—If, as you say the stock in Whitney Tractor Company is no longer of value, then the scheme to get you to convert it into an oil stock by the payment of further cash, is only a trick, and we would not advise you to put any good money after bad.

Mrs. H. E. W., Oakland county, sends me the literature of a company who wants her to paint art-pillows for them at her home and for which they promise to pay her liberally. I have replied to her as follows:

"If the Omaha Tapestry Paint Company, LaGrange, Indiana, have a fair and square proposition they certainly do not indicate it in the guarantee which they make.

"The guarantee on their order blank amounts to nothing, and after they have received your $6.00, we doubt very much if you could get any considerable part of it back were you dissatisfied.

"Any company that was really anxious to get people to work for them at home would be glad to send you the work without cost to you, and it is pretty safe to look carefully into any proposition as a money making scheme for home employment which requires you to send money in advance to get that employment.

"We are giving this company an opportunity to give us the names and addresses of some of their satisfied employees in Michigan."

Although my letter to the company was written November twentieth, **no** reply has been received to date.

"Kindly advise me, if the Auto Knitter Hosiery Co. Inc., of Buffalo, N. Y. is good and reliable, I intend to buy an Auto Knitter from that company for $50.00 spot cash, then they would give me a contract for 5 years for making socks on that machine. They agree to buy all the socks I can make in 5 years and they guarantee to pay $1.50 per dozen pairs of socks, they furnish the yarn. Would you please write me if it would be a good idea to buy this Auto Knitter and work in spare time to make some money?"

—We would advise you to send no money to any knitter company. This matter has been brought up many times and we have yet to find anyone who is satisfactorily making money at home by the method which they advertise.

Until they can prove to us that the plan is practical, we will not allow them to advertise in our columns, and we do not have very much respect for any publication which does.

Recently they sent us the addresses of some users in Michigan to whom we wrote and two out of three offered their machines for sale. If you still want to buy one, we will send you their addresses.

THE BIRTHDAY OF THE MAN JESUS

THE humble birth in a far country, centuries ago, a man called Jesus remains today the most significant event in the history of men. Whatever the measure and shade of one's honest belief, whether or not we must regard his as Messiah—the Christ or the carpenter—we face the inescapable fact that this man in three brief years of active ministry exerted a profounder influence on the subsequent life of the world than any other figure in its records.

Though there be hundreds of thousands little interested in either the practical or abstract affairs of religion, they cannot escape reckoning with the fundamentals of ethics and the basis of Christian behavior. They cannot gainsay the measureless value of character. Surrounded by a "cloud of witnesses" they must recognize the immense significance to the world of Him whom St. Paul called the "author and finisher of our faith." For it was this Nazarene carpenter who taught the world the supremacy of character, who gave to the relationship of men the glorified theory and practice of ethics, who exemplified before the world the idea of sacrifice and service.

By the hard scoffers of his time this man Jesus was accused of having imperialistic ambitions, of having designs upon earthly kingdoms. The world learned later that He sought rather to introduce the kingdom of God to the ungoverned souls of men. He did not seek to drive men into new earthly social and governmental alignments. He sought to realize in us all the latent forces of personality that we might come into the appreciation of a greater kingdom than earth can offer—the kingdom of the soul.

It is our custom to give complete approval to the agencies of human betterment. We accept the immense values of social service, of church, of Red Cross, of school and hospital. These things but exemjlify the philosophy of the man whose birthday we commemorate. We give gifts at Christmas time because the custom is remindful of the life and works of One who gave all for others. Christmas is no mere holiday. It is the day on which we turn to give our most impressive recognition to the great fundamentals of life. Without Christmas and its significance life is a dreary endurance. The illuminating fact of the Gallilean lights up the face of the world. It attaches meaning to an everlasting struggle.

"I am come," said Jesus, "that they might have life and that they might have it abundantly." He came, and life was clothed with new meaning. It was fraught with new abundance.

Whatever good impulse flows from the human heart today and tomorrow and the next day, whatever kindly word is said, whatever God like thing is done, be sure indeed that Jesus of Nasareth is passing this way.—Clipped.

THE TALE OF A CHRISTMAS PUDDING

MY Cousin Mary Agnes told me this sad tale, Mary and John told her, it happened to them personally, (as a friend of mine always says for emphasis) so it is well vouched for Also Mary Agnes tasted the pudding or at least she tried to but that is getting ahead of the tale.

Mary and John earn the butter for their bread and the clothes for their backs by the highly respected but not over-paid art of setting their mental ramblings down on paper and selling what does not reach the waste-basket.

They live in a cosy little apartment and when they do not dine out they dine at home, sometimes alone and often with a member of the Press Club for good company. Each Christmas it had been their custom to go into a bakery and at some expense buy a delicious Christmas puddng with which to induce the proper holiday spirit and to help celebrate the day.

This year of which I speak, Mary saw in a well known Women's or Ladies' Journal a recipe for a wonderful Christmas pudding, it made her mouth water to read about it, just full of candied peels, of sugared plums of nuts and raisins, all galore. A bright idea came to her, why not make the Christmas pudding? It would undoubtedly be bigger and better and cheaper too which was to be considered for many were the demands upon the modest surplus put aside for Christmas giving, as they had hearts that were ever touched by the appeal of those not so well off in worldly comforts as themselves.

The very next day, in high spirits they gathered together all the ingredients for that pudding. To be sure the materials seemed to cost a good deal, just how much they did not care to figure it might detract a little from the pleasure they were going to have. It was borne in upon them that while the pudding might not be cheaper, it must be better and certainly would be bigger anyone with even a grain of sense could see that, so with gay hearts they set about, that evening, after dinner, to put those products of many climes together. Dear inexperienced John was splendid help, if he hadn't been, Mary certainly would have given up in despair, for that pudding like the one on the old women's nose, grew in bulk and weight until, like her, they wanted to wish it away. Certainly it would be BIGGER, it filled every kettle, in it's place, every pot and every pan, they almost requisitioned the coffee-pot for the last sticky bit. At twelve o'clock two exhausted litterateurs sought their beds vowing that they were never born to be bakers.

The day before Christmas Mary Agnes blew in and was coaxed to remain for dinner, they would sample the Pudding and anticipate the joys of tomorrow and of many days to come, by the appearance of the pantry shelf. The simple repast was enjoyed to the utmost, then came the pudding reposing in a wreath of holly, looking as innocent as you please. Ah! appearances are deceiving, even in puddings, for it sat there stolidly and solidly and utterly refused to be divided, one could almost hear it say "In unity there is strength," At last it was decided to remove it to the kitchen where one might vent his feelings on that resistant mass by taking the hatchet to it. The janitor had one and it was sharp, one felt its keen edge with joy. John's prowess at golf came in handily, the cut was made, imagine their consternation when out from that break their flowed a stream, a rich brown sticky fluid carrying with it . . . but why any more painful detail? Now for the soap suds and the mop and for calm and quiet reflection after by the cheerful, blazing hearth. Who wanted the pudding any way?

Said Mary Agnes, "That pudding is like society, it is hard to break thru the upper crust, and when you do, you find little inside but dough."

That is not quite the end of the tale, for Mary and John happened to know the editor of that Journal and they decided to remember him with a bit of Christmas joy in the shape of a pudding. . . . The acknowledgement of the gift came shortly in a letter the terms of which could be best expressed by an eloquent dash or two.

There may be a moral to this tale. It can be said that while writers can produce pi(e)—they would best not tamper with a pudding.

Now if you have ever worked in a printing-office you will understand this reference.

A Christmas Carol

"What means this glory around our feet,"
The magi mused, "more bright than morn?"
And voices chanted clear and sweet,
"Today the Prince of Peace is born!"

"What means that star," the shepherds said,
That brightens through the rocky glen?"
And angels, answering overhead,
Sang, "Peace on earth, good will to men!"

All round about our feet shall shine
A Light like that the Wise Men saw,
If we our loving will incline
To that Sweet Life which is the Law.

So shall we learn to understand
The simple faith of shepherds then,
And, clasping kindly hand in hand,
Sing, "Peace on earth, good will to men!"

And they who do their souls no wrong,
But keep at eve the faith of morn,
Shall daily hear the angel song,
"Today the Prince of Peace is born!"

—James Russell Lowell.

CHRISTMAS CENTER PIECE

A SIMPLE yet effective, centerpiece for the Christmas dinner-table, that will suit the fancy of the season, is arranged on a circular piece of wood. The cover from a large candy-pail is just the right size; this you can get for the asking. Make, near the edge, two small perforations, on on each side. Wind a piece of wire, about twenty inches long, with red ribbon, and then with holly. The artificial kind, which is such a good imitation of the real holly, will do even better, for the wire stems can be easily bent in any way desired. Cover the board with a doily, then shape the decorated wire in the form of an arch, and insert each end in a perforation, bending the wire beneath to hold it firmly in place; hang three Christmas bells at the top; conceal the edges of tho board with a thick wreath of holly, and in the center of this place a small gift for each guest.

To complete the effectiveness of this little scheme of decoration there should be four tall red candles in brass or glass sticks, ornamented with sprays of holly, and if the table is a large round one there might be an individual candle at each place. Have the dinner-cards bell-shape, with sprigs of holly, and the Christmas greeting in red and green, and on each napkin place a crisp dinner roll; fold the napkin over cornucopia-shape and lay a bit of holly on top.

Another delightful centerpiece for the family dinner-table, especially pleasing to the children, is a real Yule cake; the top and sides are covered thickly with a glistening white icing, and there are small red Christmas candies scattered all over it. The cake is placed on a candle-board with a wreath of holly and lighted candles arranged around it. At the end of the meal the candles may be removed, and the cake cut and served with some light frozen dessert.

CHRISTMAS CONTRIBUTIONS FROM OUR FRIENDS

I am a reader of The Business Farmer and recieve lots of help from The Women's Department. I wonder how many of the readers make their Christmas presents. I am making some now. I always begin early so as not to be rushed at the last minute. I think it would be nice for each one of us to send ideas to our page. I am making a cute corset bag of terry-cloth with the lazy-daisy stitch. I outline the stitch in pink. It makes a very useful gift. I am also making some very pretty aprons out of cretonne and linen. One can make gifts so cheaply. I will make Christmas candies for any one who wants to buy. Chocolate fudge at 40 cents a pound, plain fudge at 30 cents and taffy at 25 cents post paid. My letter is getting long so I will close.—Mrs. O. D. Miner, Summit City, Mich.

New Ideas

Buy jewel-cloth and run colored threads, san-silk or silk floss in the open work. It will make a pretty and effective lunch-cloth or bureau scarf or cover for card tables. French gingham in fine checks is much used as borders for guest towels. It may be put on the ends doubled, and hemmed very neatly by hand.—A Reader of your page.

"Aunt Eliza's Fruit Cake

I have enjoyed "our department" so much, but have never contributed to it before altho' I have often wanted to. I'm sure many readers feel the same way, but the duties of the home are many where there are little folks and before we know it the paper has come again and we have forgotten the old request and found a new one. I see that a lady wants a fruit cake recipe and I have a dandy, so will be glad to pass it along. Will watch for the sisters reply to that bread query because I'm having the same trouble and can't locate the cause.

Cream one cup of butter with two cups of sugar, add four well beaten eggs, 1 cup molasses, one cup sour cream, one pound of raisins, seeded and chopped, one half pound of currants, one quarter pound citron, or mixed peel, 1 teaspoon of soda in the flour, spices to taste, and three and one half cups of flour. Bake in a moderate oven. Cream is absolutely essential to the goodness of this cake which when it is good, is good.

It is nice made into loaf tins and kept in a suitable place for Thanksgiving and Christmas.—Mrs. Paul Foster.

Christmas Fruit Cakes

I am sending you a couple of recpes for fruit cakes which we find very good.

Fruit Cake (Christmas)

3 lbs. raisins, 3 lbs. currants, 1 lb. ctron, 1 lb. butter, 1lb brown sugar, 1-2 lb. lemon peel, 3 cups flour, 8 eggs, 1 teacup molasses, 1 teacup coffee clear, 1 wineglass brandy (we always leave out), 2 teaspoons cinnamon, 1 teaspoon cloves, 1 teaspoon alspice, 1-2 teaspoon mace, 1 teaspoon soda disolved in hot water put in last, add 1-2 lb. blanched almonds..

White Fruit Cake

3 eggs beaten separately, 1-4 cup butter, 1-2 cup white sugar, 1-4 cup milk, 1 cup flour, 2 teaspoons baking powder, 1-4 lb. citron peel, 1lb. raisins (not necessary white), 1-2 lb candied cherries, 1-4 lb. blanched almonds, 1 teaspoon vanila extract, 1 teaspoon lemon extract, 1 teaspoon almond extract (less of these will do.)—Canadian Subscriber.

Christmas Hopes

I hope when Christmas comes around,
You'll be there to enjoy it.
And if you have a thot remorse
I hope you'll not employ it.
I hope your gifts will be enjoyed
'Mid laughter gay and jolly,
I hope your heart will lighted be
As in your house with holly,
I hope that many gifts you'll get,
Bedecked with cards and ribbon—
And when that roasted turkey comes
I hope you'll have your bib on.
I hope these joys will fill your heart
Right up from top to bottom.
And if unknoted ropes, I've left
I hope that you will knot 'em.
But pray, my friend, remember Him
To whom is dedicated
This day of joy and gaiety,
This day of hearts inflated.

—By John N. Jenney.

CORRESPONDENTS' COLUMN

Recipe Wanted

Why don't we housewives help make our page interesting by sending in more recipes?

I will give you my favorite cookie recipe.

2 cups granulated sugar, 1 cup of lard, 3 eggs, one cup of sour cream, 1 tps. soda, 1 tps. baking-powder, flour enough to roll out not too stiff.

Now will any one send in a recipe for ginger-snaps like the ones you buy in stores? I have tried several recipes but they are right.

I have a brown silk dress which is stained from perspiration; can the stains be removed? Could it be done successfully? Any help will be much appreciated.—Mrs. J. W.

A teaspoonful of powdered borax dissolved in a pint of hot water and applied with absorbent cotton will remove perspiration stains unless the stains are too deep set. The silk would undoubtedly dye all right but perspiration rots silk and the place where the silk is stained would be very apt to go to pieces. Has any one any suggestions to offer.

Pentecostal Hymn Book Wanted

I like the M. B. F. very much especially the ladies page. Will you kindly ask the readers of our page if any one has the old Pentecostal hymn book No. 1, 2, 3, 4, combined. I will gladly pay for it. Also thinking many would like home-made mittens. I will knit men's for $1.00, ladies for 75 cents and childrens for 50 cents and furnish the yarn. I can have them ready in a week or less. They make nice Christmas presents. Just mark the hand on paper. I knit them on steel needles. I have answered several questions on our page and always try to do my bit. Do you know whether the lady who wanted pumpkin seeds wants any more? I hope I have not asked too much of you.—Celia Brennen.

Bread Made From New Flour

There are many ways to make bread. But new flour must be dried. I always have success by putting a sack by the stove and stirring it often. Take enough for your bread in the morning, put in a dish set in the oven, stir often, do not let heat through but warm until ready to use. To prepare yeast, soak 1 yeast cake in half cup warm water, 1 teaspoon sugar, 1 of salt. When dissolved add warm potato water with some mashed potatoes. Keep your yeast a buzzing in a 2-quart glass can so you may see it work for at least 4 hours. Then it will be ripe enough to make bread, in any way you choose. You may stir in a little flour at night. Let it set until morning. Then set the sponge. Always keep it covered tight and keep it warm. Be sure to let the sponge get good and light, then mix stiff so it will not stick, rub on lard cover tight. When twice its size mix down again. When its twice its size mix in loaves, when twice the size, bake until done. I have baked many barrels of flour. I can give many ways for good bread but the main thing is to have ripe yeast—let it have a good start with good flour you need not worry but your home new flour. It must be dried a little, the more aged the flour is the better.—Cora E. Tracy.

Obstacle in Nose

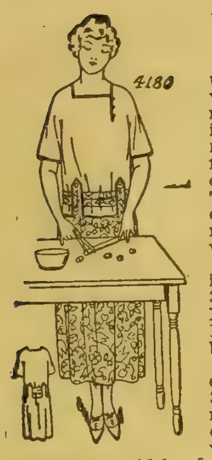
I do enjoy our page and want to tell you something to help out the mothers. I have eight childrens ranging in age from eight months to twenty-one years, and one trouble with small children I have found is their tendency to put foreign articles in their nose. Just place the child's hands tightly over his ears covering them with your own hands. Ask him to open his mouth widely and then blow forcibly into the open mouth. Out comes the offending button, kernel of corn or whatever it may be.—Mrs. Chas. H. Sieb.

AIDS TO GOOD DRESSING

For Simplicity, Service and Style

Address orders to Mrs. Jenney, Pattern Department, M. B. F.

Catalog 15c—Pattern 12c



A Pretty Frock for "Service or "Porch"

4180. Chintz and unbleached muslin were combined to make the style here illustrated. The model is also good for cotton crepe, sateen, and percale. The girdle may be omitted, and the fulness held in place with a girdle or belt.

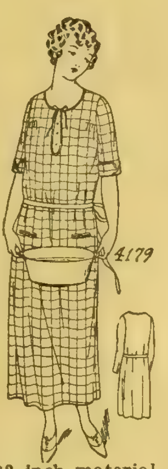
This pattern is cut in 4 Sizes: Small, 34-36, Medium 38-40, Large, 42-44; Extra Large, 46-48 inches bust measure.

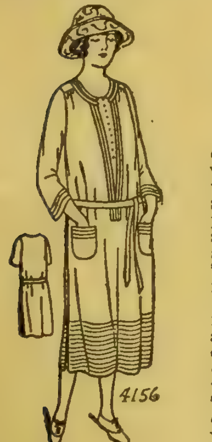
A medium size requires 4 5-8 yards of 32 inch material. To make the waist of contrasting material will require 1 3-4 yard. The width of the skirt at the foot is 2 1-2 yards.

An Ideal ouse Dress

4179. The simplicity of this model is its best feature. The pleasing fulness above the bust, and equally comfortable allowance on the sides at the hips, are practical points that will appeal to the women who likes neatness and comfort in her housedresses. The sleeve in short length is attractive and comfortable. The long sleeve may be turned up for convenience in working.

This pattern is cut in 6 Sixes: 34, 38, 36, 3, 40, 42 and 44 inches bust measure. A 38 inch size requires 4 5-8 yards of 32 inch material. The width at the foot is 2 1-8 yards.





A Smart Version of A Popular Style

4156. Kasha cloth or Canton crepe would be suitable for this model. It has simple lines. The plait fullness at the sides gives additional width to the skirt. This is a model that is easy to develop.

The pattern is cut in 3 Sizes: 16, 18, and 20 years. It requires 4 1-2 yards of 40 inch material for the 18 eyar Size. The width of the dress at the foot with plaits extended is about 2 1-2 yards.

A Model for Service and Protection

4163. The "easy to make" apron model is nice in unbleached muslin with facings of contrasting material, or, in gangham, chintz or percale. The side seams are free below the hips, but if preferred may be closed their entire length.

The pattern is cut in 4 Sizes: Small 34-36; Medium 38-40; Large 42-44; Extra Large 46-48 inches bust measure. A medium size requires 4 3-4 yards of 27 inch material.

Lily White

"The Flour the Best Cooks Use"

A GOOD RECIPE FOR PARKER HOUSE ROLLS

2 cups scalded milk, 3 tablespoons butter, 2 tablespoons sugar, 1 teaspoon salt, 1 yeast cake dissolved in ¼ cup lukewarm water, Lily White Flour. Add butter, sugar, and salt to milk; when lukewarm, add dissolved yeast cake and three cups of flour. Beat thoroughly, cover, and let rise until light; cut down, and add enough flour to knead (it will take about two and one-half cups.) Let rise again, toss on slightly floured board, knead, pat, and roll out to one-third inch thickness. Shape with biscuit-cutter, first dipped in flour. Dip the handle of a case knife in flour, and with it make a crease through the middle of each piece; brush over one-half of each piece with melted butter, fold, and press edges together. Place in greased pan, one inch apart, cover, let rise, and bake in hot oven twelve to fifteen minutes.

Will Satisfy You Better

Lily White Flour is dependable. The best cooks for three generations have found it the best flour for all general baking. Young women with little experience are surprised and pleased with their baking triumphs. Because it is made of the finest wheat, because it is clean and better milled, and because the baking results prove up, Lily White is guaranteed to be better than any other flour you ever used.

Why You Should Use Lily White

REASON No. 15

Proper Balance, Color and Flavor

There is a greater difference in flours than most people realize. Lily White is a quality flour—the highest quality. It has the right balance, color, flavor and granulation. Try Lily White once and know the difference always.

VALLEY CITY MILLING COMPANY

Never Let a Cold Get a Start

Break it up overnight

THE quick direct treatment for colds of children and grown-ups too, is an application of Vicks over throat and chest at bedtime. Not only is Vicks absorbed thru the skin, but its healing vapors of camphor, menthol, eucalyptus, turpentine, etc., are breathed all night directly into the affected air passages. Relief usually comes by morning. Just as good, too, for cuts, burns, bruises, stings and itching skin troubles.

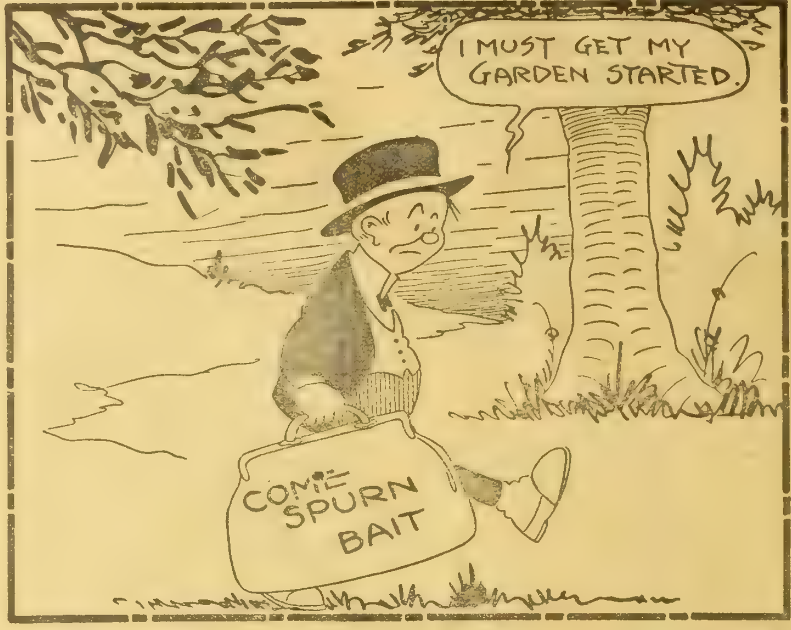
The Children's Hour

GRIP PUZZLE

BY WALTER WELLMAN



I MUST GET MY GARDEN STARTED.
COME SPURN BAIT

Jack has been told that he is late in getting his garden started, and his mother has sent him to the seed store and instructed him to buy every kind of garden seed which can be spelled with the letters on the grip. He is told that he can use a letter more than once, if necessary, in the name of a seed, although no letter appears more than once on the grip. What seeds can he buy?

DEAR Nieces and Nephews:—This issue of the M. B. F. is the Christmas issue and I am using considerable space on our page for a fine Christmas story. It is very interesting and contains a lesson. Let's not be a "Curiosity Carmella." Many times we are and do not know it but if you will watch yourself carefully you can avoid being one. People do not like "Curiosity Carmellas" so if you would have many friends do not pry into other people's business.

We have some stories about Chrismas by our boys and girls for our page and will print more next issue. No one so far has guessed what the prize will be for the best Christmas story.

I once read a quotation that the thoughts of Christmas bring to my mind. It is, "The fact that you remember means more than the gifts you give." Remember all your friends this Christmas. Although you may only send Chritmas cards it will show them that you remember.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned—May I join your merry circle? I enjoy reading the M. B. F. very much. I read about your contest in the paper so I thought I would try to win a Christmas present. I think it is something useful because Uncle Ned would not gve anything that wasn't useful.

It was Christmas night when the sun began to lower that Tommy hung up his stocking to see what Santa would bring him. As his mother and father were poor Tommy didn't expect much. It was 8 o'clock when Tommy went to bed and he was not thinking of his presents but was thinking of his dear mother and father. It was near midnight when Tommy thought he heard footstops out on the roof, and sure enough he heard something coming down the chimney and Tommy heard him by the mantle-piece. Tommy knew then it was dear old Santa and then he heard Santa return to the roof. He did not sleep at all, and at daybreak Tommy went down and to his delight Santa had brought just what Tommy wanted himself and for his dear mama and papa. Then everybody was merry and happy. I will close from your neice, Margaret Mills, R. 1, Herron, Michigan.

Hello Uncle Ned and Cousins—I am a farmer girl and go to school. I am 11 years old and in the fifth grade. I will guess the present will be a school outfit. I will write a Christmas story.

Once upon a time there was a boy who's name was Jean. He had no mother and he lived with his aunt. She was cruel to him. He only had one slice of dry bread to eat. It was just the night before Christmas when Jean went to church and the rich people talked about how they were going to get lots of toys and soon the people were ready to go home and when Jean was going down the church stairs there he saw a little boy. His hair was like gold and he was barefooted. Jean had no stockings only his wooden shoes so he put one of his shoes on his foot. When he got home his aunt said, "Where is your other shoe?" Jean told her all about it. Then his aunt said, "You will only have one shoe if you don't get the other. So Jean went to sleep. In the morning when he awoke he looked at the fireplace and what do you think he saw? Some toys and a pair of new shoes were among the toys.

Good luck to Uncle Ned and cousins. Good-bye.—Margaret Surjan, R. No. 1, Rhodes, Michigan.

Dear Uncle Ned—I am not busy at the present time so I will write you a letter. I received the leatherette pencil case and am thanking you ever so much for it. I am finding it very useful and appreciate it very much. I am nine years old and live on a 120-acre farm. My eyes are blue and my hair is light brown, and I am about four and a half feet tall. I like to go to school and I am in the third grade. I also have a little dog for a pet, named "Toodles. I enjoy hunting and fishing during [illegible] I have a little air gun which I got for my birthday and I shot a squirrel with it the second day after I got it. Well my letter is getting rather long so I will close, thanking you ever so much for the leatherette pencil case, I remain your nephew, Harold Pernie, Ossineke, Michigan.

Dear Uncle Ned—How are you these days? We have had quite bad weather these last few days. We have about ten inches of snow. I am a boy twelve years old and in the fifth grade. We have had a very good fall this year. I wrote to the M. B. F. once before. I wish some of the boys and girls would write to me. We have four horses, fifty-eight head of cattle and some chickens and one dog and four cats. I have three brothers and three sisters. I live about a half a mile from school. We have nine pupils in our school. I live on a four hundred and four acre farm. From your friend John Hann, Franklinville, N. Y.

Dear Uncle Ned—I will write a few lines as I have been reading the children's page in the Business Farmer and like the letters very much. We live on an 80-acre farm and I have for pets a dog, two cats and a rooster. My dog's name is Doodie Bug and my uncle and aunt keep him for me because I live too close to school, he would go with me every day. I am here from Texas and brought my dog with me. I have been here nearly two years and we will make our home in Michigan. I like this place just fine and like to play in the snow. Am in the 4th and 5th grade and like my teacher just fine. As this is my first letter will make it short and hope to hear from some of the other boys and grls as I enjoy reading their letters. Your little neice, Vera Richardson, R. 1, Greenville, Michigan.

CURIOSITY CARMELLA

"DO you know what they used to do to people who are always peeking and prying?" said Carmella's oldest sister Jane. "They'd hang them up by their coat collars under a waterspout in the eaves and let them get good and wet."

She had caught her little sister opening a package from the store. Of course there was nothing special in the package, only a pair of shoes, but this wasn't the first time, and every year around Christmas time when the air was full of secrets, Carmella was at her worst. I blush to say it, but her mother had to have a padlock put on the old sea-chest in which the presents were hidden until the Day. When the postman would blow his whistle Carmella was the first to fly to the door, and My! how she would hang around and crane her neck while people opened their letters! But if a parcel or package came poor Carmella's curiosity would be come almost a frenzy and unless the owner came quick and took the package away, a little hole was apt to appear in a corner, or the string would come loose.

"I hate secrets," Carmella would say. "What's the use in keeping presents until Christmas? I'd rather have mine now."

So one year her mother gave her her presents as they arrived and when Christmas Day came there was no surprise for the little girl and she didn't enjoy herself a bit. Besides it was found that Carmella was just as curious about other people's gifts as about her own.

"Well this year, you're not to have a thing until Christmas Day," said her mother, "and that settles it.'

"If you don't stop nosying into everything," said her father, "you'll get your nose into something hot some day."

But Carmella only smiled to herself and thought: "They don't like it because I'm so clever at finding things out."

And that's what she told her sister Jane.

It had gotten so bad that her next-to-the-oldest sister Betty and her brother Paul asked the postman not to give any parcels to Carmella but to wait and give them to some other member of the family.

"Hah!' thought Carmella. "They think they can keep things from me, but I'll fool them.

One day as Chistmas drew nearer and nearer Carmella heard pounding in the workshop.

"What's that? What's that?" she questioned. "I didn't know anybody was making anything."

She ran down to the shop and tried the door. It was locked and Paul's voice cried: "Please go 'way. this is a private job."

Instead of going, as she should have, knowing that Christmas was coming and the air was full of secrets, Carmella tipped around the workshop and finally found a crack in the boards and there she plastered her eye. What she saw filled her with curiosity. There was Paul making a curious box. It wasn't the kind of box one would ever expect to get as a present. It was made of rough wood and stood on legs and Paul seemed to be making a cover for it.

"It's too small for a woodbox and too large for a sewing box," she thought. "Hum! Here's a mystery. Well, I'll soon find out."

"Carmella," cried a voice behind her. "What are you doing?"

"Nothing, Mother," she replied.

"Well, you come into the house and mind your own business," said mother, with a knowing look. Mother was so hard to fool.

The box puzzled Carmella more and more. She just couldn't figure out what Paul was making it for and she felt she couldn't wait until Christmas, which seemed ages away. So she decided to make up to Paul and coax him to tell her. Paul must have wondered what had got into his small sister that made her so obliging. She helped him do his work and let him use her silver pencil. But when she popped the question about the box Paul only grinned and said:

"Wait and you'll find out, kiddo," and not another word could she get out of him.

"You'd better tell me," warned Carmella, "cause I'll find out any way."

"Help yourself," replied her brother.

"Now, Paul," she coaxed, "won't you tell me this much? Whose it for?'

"For myself," he answered.

"For yourself!" exclaimed Carmella. "That's nice! Giving Christmas presents to yourself."

"Well, old Santa's going to put something inside, see?" he said.

This made it worse than ever, especially as he simply wouldn't say another word, yes or no.

"Well, it can't be rabbits or anything like that,' said Carmella, "there's no opening for them to go in and out and no windows. It isn't a tool box."

She certainly would have grown thin worrying over it if she had stopped eating so much, but unfortunately her appetite was good and so she heard the postman's whistle. Down stairs she raced and was just in time to see Betty receive a small box from him and lay it on the hall table.

Carmella crouched on the stairs and waited until Betty had gone. Then she hurried down and picked up the little package. It was the oddest one she had ever seen. Tiny and light it was and over one end was a bit of wire screening. What in the world could it contain? She shook it and listened. She thought she heard a queer noise.

"I'll just poke the netting and maybe it will move and I can see inside," she said, although she knew the package was addressed to her brother Paul.

She pressed the netting quite hard, and sure enough, it gave way. With a look of triumph she raised the box up and was about to peer inside when something flew out and lit right on the end of her nose. The next instant she was shrieking deafening shrieks. Betty, Jane, Paul and her mother all hastened to her.

"My-nose!" screamed Carmella.

"Stung!" exclaimed Paul. "Look, she's opened the box of bees that man in New York promised to send me to start my hive with. Gee, I hope the Qeen Bee is all right." And he began to cover the box with his handkerchief.

"Ha ha!" cried Betty. "Dad said to stop nosying!"

"Never mind," said mother, "I think Carmella has learned her lesson and it's mean to taunt people."

She gently led the little girl away and put soda on her aching nose, but alas! it was many a day before Carmella cared to show that nose. It swelled and swelled and grew red and purple, and really, although I felt sorry for her when I saw her I could hardly keep from laughing, she looked so comical.

"I-I could of learnt my lesson [illegible] on the nose [illegible] hed.

—HEALTH HINTS—

OR
HOW TO CURE YOURSELF
BY
DR. T. N. ROGERS

NASAL CATARRH

A simple home remedy is a weak solution of common salt in warm water snuffed up the nostrils night and morning. This will cure many cases. A good formula is the following: Baking soda, one-half teaspoonful; powdered borax, same quantity; glycerine, 4 tablespoonsful; listerine, 2 tablespoonsful; water, 6 tablespoonsful. Use with atomizer or snuff up the nostrils 3 times a day. Avoid colds.

Book Review

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

The Country Beyond, by James Oliver Curwood—The writer of this latest popular selling novel is so well known to our readers who read "Nomads of the North" and are now following "The Hunted Woman," that all we need remark is that the new work sets a high-water mark. The real hero of "The Country Beyond" is an Airedale terrier, but there is enough human romance and adventure to make you want to stay up all the rest of the night to read it as we did! (Cosmopolitan, $2.)

"CREEPING JENNY"

(Continued from page 7)

you take care of the house while I go to Boston and get all my papers and passports and certificates and army records and honorable discharges and pedigrees, and draw my back pay—because I am a stranger in Riverboro and I want to get into society. Why don't you speak? Aren't you surprised?"

"I would 'a' been," said the boy, "'cept that Alfonso and the postmistress both said it would turn out that way; but Mother stood up for Jenny; she said it wouldn't."

"That's what all the women will have said," said Rufus.

"Well, all the men will say I jumped at you, so accounts will be square!" and Jenny smiled triumphantly back at Rufus, all blushes and confusion, her heart beating like a wild bird in her breast. "Go, Rufus, please," she said in a low tone, "and take Alfinso. I want to be alone with myself and get used to—happiness."

He bent over her and kissed her cheek while Alfinso went for his muffler and mittens.

"Good-by! I'll bring back the ring; don't forget the party. We won't stint refreshments. I'll give the twins a dollar to bring you little trees and evergreens for garlands, and we'll make a brave showing of the house. Isn't it lucky there'll be a full moon on the shingles? No doubt about the minister now! He'll have to come in the performance of his duty. Oh! my dear, my dear, God is being very good to me!"

"Good to us," whispered Creeping Jenny, putting her lips softly and shyly against his sleeve.

INVENTS NEW LAMP

Said to be Whiter and Cheaper Light than Electric or Gas

Washington—Patents have been granted by the government to a lighting engineer by the name of Johnson, on a new lamp burning ordinary kerosene oil. This lamp produces a vapor from the oil which makes a blue flame that incandesces a mantle and thus creates a very strong, soft pure white light. As it consumes only 5% oil mixed with 94% air, it is exceedingly economical. Said to be very simple to operate, odorless, noiseless and dangerless.

One of these new lamps may be secured on 10 days free trial by writing to Mr. F. H. Johnson, 609 W. Lake Street, Chicago, Ill. He also wants local distributors and has a very unique selling plan to offer to agents. He is even offering to give one free to the first user in each locality who will help introduce this new light.—Adv.

HARVESTING THE FUR CROP

(Continued from page 15)

and farm animals as possible. If an otter slide, landing or playground can be located you stand a chance of making a catch. Some set at foot of slide in several inches of water. The best place, however, if it can be located, is where the animal leaves the water to go upon the bank. Here the animal is apt to get caught by a front foot, whereas the set is at the foot of the slide, the trap is apt to be knocked off by the body and no secure hold obtained.

It takes a strong trap for this wiry animal. The No. 2, double spring, is strong enough, but there is a special otter trap with teeth and one powerful spring that is really better. This trap does not take so much room, being easier to conceal. A rock or piece of iron should be fastened to one end of a wire, then passed through the ring and staked at edge of water. If the otter is caught it will make for deep water and is apt to be drowned.

Otter are great wanders, as already mentioned, and may pass up or down a stream only a few times during the entire trapping season. Streams where otter traveled previous years are very apt to be used by otter the present season if any within miles—sometimes they travel as much as fifty miles according to old trappers.

If otter are using a small stream, only a few feet wide, drive stakes across only a couple of inches apart, except where the most favorable place for the otter to go through is, leaving about eight inches where the trap is set. This same set can be used on all small streams for mink, coon or muskrat but of course opening should be only about six inches and trap not so large, yet if otter ever frequent the stream it might be advisable to use a good strong trap.

"THE HUNTED WOMAN"

(Continued from page 12)

"No trouble at all," declared Blackton. "We've got a Chinese cook who's more like an owl than a human. How will a four o'clock breakfast suit you?"

"Splendidly!"

As they went on the contractor said:

"I carried your word to McDonald. Hunted him down out in the bush. He is very anxious to see you. He said he would not be at the depot, but that you must not fail him. He's kept strangely under cover of late. Curious old ghosh, isn't he?"

"The strangest man in the mountains," said Aldous "And, when you come to know him, the most lovable. We're going North together."

This time it was Blackton who stopped, with a hand on his companion's arm. A short distance from them they could see the buckboard in the light of the station lamp.

"Has old Donald written you lately?" he asked.

"No. He says he hasn't written a letter in twenty years."

Blackton hesitated.

"Then you havn't heard of his—accident?"

The strange look in the contractor's face as he lighted a cigar made John Aldous catch him sharply by the arm.

"What do you mean?"

"He was shot. I happened to be in Dr. Brady's office when he dragged himself in, late at night. Doc got the bullet out of his shoulder. It wasn't a bad wound. The old man swore it was an accident, and asked us to say nothing about it. We haven't. But I've been wondering. Old Donald said he was careless with his own pistol. But the fact is, Aldous—he was shot from behind!"

"The deuce you say!"

"There was no perforation except from behind. In some way the bullet had spent itself before it reached him. Otherwise it would have killed him."

For a moment Aldous stared in speechless amazement into Blackton's face

"When did this happen?" he asked then.

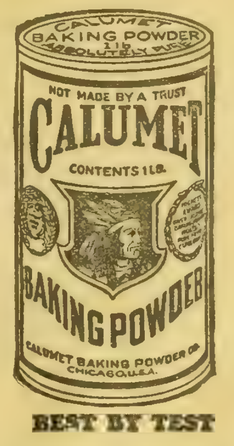
White-of-Egg
in Calumet a Vital Element Most Baking Powders Lack

Don't use a leavener that does not contain white-of-egg. When you do you take chances—you run the risk of spoiling your bakings.

CALUMET
The Economy BAKING POWDER

contains a small amount of white-of-egg. This makes it possible for representatives of the company to test it frequently for leavening strength—right on the dealer's counter. Nothing but absolutely fresh stock is permitted to remain on the dealers' shelves. It must always be up to the high Calumet standard.



BEST BY TEST

Remember the white-of-egg in Calumet protects the success of your bakings. It is the economical positive bake-day aid and its sale is 2½ times as much as that of any other brand.

A pound can of Calumet contains full 16 ounces. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a pound when you want it.

Make $13 More Per Cow

Free Book for Dairy Farmers Tells How to Cut Out Waste; Gives Valuable Building Hints

Do you know that the manure produced by one cow in twelve months contains fertilizing elements valued at $39? And do you know that one-third, or $13 of this amount is lost in the course of a year through improper handling? By providing a simple easy-to-build pit outside the barn, this loss can be prevented

Write for this Free Book, "Concrete on the Dairy Farm" and see the many money-saving suggestions it gives on the use of concrete in making permanent improvements. Properly housed dairy cattle return greatest profit on the investment. This free book is recognized as a simple guide to 100% efficiency and economy in building on the dairy farm.

Fully illustrated with diagrams and pictures. Shows how to build barns, milkhouses, silos, icehouses, cooling tanks, paved barnyards, manure pits, water supply systems, etc.

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

CURED HIS RUPTURE

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 210J Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of ruture and the worry and danger of an operation.

FARM MECHANICS

HYDRATED LIME IN MASON WORK

Please inform me as to the use of hydrated lime in building brick chimneys, plastering, stone work, etc., as a substitute for stone lime. Does it form a strong bond with good sand for brick work and endure the heat and cold of chimney tops?—J. E. G., Rapid City, Michigan.

—Wish to say that hydrated lime which is stone lime reduced to a powder by the process of limiting the amount of water which is used generally and using mechanical process to ground the lime and take out the impurities, this being substituted generally for stone lime. It may be used in any work in masonry that stone lime is used. In many ways it is considered more satisfactory principally because it is more standard and does not contain impurities, powdered stone is sometimes slack in the wall causing spots and other defects.

For use in chimney work, the addition of cement to the mortar produces a stronger mortar than lime and I think it is being used generally for this work. Cement alone cannot be used satisfactorly because it works too short and tends to roll up under the trowel, lime gives cement mortar smoothness and also water tightness.—H. H. Musselman, Prof. of Farm Mechanics, M A. C.

HOW TO REDUCE VOLTAGE

Would you please publish in the Business Farmer what material I would need and how to assemble an instrument for reducing an 32 volt direct current to an 6 or 8 volt direct current.—C. L. S., Reed City, Mich.

—The reduction of the voltage can be accomplished by a small transformer in the lamp socket, the transformer although minature in design is constructed a sany other of its kind, and is designed to reduce the current to 6 or 8 volts for pressure. The transformer socket fits into the regular socket feature and the small bulb fits into the transformer socket, the transformer socket can be purchased from practically any manufacturer of lighting equipment.—Floyd E. Fogle, Ass't. Professor of Farm Mechanics, M. A. C.

A NEW LIME SPREADER

A NUMBER of inquiries have come to the Farm Mechanic Section of the Station asking for information on a simple lime spreader. The need for an inexpensive machine of this kind is apparent when it is noted that the use of lime is not general and that many farmers who wish to use it in an experimental way on comparitively small acreages, do not feel that the expenditure for a commercial spreader would be justified.

The spreader which is shown in the accompanying cut and herein described was designed, built, and tried at this Station and has proved of such promise that its use is given over to Michigan farmers. Under the conditions for which it has been tried it has done excellent work. It is possible that some conditions may be found for which it may not be adapted in its present form. It is felt, however, that the publication of plans should not be delayed, and which may be found necessary will suggest themselves as needed.

The machine has been tested with pulverized limestone, both dry and damp. If lumpy material is to be used it should be shoveled through a screen of poultry netting or close mesh fencing placed over the top of the hopper. The mesh of this screen should have not more than 1½-inch openings.

The spreader is designed to be attached to the rear end of the wagon box and operated by a rocker arm dropping from peg to peg on a disc attached to and turning with the rear wheels of the wagon. The rocker arm moves a board under the hopper which serves as an agitator. The jarring action of the rocker arm on the agitator and box serve to feed down the lime. Both wheel disc and hopper are easily detachable from wagon by loosening four nuts and can be transferred from one wagon to another if necessary.

If this is done it is well to have the reach adjustment the same on each. The wagon box should extend about 18 inches back of the rear axle, and when the hopper is hung on the top of the box the height of the top of the box should be from 24 inches to 30 inches above the axle. This rocker arm may be adjusted for different heights of box, but where the spreader is to be used on two wagons it is preferable to have the boxes the same height above and distance back of the rear axle.

Where the soil is firm enough so that a load of lime may be drawn over it, the box may be hung on the loaded wagon and the lime spread by shoveling directly into the spreader. In case the spreading is to be done over plowed ground it will be found impracticable to draw the full load. In this case and where the lime is in storage or piles, only enough is shoveled into the empty wagon carrying the spreader to go once around the field or some other convenient distance.

It will not be found practicable to spread pulverized lime in a high wind. A moderate wind will not greatly affect the evenness of spread.

If extremely hard and lumpy material is to be handled it is suggested that the lower or cutting edges of the hopper sides be faced with a strap of iron or heavy galvanized sheet metal to take the wear. This facing should be wide enough to attach securely to the box and extend below it one-quarter to one-half inch to making a cuting edge.

The construction of the spreader is comparatively easy and should not require more than a day's time. The material needed includes proper sizes of lumber, the agitator hanger, and six bolts. The bolts, which are all alike, may be made by a blacksmith. Or these hanger bolts may be made by cutting the heads from long bolts of the right size angles, which is all that is required. Extreme accuracy is not required in the dimensions, but the side pieces ,and especially the agitator board, should be reasonably straight and true.

Two other points should be noted: that the lower edges of the hopper boards are dressed to a chisel-like edge, the point being about one-quarter inch thick; and that the top of the agitator board is beveled to make an even flow of material over the edge.

To determine amount sown per acre, tests were made with pulverized limestone over different types of ground with finely ground lime. The amount spread is determined by the adjustment of the nuts on the hanger bolts which carry the agitator. In the following table is shown the opening between hopper and agitator board necessary to give approximate amounts shown.

Opening Between Hopper and Board	Weight Spread per Acre	Distance Traveled to Spread 100 Pounds
¾ inches..........	730 lbs.	1793 ft.
1¼ inches........	2,200 lbs.	594 ft.
1½ inches........	3,800 lbs.	344 ft.

For amounts over 3,000 lbs. per acre the flat side of the agitator board should be turned up The calibration figures follow for this adjustment:

Opening Between Hopper and Board	Weight Spread per Acre	Distance Traveled to Spread 100 Pounds
1¾ inches........	2,475 lbs.	527 ft.
2 inches...........	4,770 lbs.	274 ft.
2¼ inches........	6,700 lbs.	195 ft.

The diameter of the wheel on wagon used was 44 inches. Where disc is attached to a wheel of different size the amounts would be less with a larger wheel and more with a smaller wheel.

Probably a more satisfactory way to determine amount spread per acre is to start with hopper level ful and run out a 7-inch depth of lime, with the feed set at some figure selected from above table, say 1¼-inch. A depth of 7-inch spread in a distance of 40 rods would represent closely one ton per acre. At the same rate 10 rods would represent ¼ ton or 500 lbs. per acre. If the same amount were spread in 20 rods double the amount or 2 tons per acre would be the amount sown. Two or three trials will serve to determine the desired setting.

Since the cuts describing this spreader have been made the design has been changed by reducing the length of the hopper to 8 feet 3 inches or ½ rod inside measurements. By cutting in a known amount of lime, say 200 lbs, and noting the distance required to spread this amount, the amount spread per acre can be easily calucu-lated.

Example—Weight of lime put in hopper, 200 lbs.

Distance traveled to spread 200 lbs.—40 rods.

Area spread equals ½ x40 equals 20 sq. rods or ⅛ A.

200 lbs. on ⅛ A. equals 1,600 lbs. per A.

Shortening the hopper also requires but one division in the hopper and 3 hangers for the agitator board. It has also been found that if 2-in. x 4-in. blocks having holes for the hanger bolts are fastened to the agitator board the wear of the hanger bolts on the agitator board will be reduced and more positive action of the agitator board will result.—H. H. Musselman, Dept. of Farm Mechanics, M. A. C.

The Netherlands was the largest market, except Canada, for American corn in 1921, having received 17,843,464 bushels, according to the United States Department of Agriculture. The next largest markets, in order of receipts, were United Kingdom, Germany, and Mexico.

Plenty of fresh air during winter is to be desired for the poultry flock, but be sure to avoid drafts.

The friends of Gus Holmgren, the city treasurer, desire to make it known that they wish to secure a second term for Mr. Holmgren for the reason that he is incapacitated for work of any kind and is very much in need of the assistance the position would give him.—Iron Ore.

This shows the general plan of hopper and arrangement of rocker arm.

Fruit and Orchard

Edited by
Frank D. Wells

PLANTING AN ORCHARD

THE good prices for fruit have induced many to turn their attention to the orchard. Not only is this true of land owners, but also of city dwellers who wish to retire from their present occupations and are looking to the orchard as an interesting vocation as well as a profitable investment. It is those who are unaccustomed to the soil who are most eagerly searching for information and certainly they need it before undertaking anything as complex as orchard growing. For fruit-growing is by no means a simple matter, though it may look easy enough to plant a tree and wait for it to produce fruit.

In locating an orchard it is of the first importance that drainage be considered. It is not enough that the trees will grow. Apples, for example, will grow on a wet soil, yet never produce fruit enough to pay for the time and labor of cultivation. Wet land and such as has a subsoil of quicksand is not desirable. A clay subsoil may be underdrained, but even then it will hardly be on an equal footing with land well-drained by nature. Better use such land for other purposes.

Atmospheric drainage is another point which should not be overlooked. There are some lands beside bodies of water that are protected against sudden and severe changes of temperature, but such areas are in the aggregate, not large. In the vast interior regions dependence must be placed on elevation. Land should be selected that has a lower area around it. There are thousands of acres of such lands throughout southern Michigan which ought to be covered with orchards, while other thousands of acres of low land now in orchard might better be utilized for other purposes.

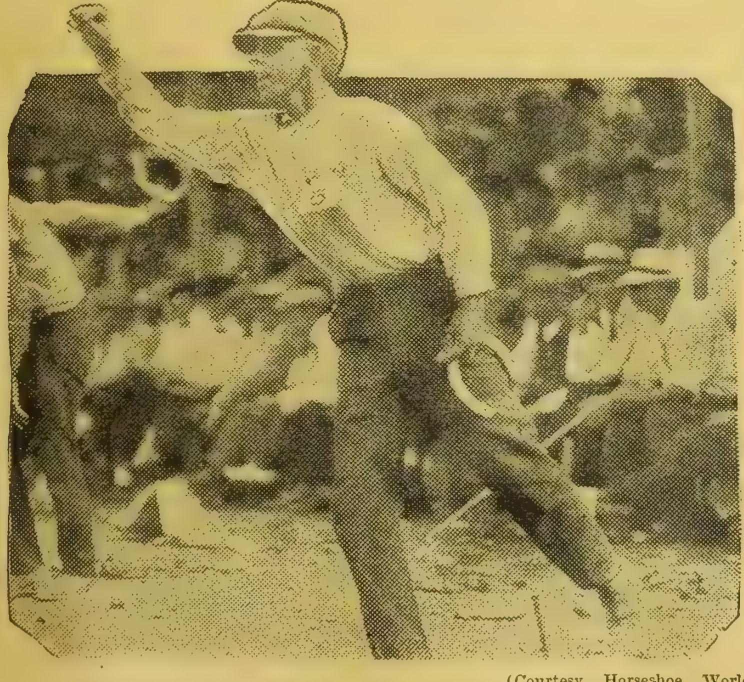
All kinds of soil are not of equal value. Sandy land will grow trees quickly. They will bear at an early age and are soon ready to die. Such orchards do not endure a severe winter as well as those on the heavier soils. Yet such orchards may be profitable for a brief time. The soil also plays an important part in the selection of varieties.

The different kinds of fruits are not equally adopted to soils and locations. Peaches are confined to narrower limitations than any of the other orchard trees. They really belong to the sub-tropical regions and in the district of the Great Lakes they are far north of their native land, though it is here that they reach perfection in quality. They do best in a gravelly loam, but even a heavy clay is good if there is good atmospheric and water drainage. Wet soil the peach will not tolerate. Cherries are adapted to a wide range and so are plums, though the former prefers the lighter soils, while the latter is partial to heavy land. Pears and apples are rather shortlived on light land, though that is not always the case.

In the majority of cases it is safest to trust to a clay loam, when such a choice can be made. However, good results can be obtained from sandy land if it can be kept well fed, while thorough cultivation will do for correcting the natural disadvantage of a heavy clay. Some of the best apple and peach orchards in Southern Michigan are on a soil usually considered too heavy for orchard purposes.

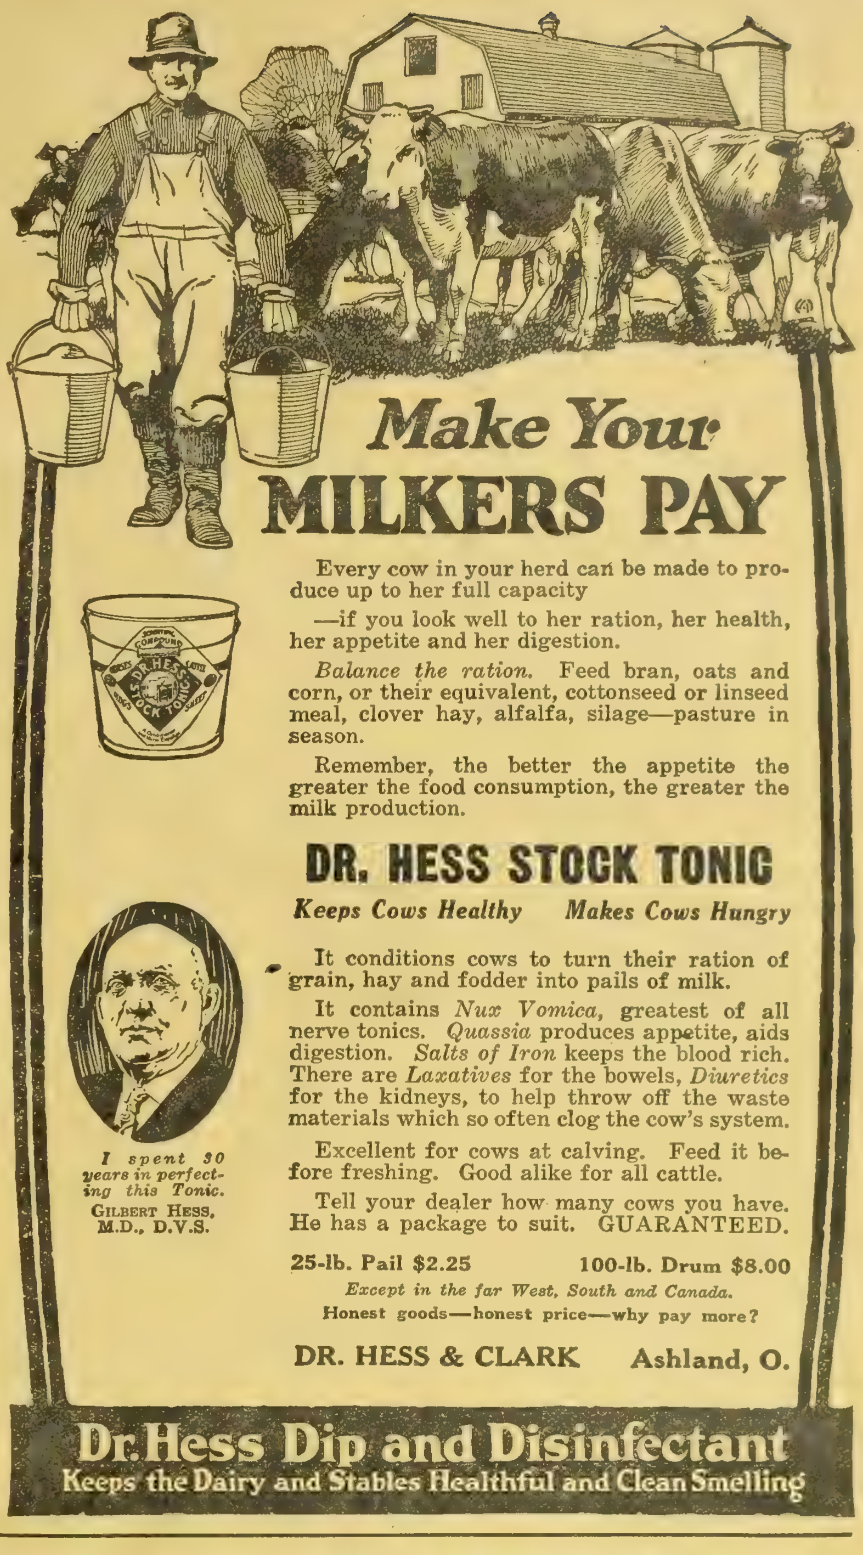
Now comes the market and on this depends the value of the orchard. It is the consumer who ultimately decides what kind of fruit should be grown and the grower who knows what the perspective customers will want, or at least can make a good guess at it, is the one who will succeed. (Cont'd on page 27)

The New World's Champion in Action



(Courtesy Horseshoe World)

GATHER around, brother horseshoe pitchers, and allow us to introduce to you Mr. Frank Lundin, of New London, Iowa, the champion horseshoe pitcher of America. Mr. Lundin won his crown at the 1922 National Tournament at the Iowa State Fair, Des Moines, Iowa, playing one whole week and losing only one game. Mr. Frank Jackson, 1921 champion finished second. The next tournament to be held of national importance will be put on at St. Petersburg, Fla., during the latter part of February. That city is spending $10,000 on new pitching courts and it is expected that the February meet will prove a great success.—Horseshoe Editor.



Make Your MILKERS PAY

Every cow in your herd can be made to produce up to her full capacity

—if you look well to her ration, her health, her appetite and her digestion.

Balance the ration. Feed bran, oats and corn, or their equivalent, cottonseed or linseed meal, clover hay, alfalfa, silage—pasture in season.

Remember, the better the appetite the greater the food consumption, the greater the milk production.

DR. HESS STOCK TONIC

Keeps Cows Healthy *Makes Cows Hungry*

It conditions cows to turn their ration of grain, hay and fodder into pails of milk.

It contains *Nux Vomica,* greatest of all nerve tonics. *Quassia* produces appetite, aids digestion. *Salts of Iron* keeps the blood rich. There are *Laxatives* for the bowels, *Diuretics* for the kidneys, to help throw off the waste materials which so often clog the cow's system.

Excellent for cows at calving. Feed it before freshing. Good alike for all cattle.

Tell your dealer how many cows you have. He has a package to suit. GUARANTEED.

I spent 30 years in perfecting this Tonic.

The New Improved Walsh No-Buckle Harness

Made in All Styles. Breechingless, Side Backer, Express, etc.

NO BUCKLES TO TEAR
NO RINGS TO WEAR

3-23

30 DAYS FREE TRIAL

Before you buy any harness, post yourself on this new way of making harness, which is three times stronger than buckle harness. Let me send you a set of Walsh No-Buckle Harness on 30 Days' Free Trial. Let me show you why this harness is three times stronger without buckles, also how much better looking and handier in every way. No obligation on your part. If not convinced, send it back at my expense. The Walsh is a proven success on thousands of farms for over eight years.

THREE TIMES STRONGER THAN BUCKLE HARNESS

Buckles Weaken and Tear Straps. As an example, a Walsh 1⅛ inch breeching strap holds over 1100 lbs. The same strap with the buckle will break at the buckle at about 350 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles—easy to see why Walsh is three times stronger, lasts so much longer without repairs.

COSTS LESS — LASTS TWICE AS LONG

The Walsh cuts harness costs. The price is no more than buckle harness, yet it outlasts two buckle harness, and saves many a dollar in repairs. No patching, no mending, because no rings to wear straps in two, no buckles to weaken and tear straps. Easily adjusted to fit any horse, rust-proof hardware, improved hames, etc. Write today for new reduced prices.

$5 AFTER THIRTY DAYS' FREE TRIAL

Balance easy payments, or pay cash after trial if you wish. Selling direct from factory gives you highest quality harness possible to make at lowest prices. Write today for free illustrated book, prices, easy payments and 30 day trial offer, also how to make money showing Walsh Harness to your neighbors.

DAIRY and LIVESTOCK

BEEF PRODUCTION COMING BACK

CONDITIONS at Glenwood Farm are similar to those all over the country. Bull sales have been slow for the last couple of years which leaves us at present writing with a great many bulls on hand, even though prices have been greatly reduced.

Tight money caused the Western Cattle men to sell feeders last year at very low figures and farmers who had been raising their own, decided to abandon the plan and buy western cattle instead. Many did not realize that a reaction was bound to come, as soon as money became easier, as tight money had two effects. It made cattle temporarily cheaper because everybody was selling more than his custom, to raise needed cash, and it made cattle scarce in the long run.

By another year if the new Congress carries out the program announced by the progressive Republicans and Democrats for easier money and credits, farmers will be sorry that their grade dairy herds are not bred to Angus bulls, as it will be impossible to buy the feeders at all. Now is the time to buy an Angus bull, while he can be purchased at a reasonable figure and while conditions are such as to assure a heavy demand for his get in nine months.

At Glenwood Farm, besides the pure bred Angus herd, we have a herd of 30 grade dairy cows, mostly Holsteins. This year every one of these cows is being mated with line bred Doddie, as we know from long experience that the calves from this mating, will top the Buffalo market, when sold for prime beef. Some of the pure bred Angus will also be sold for beef, but the grades will make the most money, because they are cheaper to raise. Cross breeding adds vigor and produces rapid growth. The pure bred is stronger than the grade, so we know that the calf will have the tendency to fleshen, inherited from the pure bred sire; while the mother has the tendency to give plenty of milk, also inherited from a pure bred advanced Holstein sire.

Challenger, International Grand Champion Steer, 1903 was the calf of a grade Holstein cow mated with a very beefy line bred bull, such as we are offering the farmers at the present time at very moderate prices.

LIME AND PHOSPHORUS ARE VITAL TO DAIRY ANIMAL

LIME and phosphorus, although they are found in relatively small quantities in feeds, have a great deal to do with milk production and building up the body of the unborn calf. If the cow does not have enough of these elements in her ration she will draw on the supply in her body for a time, and heavy producers commonly do this. Therefore, says the United States Department of Agriculture, it is a good practice to feed cows well when they are running low in milk yield and when they are dry, so that they may store up these elements as well as others in their bodies for use when the large demand is made.

The common view is that cows need only enough feed for maintenance, but experiments carried on by the department show that this is not true. The cow is a milk manufacturing plant, and, like many factories she must have a reserve supply of materials to draw on when heavy demands are made. A cow that has been well fed when dry and has stored up this reserve is able to produce more on full feed than a cow that has given only a maintenance ration during that resting period. In this way a cow can utilize her capacity the year round although she may not be giving milk all the time.

In keeping up the necessary lime and phosphorus supply it is well to keep in mind the fact that certain feeds are richer than others in these elements. The feds which contain the most are the legume hays, which include cowpea, soy bean, the clovers, and some others. Of those mentioned cowpea hay contains the most lime, and the others are named here in order of their richness in lime. The lime content of hay depends to a great extent on its quality. Laefy alfalfa hay contains more lime than coarse stemmy hay, and the same is probably true of other hays.

The common dairy feeds that contain the most phosphorus are wheat bran, cottonseed meal, standard wheat middlings, and linseed meal, in the order given. Less common feeds that are high in phosphorus are, in order, sesame-oil cake, rice polish, buckwheat middlings, rice bran, sunflower-seed cake, rapeseed cake, buckwheat bran, and malt sprouts.

No grain or other concentrates mentioned anywhere near so much lime as the legume hays; and no kind of roughage contains phosphorus in quantities comparable to those found in the concentrates mentioned above. Grasshays, corn silage, and corn products with the possible exception of those made from the germs are low in both lime and phosphorus.

TREATING SHEEP FOR STOMACH WORMS, FEATURE OF UNITED STATES EXHIBIT

"THE Story of the Stomach Worm," is the title of a demonstration and exhibit shown by the United States Department of Agriculture at the International Live Stock Exposition, Chicago, December 2 to 9. For several years the department has been testing methods for the prevention of injury and loss by this parasite, which is one of the most serious pests of farm sheep. Following a careful study of the life history of the stomach worm, a practical and oinexpensive treatment has been found that will prevent stomach-worm injury.

In its exhibit experts of the department demonstrated with a pen of wormy sheep the method of giving this treatment, known as the bluestone treatment. The simple apparatus necessary, and the proper solution to use, was also shown to those interested.

Stomach worms are particularly destructive to young lambs, causing stunted growth and losses sufficient to wipe out all profit from sheep raising. By proper use of the bluestone treatment losses from stomach worms are prevented, at small cost and lambs thrive and reach market size at an early age. If the sheep man will acquaint himself with the principal points in the life of this worm, and apply the bluestone treatment at the proper time, most of the losses caused by the stomach worm will cease.

VETERINARY DEPARTMENT

CHRONIC LAMINITIS

I have a five year old mare, who got in a cornfield and ate too much new corn and now has the founders. Her front legs seem to pain her as she lifts them up all the time. What can I do for her? The local veterinarian did not help her.—M. F., Caro, Michigan.

—From the history given in this case I am of the opinion the mare is suffering from chronic laminitis, a disease that is incurable. Moderate cases can be remedied somewhat by proper shoeing. No doubt your veterinarian did all he could in this case to prevent the disease from becoming chronic, a thing that is liable to happen in any case of laminitis or founders. Better consult your veterinarian as to proper shoeing of the animal if this is advisable. It is necessary to make an examination of the feet before giving advise as to shoeing.—John P. Hutton, Associate Professor of Surgery and Medicine, M. A. C.

WIND PUFF

Is there any cure for wind puff on a horse's leg? The horse is sound in every way, as far as is known. Also have a sow that after calving last spring became poor and stiff in her limbs. She ate fairly well but soon became so poor and helpless we killed her. We did not milk her for three months. On investigating her inwards found them covered with dark spots or lumps. Was the cow diseased or could she have injured herself during calving?—C. F., Conklin, Michigan.

—The term "wind puff" is usually applied to an enlargement of the bursae located at the lateral part and just above the fetlock joint of the horse. If there is no lameness connected with the blemish, it is very questionable if it would be advisable to treat. Rest, absorbent applications and bandages would be indicated. However, when the animal is returned to work the blemish is prone to return. In case of lameness, I would advise securing the services of a qualified, graduate veterinarian.

Regarding the disease of the cow, from the meagre description of conditions found it would be impossible to say what the trouble was but possibly was not caused by injury during freshening.

FROM MICHIGAN BREEDERS

MAKES SEVERAL GOOD SALES

Mr. Wm. C. Dicken, proprietor of Riverview Hereford Farm of Smyrna, Michigan, and breeder of both Polled and Horned Hereford cattle dropped us a friendly letter the other day. In it he advised that he had made several sales during the past year. One was a cow sold to C. W. DeGrew of Belding; another a bull to A. T. Laux and C. E. Bowen, Smyrna; bull to Richard Conzzins, Muir, bull to Seth C. Partridge, Greenville; bull to J. E. Stauffer, Alto, Michigan. Mr. Dicken also advises that Mr. Chas Lampkin of Lowell has just purchased a carload of grade Hereford Calves at Kansas City, Missouri which he will keep to breed. "The first of their kind to be shipped into this section for that purpose." says Mr. Dicken.

REPORTS TWO SALES

"Last week we sold a young bull, 12 months old, weighing 960 pounds, to Guy R. Bill of Snover and also a six-months-old calf, weighing 620 pounds, to R. M. Watts of McIvor, Michigan." writes L. C. Kelley and Son, Shorthorn breeders living near Plymouth, Michigan, in a letter dated November 22.

SOLD FINE BOAR

After having read your article in your issue of November 11th regarding the purchase of the Duroc-Jersey boar by Schaffer Bros., I wish to tell you of a Duroc-Jersey boar that I sold to Miland Young of Wheeler on November 7th. He was farrowed on February 4th 1922, and at the age of 248 days weighed 397 pounds. He was sired by Barnes' Fancy King No. 215475 whose line of breeding runs strongly to both Ira Jackson's and Brookwater's stock.

Mr. Young is the proud owner of 20 spring gilts that he intends to breed to this boar for early spring farrow.—W. U. Barnes, Wheeler, Michigan.

PLANTING AN ORCHARD

(Continued from page 26)

Customers who come to the orchard for fruit are rapidly being educated to prefer flavor to the other qualities. Every year the demand for such fruit is improving and promises to continue to do so. Good roads and automobiles make 50 or 60 miles to an orchard merely a pleasure trip. A location within that distance of a large city may well be considered as within the territory of the home market. Varieties judiciously selected so as to give a succession will enable one to dispose of a large crop.

Perishable fruits that must be sent to a distant market should be chosen for their shipping qualities. which usually requires a sacrifice of flavor. The Elberto peach is a good example. It can be shipped like a rubber ball, so the greater part of the peaches are shipped are of this variety. But would our peach growers ever offer it to another?

Cherries are limited to a few varieties. Besides the Early Richmond for first and the Montmorency to follow, there are not many grown in Southern Michigan for market, though the English Morrilla should receive some attention, since it ripens a month later than the others. In the Traverse Bay region it is a favorite.

Among the plums the Burbank has been extensively planted. It has proved the most satisfactory of the Japenese varieties, but the fruit grower may now ask himself whether or not it is best to set out this tree. It bears early and produces heavy crops. The fruit is ripe before the Domestics, and it is attractive in appearance, but will customers tolerate it if they can get Lombards, Gages or any one of a dozen European varieties? By the time a plum orchard, planted now, begins to bear, will not customers have learned to discriminate?

The pear, what can be said about that? At present the blight makes it about the most uncertain of fruits. As soon as that difficulty is overcome it should be a promising fruit.

The apple is in a class by itself. Near the large cities there is a good demand for summer and fall fruit, picked green, but it is a market depending largely on the good road and the automobile. The outlook for fall fruit which has to be shipped far is poor. Winter fruits should have a good future. Experienced growers advise limiting the planting to four or five varieties and these such as are suitable to the locality. A variety good in one place may be poor in another.

THE CERTIFICATION OF NURSERY STOCK

OWING to the number of fruit trees furnished by nurseries which prove untrue to name, the certification of nursery stock by some trustworthy organization has been suggested, one plan proposed being the examination of bearing trees while in fruit and certifying of the scions to be used in propagating.

This method of certifying the scions would be helpful if the practice could be country wide, but the certification is confined to Michigan, it will not be beneficial since less than ten per cent of the trees planted in this state are grown in Michigan nurseries, and even though planters wish to secure trees grown from certified scions, they will not be able to obtain them. We fear also that the certifying of the scions will not always secure for the planters trees that are true to name. The mistakes made in varieties are either the result of errors made by the honest nurseryman, and of errors or the fraudulent filling of orders by dishonest nurserymen.

Michigan nurserymen as a class compare favorably so far as honesty is concerned with the men in any other line, but we have known of nurserymen in Michigan as well as in other states, who apparently do not hesitate if they do not have the varieties ordered, to put in other kinds of which they have a surplus, labeling them according to the order. These men are not likely to change their methods and would be most active in calling attention to their certified stock. It would be an easy matter for them to secure a few certified scions and their catalog and other literature could be so worded that the public would think that they had certified stock only.

Each year there is an increased tendency for Michigan nurserymen to obtain their fruit trees from nurseries in New York, Connecticut, Pennsylvania, Maryland, Ohio, Indiana, Illinois, Iowa, Missouri and other States and even those who formerly grew large numbers of fruit trees now depend largely upon other nurseries for their supply except perhaps of peach trees, and igve their haps of peach trees, and give their mental trees and shrubs.

In Massachusetts, they have attempted in a small way the actual certification of fruit trees. A metal tag with the name of the variety is fastened to each tree by running a small wire through a branch and sealing it. There is no opportunity for fraud when the individual trees are marked in this way.

It is quite feasible with the most varieties and would be reasonably safe with all sorts if certified scions are used. As carried on in Massachusetts the actual cost of certifying the trees is three cents each. In Michigan the benefit would be limited by the comparatively small number of trees in the nurseries.—L. R. Taft, State Horticulturist.

One Week each Month and note the difference
MORNING
EVENING
KOW-KARE

You CAN get more milk from your cows—now, and all through the winter and spring. Read how—and why—then act.

Late fall, winter and spring months are a severe strain on the milch cow's system. Winter feeds are harder to assimilate and turn into milk than green pasturage. The digestive and milk-making organs become run down. Less milk and lowered vitality results.

BUT—you can easily maintain vitality at summer level and decidedly increase the milk flow by a one-week-a-month use of Kow-Kare. This famous medicine for cows tones up the genital and digestive organs—enables them to throw off disease and make milk faster.

Thousands of dairymen follow this plan and find the very slight cost of the treatment repaid a hundred fold. Only a tablespoonful of Kow-Kare morning and night is required—and only one week out of the month.

If disease does creep into the herd, Kow-Kare goes to this origin of the trouble and acts promptly. For *Barrenness, Retained Afterbirth, Abortion, Scours, Milk Fever, Bunches, Loss of Appetite.* etc., Kow-Kare has been the standard remedy the country over for twenty-five years.

Make a test of this more-milk plan—try it on part of your herd and convince yourself. Your feed dealer, general store or druggist will supply you—large size Kow-Kare $1.25; medium size 65c. If your dealer is not supplied, we mail, postpaid.

Write for valuable free book, "The Home Cow Doctor."

SILVERCREST KENNELS, Gladwin, Mich.

Complete Dispersion Sale of Holstein-Friesian Herd

6 1-2 miles west of Lake Odessa, Mich., Dec. 14, 1922, beginning at 2 p. m.

25-Pure Bred Registered Females-25
2-Pure Bred Registered Males-2

Twin heifer calves whose Dam is a 27lb. cow and their Sire a 30lb. bull. This herd was tested Nov. 13th under State law and passed as free from all infection.

A number of these cows have been recently tested for production records. Following are some of the results of seven day tests:

	Milk	Butter
Cow No. 159575—12 years old	761.2lbs.	26.474lbs.
Cow No. 206121—10 years old	532.2lbs.	24.070lbs.
Cow No. 427844— 6 years old	464.7lbs.	21.105lbs.
Cow No. 506145— 4 years old	623.7lbs.	27.121lbs.
Cow No. 538236— 4 years old	502.2lbs.	23.712lbs.
Cow No. 612617— 2 years old	446.6lbs.	24.155lbs.

Fifteen of these females will be recently freshened at the time of sale.

This is an estate settlement sale and every animal will be sold to the highest bidder. Shelter tent in case of bad weather. The 160 acre farm will also be sold at auction at this sale. A good dairy farm as the records will show.

Terms for stock—Cash or good approved notes with interest at 7%. Notes drawn payable in eleven months.

Terms for farm must be either cash or securities readily converted into cash. For catalogs address, *TONY McCAUL, Clarksville, Mich.*

McCAUL & CHEESEBROUGH, Owners.

POULTRY BREEDERS' DIRECTORY

Advertisements inserted under this heading at 30c per agate line, per issue. Commercial Baby Chick advertisements 45c per agate line. Write out what you have to offer and send it in. We will put it in type, send proof and quote rates by return mail. Address The Michigan Business Farmer, Advertising Department, Mt. Clemens, Michigan.

POULTRY

We yet have a few hundred Pullets in Leghorns, Barred Rocks White Wyandottes and Orpingtons. The most of these Pullets are near laying age and should be put into winter laying quarters soon. If you want a flock of winter layers, write us now.

Also Cockerels, Bronze Turkeys, Toulouse Geese and Pekin Ducks.

STATE FARM ASSOCIATION
Kalamazoo, Mich.

PULLETS, HENS AND COCKERELS

S. C. White Leghorns and S. C. and R. C. Black Minorcas. Must make room before cold weather. About ready to lay.
LAPHAM FARMS, Pinckney, Mich.

S. C. ANCONA COCKERELS HATCHED FROM H. Cecil Sheppards very best. Only a few, order early. $3.00 to $5.00.
H. CECIL SMITH, Rapid City, Mich., R. 2.

S. C. RHODE ISLAND WHITES. THOROUGHbred cockerels and pullets for sale.
JNO. A. HARTGERINK, Zeeland, Mich.

LEGHORNS

LEGHORNS

S. C. Buff Leghorn Hens, Pullets and Cockerels. Hens and pullets $2.50 each; cockerels $3.00 to $5.00 each. Show birds a matter of correspondence. **LAPHAM FARMS, Pinckney, Mich.**

COCKERELS AND PULLETS, S. C. W. LEGhorns, Tom Barron strain, 250 egg utility line, April hatched, $1.35. C. O. D.
CECIL W. BOVEE, North Star, Mich.

FOR SALE May hatched S. C. White Leghorn Pullets also Rose and Single Comb Rhode Island Red Pullets. **VALLEY RIDGE POULTRY FARM, Bloomingdale, Mich.**

S. C. BUFF LEGHORNS AND BUFF ROCK cockerels also a few yearling yearling Brown Leghorn hens at farmers prices.
E. B. HOLLENBECK, Athens, Mich.

FOR SALE—R. C. BROWN LEGHORN cockerels the big kind. These are extra good. $2.00 each, one or more. **E. HIMEBAUGH, 4[illegible] Marshall St., Coldwater, Mich.**

BUFF LEGHORNS—SINGLE COMB. Early Hatched Cockerels.
J W. WEBSTER, Bath, Michigan

RHODE ISLAND REDS

RHODE ISLAND REDS, TOMPKINS STRAIN Both combs. Stock for sale after September 15th.
WM. H. FROHM, New Baltimore, Mich R. 1.

ROSE COMB R. I. REDS, WHITTAKERS strain. Cockerels (April hatch) $2.00. Satisfaction guaranteed. **HAMPTON & SONS, Bangor, Mich.**

WHITTAKER'S R. I. REDS, 200 SINGLE comb red pullets at $2.50 to $5.00 each. Also both Rose and Single Comb cocks and cockerels. Write for calatog. Interlakes Farm, Box 4, Lawrence, Mich.

ORPINGTONS

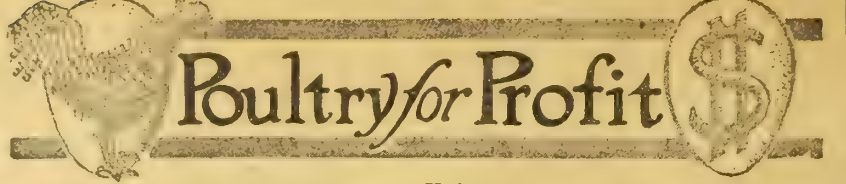
PURE BRED MAMMOTH BRONZE TURKEYS Champion strain. Large and vigorous.
MRS. B. SMATTS, East Jordan, Mich., R. 1.



Poultry for Profit

CHICKEN POX OR ROUP

I have been losing quite a number of chickens. Their heads swell up on one side, and in a few days it breaks open and kills them. This seems to be only in the half grown chickens. Their heads look yellow and pale looking. They have a large well ventilated coop, and are fed corn, oats, buckwheat and sour milk. Would the sick ones hinder my selling the healthy ones?—F. B., Michigan.

—The symptoms described by you would indicate that the chicks are affected with a form of either Chicken Pox or Roup. A postive diagnosis could not be made, however unless the birds were sent to the College and a post mortem made. We have noted this trouble is liable to occur where chicks have been late hatched and over crowded especially when they are not encouraged to roost while young. The other birds in the flock are marketable although in all probabilities they would be rather light in weight if this condition is very prevalent. We would suggest that you eliminate all diseased specimens and feed the balance of the flock a moist mash containing equal parts by weight of bran, middlings, corn meal, and ground oats plus ten per cent meat scrap. This mash should be fed once a day. A scratch feed of cracked corn, and wheat should be given both in the morning and in the evening with a heavier feed at night.—E. C. Foreman, Department of Poultry Husbandry, M. A. C..

EXAMINATION REQUIRED

I have a nice flock of Plymouth Rock chickens, been doing well every year, but this summer, have lost lots of them and keep on losing them. They don't look sick at all that I notice, but find some dead under the roost, I open them, all the same trouble. The liver is spotted yellow and rotten. They have good feed, lots of sour milk and fresh water all of the time. Please tell us what should be done, I am afraid I will lose the rest of them.—J. D. Levering, Michigan.

—The disease spoken of cannot be diagnosed without an examination of a diseased bird or the carcasses of the birds which have recently died. The spotted liver may be found in blackhead, tuberculosis, or even other diseases. The best way of settling this question is to examine some of the fresh tissues from the diseased birds.—H. J. Stafseth, Res. Asso. in Bacteriology, M. A. C.

OVER $45,000,000 LOSS YEARLY FROM BAD EGGS

FEW people understand that eggs are almost as perishable as meat or milk. They belong to the same class of food, but just because they are enclosed in a hard shell, people think they will stand almost any kind of treatment.

Government experts estimate a loss of over $45,000,000 every year from bad eggs. This loss can be largely prevented by better handling and marketing.

Five per cent of the eggs in the United States are lost through shrinkage. The shell of an egg is porous, so that the developing chick can get air during the incubation period.

Seventy-four per cent of an egg is water. Whenever an egg is in a temperature above freezing, this shell. The higher the temperature and the more circulation of air there is, the faster the evaporation takes place. Eggs grow stale in warm poultry houses, in hot kitchens on the farm, or in the cupboards of the consumer. Egg dealers count that three stale eggs are equal to a rotten egg and pay accordingly.

Gather your eggs daily and keep them in a cool place. Market them as often as possible—at least once a week—better twice a week.

Blood rings cause a loss of 5 per cent of the eggs produced in the water is evaporating through the United States. This point was covered in the discussion of the preceeding chart.

Two and one-half per cent of the eggs on the market are rotten. Black rot, the rot caused by fertile eggs, has already been discussed. It is the most common rot and, as suggested before, can be prevented by producing infertile eggs

There are other kinds of rotten eggs. Bacteria gets in to the egg through the porous shell. These bacteria develop, causing various kinds of rot and mold. The tough inner membrane of the egg is practically bacteria proof unless it becomes damp.

Don't let hens nest on the damp ground. Keep the nests clean and dry. Don't wash any eggs you intend to sell. This destroys the inner protective membrane and allows germs to enter. Large egg dealers are sending out printed instructions, "Under no conditions wash eggs."

Two per cent of the eggs produced are broken. Some are broken by you on your way to market, but you are not as responsible as the local packers, the railroads, and the truck drivers of the large cities.

Two per cent of the eggs which come to market are dirty. Customers do not want dirty eggs. The egg dealers count three dirty eggs as the equivalent of one rotten egg, and deduct from the price accordingly.

Keep the nests clean. If eggs get dirty during the muddy weather in the spring, wash them, and use them immediately at home. Washed eggs are as good as any if used at once.

Mold spores enter the egg the same as bacteria. The spores grow and the egg tastes musty and ill flavored. Keep the nests clean and dry, and store the eggs in a cool dry place. Never put them in a musty room or cellar, or pack them in musty cases. There is only a small loss from this cause—one-half of one per cent.

Adding these percentages we find that 17 per cent of all the eggs in the United States are unfit for food. Help to prevent this loss by producing infertile eggs, by keeping the nests clean, by gathering the eggs daily, by storing them in a cool, dry place, and by marketing them often.

HOME PRESERVATION OF EGGS

PRESERVED eggs are as good for nearly all purposes as fresh eggs. If the preservative has been properly made and the eggs are fresh when they are put into it, even experts can hardly distinguish the preserved product from the fresh.

Water glass is one of the best preservatives for home use. Use 1 gallon of water glass to 10 gallons of water. Boil the water, then add the water glass, and mix thoroughly. Use only clean, fresh eggs. Pack in a glass or stone jar, or in a wooden keg. Have at least two inches of the solution above the top layer of eggs. Keep your eggs covered, and store them in the cellar or some other cool place.

Water glass costs from 60 to 75 cents a gallon. One gallon will preserve from 75 to 100 dozen eggs. Do not use the solution a second time.

Lime water can be used instead of water glass. Slake three pints of quick lime in three gallons of water. Add one pint of salt, and stir well. Let the mixture settle and pour off the clear liquid for your preservative.

Preserved eggs must be marked as such, if offered for sale.

"Today we have in the United States one cow for every four people while in Japan there is only one cow to every 1,114 people. Milk is undisputably the most important food in the development and growth of the human body. Without its use we would soon be a nation of people of small and undersized stature."—Jessie Hoover.

A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.

Working along entirely original lines Mr. Smith discovered why hens lay less in winter than in summer, and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certaian to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large $1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only $1 on this introductory offer, otherwise, nothing.

Send no money—just your name and address to M. B. Smith, 1260 Coca Cola packages will be mailed immediately.

When they arrive, pay the postman only $1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

TURKEYS—DUCKS—GEESE

BOURBON RED TURKEYS—UNRELATED stock. Order early for low prices. Collie pups for sale. Also Buff Wyandotte Cockerels.
THOS. G. CALLAGHAN, Fenton, Mich.

FINE, LARGE, VIGOROUS, THOROUGHBRED Bronze Turkeys. Wish to lessen my flock. For quick sale. Hens $8.00, Toms $10.00

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

An understanding of the figures on this page as they are revised and preented each month, enables the farmer to see the position of the important factors vhich indicate the trend of business and prices and give a basis for judgment oncerning future agricultural operations.

UMMARY:

The chief elements in the situation are encouraging in all four groups of actors.

. PRODUCTION AND TRADE.

Combined crop output in the United States this year is the third largest ever produced, the production for 1915 and 1920 being slightly in excess of 1922.

Pig iron production has made steady and rapid increase since the low point n July, 1921. The output in October this year registered an advance of 205 per cent over July, 1921.

Bank clearings outside of New York City, for October, show 28 per cent increase over October last year. This is mainly due to big crops and reviving trade but can be partially explained by a 9 per cent advance in the general price level.

II. FOREIGN TRADE.

As shown in last month's review, wheat and pork—two of the major farm exports—were going out of the country in unprecedented volume during the last two fiscal years. The ability of Europe to buy is partly explained by the net imports of gold into the United States, of 946 million dollars during the two years ending July 1, 1922, and of estimated foreign investments by American citizens amounting for the two years to 1,633 million dollars. Net imports of gold cannot and should not continue and are not continuing in this volume. Investments in foreign countries may be expected to keep on and increase if the factor of safety grows. Foreign loans extended by American investors in the fiscal year 1922 were 64 per cent greater than in 1921 indicating increasing confidence in the return of normal conditions abroad.

III. MONEY AND CREDIT.

● At the present stage of the business cycle an increase in interest rates and decline in federal reserve ratio are encouraging for they may signify expanding business activity, bringing greater demand for raw materials and shortly thereafter a larger supply of finished products available for consumption. When such changes come during the crop moving period, they may be reflecting mainly a temporary need for money and credit. Both sets of facts are probably true in the present noteworthy advance in commercial interest rates since last month.

IV. PRICES.

The September, 1922, purchasing power figure, based on prices for the year 1913, was 64, which means that farm products at prevailing prices can buy only 64 per cent as much of other commodities as in 1913. If it were possible to compute the November figure a slight increase would probably be shown but at best the gain is small over 62, the low point in farm purchasing power registered in December, 1921.

When volume of production as well as price is taken into consideration, the situation is more encouraging. A study by the Department of Research in August showed the purchasing power of the 1920 crops, total value basis, namely price multiplied by volume, to be 75; the 1921 crops 61; and the 1922 crops, on August forecasts and July prices, 77. November forecasts and prices might raise this last figure slightly. From this showing, which is more significant than the price relationship alone, farmers are about 25 per cent better off this year than last year but are still over 20 per cent below their 1913 position. It should be remembered that this is the third consecutive year the exchange ratio has been unfavorable.

On November 21, compared with a month previous, 17 out of 24 farm products advanced in price, 6 declined and 1 remained unchanged. Compared with a year ago there are 19 advances and 5 declines.

2. U. S. Department of Labor Relative Wholesale Prices:

Prices in year 1913 equal 100

	Oct., 1922	Sept., 1922	Oct., 1921
All commodities (Weighted average or General Price Level)	154	153	142
Farm products	138	133	124
Food products	140	138	140
Cloth, clothing, etc.	188	183	180
Fuel and lighting	226	244	189
Metals and metal products	135	134	116
Building materials	183	180	159
Chemicals and drugs	124	124	131
House furnishing goods	176	173	180
Miscellaneous	120	116	118

3. Prices of Farm Products at the Farm Relative to 1913:

Prices in year 1913 equal 100

Commodity.	Sept., 1922	Aug., 1922	Sept., 1921
Cotton	161	170	107
Corn	104	105	127
Wheat	115	112	99
Hay	98	96	104
Potatoes	108	137	115
Beef cattle	92	93	100
Hogs	110	114	102
Eggs	156	118	121
Butter	134	124	102
Wool	188	189	95

4. Relative Purchasing Power of Farm Products:

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in September, 1922. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	105	88	66	120	89	93
Corn	68	57	43	78	58	60

1919	111	September	64
1920	86		
1921	67		

MARKET FLASHES

MARKET SUMMARY

All grain steady with demand slow. Corn shows indications of bullish tendency in near future. Beans firm. Demand for eggs and butter brisk and supplies small. Potatoes in large supply and easy owing to decrease in demand. Active trade in poultry. Market for turkeys quiet. All live stock active with sheep higher in price.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

TRADE AND MARKET REVIEW

THE latter part of November showed a slight slackening in business activity and considerably less confidence in the grain markets. At the same time car loadings continued heavy in all lines and the car shortage is still acute.

Many of the potato sections of this and other states are reporting a great deal of difficulty getting a sufficient number of suitable cars to ship out big holdings in warehouses and to this fact is attributed part of the blame for the exceedingly low prices.

We do not see how business can continue the same rate of improvement noted the past several months without a corresponding improvement in agricultural circles. Although the prices of most staple crops have advanced the past ninety days, the farmers themselves have received only a small part of the accruing benefit. Much of the grain crops went into the hands of the dealers early in the season and those who were fore-handed enough to hang onto the grain are reaping nice profits. The condition of the grain farmer is no doubt slightly improved because of the advancing prices of wheat, corn and oats, but the potato farmer is having a bad year of it. He represents a considerable number of farmers and all business is bound to suffer some because of the low price of his product.

The prices of most items of hardware, including stoves, of clothing, shoes, etc., have advanced from 5 to 20 per cent the past thirty days. Cotton has almost doubled in price since last spring, with varying increases in the prices of cotton goods. An up-state merchant recently told us that he would have to pay 5 to 20 per cent more for the same goods today than he paid some months ago. Items which have advanced include shoes, rubbers, underwear, clothing, socks, mackinaws, wool and cotton blankets and most of the dress goods.

The blame for the advancing prices is laid by many to the door of the Fordney tariff law. Even so no one would object to higher prices if all in the same proportion at the same time, and wages also keep up to the level. But that does not happen. Too often we see farm product prices going down while the prices of other commodities go up, but very seldom do we see the reverse.

WHEAT

Little change is noted in wheat prices the last fortnight. Both the Detroit and Chicago markets are about one-half under what they were two weeks ago. In that period prices have fluctuated up and down, with the bulls in control one day and the bears the next. However, to casual observers of the market it would appear that the bulls seem to have the situation well in hand and show little fear of lower prices for some time to come.

Wheat has been moving freely for export from both the United States and Canada, the latter country having already moved about 175,000,000 bushels. Little of this wheat is coming to the United States because of the prohibitive tariff, but instead it is taking the place of American wheat on the English market. So far as practical effects are concerned Canadian wheat might just as well come into the United States as not, as both countries have a large exportable surplus which must eventually find its way abroad.

The Argentine wheat crop is nearing the harvesting period, but reports of bad weather conditions, and prospective low yields offset the usual bearish influence of the crop. Europe is desperately in need of wheat but her purchasing power becomes daily less and inevitably it must soon cease altogether unless drastic measures are taken to stabilize the currency. Germany has been a fairly good customer for American food products since the war, but the mark is depreciating at a terrific rate and the cost of American grain [illegible] in Germany is well nigh prohibitive. Before the war a German mark was worth nearly 25 cents in American money. A year and a half ago it was worth one and one-half cents in American money. Today, $50 will buy a quarter of a million marks. The money of nearly all other nations of the Continent has so depreciated that the people cannot afford to buy the products of other countries with it. And yet, millions of bushels of grain are going across the ocean, and is being paid for some way, and millions more will go.

The mills are active bidders for wheat and that helps keep the price up. Just now there seems to be a slight slump in the market, but we rather expect to see renewed interest in wheat within another week, which is likely to be followed by a dull season over the holidays, after which a second bull movement is not unlikely.

Prices

Detroit—No. 2 red, $1.33; No. 2 white and No. 2 mixed, $1.31.

Chicago—No. 2 hard, $1.18¾ @ $1.19¼.

New York—No. 2 red, $1.32¾; No. 2 hard winter, $1.31¾.

Prices one year ago—Detroit, Cash No. 2 red, $1.25; No. 2 mixed and No. 2 white $1.22.

CORN

If there has been any change in the tone of corn it has been in favor of the bear side although it is doubtful if the market changed much in general. The present outlook is that prices will be lower and the market easy in the near future. Expectations of larger receipts are bearing the market and should these expectations be realized undoubtedly prices would decline sharply. Cars were more plentiful last week and farmers showed an inclination to sell freely. Export business has been dull the past fortnight. However there is some demand as houses at seaboard have been disposing of their supplies in spite of reports that Europe was having her needs taken care of by Argentina. Reports have it that Argentina has about sold all of her surplus and that Europe will soon be back in the American market in earnest. If this be true our slump in this market should be short-lived.

Prices

Detroit—No. 2 yellow, 76c; No. 3 yellow, 75c; No. 4 yellow, 74c; No. 5 yellow, 72c.

Chicago—No. 2 mixed, 71½ @ 73c.

New York—No. 2 yellow, 90¼; No. 2 mixed, 89¾c.

Prices one year ago—Detroit, Old Cash No. 2 yellow at 59c; No. 3 yellow 58c; new yellow Cash No. 3, 56c; No 4, 54c.

OATS

There is nothing we can say about this market except what we have said before. There is no feature to the market. Oats will contiue to act in sympathy with wheat. Country offerings are light and domestic shipping demand moderate. On the close of last week Chicago reported sales of 30,000 bushels were made to go in store.

Prices

Detroit—No. 2 white, 49½c; No. 3 white, 48c; No. 4 white, 46½c.

Chicago—No. 2 white, 43¾c@ 45½c.

New York—No. 2 white 53½c.

Prices one year ago—Detroit, No. 2 white, 38c; No. 3 white, 35@36c; No. 4 white, 30½@33½c.

RYE

Rye followed the trend of other grains during the past fortnight and the present price is slightly under that of two weeks ago. Exporters are bidding for rye but they want it for less than prevailing prices. Last week seaboard reported 100,000 bushels sold for export. We believe this decline to be only temporary and that the market will come back strong in the near future.

Prices

Detroit—Cash No. 2, 89c.

Chicago—Cash No. 2, 83½c.

Prices one year ago—Detroit, Cash No. 2, 87c.

BEANS

The bean market rules steady and firm. Dealers are not getting any more beans than they can readily dispose of. Probably the major part of it is still back on the farms, the holders feeling that prices will be very much higher before the next crop. We rather hold to this view ourselves, but do not think it would be good business for any farmer to hold his entire crop on the strength of that belief.

Prices

Detroit—C. H. P. $6.75 cwt.

Chicago—C. H. P. $8.50 cwt

Prices one year ago—Detroit, C. H. P. $4.20 cwt.

POTATOES

No improvement in the potato market. Prices have taken another drop since our last issue and a great many bushels are still offered in excess of what the market can absorb readily. Farmers living in the vicinity of the large cities have been particularly ready sellers, their spuds commanding from 40 to 60 cents a bushel, depending upon the locality and the quality of the offerings. This price looks good to the truck farmer when compared with the 18 to 25 cents per bushel which the farmers up-state are offered.

There are as usual many daring prophets who still talk of dollar potatoes before the coming of spring but they haven't much real fact to back up their argument. It is true that thousands of bushels are still in the ground and thousands more have been fed to stock and otherwise utilized outside the marketing channels, and it not altogether impossible that the wastage has offset the usuable surplus. But that is a far-fetched conclusion. Nothing but the discovery of a serious error in the government report can, we believe, bring about a substantial increase in potato values. On our part we expect to see better prices even in the face of the government estimate, simply bcause the majority of farmers who have held their crop this long will not sell at the prevailing low prices until the last hope for better prices has gone glimmering. Sooner or later there must develop a scarcity of potatoes, and it won't have to be much of a scarcity, either, to influence higher prices. With everybody praying for higher potato prices it doesn't require much of an excuse or effort to bring them about.

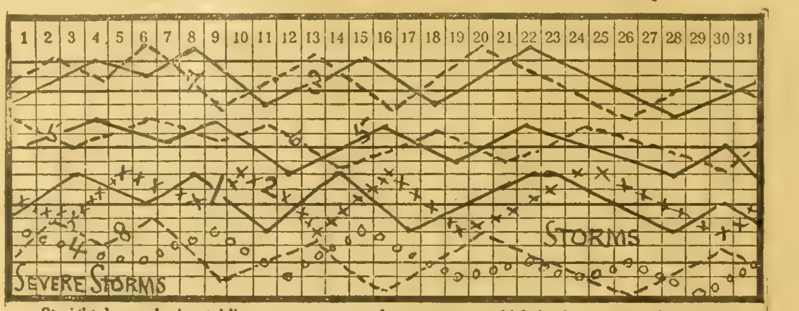
Right in this connection we are sure that our readers will be interested in a letter just received from a subscriber in far-off Colorado. He writes as follows:

"I notice your wail and weeps in your last November issue about potatoes. It is an old Board of Trade saying 'The tail end of a small crop is the big end—while the tail end of a big crop is the small end.' Wouldn't it be a great joke if a big

THE WEATHER FOR NEXT WEEK

As forecasted by W. T. Foster for The Michigan Business Farmer

FOSTER'S WEATHER CHART FOR DEC 1922



Straight, heavy, horizontal lines represent normal temperatures, which is the average of same days of the year for forty years. Crooked lines above normal lines mean warmer; below, cooler; that marked 1 is for section 1, north of latitude 47, between meridian 90 and Rockies crest—2 for section 2 on my section map is for east of meridian 90, north of latitude 47—3, between latitudes 39 and 47 and between meridian 90 and Rockies crest—4, east of meridian 90, between latitudes 39 and 47—5, south of latitude 39, between meridian 90 and Rockies crest—6, east of meridian 90, south of latitude 39—7, north of latitude 43½, west of Rockies crest—8, south of latitude 43½ to Mexican line and west of Rockies crest.

Washington, December 8, 1922.—The cropweather of North America for 1923 will average much less favorable than that of 1922; the good and bad will not be located as in 1922, because the moisture will not come from the same ocean and therefore the same rules about sea level and elevated cannot be applied for two years. In some seasons the moisture floats high, and best crops are above the 1200-foot level; other seasons it floats low, and the best crops are below 1200 feet. When the moisture comes from the gulf stream the summers and winters are warmer; when it comes from far northern oceans they are colder.

Forecast for Michigan: Highest temperatures 9 and 15, lowest 12 and 19; average warmer than usual; not much moisture 9 to 19.

The conflicts of the forces that operate the machinery of the solar system are eternal and fierce; it is not a harmonious family; like the race, it is divided into groups that war on each other, and these wars are brought to our notice, sometimes by unpleasant methods, in our storms and other weather features. It is significantly strange that Homer's writings about the dispositions of planets toward each other. This may be noted in the coming January weather. Saturn will attack earth January 11, and Homer's overlord interferes; that racket in the family will reach our ears through a bad spell of weather. Then January 17, Uranus, to which Homer applied another name, picks a quarrel with Venus, queen of the skies, daughter of the premier of the heavenly host and messenger of peace, between the overlord and the contending armies of Troy. Uranus is very powerful, and before the peace messenger can stop him we will get many a wintry blast as a result of the fierceness of that great family of the milky way.

lot of people in the United States and Europe who do not put away a winter's supply of spuds because there are so many they can't be sold, should be hunting taters at $3 to $5 per cwt. in the spring while now the farmers knowing the taters ain't going to be worth nothin', are feeding them to hogs cattle, sheep, chickens or anything that will eat or nose them out of the barnyard, into a mud-hole or manure heap, any way to get them out of the way. I guess there were more spuds left in the fields of Colorado laying on and on the ground to rot than Michigan raised, and heaps enough to feed your county and Detroit sold at 25 cents a sack for hog feed."

Prices

Detroit—92c cwt.

Chicago—83c cwt.

Prices one year ago—Detroit, $2.04.

HAY

Markets have shown very little activity during the last week and prices in some markets have declined owing to heavy receipts of the poor grades. Good hay is meeting with a steady demand and very little is allowed to accumulate at any of the markets.

Prices

Detroit—No. 1 Timothy $17@$17.50; light standard $16.50; light mixed $16.50@$17.

Chicago—No. 1 light clover mixed $19@$20; No. 1 Timothy $21@$23; No. 1 clover $19@$20.

Prices one year ago—Detroit, No. 1 Timothy at $19@$20; standard and light mixed $18@$19; No. 2 Timothy $17@$18; No. 1 clover mixed $16@$17.

WEEKLY MARKETGRAM

U. S. Bureau of Agricultural Economics

Washington, D. C. for the week ending December 2, 1922.

Live Stock and Meats—Compared with a week ago Chicago hog prices ranged from 10 to 20 cents higher. Native beef steers largely 75 cents higher, western grassers mostly 50 cents higher. Beef cows and heifers steady to 25 cents higher. Canners and cutters weak to 10 cents lower. Bulls strong to 15 cents; Veal calves unevenly 50 cents to $1.25 higher. On December 2 Chicago hog prices were 15 to 20 cents lower than Fridays average. Cattle, sheep and lamb practically unchanged. Dec. 2, Chicago prices: Hogs, top $8.35; Bulk of sales $7.90-$8.25; Medium and good beef steers $7.25-$13.50; Butcher cows and heifers $3.60-$10.75; Feeder steers $5.25-$7.75; Light and medium weight veal calves $8.50-$9.50; Fat lambs $13.25-$15.50 Feeding lambs $12.25-$14.25; Yearlings $9.50-$13.50; Fat Ewes $4.50—$7.75. Stocker and feeder shipments from 12 important markets during the week ending Nov. 24 were: Cattle and calves 138,489; Sheep 135,098. In eastern wholesale fresh meat markets, beef was steady to $2 higher, with lamb steady to $2 lower. Veal steady to $1 higher on better grades; Mutton ranged from $1 lower to $1 higher on better grades with pork loins steady to $1 lower. December prices good grade meats. Beef $14-$17; Veal $13-$17; Lamb $23-$27; Mutton $11-$17; Light pork loins $17-$20; Heavy lions $13-$18.

Feed: Mill feed market inactive; Offerings fair, demand light. Good inquiry from Texas and southeast. High protein feeds weak and offered at $1-$1.50 below mill prices by the sellers. Production good especially of corn feeds. Receipts and movement fair. Supplies in the dealers hands are ample for present need. Quoted December 1, Bran $22.75, Flour middlings $25.50, Rye middlings $21.50 Minneapolis; 36 per cent cottonseed meal $42.75 Memphis, $43.50 Atlanta; White hominy feed $29 St. Louis, $30 Chicago; 34 per cent linseed meal $49.50 Minneapolis, $51 Buffalo; Gluten feed $38.35 Chicago.

Fruits and Vegetables: Potatoes generally steady in consuming markets, steady at eastern shipping points, slightly weaker at northern points. Cabbage still continues to strengthen Danish stock up $4-$9 per ton. New York Baldwin apples firm in city markets and at shipping points. Northwestern boxed stock weaker. Yellow-onions up 25-75 cents per 100 pounds. Prices reported December 2: Eastern round white potatoes sacked and bulk $1.25-$1.50 per 100 pounds in leading markets, 30-95 cents f.o.b. shipping points. Northern stock mostly 90 cents-$1.15 in midwestern cities, 60-70c f.o.b. New York Danish type cabbage $20-$27 per ton bulk in consuming centers, $12-$16 f.o.b. Northern Danish $15-$16 in Chicago. New York Baldwin apples $4.50-$5.50 per barrel in leading markets $3.75-$4 f.o.b. shipping points. New York and Michigan Rhode Island Greenings $5-$5.50 in Chicago. Virginia York Imperials $3.50-$4.25 in eastern markets. Northwestern extra fancy boxed Jonathans $1.50-$2.25. Middlewestern yellow onions $2-$2.75 per 100 pound sack in leading markets, New York stock $2.25-$2.50 in New York City.

Diary Products—Butter markets steady. Supplies light, demand good, but rumors of possible imports partly responsible for unsettled feeling, especially at New York where prices declined ½c on the first. Markets are out of line with each other as Chicago is now higher than New York. Closing prices 92 score butter: New York 53c; Chicago 54c; Boston 52c. Cheese markets steady to firm but trading quiet following sharp advances averaging about 1½c on Wisconsin cheese boards Monday. These advances are supported to some extent by decreasing production and fairly good demand even at the high prices. Cheese prices at Wisconsin Primary markets December 1: Twins 26½c; Daisies 27¼c; Longhorns 26¾c; Square Prints 27½ cents.

MISCELLANEOUS MARKET QUOTATIONS

BUTTER—Best creamery, in tubs, 45@48c per lb.

EGGS—Fresh, current receipts, 48@50c; fresh, candled and graded, 50@53c; refrigerator firsts, 26@30c per doxen.

APPLES—Greenings, $1.25@1.50; Spy, $2@2.50; Jonathan, $1.75@2.25; other varieties, $1@1.50 per bushel; western boxes , $2@3.

POPCORN—4½@5c: Little Buster, 7½@8c per lb.

ONIONS—$2@2.25 per sack of 100 lbs; Spanish, $2.15@2.25 per crate.

DRESSED HOGS—90 to 100 lbs, 11@12c; 130 to 160 lbs, 10c; heavy 6@8c per lb.

DRESSED CALVES—Choice, 15@16c; medium, 12@14c; large, 5@10c per lb.

LIVE POULTRY—Best springs, 29c; leghorns, 15c; large fat hens, 21@22c; medium hens, 18c; small hens, 14c; old roosters, 15c; geese, 20c; large ducks, 20c; small ducks, 17@18c; turkeys, 35@40c per lb.

WOOL MARKET

The slight easiness in fine wools last week was accentuated by the quiet trading recently, the Thanksgiving holiday being a factor, and fine and fine medium wools are quoted 1c off, while the coarser wools, though quiet, maintain a very firm tone at unchanged prices.

Quotations on mid-winter or so-called "native" wools in large lots—such prices as are obtained by the farmers' pools—are as follows(f. o. b. Chicago): Fine and fine medium staple, 52@53c; ½ blood staple, 51@53c; ½ blood clothing, 48@49c; ⅜ blood wool, 47@48c; ⅞ blood 44@45c; low ¼ blood, 35@37c; braid, 30@32c. Western ("territory") wools sell, Chicago basis, as practically these levels.

BUTTER MARKETS

During the week ending Dec. 2nd the butter markets, while equally firm on the surface, began to manifest an undertone of nervousness which did not exist before. This was largely the result of indications that the domestic supply would soon be increased and of the advance of domestic prices to a level where purchases of foreign butter in sizeable quantities were actually made. Many of the trade questioned whether the reduced demand would be able to absorb any material increases in supplies and as a result, though the street stocks of fresh butter were only barely sufficient to satisfy the demand, fewer predicted further advances of any importance.

Belgium Imported Melotte

22% Cut In Price

MELOTTE, the Edison of Europe, manufacturer of the greatest Cream Separator the world has ever known, announces a sweeping reduction in prices. Labor conditions in general together with tremendous re-building and re-organizing efforts put forth by this big man of Belgium has resulted in cutting production costs to the bone.

And right now *at this particular time* exchange rates are extremely favorable. Take advantage of this condition while it lasts. Get the most for your American dollar. Buy now and save money.

Before buying any separator find out how the Melotte has won 264 Grand and International Prizes and how, for efficiency of skimming, ease of turning, convenience of operation and durability—the Great Belgium Melotte has won every important European contest. Find out why 500,000 Melotte Separators are in continuous use today.

Our 15 Year Guarantee

Every Belgium imported Melotte Cream Separator is sold under an absolute, ironbound, 15-year guarantee. No Melotte is ever sold except under this guarantee. A guarantee written in plain English so that you can understand it. A guarantee that is 100% stronger than any other separator guarantee ever made. A guarantee that really guarantees something—upon which you can absolutely rely—an absolute protection to the purchaser, and which binds us to our bargain.

What U. S. Government Says:

Vibration of a cream separator's bowl will soon cost you more money in cream waste than the price of your separator. U. S. Government Bulletin No. 201 says that a perfectly true motion of the bowl is *absolutely necessary*. the bowl is the vital part of any separator—the part where the cream separation takes place.

Self-Balancing Bowl

The Belgium Melotte is the only single-bearing-bowl separator made. This patented bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years' use as when new. Positively can not ever get out of balance—can not vibrate and thus cause cross currents which waste cream by re-mixing with the milk. The 600 lb. Melotte turns as easily as the 300 lb. machine of other makes. Spins for 25 minutes unless brake is applied. No other separator has or needs a brake. The Melotte bowl has solved the problem of perfect skimming.

$7.50 after 30 Days Free Trial

—NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE

We will send an Imported Melotte Cream Separator direct to your farm on a 30 days' absolutely Free Trial—no deposits—no papers to sign—use it as if it were your own separator. Satisfy yourself that the porcelain bowl is as easy to clean as a china plate. Compare it—test it in every way.

When you are convinced the Melotte skims cleaner, turns easier, washes quicker, has one-half less tinware to clean, lasts longer than all others, then pay $7.50 as first payment and the balance in small monthly payments until the separator is paid for.

Send No Money!—Easy Payments!

After 30 days free trial, then send only the small sum of $7.50 and the balance in small monthly payments. The Melotte pays for itself from your increased cream checks.

You're not to send one cent until you've used this great Belgium Melotte and have made up your mind it is the machine you want. Keep it for 30 days and use it just as if it were your own machine.

Compare the Melotte separator with any other—test them side by side. Then send your milk to the creamery. Let *them* prove which separator skims the cleanest.

*Also Three Big Farm Organization Meetings Agree—Michigan Leads at International—
Dr. Friday Will Probe Milk Prices—A Complete Short Story and Many Other Features*

Friday Will Probe Milk Prices

Dr. David Friday, president of the Michigan Agricultural College, announced last week that he will investigate the milk business in Detroit to see if it is possible to reduce the price of and still pay the producer more for his milk.

He said he hoped to be able to get it down to 12 cents.

About a month ago farmers producing for the Detroit market demanded more money from the distributors. The distributors refused to accede, on the ground that it would necessitate raising the retail price.

No agreement could be reached, and Nov. 30 the farmers and distributors decided to submit the matter to Dr. Friday. A meeting was held in East Lansing, and Dr. Friday agreed to an increase to the farmers of 40 cents per 100 pounds of milk, making their price $3.

He also agreed to the increase in the retail price form 13 to 14 cents a quart. This increase was on condition that he be permitted to examine the books of the distributors and producers.

These new prices were to hold for December, and after that new prices were to be fixed.

$3.45 Milk Sold for 12 Cents

Since that meeting Dr. Friday has been investigating conditions in other cities. He has found that in Philadelphia milk sells retail for 12 cents a quart, and the farmers receive $3.45 per hundred pounds, 2 cents cheaper for the public and 45 cents more per 100 pounds for the producers.

Milwaukee has milk for 10 cents a quart, and Kalamazoo gets it for 13 cents a quart, with the farmers receiving $3.40 per 100 pounds. The producers' price is $3.20 but a premium for good quality milk makes it practically $3.40, according to Dr. Friday.

"I am going to see if it isn't possible to cut 50 cents per 100 pounds out of the cost of production and 50 cents out of the cost of distribution," said Dr. Friday. "That will permit 12-cent milk."

Resolutions of Farm Organizations

Resolutions adopted by the American Farm Bureau Federation in convention at Chicago, December 11th to 14th. See story on page 3.

RESOLVED: (1) That we urge further progress toward proper marketing of farm products as coordinate with economic production in equalizing the present handicap of the American farmers;

(2) That the American Farm Bureau Federation shall continue to give outstanding attention to the marketing problem and continue the policy of strengthening and encouraging co-operative commodity marketing organizations;

(3) That the American Farm Bureau Federation maintain a division of co-operative marketing, to be managed and directed by capable and experienced co-operative marketing specialists;

(4) That this division shall in every possible way stimulate and promote the co-operative marketing movement in the United States and shall plan and carry out an extensive national educational campaign for co-operating marketing of farm products;

(5) That the American Farm Bureau Federation, acting through this division, shall formulate the fundamental principles of true commodity co-operation as exemplified in the history and experience of successful farmers' co-operatives and give the same wide circulation;

(6) That this division shall tender its services as counselor and advisor to state and district organizations and agencies on questions relating to type and plans of organization, campaign methods, problems of operation and other related subjects;

(7) That this division shall endeavor to unify or co-ordinate all organizations, agencies and interests in behalf of a comprehensive and united program of co-operative marketing in the United States;

(8) That the Farm Bureau Federations, National, State and County, shall be active in educating producers of farm and live stock products to the advantages offered by the co-operative marketing agencies that have been and shall be established, stressing the fact that the success of these agencies depends primarily upon the loyality and patronage of the producers themselves.

Resolutions adopted by the Michigan State Association of Farmers' Clubs, in convention at Lansing, Michigan, December 5th to 6th. See story on page 3.

1. We endorse and approve of the Congressional Farm Bloc in statesmanship, it has broken down sectional lines and has followed the saying of Abraham Lincoln "That He would work with any man for the things which are right."

2. We insist on rural credit measure which will afford farmers access to credit in the same measure as other industries. We also indorse the Norris Bill for an export commission suitably financed by the federal Government to conduct our foreign trade.

3. We ask that the water power of the country remain in control of the whole people or to be developed by the United States Government directly or indirectly.

4. We favor the enforcement of the prohibition law and will support for office only those who are pledged in favor of the 18th amendment and enforcement of same. We are opposed to any weakening of the Volstead Law by permission to manufacture beer or wine.

A motion was made by Hon. A. B. Cook of Owosso that the Association go on record as favoring the most liberal dealing with the boys disabled in the World War. This motion was carried.

Resolutions on State Affairs

The State Association of Farmers' Clubs do hereby endorse a policy of close co-operation with all existing organizations of our state that have for their object a better country life, and that we urge upon every Farmers' Club in our territory the opportunity of developing an educational program that shall reach every phase of country life.

Whereas, the heavy traffic on our roads by busses, trucks and other vehicles used to carry freight or passengers for hire, greatly increase the cost of maintenance, we recommend that the Legislature amend the Motor Vehicle Laws so that a higher tax be placed on such motor vehicles and that the money raised from such increased taxation be used for highway purposes.

Whereas, the real property tax in Michigan has become oppressive and the tax Constitutional Amendment was defeated at the last election on account of lack of a better understanding of merits, and, whereas, relief is necessary in the matter of real taxation immediately, therefore, Be It Resolved, at the State Association of Farmers' Clubs recommend to the coming Legislature the passage of a gasoline tax to be used for the improvement and maintenance of our highways, thereby reducing the amount to be raised by property tax.

Resolved that the Quail be permanently placed on the list with the Michigan song birds, that its protection may become permanent.

Whereas, the State Income Tax has met with untimely defeat and, whereas, the tax system places on real estate a burden wholly out of proportion to its rendered compensation and, Whereas, the old tax system, good in its day is completely outgrown, Be It Resolved, that we reaffirm our faith in the principle that net income be made to bear a fair share of the expense of state government and indebtedness.

Whereas, President Friday has won a National reputation as an economist of first rank and Whereas, his services to the farmers' of Michigan will be beyond compution and Whereas, the proper agricultural alivement is now so difficult to state in the light of diversified interests, Therefore, Be it Resolved, That we extend to our new President at M. A. C., our most hearty co-operation and wish further to reassure him of our faith in his unquestioned ability to deal with the agricultural situation.

The following resolution was presented by Hon. J. N. McBride and adopted: The need of an agricultural conference to establish a working program or better understanding was apparent, Therefore, It Was Resolved, That the president assume the initiative in appointing a committee to provide for a conference of delegates from the various farm organizations and other agricultural bodies, including the College and University heads.

WHY THE APPLE SHOW?

MICHIGAN'S apple show at Grand Rapids this winter was a success, in so far as the display of fruit was concerned, but the attendance was a disappointment. The meeting of the State Horticultural Society was well attended by fruit growers, but the city of Grand Rapids never seemed to awaken to the fact that there was a fine exhibit of a product upon which so much of her prosperity depends.

Yet what was to be expected? Apples are common, they are looked upon as a matter of course, without much thought about how they are produced. If they had to be brought from over seas or the other side of the equator, it would have been different.

What, then, is the apple show for? Is it not to advertise our state's best products? If that is the case it ought to be held, not where the fruit is grown, but where it is not. Instead of Grand Rapids or Detroit, take the display to New York, Philadelphia, Baltimore, Pittsburgh, or to a dozen southern cities, where there are thousands of consumers. No question about the attendance, nor the demand for the fruit that would follow. What good does it do us to claim that our apples are the best that grow, so long as we do not show it to others?

Michigan apple men, you are hiding your light under a bushel. Uncover it, so that others can see. Get together. Next fall be ready with a display that will open the eyes of people in a half a dozen of the large cities outside the state and make the year 1923 famous in the annals of Michigan horticulture. E. E. G., Monroe, Michigan.

—The foregoing is just what many fruit growers have been thinking about of late years. What is now needed is for a leader to take up the idea and develop it to a definite end. It is something that interests not only the fruit producers, but everyboody in the state. When it is considered what the orange growers have done to create a market for their product, the possibilities of the apple seem almost without limit.—Frank D. Wells.

MICHIGAN 7TH ALFALFA STATE

IN alfalfa production, Michigan has stepped into the lead among the states east of the Mississippi River and is now in seventh place among all the states of the Union as a result of the great increase in acreage in the last year. This information was given out by Prof. J. F. Cox, head of the farm crops department of the M. A. C., who has compiled statistics showing the relative position of Michigan.

Not only is the state assuming a place of prominence in alfalfa production, but the rapid increase in the number of acres planted to this crop gives promise of revolutionizing the agriculture of Michigan in an economic sense This state has been and probably will continue to be known for the diversification of its farm products. Increase of alfalfa is not likely to lessen the diversification, but it is bound to have an important effect on the proportions of the various products placed on the market by the Michigan farmers.

A CONSUMERS' COOPERATIVE MILK DISTRIBUTING PLANT

FOR the opening of the No. 2 plant of the Franklin Cooperative Creamery Association of Minneapolis, on October 21, a rather elaborate program, extending through the afternoon and evening, was prepared.

This association is a development in the field of consumer cooperation. It was formed by 350 dairy workers who were on a strike, and by 1650 consumers. A model plant with modern equipment and a capacity of 3,000 quarts per hour was erected. Business began on March 12, 1921. By the close of the calendar year sales amounting to nearly $850,000 has been made, upon which were net earnings amounting to over $37,000. During the first nine months of 1922 the sales were $1,185,630 and the net earnings $83,412.17. The number of consumer patrons is now many times the original 1650.

LARGER COMMERCIAL LATE ONION CROP

Production of commercial late onions is estimated at 24,074 cars of 500 bushels each by the United States Department of Agriculture. Production in 1921 was 18,823 cars. Yield per acre is estimated at 309 bushels compared with 259 bushels last year. As much as 460 bushels were raised in Idaho and 400 bushels in Michigan and Utah. The area of the crop was 38,991 acres compared with 36,381 acres in 1921. Michigan produced 1,386 cars.

Three Big Farm Organization Meetings Agree

Farm Bureau, Grange and Farmers' Clubs, in Meetings Held this Month, Practically as One on Big Farm Problems, Both National and Local

TIME was, and not so long ago either, when they said: "Farmers never stick together" or "you'll never find two farmers who think alike, they're always hollerin' like stuck-pigs about something, but never about the same things!"

Let the city-saplings who spilled those lines, prepare to take them back. The resolutions passed by three great farm organizations, represent every faction of the farming business in Michigan at least, are practically in agreement on every vital issue in which the farmer is interested.

During the first two weeks of December have been held the Golden Jubilee convention of the Michigan State Grange at Kalamazoo, the Thirteenth Annual Meeting of the Michigan State Association of Farmers Clubs at Lansing and the Fourth Annual Convention of the National Farm Bureau Organization at Chicago.

MEETING OF FARMERS CLUBS

East Lansing, Dec. 5-6 — The 30th annual meeting of Michigan State Association of Farmers Clubs held in Senate Chamber, Capitol Building, Lansing was attended by over 80 delegates and was one of the most instructive and interesting programs that was ever held by the association.

Professor W. D. Henderson, talking on "Signs of New World" brought to the attention of the delegates the great part that Agriculture had played in the past and the part it must play in the future. In closing Mr. Henderson states that "The world must learn that every man is your brother, all must have goods and these must be supplied by the farmer."

Hale Tennant, Director of Markets, spoke of the diversified lines of Agriculture that had had to be dealt with by the Farm Bureau, also stating a better organization of the farm organizations was needed as no respect would be shown agriculture until there was power, power brings protection. The work of the farm organizations must also be to make life on the farm just as attractive as life in the city and he could see no reason why agriculture could not be just as well protected as labor.

In closing Mr. Tennant said: "Farmers will never get anything without a fight so lets us fight."

Mrs. Louise Campbell, Acting Dean of Home Economics addressed the Association on the proper food for the child and the great need of special attention in the rearing of the child as the children of today will be the men and women of the coming generation.

Mr. J. H. Brown, of the Auto Tour Association showed in moving pictures how tourists camped. The trip the coming year being to Washington, D. C., where a week will be spent in visiting the Capitol City.

The presidents address brought very forcibly the need of discretion in the production of crops. This was discussed by many present, some thinking that the great need was not in discretion in production but lack of knowledge in the time to market crops.

Dr. Eben Mumford spoke on "Farm Organization" and emphasized the great need of the same as only by this can agriculture win. He spoke of Agriculture being at the present time at the lowest possible basis and this was always the case in the past that when this occurred there was a bright cloud ahead, this he suggested as his idea of the outlook for the farming business.

Mrs. Jeanette Lyons, Secretary of the Girls Protective League gave a very able address on the work accomplished in the help of unfortunate girls that is being looked after by the organization.

The session on Wednesday, Dec. 6th, was opened by an address by W. W. Waltman, Secretary of the Anti-Saloon League, in the absence of Grant Hudson. Mr. Waltman in his remarks suggested that every nation was looking to the United States to see what they could do with the liquor question and it was necessary for us to take the proper attitude in this manner as it would govern their decision largely. Much has been given us and much is expected of us.

A report of the Federated Committee was given by Hon. J. N. McBride, who gave in detail the work accomplished the past year by this committee and although not successful in having the Income Tax amendment pass had awakened the people to see the need of the same and in some future time not far away this will be accomplished.

Dr. W. W. Diehl addressed the delegates on Spiritual Values on Country Life very forcibly impressing on all present the great advantages in the country life to that of the city although the wages earned did not compare with that of the city.

Miss Vaughan of M. A. C. gave a short talk on the Boys' and Girls' Club work showing how the club work not only taught how to raise a calf but how to write the story and how to keep accounts to figure the profits.

G. N. Otwell, Supt. of Rural Education gave a talk on the better education for the rural community and showed the great need of this if our children had the same education the city children have.

The following officers were elected for the coming year: President, Lee S. Noble, Oxford; Vice President, W. A. Cutler, Grass Lake; Secretary-Treasurer, Mrs. I. R. Johnson, Rushton; Corresponding Secretary, Sarah O. Broderick, Ithaca. The directors are: G. A. Millispaugh, Oxford and W. J. Brookins, Ovid.

The meeting closed as one of the best ever held and all members went home enthusiastic.

THE GRANGE MEETING

Kalamazoo, Dec. 11-15—The 43,000 members of the Michigan State Grange will ask the thousands of members of other farm organizations to join with them in supporting legislation they consider vital to the farmers.

In the Grange convention, which closed here Friday, the delegates urged the closest co-operation with the State Farm Bureau; indorsed the continuance of the joint legislative committee of all farm organizations, and in speeches and discussions voiced the opinion, time after time, that "the rich man, the city man and the moneyed interests have had their innings—let's have ours."

The farmers will concentrate on three major taxation propositions.

They want an income tax, to be voted on in 1924, which would tax only the person with an income of $5,000 or more. This exemption, they believe, will secure the labor vote which went against the income tax in the last election.

Demand Gasoline Tax

They will demand that the maximum limit of $10,000 in state Corporation Tax Law be removed "to give the state a chance to collect from the big corporation at the same rate as it assesses the small one." They also suggest that the minimum limit be lowered from $50 to $10, and the rate increased from 3 to 4 mills.

If the Legislature refuses to amend the law as suggested, a faction of the Grange prepared, speakers said to initiate an amended corporation tax law.

The farmers' organizations will

(Continued on page 17.)

Michigan Exhibitors Led Field at International Hay and Grain Show

MICHIGAN can be, and is, proud of her many business farmers who exhibited at the Hay and Grain Show at the 1922 International for they not only held their own but won more prizes in farm crops than any other state. And these winnings were made against the stiffest competition ever gathered in America, the products from 38 states being entered.

One of the greatest surprises of the entire show came in the corn judging. For region number 2, which includes the states of Wisconsin, the Dakotas, Iowa, Pennsylvania and New York, Michigan growers of yellow corn walked away with 15 of 25 prizes. In this class, 10-ear exhibit, Michigan winners and positions for the first ten places are: First: L. H. Laylin, Mason; Second, H. W. Mann, Dansville; Third, T. H. Hanna, Dansville; Fourth, A. W. Jewett, Jr., Mason; Sixth, F. M. Mann, Mason; Eighth, Robert Laughlin, Dansville; Ninth, Roy How, Saginaw, W. S.; Tenth, Douglas Bow, Saginaw, W. S. In the exhibit of a single ear of corn Michigan also was a strong contender, winning first, fifth and tenth place in Region 2. The winners are: H. W. Mann, Chas. Laughlin, both of Dansville, and Lester Milham, of Kalamazoo, respectively.

Michigan rye producers were not quite as consistent winners as last year as they won twenty prizes out of thirty this year compared with twenty-five out of thirty at the 1921 show. Also first place escaped from them being won by John W. Lucas, Alberta, Canada. But in spite of the fact that the blue ribbon must be shipped to Canada, Michigan growers feel that after all it is a victor for Michigan to a certain degree as it was won on an exhibit of the Rosen variety, which originated in this state. Last year nine out of the first ten awards came to Michigan while this year the state won eight out of the first ten positions. Wolverine farmers among the first ten winners are: Second, L. H. Laylin, Mason; Third, W. H. Warner, Concord; Fourth, A. W. Jewett, Jr., Mason; Sixth, Lynn Jewell, Leslie; Seventh, Garfield Farley, Albion; Eighth, A. E. Hilliard, Mason; Ninth, Melvin J. Smith, Springport; Tenth, R. F. Jewett, Mason. This class included competition from all of the United States and Canada.

Win Many Prizes on Hay

In the hay classes Michigan got the first six awards on timothy, five out of ten places, including the first three, on red winter clover, six out of fifteen awards on alfalfa, and A. W. Jewett, Jr., of Mason, received the blue ribbon for having the best sample of hay at the show, winning it on a sample of timothy. Wolverine winners and positions in the timothy class are: First, A. W. Jewett, Jr., Mason; Second, L. H. Laylin, Mason; Third, Richard Jewett, Mason; Fourth, R. F. Jewett, Mason; Fifth, A. E. Hilliard, Mason; Sixth, Lynn Jewell, Leslie. Although Michigan was not quite so fortunate in the red clover class, first place was won by Lynn Jewell, Leslie; Second, A. W. Jewett, Jr., Mason; Third A. E. Hilliard, Mason; Sixth, L. H. Laylin, Mason; Eighth, R. F. Jewett, Mason. In the alfalfa class Michigan growers won fourth, fifth, sixth, ninth, tenth, and eleventh prizes. The winners are: L. H. Laylin, Mason; A. W. Jewett, Jr., Mason; R. F. Jewett, Mason; Lynn Jewell, Leslie; A. E. Hilliard, Mason; Richard Jewett, Mason, and they won in the order mentioned.

As a wheat producer Michigan also made a great mark, Wolverines winning thirteen out of twenty-five prizes in the soft red winter wheat and all five places on white winter wheat. In the soft red winter wheat farmers from Michigan took the first five awards in the order named: C. D. Finkbiner, Clifton; A. W. Jewett, Jr., Mason; John W. Vietengruber, Frankenmuth; Lynn Jewell, Leslie; and A. J. Lutz, Saline. In the white winter wheat class A. W. Jewett, of Mason; Lynn Jewell, Leslie; A. E. Hilliard, Mason; R. F. Jewett, Mason; and B. H. Laylin, Mason, carried off the five awards in the order mentioned.

Oats Awards to Michigan

Nineteen of the thirty-five prizes offered on oats in region 2 came to Michigan, and of the first ten places farmers from this state captured five of them. Their names and positions are: A. W. Jewett, Jr., of Mason, won Fourth place; L. H. Laylin, Mason, Sixth; Richard Jewell, Mason, Seventh; Lynn Jewell, Leslie, Eighth; C. D. Dailey, Kalamazoo, Tenth.

Michigan was also out to get her share of the awards on soy beans and in regions 1 and 2 won five of the ten positions. The positions won by Michigan growers are: Fourth, fifth, sixth, seventh, and tenth and the following farmers won the positions in the order named: Albert Jacob, Merrill; J. J. Kraker, Beulah; H. C. Oven, Ovid; A G. Wilson, Mason; and W. O. Skiver, Cedar Run. In the barley class, six rowed, Michigan also had winners. A. W. Jewett, Jr., took Seventh place and R. F. Jewett won Eighth place.

Varieties developed by the farm crops department of M. A. C., under the supervision of Prof. F. A. Spragg, famous plant breeder, were responsible for practically all the state's winnings in crops. The list includes Rosen rye, winner of all 30 places in rye, Red Rock wheat; M. A. C. Duncan corn, developed by Robert Duncan of the college staff; and Wolverine oats.

It was the greatest collection of farm crops exhibits ever gathered in America" says Professor J. F. Cox, head of the M. A. C. farm crops department. "This fact makes the Michigan winnings particularly noteworthy."

John and Mollie Should Stick to the Farm

Our Readers are Almost Unanimous in Their Advice to Young Farmer Torn Between City and Farm

NO sooner than was the issue of The Business Farmer which contained the interesting plight of John and Mollie Rutledge, of Gratiot County, come from the press, than our readers began to take the problem to their hearts. Let it never be said that the farmers of Michigan are not sympathetic. Time and again we have proved that their hearts are as big as mountains and their thought just as deep.

There is a heap of good advice in these letters for all of us particularly for hundreds of other Johns and Mollies, scattered over the farms of not only Michigan, but of all America. These last two years have been full of discouragment and many are those who have been about ready to give up and take what which appeared to them "the easiest way"—into the city sweatshops. But read for yourself in prose and poem how our readers advise John and Mollie:

Stick to the Farm

Real good advice for John Rutledge is stick to the farm. Take an old woman's advice. We have had the same row to hoe and have five children. The farmer is the only one that is always sure of his living. He can not do better in the city. It is true he can get more money but the question is can he save it? I have five boys in the city of Detroit working at $11 per day and not one of them can save a dollar. I do not know whether they will be able to buy their coal this winter. Stick to the farm, it is the best place.—Mrs. Navarre, Livingston County.

Doing Remarkably Well

It appears to that John Rutledge has done remarkably well for a renter. Any man who can go on a rented farm and buy things to farm with and live the first year, although he may not meet all of his debts, has beat the factory worker a long way, as he has the necessary tools to farm the coming year. He does not have to make the purchase of farm tools every year but most of the city workers have to go in the same track; and it leads to nowhere. John's failure this year is in his head not in fact, as he made the mistake of having his debts come due too early in the fall. His experience this year should teach him something, and he can learn each year from his experience on the farm. In the factory he has no chance to cultivate what there is in him and later in life he is nothing but a hired servant spoiled by the lure of big wages and short hours that in a few years will ruin any nation. I had the same beginning largely that John has. I stuck to the farm and it has paid out big. I say stay by the farm, it makes men.—J. C. Haskins, Shiawassee County.

Good Farmer Will Pull Through

I am going to write a few lines for the benefit of John Rutledge. I started without a dollar back in 1879. Sold my first crop of oats at 16 cents, corn at 12 cents a bushel, hogs at $3.00 per hundred pounds. I was like John, I had to sell.

I had a chattel mortgage on my team that had to be paid. I sowed 30 acres of wheat in 1896 on shares, got 30 bushels from what I cut. Lost a colt each year for three years. It took me four years to get out of debt and have $50 ahead.

I think John figured a little too fast in buying a farm the second year, but if he likes to farm he can't do any better than to stay with it.

This changing around don't get a man anywhere. Don't go in debt for a lot of tools that you can do without. Buy a pure bred cow of your choice of breeds. Keep all the sheep that your place will stand, they always pay if you keep them instead of selling them, when they go down. Don't be in too big a hurry to buy a farm, rent is cheaper than interest and taxes around here. It is just a question if a man wants to work for himself or others. If he is a good farmer he will make good!—John S. Lint, Branch County, Mich.

Many Cases Like John's

The case of John Rutledge is similar to a great many other cases in the State of Michigan. The automobile business of which Michigan is the center has for years outstretched their hands to the young men upon the farm. Whether John Rutledge should stay upon his Gratiot county farm or not must be determined largely by how John Rutledge feels in regard to it. If he loves the farm and takes an interest in developing his live stock and the improvement of his soil, and is willing to be patient, he is better off upon his Gratiot county farm than in the big factories of the cities.

The farmers purchase 60% of the manufactured products of the country, and unless the farmers prosper and have a good purchasing power manufacturing industries of the city cannot continue to manufacture. When that time comes, John is better on the farm than in the city.

The agricultural interests are going through trying times. The pendulum so far as they are concerned has swung well to the left, but if I read the signs of the times right, it will soon swing to the right and then John will come into his own on his Gratiot county farm.

A rolling stone gathers but little moss and the shifting from the country to the city and from the city to the country wears away and exhausts our savings. My advise to John would be to sit tight or he may find he has jumped from the frying pan into the fire.—John A. Doelle, Commissioner of Agriculture.

Farming Discouraging at Present

I read your article about the farm and city. I have tried them both and am sure that if farming stays as it has been there will be more than John Rutledge trying the city.

If the farmer buys a plow, wagon, or any piece of farm machinery he pays war prices and if he buys a barrel of flour he has to sell enough wheat to make two barreds of flour to pay for it. Taxes are so high that it is just about like renting to pay for them. A farmer pays about $2.50 an acre a year taxes on the farm he owns.

The average farmer works from 5 A. M. to 8 P. M. If the man in the city would work the hours that the farmer does he would earn and save dollars where the farmer can not make enough to pay his unreasonable taxes.

The average bean crop is about five bushels to the acre this year in this county, wheat and rye about twelve bushels per acre. It costs money to plow, sow, harvest and thresh. Count the cost and what has the farmer left for his work. If it were not for the few cows and hogs that are kept in this county farmers would not have enough money to walk to the city. The hope of doing better next year is what makes the farmer stick to the farm. I am not a kicker but the city people should know more about what the farmer is up against. —H. F. B., Gladwin, Mich.

Many Would Rent Farm

I feel that it is up to some of us to help solve the problem that is puzzling John and Mollie.

You very seldom hear the city man's side of the case—his worries and financial troubles. You see it is not policy to publish them. Our factories must be filled, so that the products may be turned out on schedule time. And the seamy side of a factory man's life is scarcely ever heard of. (Yes, this is from Flint; but it applies to other cities as well.)

It was not many months ago that over the noon-day lunch, many heart to heart talks could be heard among the men. Theirs was the all-absorbing topic of 'how the cut-down wages (in some cases a cut of 50%) could bestretched to cover the family budget.' It was a pretty heavy load to carry—for man and wife; and many had hard work making the grade.

Yes, it is better right now. But remember, the good old days are past when the sky was the limit, as far as work and wages went. You have to work for what you get; and the employment offices are filled with men seeking work—always more men than jobs, especially at this time of the year.

I don't want to discourage any one who is bound to leave the farm and come to town. But remember, the average workman's life is not always a bed of roses. He gets a living, of course, but he practices economy just as carefully as his country brothers.

How do I know? I have lived both as a farmer and as a factory man. A fortunate deal has given me a farm again; and I hope to pass the rest of my days there.

Do many feel as I do? Listen. Unfortunately I was unable to move onto the farm this spring. I inserted a small liner ad in the local paper, and received more than 80 replies—mostly from factory men. I chose one of these as my tenant, and am glad I did so. He and his wife have made good there; and I am proud of them and the place—scarcely a weed on it; and the stock shows excellent care. The tenants themselves are doing well financially, too. And, best of all, they are and wood up from the wood-lot to keep you warm, then I think of a working for themselves. Ask them which they prefer—the present job, or punching a time clock card each day in a factory. They will soon tell you.

There are hundreds here who would be glad of their chance, but the opportunity does not come to all. They might not all make good as Tof and Ida are doing, but they would be glad of the chance to try."—W. L. Buckland, Oakland County.

How Falsely the Siren Smiles

It may be I too stood at the side of Mollie and John as "Flint fell," a slump that took strong men by the throat and drew great scalding tears down the cheeks of women, home makers who had saved and saved, putting every cent in a little home on the "flat" or parks around Flint, the ve"hick"le city of the world. You notice I spell vehicle with a hick! It was a hick town and could not stand the wave of prosperity. Builded on sands and all that.

And what good was a measly little lot and a house contract when a fellow got the blue ticket! Finally "let her go back" couldn't help it. Then back to the farm and farmerish ways, ways less grasping, a friendly hand a laugh now and then, a trip to town on Saturday night. Hard work? I'll say! But how about Sunday? Do you remember the last Sunday dinner you ate in Flint? After the slump? Did you have chicken and biscuits? Or even salt pork and milk gravy, a great delicacy if prepared right. You didn't have little button radishes and green onions, did you? And yellow sweet butter and home-made bread? No, you probably had oleo and baker bread, and for the rest lets just say "canned stuff."

Did you ever stop to think the city is mostly canned stuff? Canned food, canned fun, and a grinding futility of being canned if you can't keep up to the endless chain system, in or out of a factory door.

Your child has all the fresh milk he can drink. In Detroit milk cards are given out to children who come to school undernourished, that they may have one glass of milk in the morning. Look at your child, his bright eye and rosy cheek! Dare you think of going back?

In Detroit and every city are found some wonderful paintings, works of art. Then right now, look out of your kitchen window! Did you ever see a more beautiful picture? Nearly Christmas and the green of the grassy meadow and blue of the sky blends in perfect harmony; like a chameleon, the picture changes with the season, would you in ignorance trade all this for a daub of paint faded with years maybe. Remember the only painting worthy of a second glance is this, the ever changing, unfading one of "The Great Master."

Music! A charm for the soul. What if you haven't a player piano and Victrola. The robins sing in the spring, the snow bird calls and the laughter of children fall on your ear! What singer sends such thrills as these!

Rare perfumes and costly incense just for the taking. The lilacs and the roses blow, apple blossom and berry mingle with the odor of peach and plum, later new mown hay; exquisite smell of baking bread and tasty pie. All these, not chemical compounds at dollars an ounce.

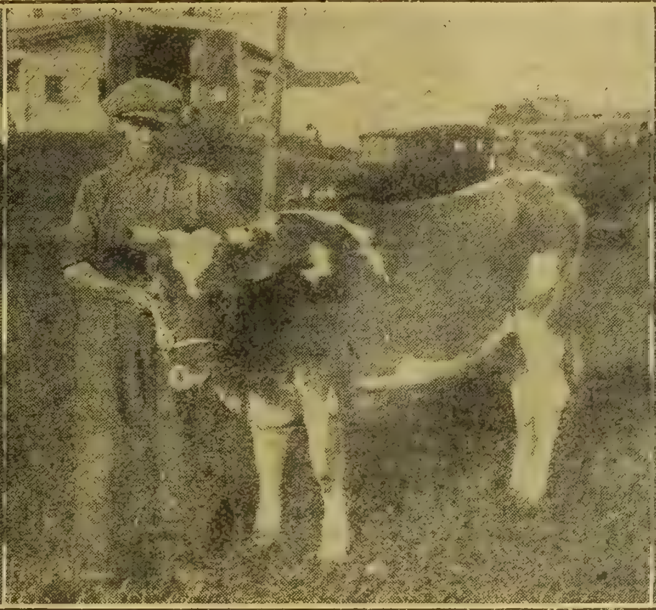
And when the snow has drifted white in field, on fence, just to know you have enough in the cellar to eat poem I wrote long ago while on a visit to my grandfather's farm. In an incidental way I might mention he has just been buried after fifty-four years of successfully trotting double harness on a farm near Lapeer, Michigan. So you see you even live longer on a farm!—Marie F. Haines, Oakland County.

To John and Mollie Rutledge

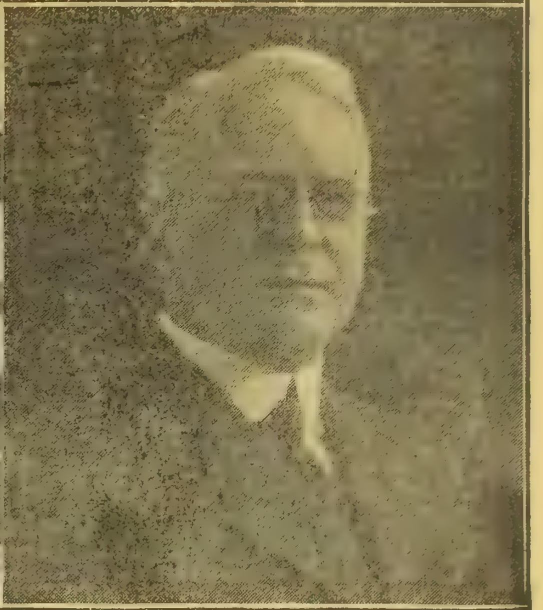
I would build no stately mansion
But in a humble small spot
I'd make me a lowly cottage
The whole of the world forgot.
A path leading up to a vineclad door
Sunbeams dancing, snow white floor
For music I'd have my children's smile
Laughter and glee all the while!
Trees for shade and refreshments there
No crowded street, people to stare
A deep cool well, garden too
I'd work so willing the long day thro'.
A stream idling by in lazy ways
A place to dream, a pleasant haze
But not forgotten, important things
The ideals, realities to make men kings
I would have me a helpmate too
Her eyes should be of a steadfast hue
And all my life I would hold her dear
I would shield her always from a tear
And now I am old, my dream fulfilled
I've done my work as God has willed.
—Marie F. Haines, Oakland County.

PICTURES FROM FAR AND NEAR

The latest photo of Kaiser Wilhelm. Here is a new and exclusive photograph of William Hohenzollern, former ruler of Germany, whose recent marriage to Princess Hermine of Reuss created a storm of protests among his relatives, the wife of the former Crown Prince heading the opposition. His white hair and beard give the former German monarch a dignified and imposing appearance. Until recently he kept himself in seclusion but now he leaves his estate, according to reports, and goes for long walks throughout the surrounding country.

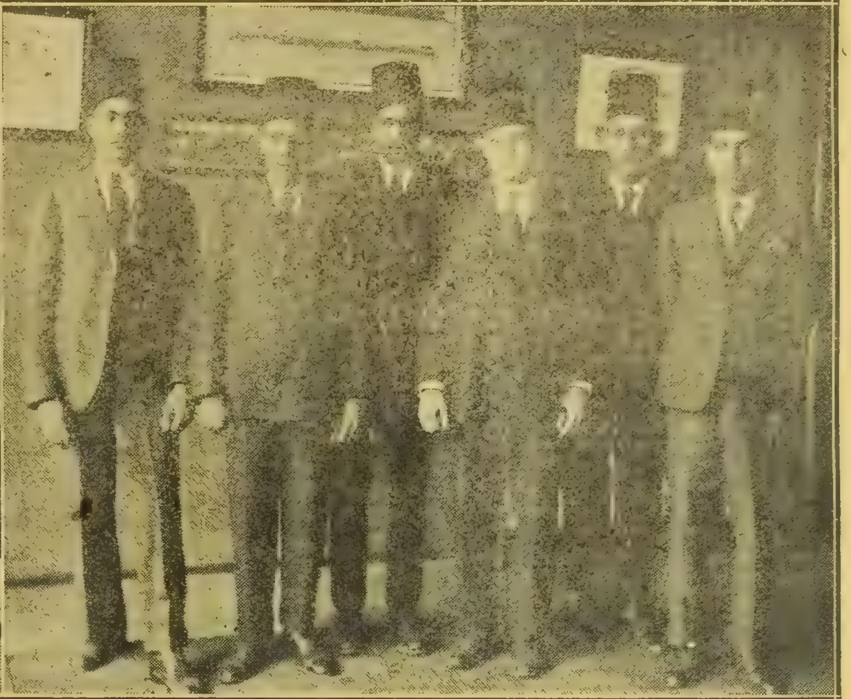


America's champion farmer is a Michigan boy. His name is Andrew White and his age is 17, and he comes from the Upper Peninsula. Residents in and around Iron River, where Andrew lives, are willing to stake him against any one who cares to dispute his right to this championship. Young White has won many prizes in live stock judging and his most recent triumph is the winning of a scholarship to the Michigan Agricultural College. His ambition is to become the owner of the finest herd of pure bred Guernseys in the United States and he already has taken several steps towards the realization of this ambition. At present he owns seven pure blooded animals of this breed which have won many prizes.



James Couzens, Michigan's new senator, was born at Chatham, Ontario, August 26, 1872, married Margaret A. Manning, of Detroit, August 31, 1898. Joined Henry Ford in the pioneer days of that company, 1903, resigning as Vice-President and General Manager. Successively Detroit Police Commissioner, President of the Detroit Board of Commerce, and Mayor of Detroit from 1919 to 1922, during which time he successively won the 50-year fight to oust the D. U. R. and give Detroit municipal-ownership of her street cars. Appointed to fill the unexpired term of Truman Newberry, taking his seat December, 1922.

Harding turkey arrives at White House. For the last three years it has been the annual custom of the Harding Girls Club of Chicago to send the President his holiday dinner but this year, due to the scarcity of large turkeys, one weighing 41 pounds could not be obtained until the last minute, making it too late to be sent by messenger or train. As a result of an appeal to the General Motors Truck company of Pontiac, Mich., to deliver the turkey at the White House, a record non-stop run of 825 miles between Chicago and Washington was made on November 27 and 28. An average speed of 22 miles an hour was made. Snow and ice were encountered for 100 miles through the mountains.



Six Egyptian students here to study auto. They have been sent here to study the automotive industry as accredited representatives of the Ministry of Transport and Communication. They are instructed to spend three years in this country, the entire expense being paid by the Egyptian Government. While in Washington, the Egyptian emissaries personally met President Harding. The first year will be spent at the Michigan State Automobile School, at Detroit, where courses in automobile and tractor mechanics, advanced automotive electricity, oxy-aceteylene welding, tire repairing, battery repairing, and machine shop work, will be taken. During this time, the men will also study the manufacturing and service methods of several of the automobile factories.

Michigan man pays $50,000 for single strawberry plant. Frank E. Beaity, the smiling gentleman under the fedora above, paid Harlow Rockhill, the Luther Burbank of Iowa, $50,000 in cold cash for the strawberry plant shown above, thus bringing another world's record to Michigan. Mr. Rockhill began it away back in 1908, when he introduced to each other two blushing young strawberry blossoms, the flower of two of the best strawberry families in America, and later bound them together in holy wedlock by the simple ceremony of tying a paper bag over them. The fruit of that union was a prodigious strawberry of unexcelled texture, tint and flavor. Year after year the strongest and best plants were selected and cuttings were made from the runners of those producing the largest fruit. But at last the process was complete. It had proved its worth in Iowa, so it was brought to the vicinity of Jackson, Michigan. It stood the test.

She leaps into fame-via parachute. Miss Edna Hayden's leap into fame was a literal one. Recently she made a parachute jump from an airplane 2,000 feet above Burlington, Iowa. She took her first air ride on Sunday, the second on the following Thursday and on Saturday of that week she made her thrilling papachute drop.

SYNOPSIS

JOANNE GRAY is one of the passengers on the train that connects "The Horde" with the civilized world. For eighteen hours she has been riding steadily bound for Tete Jaune Cache, the home of "The Horde", where she has no friends and all will be strange to her. The train stops at a town composed of several tents and learning that the train will not leave for two hours she goes in search of food and a bath. She is directed to "Bill's Shack" and it is here where she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which the girl and Quade have passed. In but a moment the girl steps out her face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl some money but before he can do so Aldous steps to the girl's side and floors Quade with a terrific blow. Aldous hurries the girl away from the scene to the home of friends. He then asks the girl to be his guest at supper in his cabin. She accepts. Joanne tells Aldous she is going to Tete Jaune to find her husband, Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner at Tete Juane, Culver Rann. Aldous believes FitzHugh is dead and locates a friend who declares he has seen the grave. Upon their arrival at Tete Juane they are met by friends of Aldous at whose place they are to stay during their stop. John is advised his close friend MacDonald has been wounded by a hidden enemy.

(Continued from Dec. 9th Issue)

"Three days ago. Since then I have not seen old Donald until to-night. Almost by accident I met him out there in the timber. I delivered the telegram you sent him. After he had read it I showed him mine. He scribbled something on a bit of paper, folded it, and pinned it with a porcurine quill. I've been mighty curious, but I haven't pulled out that quill. Here it is."

From his pocket he produced the note and gave it to Aldous.

"I'll read it a little later," said Aldous. "The ladies may possibly become anxious about us."

He dropped it in his pocket as he thanked Blackton for the trouble he had taken in finding MacDonald. As he climbed into the front seat of the buckboard his eyes met Joanne's. He was glad that in a large measure she had recovered her self-possession. She smiled at him as they drove off, and there was something in the sweet tremble of her lips that made him almost fancy she was asking his forgiveness for having forgotten herself. Her voice sounded more natural to him as she spoke to Mrs. Blackton. The latter, a plump little blue-eyed woman with dimples and golden hair, was already making her feel at home. She leaned over and placed a hand on her husband's shoulder.

"Let's drive home by way of town, Paul," she suggested. "It's only a little farther, and I'm quite sure Miss Gray will be interested in our Great White Way of the mountains. And I'm crazy to see that bear you were telling me about," she added.

Nothing could have suited Aldous more than this suggestion. He was sure that Quade, following his own and Culver Rann's old methods, had already prepared stories about Joanne, and he not only wanted Quade's friends—but all of Tete Jaune as well—to see Joanne in the company of Mrs. Paul Blackton and her husband. And this was a splendid opportunity, for the night carnival was already beginning.

"The bear is worth seeing," said Blackton, turning his team in the direction of the blazing light of the half-mile street that was the Broadway of Tete Jaune. "And the woman who rides him is worth seeing, too," he chuckled. "He's a big fellow—and she plays the Godiva act. Rides him up and down the street with her hair down collecting dimes and quarters and half dollars as she goes."

A minute later the length of the street swept out ahead of them. It is probable that the world had never before seen a street just like this Broadway in Tete Jaune—the pleasure Mecca of five thousand workers along the line of steel. There had been great "camps" in the building of other railroads, but never a city in the wilderness like this—a place that had sprung up like magic and which, a few months later, was doomed to disappear as quickly. For half a mile it blazed out ahead of them Two garishly lighted rows of shacks, big tents, log buildings and rough board structures, with a rough street between.

To-night Tete Jaune was like a blazing fire against the darkness of the forest and mountain beyond. A hundred sputtering "jacks" sent up columns of yellow flame in front of places already filled with the riot and tumult of the night. A thousand lamps and colored lanterns flashed like fireflies along the way, and under them the crowd had gathered, and was flowing back and forth. It was a weird and fantastic sight—this one strange and almost uncanny street hat was there largely for the play and the excitement of men.

Aldous turned to Joanne. He knew what this town meant. It was the first and the last of its kind, and its history would never be written. The world outside the mountains knew nothing of it. Like the men who made up its transient life it would soon be a forgotten thing of the past. Even the mountains would forget it. But more than once, as he stood a part of it, his blood had warmed at the thought of the things it held secret, the things that would die with it, the big human drama it stood for, its hidden tragedies, its savage romance, its passing comedy. He found something of his own thought in Joanne's eyes

"There isn't much to it," he said, "but to-night, if you made the hunt, you could find men of eighteen or twenty nationalities in that street."

"And a little more besides," laughed Blackton. "If you could write the complete story of how Tete Jaune has broken the law, Aldous, it would fill a volume as big as Peggy's family Bible!"

"And after all, it's funny," said Peggy Blackton, "There!" she cried suddenly. "Isn't that funny?"

The glare and noisy life on both sides of them now. Half a dozen phonographs were going. From up the street came the softer strains of a piano, and from in between the shreiking notes of a bagpipe. Peggy Blackton was pointing to a brilliantly lighted, black-tarpaulined shop. Huge white letters on its front announced the Lady Barbers were within. They could see two of them at work through the big window. And they were pretty. The place was crowded with men. Men were waiting outside.

"Paul says they charge a dollar for a haircut and fifty cents for a shave," explained Peggy Blackton. "And the man over there across the street is going broke because he can't get business at fifteen cents a shave. Isn't it funny?"

As they went Aldous searched the street for Quade. Several times he turned to the back seat, and always he found Joanne's eyes questing in that strange way for the some one whom she expected to see. Mrs. Blackton was pointing out lighted places, and explaining things as they passed, but he knew that in spite of her apparent attention Joanne heard only a part of what she was saying. In that crowd she hoped—or feared—to find a certain face. And again Aldous told himself that it was not Quade's face.

Near the end of the street a crowd was gathering, and here, for a moment, Blackton stopped his team within fifty feet of the objects of attraction. A slim, exquisitely formed woman in shimmering silk was standing beside a huge brown bear. Her sleek black hair, shining as if it had been oiled, fell in curls about her shoulders. Her rouged lips were smiling. Even at that distance her black eyes sparkled like diamonds. She had evidently just finished taking up a collection, for she was fastening the cord of a silken purse about her neck. In another moment she bestrode the bear, the crowd fell apart, and as the onlookers broke into a roar of applause the big beast lumbered slowly up the street with its rider.

"One of Culver Rann's friends," said Blackton sotto voce, as he drove on. "She takes in a hundred a night if she makes a cent!"

Blackton's big log bungalow was close to the engineers' camp half a mile distant from the one lighted street and the hundreds of tents and shacks that made up the residential part of the town. Not until they were inside, and Peggy Blackton had disappeared with Joanne for a few moments, did Aldous take old Donald MacDonald's note from his pocket. He pulled out the quill, unfolded the bit of paper, and read the few crudely written words the mountain man had sent him. Blackton turned in time to catch the sudden amazement in his face. Crushing the note in his hand, Aldous looked at the other, his mouth tightening.

"You must help me make excuses, old man," he said quietly. "It will seem strange to them if I do not stay for supper. But—it is impossible. I must see old Donald as quickly as I can get to him."

His manner more than his words kept Blackton from urging him to remain. The contractor stared at him for a moment, his own eyes growing harder and more direct.

"It's about the shooting," he said, "If you want me to go with you, Aldous——"

"Thanks. That will be unnecessary."

Peggy Blackton and Joanne were returning. Aldous turned toward them as they entered the room. With the note still in his hand he repeated to them what he had told Blackton—that he had received word which made it immediately urgent for him to go to MacDonald. He shook hands with the Blacktons, promising to be on hand for the four o'clock breakfast.

Joanne followed him to the door and went out upon the veranda. For a moment they were alone, and now her eyes were filled with fear as she clasped her hands closely in his own.

"I saw him," she whispered, her fingers tightening convulsively. "I saw that man—Quade—at the station. He followed us up the street. Twice I looked behind—and saw him. I am afraid—afraid to let you go back there. I believe he is somewhere out there now—waiting for you!"

She was frightened, trembling; and her fear for him, the fear in her shining eyes, in her throbbing breath, in the clasp of her fingers, sent through John Aldous a joy that almost made him free her hands and crush her in his arms in the ecstacy of that wonderful moment. Then Peggy Blackton and her husband appeared in the door. He released her hands, and stepped out into the gloom. The cheery good-nights of the Blacktons followed him. And Joanne's good-night was in her eyes—following him until he was gone, filled with the entreaty and their fear.

A hundred yards distant, where the trail split to lead to the camp of the engineers, there was a lantern on a pole. Here Aldous paused, out of sight of the Blackton bungalow, and in the dim light read again MacDonald's note.

In a cramped and almost illegible hand the old wanderer of the mountains had written:

> Don't go to the cabin. Culver Rann waiting to kill you. Don't show yourself in town. Cum to me as soon as you can on trail striking north to Loon Lake. Watch yorself. Be ready with your gun.
>
> Donald MacDonald.

Aldous shoved the note in his pocket and slipped back out of the lantern-glow into deep shadow. For several moments he stood silent and listening.

CHAPTER XI

As John Aldous stood hidden in the darkness, listening for the sound of a footstep, Joanne's words still rang in his ears. "I believe he is out there—waiting for you," she had said; and, chuckling softly in the gloom, he told himself that nothing would give him more satisfaction than an immediate and material proof of her fear. In the present moment he felt a keen desire to confront Quade face to face out there in the lantern-glow, and settle with the mottled beast once and for all. The fact that Quade had seen Joanne as the guest of the Blacktons hardened him in his determination. Quade could no longer be in possible error regarding her. He knew that she had friends, and that she was not of the kind who could be made or induced to play his game and Culver Rann's. If he followed her after this——

Aldous gritted his teeth and stared up and down the black trail. Five minutes passed and he heard nothing that sounded like a footstep, and he saw no moving shadow in the gloom. Slowly he continued along the road until he came to where a narrow pack-trail swung north and east through the thick spruce and balsam in the direction of Loon Lake. Remembering MacDonald's warning, he kept his pistol in his hand. The moon was just beginning to rise over the shoulder of a mountain, and after a little it lighted up the more open spaces ahead of him. Now and then he paused, and turned to listen. As he progressed with slowness and caution, his mind worked swiftly. He knew that Donald MacDonald was the last man in the world to write such a message as he had sent him through Blackton unless there had been a tremendous reason for it. [illegible]ed himself again and again, should Culver Rann want to kill him? Rann knew nothing of Joanne. He had not seen her. And surely Quade had not had time to formulate a plot with his partner before MacDonald wrote his warning. Besides, an attempt had been made to assassinate the old mountaineer! MacDonald had not warned him against Quade. He told him to guard himself against Rann. And what reason could this Culver Rann have for doing him injury? The more he thought of it the more puzzled he became. And then, in a flash, the possible solution of it all came to him.

Had Culver Rann discovered the secret mission on which he and the old mountaineer were going into the North? And was their assassination the first step in a plot to secure possession of the treasure?

The blood in Aldous' veins ran faster. He gripped his pistol harder. More closely he looked into the moonlit gloom of the trail ahead of him. He believed that he had guessed the meaning of MacDonald's warning. It was the gold! More than once thought of the yellow treasure far up in the North had thrilled him, but never as it thrilled him now. Was the old tragedy of it to be lived over again? Was it again to play its part in a terrible drama of men's lives, as it had played more than forty years ago? The gold! The gold that for nearly half a century had lain with the bones of its dead, alone with its terrible secret, alone until Donald MacDonald had found it again! He had not told Joanne the story of it, the appalling and almost unbelieveable tragedy of it. He had meant to do so. But they had talked other things. He had meant to tell her that it was not the gold itself that was luring him far to the north—that it was not the gold alone that was taking Donald MacDonald back to it.

And now, as he stood for a moment listening to the low sweep of the wind in the spruce-tops, it seemed to him that the night was filled with whispering voices of that long-ago—and he shivered, and held his breath. A cloud had drifted under the moon. For a few moments it was pitch dark. The fingers of his hand dug into the rough bark of a spruce. He did not move. It was then that he heard something above the caressing rustle of the wind in the spruce-tops.

It came to him faintly, from full

half a mile deeper in the black forest that reached down to the bank of the Frazer. It was the night call of an owl—one of the big gray owls that turned white as the snow in winter. Mentally he counted the notes in the call. One, two, three, four—and a flood of relief swept over him. It was MacDonald. They had used that signal in their hunting, when they had wished to locate each other without frightenihg game. Always there were three notes in the big gray owl's quavering cry. The forth was human. He put his hands to his mouth and sent back the answer, emphasizing the fourth note. The light breeze had died down for a moment, and Aldous heard the old mountaineer's reply as it floated faintly back to him through the forest. Continuing to hold his pistol, he went on, this time more swiftly.

MacDonald did not signal again. The moon was climbing rapidly into the sky, and with each passing minute the night was becoming lighter. He had gone half a mile when he stopped again and signalled softly. MacDonald's voice answered, so near that for an instant the automatic flashed in the moonlight. Aldous stepped out where the trail had widened into a small open spot. Half a dozen paces from him, in the bright of the moon, stood Donald MacDonald.

The night, the moon-glow, the tense attitude of his waiting added to the weirdness of the picture which the old wanderer of the mountains made as Aldous faced him. MacDonald was tall; some trick of the night made him appear almost unhumanly tall as he stood in the center of that tiny moonlit amphitheatre. His head was bowed a little, for he was old. A thick, shaggy beard fell in a silvery sheen over his breast. His hair, gray as the underwing of the owl whose note he forged, straggled in uncut disarray from under his drooping rim of a battered and weatherworn hat. His coat was of buckskin, and it was short at the sleeves—four inches too short; and the legs of his trousers were cut off between the knees and the ankles, giving him still a greater appearance of height.

In the crook of his arm MacDonald held a rifle, a strange-looking, long barrelled rifle of a type a quarter of a century old. And Donald MacDonald, in the picture he made, was like his gun, old and gray and ghostly, as if he had risen out of some graveyard of the past to warm himself in the yellow splendor of the moon. But in the grayness and gauntness of him there was something that was mightier than the strength of youth. He was alert. In the crook of his arm there was caution. His eyes were as keen as the eyes of an animal. His shoulders spoke of a strength but little impared by the years. Ghostly gray beard, ghostly gray hair, haunting eyes that gleamed, all added to the strange and weird impressiveness of the man as he stood before Aldous. And when he spoke, his voice had in it the deep, low, cavernous note of a partridge's drumming.

"I'm glad you've come, Aldous," he said. "I've been waiting ever since the train come in. I was afraid you'd go to the cabin!"

Aldous stepped forward and gripped the old mountaineer's outstretcher hand. There was intense relief in Donald's eyes

"I got a little camp back here in the bush," he went on, nodding riverward. "It's safer 'n the shack these days. Yo're sure—there ain't no one following?"

"Quite certain," assured Aldous. "Look here, MacDonald—what in the thunder has happened? Don't continue my suspense! Who shot you? Why did you warn me?"

"Same fellow as would have shot you, I guess," he answered. "They made a bad job of it, Johnny, an awful bad job, an' mebby there'd been a better man layin' for you!"

He was pulling Aldous in the bush as he spoke. For ten minutes he dived on ahead through a jungle in which there was no trail. Suddenly he turned, led the way around the edge of a huge mass of rock, and paused a moment later before a small smouldering fire. Against the face of a gigantic boulder was a balsam shelter. A few cooking utensils were scattered about. It was evident that MacDonald had been living here for several days.

"Looks as though I'd run away, don't it Johnny?" he asked, laughing in his curious, chuckling way again. "An' so I did boy. From the mountain up there I've been watching things through my telescope—been keepin' quiet since Doc pulled the bullet out. I've been layin' for the Breed. I want him to think I'd vamoosed. I'm goin' to kill him!"

He squatted down before the fire, his long rifle across his knees, and spoke as quietly as though he was talking of a parridge or a squirrel instead of a human being. He wormed a hand into one of his pockets and produced a small dark object which he handed to Aldous. The other felt an uncanny chill as it touched his fingers. It was a misshaped bullet.

"Doc gave me the lead," continued MacDonald coolly, beginning to slice a pipeful of tobacco from a tar-black plug. "It come from Joe's gun. I've hunted with him enough to know his bullet. He fired through the window of the cabin. If it hadn't been for the broom handle—just the end of it stickin' up"—he shrugged his gaunt shoulders as he stuffed the tobacco into the bowl of his pipe—"I'd been dead!" he finished tersely.

"You mean that Joe——"

"Has sold himself to Culver Rann!" exclaimed MacDonald. He sprang to his feet. For the first time he showed excitement. His eyes blazed with repressed rage. A hand gripped the barrel of his rifle as if to crush it. "He's sold himself to Culver Rann!" he repeated. He's sold him our secret. He's told him where the gold is, Johnny! He's bargained to guide Rann an' his crowd to it! An first—they're goin' to kill us!"

With a low whistle Aldous took off his hat. He ran a hand through his blond-gray hair. Then he replaced his hat and drew two cigars from his pocket. MacDonald accepted one. Aldous' eyes were glittering; his lips were smiling.

"They are, are they, Donald? They are going to try to kill us?"

"They're goin' to try," amended the old hunter, with another curious chuckle in his ghostly beard. "They are goin' to try, Johnny. That's why I told you not to go to the cabin. I wasn't expecting you for a week. Tomorrow I was goin' to start on a hike for Miette. I been watching through my telescope from the mountain up there. I see Quade come in this morning on a hand-car. Twice I see him and Quade together. Then I saw Blackton hike out into the bush. I was worrying about you an' wondered if he had any word. So I laid for him on the trail—an I guess it was lucky. I ain't been able to set my eyes on Joe. I looked for hours through the telescope—an' I couldn't find him. He's gone, or Culver Rann is keeping him out of sight."

For several moments Aldous looked at his comparison in silence Then said:

"You're sure of all this, Donald? You have good proof—that Joe has turned traitor?"

"I've been suspicious of him ever since we come down from the north," spoke MacDonald slowly. "I watched him—night an' day. I was afraid he'd get a grubstake an' start back alone. Then I saw him with Culver Rann. It was late. I heard 'im leave the shack, an' followed. He went to Rann's house—an' Rann was expecting him. Three times I followed him to Culver Rann's house. I knew what was happening then, an' I planned to get him back in the mountains on a hunt, an' kill him. But I was too late. The shot came through the window. Then he disappeared. An'—Culver Rann is getting an outfit together! Twenty head of horses, with grub for three months!"

"The deuce! And the outfit? Is it ready?"

"To the last can of beans!"

"And your plan, Donald?"

All at once the old mountaineer's eyes were aflame with eagerness as he came nearer Aldous.

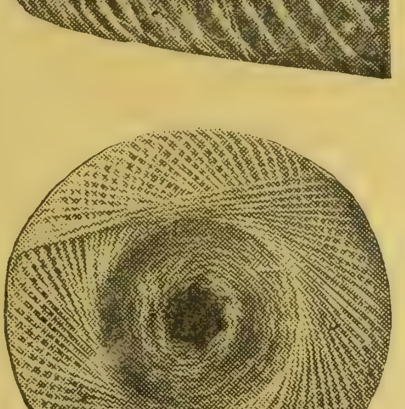
Ask For the Original

"BIG BALL"

The twine that is wound into these new "Big Balls" is just the same high-grade Harvester twine that you have been using for years—made more convenient and economical by an improved system of winding. You put two balls in the twine can—same as ever—but what a difference in the amount of grain they bind. The new winding increases the footage, per ball, by 40%—six "Big Balls" do the work of ten of the old-style balls—and you make only three-fifths as many stops in the field for twine.

McCormick Deering
International
Binder Twine



Only Harvester brands of twine have the patented, reinforcing cover shown in the illustration above. Even after the entire center has been used out, the patented cover stands firm and free from collapsing—you use all of the twine—none need be wasted. When you buy your twine for next season, insist on getting the "Big Ball"—genuine Havester brards have the patented cover winding

The "Big Ball," with the patented cover winding, is one of the greatest improvements made in binder twine in many years—and you can get it only in the Harvester brands. Next harvest season McCormick-Deering dealers in practically every community will be prepared to furnish you with these good brands in the "Big Ball" winding. You cannot afford to deny yourself the many advantages of fewer stops in the field; less likelihood of snarling, collapsing, and tangling; and less bulk to store, handle, and haul.

Now is a good time to plan for next harvest's requirements. Consider every angle well. You have always known Harvester twine to be of unquestioned quality—now you have the added advantage of the "Big Ball" winding. Assure yourself a full supply of this good twine by making arrangements with the McCormick-Deering dealer next time you are in town, for delivery before harvest time.

And Not Enough Like This

John Hobart Makes a New Year's Resolution

By Carl F. Haefka

R. F. D. No. 5, Midland, Michigan

"THERE, boss," said John Hobart, in a gentle tone of voice, as he finished stripping the last cow. He was pleased with himself on this crisp New Year's Eve—and he had reason to be, for everything about him radiated his success as a farmer. The buildings, were freshly painted and in good repair, were models of sensible architecture; the steel stanchions for his thorobred cows, with their individual drinking fountains, the milking machinery and the tractor, all demonstrated the good judgment and sound business principles of the man who owned them.

John Hobart was decidedly a successful farmer, but it was not this fact entirely which brought an anticipatory smile to his lips, as he picked up his 300 candle power lantern and prepared to leave the barn. No, it was that his chores were now finished and he would soon be at the house having a deliciously warm supper, after which he would be free to the cozy comfort of the living room, there to peruse the columns of his favorite farm magazine. Already, in fancy he could see the subdued light of the reading lamp and hear the cheery roar of the flames, as they went up the chimney.

Outside, the stars shone brightly, and the snow crunched under his feet with a pleasing sound as he walked. A few minutes more and he would be having supper, after which —the paper! As he climbed the back steps , he could hear the low toned gr-r-r-r of the cream separator, in the milk house at the end of the kitchen. Evidently Harry hadn't finished running the milk through yet. That boy would have to hurry if he intended taking the girls to the New Year's party at Benson's.

"Supper ready?" greeted John Hobart cheerily, as he thrust his head in the kitchen door.

His wife looked up and smiled wanly. A tired looking face was hers, the sparkle gone from the eyes, and vertical wrinkles prematurely come upon the forehead. She was churning, but rested a bit from the labor of turning the ten gallon barrel over and over, to reply:

"No, dear, but I'll have it ready soon. The butter doesn't seem to form; I've been churning for two hours, and still it looks no different than when I started. I'll need a pail of fresh water soon, too. Will you get it?"

Her husband grunted.

"I'll get some," he said, "but it does seem that we could manage to have our work done a little earlier at night."

"Supper is on the stove," said Mrs. Hobart, "but you'll have to wait a little until I can put it on the table."

The man grunted again. Already his little plans for the evening were being threatened. But he went out to the well for the pail of water.

Like many another man, John Hobart was, in no wise, familiar with the cooking of a meal indoors (He could cook a splendid one in camp), nor did he know how to prepare one already cooked. So, after he had returned with the water, he "washed up," combed his rather tousled hair and departed to the living room, where he lighted the lamp and settled himself before the fire to read a little while waiting for supper.

He tried to become interested in an article by a famous dairyman, but it was useless. The bedroom of his two daughters adjoined the living room, and a muffled conversation from that direction annoyed him. In vain did he attempt to concentrate his mind upon the article, and at last, in desperation, he tossed the magazine upon the center table and leaned back in his chair.

Then he caught a few words of the conversation in the next room and he sat suddenly upright.

"Dad could do better by mother," he heard Genevieve say.

"Uh huh," agreed Margaret.

"He has made lots of improvements in the barns," continued Genevieve, " and bought modern machinery, but mother still has to churn by hand and carry water from the well. I don't think it's fair."

The girls moved to another part of the room and he could no longer distinguish their conversation, but what he had heard gave him an unexpected jolt. He was bewildered—he who had felt so secure and at peace with everything about him but a short time before.

He tried to be fair—to discover the justice of his daughter's remarks. Wasn't the well but a few steps from the house, and didn't his wife have a washing machine and a barrel churn to make her work easier? Wasn't everything as convenient as possible under the circumstances? But what were these circumtances? Were they any different from the ones with which he had to contend every day in his business of farming? He had to admit that they were not. Gradually his resistance was broken down by the evidence of his own reason. It was true that when it seemed that his cows must have pure, running water he had supplied it; it was true that when changing conditions had seemed to warrant the use of the motor truck and a tractor he had not hesitated in purchasing them. And was the present matter any different in principle? No! . . He had wondered about that tired look in his wife's eyes; now he understood it. What an unmitigated, selfish fool he had been not to have known it before! Why should cows, even though they are blooded stock, be provided conveniences which his wife did not have? Why, she was worth more than all the cows in the world!

And then there came a sound of heavy footsteps outside the living room, and John Hobart leaned well back in his chair and simulated slumber. The person entered the room, and between partially closed eyelids the man saw that it was his son, Harry. At that moment Harry was not in the best of humor, for he was scowling darkly. He came tramping across the room, but when he noticed the supposedly sleeping form of his father he finished the walk to his room on tip toes. The elder felt guilty through and through and in that instant a great light flooded his soul. He had never before realized all his children meant to him. He must keep them interested in the farm! And then he made a resolution.

As soon as Harry entered his room, the father quietly left his chair and made his way to the kitchen where he found Mrs Hobart putting on supper.

"Did the butter come out all right?" he asked.

"No, dear" she said, "but it was taking so long. I thought you'd like supper first. I'll finish churning after we eat."

"No you won't," said her husband, and she looked at him in astonishment.

"Because," he continued, "I'm goin' to do it myself. An' what's more, you're never goin' to churn by hand again! Tomorrow—no, tomorrow is New Year's—the day after tomorrow, we are goin' to town with the truck an' fetch home a lot of things. A gas engine to put in the cellar, a power washin' machine an, power attachments for the seperator an' the churn. The engine will do all the churnin', run the seperator, wash the clothes an' light the house after I can have it wired. We can get a pump, too, so you won't have to carry the water from the well any more. I guess we can have improvements in the house as well as other places on the farm. What do you say to that?" he concluded, and kissed her—something he had not done for months.

Mrs. Hobart became tremendously joyful, and a light of renewed vigor shone from her eyes.

John—John!" she gasped. "You

(Continued on page 17)

FRUITAGE

I'VE been thinking much today John,
How, when we bought this place,
We carried water from the spring
With slow and labored pace;
And after while we dug a well
Near by the kitchen door,
We thought that that was very fine
And we couldn't ask for more;
But now I turn the water on
Above my kitchen sink,
And I'm thankful for the easy way
I get the old-time drink.

Upon the kitchen shelf
The lamps stood in a row,
Each with a spotless chimney
When I'd time to make it so.
At night each sent a feeble ray
To penetrate the gloom;
But now I press a button
And white light floods the room.
The kerosene lamp was very good,
It served us with the rest,
But for our old and dimming sight
We're thankful for the best.

Now our furnace and our auto,
May seem small to people here;
But to us they mean the weary toil
Of many a long, long year.
We're thankful for the strength of brain
That dared to plan to do,
And for the strength of nerve and brawn
That made our dreams come true.
We're thankful that the Lord has blessed
The labor of our hands,
The fruitage of our orchards,
The tilling of our lands.

There have been times of trial
When the burden of our care
Seemed to grind and almost crush us,
And be greater than our share.
Now, the glory of achievement,
The triumph, and the gain
Make us glad we've had our crosses;
Make us thankful for our pain.

FUR DEPARTMENT

Edited by A. R. HARDING, America's Foremost Author and Trapper

QUESTIONS INVITED

RAISE MUSKRATS

ALTHO the average person has not found the place "where dollars grow on bushes" during ecent years thousands of trappers ave literally "picked dollars out of he water" in the form of muskrat elts. This good thing however ould not last long for the wild su-ly could not stand the "picking." Only a very few years ago when est muskrat pelts were worth less han a dollar to the trapper there ere untold millions in nearly all onds, lakes and streams throughut North America. How is it toay? Greatly increased value of uskrat furs during the past few ears has caused this fur producer o be closely hunted and trapped, ot only by boys and amateurs, but rofessional trappers as well.

Five years ago the waters of such tates as Michigan, Wisconsin, innesota, the Dakotas, Nebraska, owa, Illinois and Indiana were the omes of large numbers of muskrat ut when the value went to $2, $3 nd even $4 each the animals greatly ecreased owing to persistent efforts f the fur hunters and trappers.

The past summer, during a three months' stay in Antrim County, Michigan, from which place I often drove out 30 miles into Grand Traverse, Kalkaska, Charlevoix, Otsego and Crawford Counties very little muskrat sign was seen altho I kept an eye out for sign and was on numerous streams and lakes. Trappers and buyers said that there was not one muskrat in these counties to five a few years back.

What is true of the Michigan section is largely true in most states. In Ohio where the lawful muskrat season lasts from November 15 to March 1 the crop will be small—twenty-five to thirty-five per cent of only a few years back. Indiana and Illinois both report short supply while under date of September 12 a well known dealer of Western Pennsylvania wrote as follows:

"We have miles of the finest muskrat creeks that do not have a rat track on them as high prices followed by high water and no closed season has left this section of the state with very few muskrat."

What does all this mean? If present demand continues, and indications are that it will, raising surely offers the only solution. The trappers of muskrat and others are not all idle by any means for I have received numerous letters from various parts of the country in regard the raising of this animal and they range from those who are thinking of building a pond to those who wish to buy or rent a marsh or lake. Both methods no doubt, at present prices of muskrat pelts, can be made a paying business.

The would-be raiser should select a pond, lake or stream that abounds in wild rice, flags, lilies, etc., as these make ideal food and building material for muskrat. It is not expected that all of these grow on any one stream or pond but at least one of them should. It is well to have the food supply well started before the muskrat crop becomes too numerous, yet of course, they can be fed corn, pumpkins, turnips and other roots.

Actual experience is what counts and the following is from a Minnesota raiser of some ten years experience who says: Litters average 5 to 8 and three litters each season. The young are born six weeks after mating. The first litter by early April usually. They like their own or natural food best, such as roots, etc., so we seldom feed except carrots, corn and apples. I plant marsh potatoes and my muskrat are kept in a natural swampy place—some in wire enclosures, but costs a great deal more—and the muskrat seldom leave if not disturbed and kept in feed. My observation covering ten years of muskrat farming, gives these facts: A tract of marsh one-half mile wide and one mile long paid more profit on investment than another fenced in. Of course an open tract, if allowed to get overcrowded, causes some rats to leave, but unless disturbed or unfed they seldom do. In a season of little rain fall they may leave if pond dries. This is prevented by flooding with dams. Our advice is select ponds or small lakes with an abundant supply of deep water and your rat farm where tresspassers can be kept off by law and you have a profitable side line, in fact, makes a worthless swamp worth hundreds of dollars per acre.

There are thousands of small ponds and lakes in Michigan, Wisconsin, Minnesota, the Dakotas and Iowa that offer golden opportunities for muskrat raising. Such places, I think, offer by far the best places to quickly build up your supply of muskrat for remember that they breed as a rule three times a year. Artificial ponds, of course, can be built but ponds or small lakes where the food supply is already started should not be overlooked. The raising of muskrat is a business that surely promises well to those who know something of the nature and habits of this now valuable but fast disappearing fur animal.

PUBLISHER'S DESK

PAY AS YOU ENTER—FOR A JOB!

An ambitious school teacher who wants to make her salary go farther, sends us the ciircular of the Professional Service Bureau, "a national organization," Goebling Building, Detroit, which offers for "$1 down and $2 more when earned" to put the young lady in touch with those who want spare-time work done at home. She wants to know if the company is reliable.

We always give a proposition the benefit of the doubt, but two letters to this company have failed to bring any response and there is no such concern listed in the Detroit telephone directory, so we have a fair idea that this lady saved a dollar, at least, by writing us before she "bit." Allow me again to repeat in this column, that the job you have to pay to get is usually not worth the price you pay for it!

Well, it looks as though what we predicted in the Nov. 11th, issue had come to pass. The American (alias Canadian) Silverware Company, of Montreal, Quebec, Canada, who by postal card advised thousands of farmers, that they were the "lucky" winners of a set of silverware and only had to send 98 cents to "pay the postage", are out of business. The assistant manager of The Bank of Montreal, advises the publisher, that, "their office at 43 St. Francois Xzavier street is closed." So endeth another lesson! We hope our timely warning saved a few of you from the clever scheme of the international boundary- line grafters.

A ROOFING GUARANTEE

I herewith inclose guarantee order blank for which I signed and ordered ½ barrel Saveall Roofing. This came when we were very busy on the farm and did not get it on for perhaps four weeks. The next time it rained it leaked as bad as ever. They also sent 40 gallon instead of ½ barrel. I wrote and told them the roof still leaked and offered to to send the balance back. They told us it was not put on right and said if we didn't pay by return mail they would sue. Please tell us what to do.

—Inasmuch as the Franklin Paint Company, Cleveland, Ohio, states very plainly in their order blank that the roofing is guaranteed for ten years, and you agreed to pay in four months, if it was all they claimed, or that you would report promptly and there was to be no charge for the amount you had used.

Under the above circumstances I do not believe this company has a possible chance of collecting any money from you in any court in the land. My suggestion is to return the unused portion by freight collect and tell them to go ahead with suit if they want to. Of course, this is only my opinion and you can secure a local attorney's opinion if you care to.

Trappers-Fur Shippers
The Largest Fur House In the Northwest
Percey's
50 YEARS IN OSHKOSH
Wants Your Furs

Exactly fifty years ago Percey's Fur House was established at Oshkosh to barter with the Indians and other trappers. Percey's fair treatment and square deal policy built such a reputation that trappers went out of their way to secure Percey's prices. A man's word was as good as his bond in those days, and through the northwest Percey's word was "as good as gold." It still is.

Muskrat — Skunk — Mink

We need all the Muskrat, Skunk, Mink, etc., you can ship us right now. For 50 years Percey's fair treatment and square deal policy insures you full market value for your furs. Make sure your name is on our list. We will advise you of every change in market prices and conditions. Send us a postal *Today Sure.* For fifty years Percey's Price List has been the standard of the northwest.

SHIP NOW TO The Largest Fur House In the Northwest Percey's 50 YEARS IN OSHKOSH FOR TOP PRICES

Percey's Prices
Percey's Prices are bonafide based on standard grading that insures you the largest returns.

Percey's Graders
Percey's Graders are men of years of experience having the highest reputation among fur shippers.

Percey's Checks
Percey's Checks for your furs means the most money for your catch. We pay express and parcel post charges on all shipments where charges do not exceed 10% of the value of the furs.

RUSH YOUR SHIPMENTS
Ship to Percey's NOW while prices are high. Honest grading, highest market prices and a square deal to all Fur Shippers for 50 years has made Percey's the Leading Fur House of the northwest.

We cater to dealers' lots and will send a representative on request. Write us TODAY Sure for Price List and Shipping Tags.

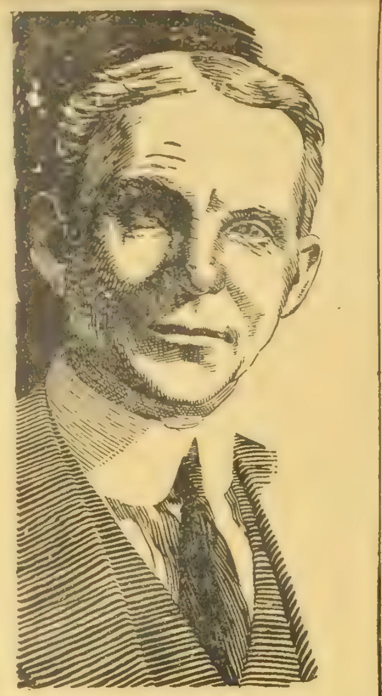
The Truth About Henry Ford

By Sarah T. Bushnell

An Amazingly Fascinating Story of the Rise to World Fame of Michigan's Most Famous Citizen!—The Most Talked of Book of the Year.



MR. HENRY FORD

CHAPTER I

His Childhood and School Days

HENRY FORD belongs to that stern, strong, creative generation of Americans that has served our country so well in the days of its critical development. He has the simple faith, the sturdy life, the unflaging industry, the love of family that typify the best Americans. This brief chronicle of some of the vital periods of his life will give his fellow countrymen a clearer understanding of the character and purposes of the man.

* * *

Two years after Michigan became a state the first link in the railroad connecting Detroit and Chicago was built to Dearbornville, then a small village ten miles from Detroit. In those early days the settlers drove to "town" in ox carts over corduroy roads that they themselves had built with logs from the surrounding forests. The coming of the first train, therefore, a great day in Dearbornville. The pioneers gathered in the shade of the stockade walls of the arsenal and debated the new invention. There were many pessimists among them who were sure that the crude locomotive of that time would never be of practical value. William Cremer had wagered that his white faced correl mare could out-run the iron horse in a race from Ten Eyck's tavern to the village; and it did, William reining in his horse at the arsenal before the train came in.

In the group that witnessed this triumph of the horse and the subsepuent arrival of the train was a young lad, William Ford, who lived between Dearbornville and Fort Wayne—a post where U. S. Grant was stationed a few years later as a lieutenant. William Ford had recently come over from Ireland. The twinkle in his blue eyes, the glow in his cheek and his ready wit told that, but his speech and his manners spoke of his English ancestry. He had cleared and put under cultivation the land where he lived, and some years later married Mary Litogot, the daughter of his nearest neighbor. In the five years that followed five children came to bless their home.

On July 30 in the third year of the Civil War, Henry Ford was born and was named after his uncle who owned an adjoining farm. The war and the still wonderful iron horse were general topics of conversation in the days of Henry Ford's childhood. He heard the grim tragedies of the conflict retold; he knew many of the soldiers at the arsenal and he often saw bluecoated army officers splashing along the road to Detroit. As he grew older he accompanied his parents when they drove to the small Episcopal church in Dearborn where William Ford was a vestryman and where the services were conducted by the army chaplain from Fort Wayne. Thus war had its part in his boyhood as in the later days of his life.

The five Ford children attended the old Scotch settlement school when very small, and when Dearborn and Springwells townships were land they went to the Springwells school. Every day that weather permitted, the five children walked the two and a half miles where they were taught reading, writing, spelling, geography and arithmetic. No attention was paid to history even though it was then in the making. The schoolmaster was Mr. Brush whose son Alonzo Brush, a playmate of the Ford children, was years later the inventor of the Brush automobile. Henry Ford's deskmate was Edsel Ruddiman, who for twenty-five years has been Dean of Chemistry at Vanderbilt University and after whom Henry Ford's only son is named. James Ruddiman, Edsel's brother, later married Mr. Ford's sister.

One of the earliest childhood recollections of Henry Ford is his longing to see the iron horse that he could hear a mile away beyond the woods. A frail child, he had been forbidden to venture away from his home alone, so he would climb a fence top when he heard the distant whistle and try to make out the strange machine as it toiled over the grades. His childish imagination could not believe that the ugly, silent monster of iron that he saw when occasionally he went to the village with his parents could be the fiery thing that whooped through the woods like an Indian—and in those days it was said that Chief Pontiac still roamed the forests of the region.

Henry Ford showed early in life that interest in machinery that shaped his later career. The story runs—and although it is fiction it may be repeated here—that when six years old Henry eluded his father and mother one Sunday morning as they were entering church, and was found later trying to put together a playmate's watch which he had taken apart. At 14 the lad was confirmed in the village church by the bishop and to this day he frequently attends service there.

There are many authentic stories of his boyhood interest in mechanics. About the time he was ten or twelve years old he developed a great interest in the steaming teakettle that sang and jiggled on the kitchen stove. While the other children romped outdoors Henry kept close to the hot wood stove, watching with the round eyes of childhood as the steam lifted the kettle top and rattled the lids of the vegetable sauce pans. In the dining room of the Ford home was an old fashioned fire place. One day Henry secured a thick earthenware teapot which he filled with water; then he stuffed the spout with paper and tied down the lid

"Now let's see if you can lift that lid, old Mister Steam," he said as he thrust the teapot close to the fire. Then he sat down to see what Mr. Steam could do. An explosion, followed by a child's cry of pain, soon brought Mrs. Ford running from the kitchen. Scattered about the room were fragments of the tea pot. One piece had shattered a window pane, another had broken a mirror, while a third had cut a gash in Henry Ford's head. His face, too, was badly scalded. To this day a faint scar remains to show what Mr. Steam did.

Mary Ford possesser that quick understanding sympathy of the true mother. "My dear child," she said after the wound had been attended to, "I am afraid you are going to hurt yourself many times if you try to imprison steam or make other experiments."

After the children had been put to bed that night she told her husband of the incident. "Henry is eaten up with curiosity," she declared. "He asked questions I could not answer in a thousand years. I am afraid he is different from other boys; they are satisfied with explanations but Henry has to investigate everything for himself. I wish you would watch him closely when he gets near machinery. I am worried about him whenever he goes to the barn, for he doesn't know the meaning of fear."

Sometime later his parents noticed that Henry was not returning from school until twilight. Inquiry brought out the following explanation: Near the school was a creek bordered by twisted weeping willows, whose cool shade afforded a delightful place for boys to lounge and plan the great things of boyhood. While the other pupils spent their noon hour in games, Henry Ford and his group of chums busied themselves in building a dam across the creek with stones and other materials gathered from the nearby fields. When the dam was done they fashioned a rude water wheel that revolved with gratifying rapidity. But the dam caused the waters of the creek to back up and this brought protests from the farmers. Schoolmaster Brush ordered the youthful engineers to tear out the dam. "When this is done," he concluded, "Henry, who is your ringleader, can remain with me after school each day until I tire of his company." And that was why Henry returned home each evening at twilight.

Today Mr. Ford counts among his most treasured possessions a picture of the old creek showing the dam and the water wheel and a group of his long ago companions sitting in in the shade of the willows. Mr. Ford's keen interest in water power still persists. He has traveled thru Michigan and other states buying water rights and sites for dams, and is formulating plans for locating small industries in country districts where water power can be developed.

At one time John Haggerty was Henry Ford's deskmate at the Springwells school. One afternoon the two boys, hidden behind their open geographies, were busy dissecting a watch. At the most interesting point in their investigation the sheltering geographies fell with a bang and their occupation was revealed. Mr. Brush serveyed them sadly. "Now John," he said at length, "I will trouble you and Henry to bring me that watch. You are sent here to get book learning. The idea of big boys like you, almost 16 years old, playing like children. You can stay after school and try to put the insides of that watch back like they were before you began to meddle with it. You might as well learn right now that it is wrong to start anything and leave it unfinished.

When Henry was 14 his mother died and the little family was overwhelmed with grief. With the fine courage of the early settlers Margaret Ford, the oldest daughter, took up the labors and responsibilities of the household, and the father did all he could to fill the mother's place, but the family life was sadly changed. Mary Ford was a remarkable woman; she taught all her children that to be useful to their country and community was the best of all ambitions, and she imbued them with noble principles and ideals. At 18 or 19, when she married William Ford, she was a rosy-cheeked, dark-haired, beautiful girl, calm, well poised and courageous. In those years a mother's tasks were many and heavy, especially in the country districts. Mrs Ford met each day's problems with a cheerfulness that made her seem wonderful in the eyes of her son, Henry. She taught him that he must not drink, smoke or gamble, and to these teachings he has remained steadfast all his life. She impressed upon him that he must be true to conscience and duty, and she taught him that courage which bore fruit in after years.

At 17 Henry Ford finished the eighth grade at the Springwells school and a year later he set out for the city, Detroit.

CHAPTER II.

The City Beckons

Like most active country boys Henry Ford had made himself a tool shop, where he spent many busy, happy hours on the farm. So adept did he become that as he grew older he became a general handy man for the neighboring farmers. He fixed many broken farm implements and before he was 18 he was in charge of his father's saw mill. But the city called him and he went.

Alone and unknown, he secured a job with the Flower Manufacturing company, engaged in the making of steam engines and employing more than a hundred men. The company was at that time one of Detroit's largest manufacturing concerns. His apprenticeship there was practically a course in mechanical engineering, and he was paid $2.50 a week. This was less than William Ford paid his hands on the farm and did not cover the cost of Henry's room and board in the city. But the place had this compensation: It brought him opportunities that were out of reach on the farm. He could spend his idle hours in the city library among the companions he valued most of all—the books and journals on mechanical engineering. To supplement his "salary" he made arrangements with a jeweler whereby he could repair watches. That was one of the red-letter days of his youth, rivaling that other when he was allowed to mend a neighbors sewing machine.

He worked hard and long, his two occupations keeping him busy from seven in the morning until six at night and from seven until bed-time. For nine months he was thus employed, steam engines and watches filling his waking hours and quicken-

The Author's Preface to This Story

IN publishing this biographical sketch, I wish to acknowledge my gratitude for the co-operation of Mrs. Henry Ford and of prominent Detroiters who were associated with Mr. Ford in his early days—among them being James Couzens, A. Y. Malcomson, Horace Rackham, E. G. Pipp, C. A. Brownell and many others.

From Mrs. Henry Ford, I secured most of the data. She personally helped me to secure accurate and authentic information. For months she gave me liberally of her time in order that I might compile this volume and verify my facts. This assistance entailed a sacrifice, for she shuns publicity, heartily dislikes any attempt to draw her into the limelight and objects to having her name appear in print.

Mr. Malcomson's financial support made Mr. Ford's success possible. Had there been no Alexander Malcomson and no James Couzens, the inventive genius of Henry Ford probably never would have reached the heights it has. From Mr. Couzens, I secured the figures of the stock subscribed by the first Ford stockholders. Mr. Pipp, widely known as the former editor of the Detroit News, was most kind and generous in assisting me on certain difficult and important points. I am indebted to Mr. Brownell for his friendly help and interest. He was for many years an executive officer of the Ford Company.

In this little book I have tried to include only points which are frequently discussed and to use carefully only information which I secured directly from those who have been closest to Mr. Ford for the past twenty years. To all who assisted me, I am sincerely grateful and I take this method of acknowledging my appreciation.—Sarah T. Bushnell.

(Copyright by Reilly & Lee Co.)

ing the many ideas that filled his mind, awake and asleep.

Someone has said that invention travels in thought waves. It is possible for two or more inventors, hundreds of miles apart, to be working on the same problem without any knowledge that someone else is engaged on the same project? It was about this time that the restless desire began to formulate itself in Henry Ford's brain to build a vehicle that would compete with the iron horse of childhood memory.

After seven months in the employ of the Flower Manufacturing company young Ford went to work for the Drydocks Engine company, whose specialty was marine machinery. He was doing well, and opportunity for advancement was just ahead when one day came word from his father urging him to return to the farm. William Ford said that his health was poor, that he was growing old, the farm hands were becoming careless and indifferent and beyond his ability to manage. He needed his boy, he said, to care for the home place. It was a blow to the young man in Detroit, but his mother's teachings made his decision certain. Putting aside ambition, he answered the call of filial duty and gave up his place in the city to return to the farm where he was needed. This summons, as will be seen later on, was the turning point in his life.

Brief mention will not be out of place here of the other sons of William Ford. John Ford remained on the farm. Some time later he became a member of the Springwells school board, a position he retains to this day. William Ford, another brother, became in later years Mayor of Dearborn and member of Dearborn school board.

Today two miles from the old Ford homestead can be seen the tall smokestacks of the great River Rouge foundry. This gigantic plant, owned by Henry Ford, was used during the world war as a naval station, and also in the making of the Eagle boats and submarine chasers. These boats were launched directly into the River Rouge and made the long voyage through the Detroit river, Lake Erie and Lake Ontario, through the Welland Canal and down the St. Lawrence river to the sea—and service. But that is getting ahead of the story.

CHAPTER IV.

His Courtship and Marriage

Up to this time Henry Ford had rough-hewn his life; now Destiny stepped in and began to shape his career. He spent the spring, summer and autumn following his return in plowing, planting and harvesting on his father's farm. But Fate was preparing a reward for his self-sacrifice and entrusting the details of Romance. Henry soon again became a favorite in the countryside, his city-learned ways adding to his popularity. When winter came he showed that he was still the best skater in the neighborhood. "In those days," as an old-timer has said, "no one went to Florida or California in winter. Instead they stayed at home and enjoyed the best sports of the year."

Henry bought a bright red cutter. As it sped over the smooth roads with many bells a-jingle, it was generally admitted that he was the best "catch" of the neighborhood. But that opinion was not unanimous; five miles away, in Greenfield township, lived Clara Bryant, local belle and beauty, with beaux a-plenty. She cared not a snap of her pretty fingers for Henry Ford, his city ways and his new cutter—and she made no secret of her opinion.

Naturally such indifference challenged young Ford's attention and quickened his interest. He forgot Detroit and mechanics and set about accomplishing a bigger undertaking. His red cutter was an asset of which he made effective use; good naturedly he carried many a laughing crowd to and from skating parties. At the Greenfield club one evening he quietly produced a curious watch, the like of which the countryside had never seen. It had two sets of hands and recorded both standard and sun time. As he displayed this wonder he dropped vague hints of other and greater inventions.

"Mother," said Clara Bryant the morning after the Greenfield club party, "Henry Ford is different from the rest of our crowd. He can invent the most interesting things. He is the best skater and he dances as well as he skates. We sat out two dances last night because I wanted to see a watch he had made. It is the queerest watch you ever saw. He says he is going to make something else and let me see it."

Mrs. Bryant, wise mother that she was, said nothing. She was acquainted with her daughter's sudden enthusiasms.

During that winter Henry Ford invented his first tractor, although it did not bear that modern name. It was a machine to use in plowing and harvest time, and it was fashioned out of an old wagon body, some wagon tires, harrow teeth and other pieces of discarded farm machinery. As he toiled over his new machine the young inventor did not dream that in later years his name would be known 'round the world wherever ground is broken and harvests gathered. About this time he took a course in Goldsmith's college in Detroit, but study and invention did not crowd one other plan out of his active mind.

"Father," he asked when he was twenty-four years old, "if I should marry what part of the land would be mine?"

"I'll do for you just as I intended to do for John and William," his father replied. "You can have enough timber to build a house and can have eighty acres facing Recknor road. When I'm gone there will be forty acres more for each of you children."

The son went about his courtship with the determination and enthusiasm that marked his undertakings in mechanics. Likewise he set about the building of a home for his future bride. Such methods could not fail and Henry Ford and Clara Bryant were married one April day 1888. Their new home, a modern structure with broad verandas, was ready for them. It stood in the midst of rolling farm land, with its red dairy and barns grouped in the rear. For three years the young couple dwelt there in happiness. The husband was busy with his farm work, but the hum of machinery still was music to his ears. In this time he built three saw mills and often he was to be seen sitting in the shade of a spreading oak figuring with pencil and paper; often, too, he was busy in his tool house with odds and ends of machinery.

One evening came the revealing of his great resolve. "Clara" he said, " it looks as if I could not stand the farm any longer. I'll have to go back to Detroit and begin work on my horseless carriage. I can't do much on it here."

His young wife was aghast. Her glance took in the many comforts of their home, the opened piano with its sheets of music, the cheerful fire on the hearth, the large carved armchair that her mother had brought from Warwick, England, the old-fashioned English clock that William Ford had given them as a wedding present. She loved that cozy home, and she never had heard of a horseless carriage. Was her husband losing his mind?

"Why, Henry," she exclaimed, "you are the best farmer around here. Your engine is a wonder—and whoever heard of a horseless carriage!"

"Bring me a pencil and a large piece of paper and I will show you what it is," her husband replied.

From the piano where she had been playing she took a piece of music. On the wide, white back of the sheet Henry Ford drew with quick, sure strokes, until to his wife leaning over his shoulder the strange vehicle took form and semblance. He explained each part as he drew it, his eyes sparkling, his hand trembled with his enthusiasm. As he pictured the vehicle to her it did not seem improbable. He spoke of the motive power and fire engines; he talked confidently of resilience and gasoline. It was midnight before he finished and then his wife had caught his enthusiasm.

"If you want to go back to Detroit we'll manage it somehow," she promised him.

Soon they were house hunting in town and found on Bagley street, then in a residential district but now a business thoroughfare, the home they wanted. It was a small building with a large red, brick barn which would serve as a workshop. They soon moved to the city and Mr. Ford, then twenty-eight years old, went to work for the Edison company. He had, in addition, an income from his farm and three saw mills and was not a poor man. However, he had to make the most of time, money, material and effort. Mrs. Ford was sympathetic and optimistic and she was a great help to him in those days when his home surroundings were such a factor in keeping his hopes high and his determination unshaken. It was by good management and hard work that he rubbed Aladdin's Lamp and became one of the world's richest and most famous men.

CHAPTER IV.

The First Car and the First Race

For two years that horseless carriage "ate its head off." Always it consumed money, money, more money. Bicycle wheels were bought for it, but all other parts had to be made to order and by hand. And often these parts would not fit and had to be made over. But Henry Ford never grew discouraged, never lost confidence in the ultimate success of his invention. And then—at 2 o'clock on a rainy morning in April 1893, the task was done and the vehicle ready for a test. Despite the darkness and downpour Mr. Ford would not delay. With no idea of what that strange machine might do, Mrs. Ford caught up an umbrella and followed her husband to the street.

As he clanked away all sorts of fears assailed her. If the machine did not kill him he probably would die of pneumonia. The noise of the vehicle would awaken the neighborhood. She wished for the moment that she had not encouraged him in his work. As her mind recalled the days and months of study and labor, a loud noise heralded her husband's safe return. The horseless carriage would go! Flushed with pride and excitement, the inventor pushed the strange little machine into the barn, locked the doors and went into the house. He drank a glass of hot milk, spread his dripping clothes before the fire and went calmly to bed to enjoy the best rest he had known since their return to the city.

In the days and weeks that followed friends and neighbors flocked to see the new machine. Mr. and Mrs. Ford created a sensation every time they rode through the streets; in the country horses dashed into ditches or fences when the horseless carriage approached. Country people regarded them as much as they did a circus. Every time the vehicle was dragged from the barn Mrs. Ford made some excuse for accompanying her husband on his ride. She was optimistic by nature, but she felt that sooner or later some accident would occur—and she wanted to be with him then. He was anxious to test the machine's hill-climbing powers. The neighborhood was flat and the one hill in Wayne street was too near the river to make a test prudent. So Mr. and Mrs. Ford drove ten miles around the boulevard to the graded approach to the viaduct, Mrs. Ford said nothing of her fears but waited. The little car did not tip over or roll backward down the grade, but slowly, inch by inch, it gained the top.

Those were the days when everyone rode a bicycle and Woodward avenue was thronged with men and women on their wheels. One day as Mr. and Mrs. Ford were making their slow progress along the boulevard a bicyclist—a "scorcher"— approached their car. So astonished was he at sight of the strange contrivance that he fell under the Ford car. The two occupants were terrified. Mr. Ford urged the fallen cyclist to lie still; then he and his wife hastily got out. A wondering crowd gathered. There was but one thing to do and that must be done quickly. Carfully Mr. Ford lifted the car off the fallen rider, who scrambled to his feet unhurt, while the crowd roared with laughter. As Mr. Ford wiped the perspiration from his forehead he remarked, "That was a close call for us."

Later came another unpleasant adventure. The proudest possession of a wealthy resident of Boston boulevard was a pair of fine driving horses. The first time those horses saw the new car they snorted, reared and bolted. Their owner's wrath was almost beyond words as he

"The Farm Paper of Service"

BABSON PREDICTS FARM PROSPERITY FOR 1923

"ANOTHER reason I am optimistic is on account of the crop situation. Now, at times when the country has small crops and high prices, the farmers are happy, but it is not good for the nation; and there are times when we have bumper crops and low prices, the people in our cities are then happy, but it is not good for the farmers.

"The nation as a whole is best off when we have fair crops and fair prices and I hope that the next twelve months will show somewhat such conditions.

"I find that the farmers of this country will receive a billion dollars more for this year's crop than they received for last.

"Now, as operating expenses of the farms must have been less this year than last year, that means that the farmers will have considerably more to spend. As a third of the people of this country receive their incomes from the farms, that means that a third of the people of the country will have more money to spend in 1923 than in 1922."—Roger B. Babson, Famous Business Analyst, at Chicago, November, 29, 1922.

PRITCHARD'S WEATHER FORECAST

YOU remember the blizzard which covered northern Michigan with a sheet of ice the week of February eighteenth, last year? Trains stopped, telephone and telegraph lines sagged and fell. It was a near catastrophe in some sections. Well, the United States weather bureau for that week predicted: "Cloudiness; occassional snows, normal temperature." Mr. Pritchard predicted a "rain, sleet or snow storm" and pointed out his reasons why it might be disastrous, thus warning the readers of his column of what they might expect.

L. N. Pritchard is a Michigan man who has become famous the past few years by his almost uncanny predictions of what the weather is going to be a few weeks or months ahead.

Turn to page 23 of this issue and read what the weather will be for the next two weeks! You don't think anybody can predict the weather? Well, mark down what Mr. Pritchard says about next week and New Years day on your calender in the kitchen and then see how near he hits it!

TOO MANY ON THE FARMS?

OVER at Kalamazoo last week, Mrs. Stockman, according to the press dispatches told the state Grangers that we already have too many farms and too many farmers. This may be true and if it is, the present movement, which has been pretty general all over the country from the farms into the city, should be solving the problem. We do not question but what improved machinery has year by year, lessened the labor requirements of the farms. Nature does a heap of a lot of the manufacturing of farm products, with only the assistance which nowadays one man and machinery can give her a lot of, in a short space of time. Now, if they will only pay enough for farm products, so that the few of us who remain can have the wherewithal to buy the necessities and a few of the luxuries too, which our highly paid city cousins are going to make for us, then all will be merry.

RUSSIAN HORRORS SUBSTANTIATED

YESTERDAY from the lips of a man I have know intimately for many years, I heard a story of horror and suffering, which had I read it or heard it from one I did not know, I never should have believed. My friend, David A. Brown, a self-made man who by his unselfish service to humanity during the past few years has made himself typify the best side of dynamic Detroit had within the week returned from a six months trip in Russia and the Ukraine district. He was a member of a commission sent out officially to get the facts regarding the famine and America's work to relieve it. He said:

> "In the south of Ukraine, people have and are still, dying by the thousands. Wagons go around the streets each morning to pick up their loads of those who have died during the nights. People go to the cemetaries and dig their own graves, rather than be dumped into open pits by the wagons. I have seen the actual proofs of canibalism and in some parts, the authorities will not allow groundmeat to be sold, knowing not but what it will contain human flesh! In houses and buildings, attics and closets are searched for unfortunates who crawl into them to die. Of the millions of bushels of grain sent over by the United States for seed, not 25% reached the soil, because the hunger-crazed people ate it to fill their empty bellies! In unheated hospitals and abandoned asylums I saw old men and women lying on boards stretched over boxes, with only one single blanket to cover their wretched nakedness. The vermine, the stench, the horror of a visit to one of these places drove me nearly frantic."

Remember please, that Mr. Brown was talking of a white race, who but a few years ago were boasting of their culture! You will not believe it possible? Neither would I, if my authority were not unquestioned, nor would Mr. Brown, until he had seen it with his own eyes.

The redeeming feature is, however, that the American Relief agencies directed by Herbert Hoover, supported by countless charity organizations and aided by the twenty millions of dollars donated by the United States Government, have actually been the means of feeding and thus keeping alive 11,000,000 of these unfortunate people. Everywhere, according to Mr. Brown, the Russians speak of America as they would God, with reverence and devotion. The job is not completed. Political Russia is still in the hands of the Soviet. But with seed planted under American guidance and by American machinery in the wonderfully fertile valley of the Ukraine during the coming spring, Mr. Brown, believes that the attendent crop will relieve the suffering and place this agricultural country once more on a self-sustaining basis.

Does it seem possible that these conditions can exist today or that they can be brought about in so short a space of years. It seems only yesterday that Russia was the greatest food exporting country in the world, now America must attempt to feed her, while millions die from hunger!

LONG TERM CREDITS

ONE of the major questions which will undoubtedly confront the next Congress will be the establishment of long-time credit for farmers. Nearly all farm organizations and newspapers have been so insistent in their demands for a revision of the banking laws that they cannot very well be ignored. There is no question but what the farmer ought to have the same access to credit as do the business men of the city. When he produces a crop in the fall of the year and desires to borrow upon it for a matter of six months or longer, he ought to be able to do it with the same ease with which mechandise. Just what the government can do to improve the situation is problematical. It is really a question for bankers, but cursed with their traditional conservatism, they will usually wait in this case as they have in others, until the government goes ahead and at least points out the way for better rural credits.

BETTER CATTLE

AN encouraging sign of the times is the interest which business farmers are taking in the better strains of both dairy and beef cattle. What education failed to do necessity has accomplished. During the period of high prices farmers could if they wanted to, keep low producing cows and sell almost any kind of beef, but they can't do it today. Competition is too stiff for the farmer who does not produce economically. And the man who is still keeping boarder cows and raising scrub-beef is in that class.

But all over Michigan farmers who have never kept any watch on their milk records of their various cows are now joining cow testing assoinciations. For the first time since they have been in the dairy business they know which cows they should keep and which they should sell, or kill. It's no longer a case of guessing.

Farmers who proceed along scientific lines to build up their herds will have nothing to regret. Just now the pure-bred dairy industry is in the doldrums. But it's sure to have a come-back and very soon. Dairy cattle are going to the shambles by the thousands and the day is not far distant when their places must be taken by new and better cattle. That will be the day of opportunity for the alert breeder.

STARTS OFF ON HIS RIGHT FOOT

UNDER the heading of "Couzens Kicks Up Heels Early," a Washington press dispatch quotes Senator Couzens as saying:

> "I am not yet sufficiently familiar with the details of the subsidy bill to say how I will vote when it come up for final passage. I am firmly convinced the bill should not be passed on in this session and for that reason I have joined in the move to displace it and take up the Farm Credit Bill. Almost everybody seems to agree on the need for some such measure. It is fundamentally different from the subsidy bill in that the subsidy proposes to take money from the public treasury and give it to a special interest, whereas money extended in the form of credit to the farmers ultimately will be paid back. The farm bill is founded on the right principle and there is no partisan division over it."

Last issue, on this very page, we said we believed before a year from that time Mr. Couzens would find among his best friends at home our farmers, but we had no idea of prophesying that he would come out so plainly for a square-deal for farmers, almost before he had his seat in the Senate warmed! If you folks admire a fighter you'll like our new Senator.

WE'RE WITH YOU, BROTHER FRIDAY!

PRESIDENT Friday of M. A. C., who as arbitrator set the price of milk in the Detroit area for the month of December, is proving that it was not press talk, when he said at that time he proposed to go to the bottom of the milk situation. Now, we hear he has actually gone to work on a job that is not exactly a pleasant one for a man in his position, but it is a mighty necessary one. We want Mr. Friday to know that the farmers of Michigan, altho not all in this area nor all milk producers, will back him to the limit in a thorough investigation. And we want him to know also, that the columns of the Business Farmer are open for his use during this campaign. If you milk producers in the Detroit area have facts that Mr. Friday ought to know in making this investigation, now is the time to send them to him. If you feel that you have been subjected to injustices in the past, now is exactly the time to give them an airing and East Lansing is the address of the gentleman who will be mighty glad, we believe, to receive them.

J. R. Howard, who steps down from the presidency of the American Farm Bureau, has felt all the sensation of the national president. He has ben praised, censured, blamed, coerced, bulldozed, lied too, talked about and talked to death! Now it is all over and he can go back to his farm and watch the other fellow get it in the neck as he did for three years. The wonder is that there are always a bunch anxious at the trough to get the rope around their necks!

"The tumult and the shouting dies
The Captains and the Kings depart—"

and it makes little difference who was king or queen when Shakespeare wrote, or who was the wealthiest man in all of these United States when Longfellow composed his sonnets. There is something more in life than money, even though at times we are wont to forget this eternal fact.

Wonder what old banker Toldjerso says about the big farm organizations, all pulling in the same harness, towards the same end of the row?

Pritchard, our new weather prophet, predicts the January "thaw" late in the month.

Which is harder to get rid of, a Christmas cigar or a Christmas tie?

"Christmas comes but once a year," and some of us are glad of it!

What the Neighbors Say

"NOTHING IS WITHOUT SUFFICIENT CAUSE"

RECENTLY there was an article in the M. B. F., reciting the misfortune of "John and Mollie," and it was suggested that some one give some thought on the subject of those who have had hard luck on the farms, the reason and the remedy, if any.

"Nothing is without sufficient cause," is a truism, and it as true in regard to the "Johns and Mollies" as it is true in other fields of thought and being, beside that of agriculture. We are living in a universe of law and order, so far as the physical universe is concerned, and man-made laws are presumed to be made in the endeavor to bring the greatest good to the greatest number of people. In other words, laws should be made so as to bring justice to all men, or as nearly that as is possible for man to do.

Now why do the Johns and Mollies fail on the farm? They raise good crops, hay, corn, meat, eggs, and a vast variety of good stuff. There are several reasons for the failure to make good. Conditions over which the Johns and Mollies have no control, or at least exert a very trifling amount of influence. They have no political sower, hence exert no influence in legislation. Laws are made favoring the large corporation, banks, railroads, telephone and telegraph lines, while the ownership of coal mines, copper, iron and all minerals as well as timber lands have now passed into the hands of the capitalist class. The big corporations make the price on lumber, all building material and determine all food values. The greater part of the farming element are compelled to sell the products of the farms at harvest time and then later these products are re-sold at advanced prices. The railroads, capitalized at about three times their real value, are charging exhorbitant rates for transportation in order to make dividends. Almost all of the necessities of life are owned and controlled by men who toil not, neither do they spin,—only fine words for the workers to practice greater economy, and to produce more goods.

Another reason for failure of John and his wife is that we are in one, if not the mostly highly developed industrial countries in the world. The wealth of the country is being centralized in fewer hands and is located in or near the large cities ,and our population is drifting cityward. The workers in the cities derive no benefit from the cheap produce on the farm, for transportation rates and the middle man add to the cost of cheap farm products, and the consumers, to their own detriment, pay the bills. In other words, the farmer is carrying three or four parasites on his back, in the shape of three or four well-dressed, well-fed and well-housed men, who sport fine autos and front seats at the Gaiety.

Take for an example of our modern industrialism, Mr. Ford, of Detroit, and Mr. Ford is an exception to the general run of men of the capitalistic class. In spite of the fact that he pays his employees a generous wage, compared to what some employers pay, yet the 75,000 men who make the autos for him have turned over to Mr. Ford at the end of say twenty years an amount today of over four hundred million of dollars. He hires experts to manage the business, but as a phenomenon in our social life, it cannot be interpreted as being other than a menace.

The Federal Reserve Bank, with the power invested in a few men to inflate our currency at their own discretion, is a fruitful cause of injustice. The farmers of the country have lost billions of money, in depreciated farm and produce values, in the last three years. It has been politely called "the era of readjustment," but it has been the era of balking the unions; an era of enforced idleness and strikes, an era of extravagance and waste.

The recent action of the Detroit Creamery Co., very well illustrates how the city consumers and the farmers get it in the neck, but if the milk producers would organize as they did recently in Minneapolis, and sell their milk in the city themselves, they might stand a chance to get a whole melon, which would be much better for all except some very fine parasites.

There is no solution for the problem of the Johns and Mollies save through the method of co-operation. We will have to become more scientific in our exchange of commodities and in the production of them, in order that we may make a nearer approach to justice.—E. H. Barrett, Macomb County.

"I WANT A LITTLE PERSONAL FREEDOM"

IF my case were exceptional, I could not write this letter. My pride would prevent it. But I know that in this community at least it is the rule, not the exception and so for once and hoping that somebody may be benefitted by it, I am going to speak out.

I was married when a very young girl and came on a farm with my husband. I knew nothing of farm life but he had been raised on one and so I took it for granted that he knew all about it. He began managing everything and I, being very much in love and feeling my ignorance so keenly, laughingly acquiesced. Now, I blame myself for that very acquiescence. I feel that if I had asserted myself then and demanded the management of my household affairs, perhaps things would not be as they are now. I felt then, however, that he knew best but I resolved that I would leave no stone unturned to learn. I studied everything I could find about farm work and house work on a farm and I watched my neighbors for pointers.

I learned rapidly and soon wished to take over the management of the house. But he held tight to the rens and to this day, though we have been married sixteen years, I have no freedom even to do my own work when and how I see fit. He buys what he decides we need; I have no say in it at all. I have studied the needs of my children and it hurts me to know what they ought to eat and yet not be able to feed them right, especially when I know it would be cheaper than what we do eat.

It is just the same in the matter of clothes. He buys what he wants us to have when he wants us to have it. I go until I haven't a decent house-dress to wear to the front door and finally he'll decide I need something and he'll go and buy what he wants me to have. I don't get to select one dress out of ten that I have. And it's just the same with the children's clothes. I have borne seven children. I do all my own work: washing, ironing, cooking, scrubing, gardening, and I used to go to the field. I haven't done that for several years because my strength will not permit. But with all that, I never have five cents of my own. My market eggs must buy household necessities; he generally sells them himself. If I have any chickens to sell, he sells them and takes the money or if he hands it to me, he tells me what I must do with it. I have canned a good deal for market; that money goes the same way. I do not expect him to feel as I do over church work. But he need not cut me off from church because he doesn't care for it. We have a small church so of course every member needs to do his or her part. But I never know until I begin to get ready whether or not I will be permitted to go or not. The distance is too great to permit of my walking especially as I always have a baby so I can only go when he will let me have a way. I can't pay anything without begging for it and it cuts me to the quick. It isn't right and it makes me feel like a bond slave. To sum it all up I have absolutely no freedom of action.

He considers himself a good husband. We have a good home, he is fond of the children, and, of course cares for me in his own way. I wish he could realize that I'd be worth much more to my family if I were not kept bound hand and foot. Mrs. R. B., Ohio.

CONSERVATIVE INVESTMENT
FIRST MORTGAGE BOND COMPANY

If You have Money Earning Less than 6½%

If you have money earning less than 6½% in a safe investment you are losing profits which you ought to have, and you should read this booklet. If you have ever lost in speculation you should have it so you won't make that mistake again.

Without technical terms, briefly, and in a manner plain to all, this booklet tells what elements of safety must be looked for by the man or woman who would invest safely at a fair return.

It will be sent cheerfully and entirely without obligation to anyone who will send the coupon.

The Farm Home

A Department for the Women

Edited by MRS. GRACE NELLIS JENN

A FITTING NEW YEAR'S RESOLUTION

LET us resolve that in the future we will always exercise our voting privilege to the best of our knowledge and ability, that we will never be slackers in this particular, that we will read, think and talk matters of public interest over and then go faithfully to the poles and cast our vote for good government and clean politics. Only then may we be called 100 per cent Americans. Only then may we deserve to be citizens of the best country on the face of the earth.

A RELIGIOUS DUTY

THE National League of Women Voters' campaign to teach voters that exercise of the franchise is a sacred duty and an obligation of conscience has a new champion in Dr. George Horton, poet, novelist, and U. S. Council General at Smyrna, who is spending a leave of absence in Washington. He has written a prayer for the use of voters and has given it to the National League. A prayer used by the Florida League has been widely circulated and in some cities was read out in churches on the Sunday before election. The League hopes that religious observance of the Sunday before election will become a national custom. Dr. Horton heartily favors the movement to establish such a custom and contributes the prayer in the hope that it will prove helpful. It is a brief and simple prayer, for, says the author, emergencies in which "you have to pray" have taught him the value of unadorned language and to-the-point utterance. The prayer is as follows:

O God, help us to realize that this vote which we are about to cast is the greatest instrument for good or ill that can be weilded by human hands; that it can set the worthy, however lowly, in high places and is a thunderbolt to cast down tricksters and tyrants. Help us to vote thoughtfully, reverently, and prayerfully and with an eye single to the common good. And especially, O God, to whom all minds are an open book, save us from voting for any selfish or dishonest candidate, or for any unpatriotic measure. And this we ask for Jesus' sake, Amen.

WOMEN AS INVESTORS

AN official of The Union Trust Co., of Detroit, said to me recently, that statistics showed that 70% of the insurance money paid to widows was totally lost thru unwise investment.

It is a sad commentary on the average woman's ability to invest money wisely and the over confidence she places in some promoters word. A big interest rate is a temptation and it is almost always true that the larger the rate of interest promised the greater the risk.

Many commercial stocks are good but these stocks are influenced by business conditions that no one can with any certainty forsee and are altogether beyond even the wisest and most honest management.

Mortgage bonds are safer than stocks and money loaned on real estate is safe providing the loan is not too large for the property, 60% of the value of farm property is considered safe.

Many stocks, that a business man, who watches the market, could safely invest in would not be a good investment for the average woman.

The business woman has a better chance to act wisely than the woman who has always lived a protected life and had all business matters managed for her, and money sufficient for her needs and those of her family handed to her. She has probably gone on in a happy care-free way until some calamity throws her upon her own resources then she becomes the natural prey of the unscrupulus promoter.

This is one of the issues in which this department hopes to be of use to women, if you write for advice the opinion you get will be from a source whose honesty and high standing is above question and whose knowledge of financial matters is as good as any in the land.

CORRESPONDENTS COLUMN

A. W. C.—About the only way to dispose of an old piano, for it's case is to find a wood worker near your home, a cabinet maker. Such a man is often willing to give a fair price for the mahogany. A grand piano, not too large, makes a fine desk, being both handsome and useful. It needs an expert cabinet maker to handle such work. I have not found any music house that will take a piano for the wood.

Mrs. A. R.—All dresses are made most simply this winter. Generally hanging straight from the shoulder, with a low girdle, which is worn well down around the hips. Giirdles may be of silk or of the goods if of the latter they are not over three of four inches in width. Small wooden beads about the size of a pea are much used as trimming around the neck and sleeves. Silk tassels may be used on girdle ends. Sleeve and girdle ends may be faced with a color. The length from the floor may be from five to seven inches. A bit of hand stitching is good, as the long, in and out stitch or the chain stitch. The girdle made of silk cord is very popular. Metal girdles are much worn, particularly by the young girls.

I think the prevailing styles are most attractive when well carried out. In the matter of comfort and simple beauty they are modern conceptions and adaptions of the gowns worn in Ancient Greece, and at no time have those gowns been excelled in their simple elegance, conforming to the lines of the figure but giving the utmost freedom of movement. They are an expression of this athletic and active age, when it is a disgrace not to be busy if one has the blessing of good health and that is more and more becoming a factor to be controlled by ones self, by right living and right thinking.

Attention! Ellsworth, Michigan — Received 24 cents for two patterns but no name given. Please send full address and patterns will be forwarded.

Please look your pattern orders over well before mailing. So often the size is not mentioned or the address is not complete or the stamps are forgotten and it all means confusion to your editor and a delay to you. Yes, there is just one Mrs. Jenney busy on this page and responsible for all of it. I get the pattern orders out the same day they come to my desk but they are all sent direct to you from the factory and you should order your pattern about a week before you wish to use it then there will be no disappointment caused by delay. Notify me if the pattern does not arrive in a weeks time. Giving if possible the date of your order. That will save me much time but notify me any way. We will always make good on every order.

If you wish a pattern for any purpose and do not find it just write and ask me about it. We have sometimes had patterns drafted especially for readers of the Business Farmer.

GERANIUMS WANTED

I was reading in the paper about seedling geraniums. A lady said that she had bought a packet of seed from a seed house and that she had some fine specimens. I had fifty of them and only two of them blossomed and they are both single. I would like some double pink ones, white and scarlet. I am a great lover of flowers. My name is Mrs. Ed. Tubbs and my address is Applegate, Michigan.

DILL PICKLES

I saw a request in the Business Farmer for a recipe for Dill Pickles and I offer the following: Wash cucumbers and wipe dry, now place layer each of horseradish root, dill, bay leaves, cucumbers, few whole cloves, one whole pepper, continue the same until the crock is full, then cover with 3 quarts Vinegar, 1 quart water, and 1 cup salt, then place over same, sack containing 5 cents worth of white mustard seed, held in place by close fitting plate.

The above has proven satisfactory, its keeping qualities also being good. Mrs. J. T. Daniells.

Am sending my dill pickle recipe in hopes that it may benefit Mrs. N. L., Ellwell, Mich.

1 quart vinegar, 4 quarts water, 1 cup salt, piece of alum size of a marble. Place layer of grape leaves, pickles and dill until crock is full, then pour over liquid. Alum and salt must be dissolved. Weight the pickles so juice will always be above them. Sometimes the top layer will soften and there will be a scum on top but this does not affect pickles on the bottom.

DARK CHOCOLATE CAKE

Here is a cake recipe worth trying.

2 cups brown sugar, ½ cup coto, suet or lard, 2 eggs well beaten, ½ cup sour milk, 9 tablespoons hot water, 2 teaspoons cocoa and 1 teaspoon soda, mix and put in cake, 2 cups flour, salt, 2 teaspoons baking powder, lemon or vanilla. This is delicious.

Will some reader please send a good recipe for nut bread?—Mrs. Lloyd Eckhardt.

MAKE CANDY WITH CORN SYRUP

Will you please print in the M. B. F. or tell me where I can get the directions for making candy with corn syrup. I saw some in the paper some time ago. I made delicious candy, one was peanut brittle, but I cannot find the paper now. I would like to make some for Christmas.—Mrs. Wm. W.

WILD GRAPES FOR WINE

Sometime ago I saw an item (in the editorials, I think) stating that wild grapes were no good for making grape juice. I wanted to write right away and contradict the statement but did not get at it. Here is my way of fixing them: Gather and clean the grapes then put them over the fire with just enough water to keep them from burning and a tight cover to keep in the steam. In a few minutes they will soften so they can be mashed with a potato masher. Do so, then let them come to a boil and strain the juice through a bag. Re-heat and can without sugar. Now this is not a bit good to the taste but when ready to use, to one cupful of the juice, add a gallon of water and about 1½ to 2 cups of sugar.

I forgot to state that the grapes must be thoroughly ripe or the flavor is not so good.

Here is another hint for those who can't drink coffee. Roast some soy beans (Ito-San variety) and grind up and try those.

Save the old inner tubes and cut can rubbers out of them, using the

NEW YEAR'S EVE

RING out, wild bells, to the wild sky,
The flying cloud, the frosty light,
The year is dying in the night;
Ring out, wild bells and let him die.

Ring out the old, ring in the new;
Ring, happy bells across the snow.
The year is going, let him go;
Ring out the false, ring in the true.

Ring out the grief that saps the mind,
For those that here, we see no more;
Ring out the fued of rich and poor,
Ring in redress to all mankind.

Ring out a slowly dying cause,
And ancient forme of party strife;
Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out the false pride in place and blood,
The civic slander and the spite
Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease,
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man and free,
The larger heart the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be.

—Alfred Tennyson.

AIDS TO GOOD DRESSING

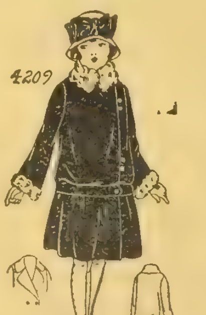
Simplicity, Service and Style

Patterns 12 Cents

Address orders to Mrs. G. N. Jenney, Pattern Department, M. B. F.

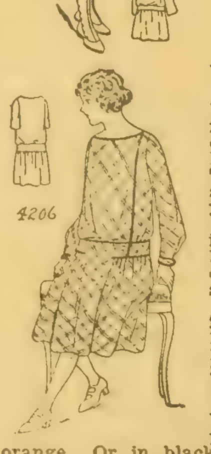
FASHION BOOK NOTICE

Send 12c in silver or stamps for our up-to-date fall and winter 1922-1923 Book of Fashions, showing color plates, and containing 500 designs of Ladies', Misses' and Children's Patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stiches) all valuable hints to the home dressmaker.



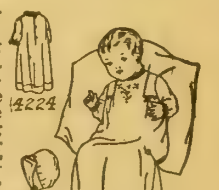
A Stylish Coat
4209. Black Velvet and squirrel fur are here portrayed. This is a good model for broad cloth, velours, and other cloakings. The collar is convertible. It may be turned up high, or rolled low with the fronts open.

The Pattern is cut in 5 Sizes: 6, 8, 10, 12, and 14 years. A 10 year size requires 2 1-4 yards of 54 inch material.



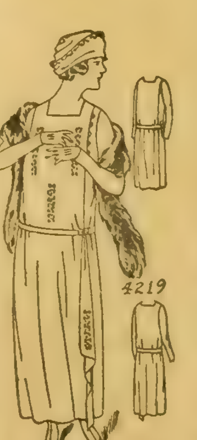
A Smart Style For The Growing Girl
4206. The girl who likes something different will be pleased with the style lines of this model. The long waist and side closing are youthful and becoming. Plaid suiting in brown tones with bands of red broad cloth developed this style.

The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 12 year size requires 3 1-4 yards of 44 inch material. One could have this in blue homespun with pipings in henna or orange. Or in black panne velvet with pass stitchery in green or white.



A Pretty Set For Baby's Wardrobe
4224. Comprising a pretty dress, a dainty cap and comfortable shoes. The dress may be made of cambric, long cloth, nainsook, or voile. The cap of lawn, silk or crepe, or of embroidery and the shoes of silk, flannel, suede, satin or kid.

To make the dress 2 1-4 yards are required. For the cap 3-8 yard and for the shoes 1-4 yard, of material 16 inches wide.



A Stylish Frock With New Features
4219. Broadcoth or satin could be used for this model, with braiding or embroidery for decoration. The cascade drapery may be omitted. The sleeve is a new close fitting model in two peices.

This Pattern is cut in 3 Sizes: 16, 18, and 20 years. 18 year size requires 3 1-4 yards of 54 inch material. The width at the foot without lapped part of front is 2 1-4 yds.

top of the can as a pattern for the inside of the ring. In this way I managed to use several pint cans my mother used to have that had small tops and I could not buy rings for. You can cut a common sized ring and a small one out of same piece.

WANTS TO KNOW ADDRESS

I would like to have the address of the lady who makes sleeveless sweaters, and want to know how much yarn it would take to make size 48 in bust measure. Thanking you.—Mrs. Axel Lindquist, R. 3, LeRoy, Michigan.

POEMS WANTED

Can you tell me where I can get the poems, Brier Rose and Lasca? They begin this way:

"Said Brier Rose's mother to the naughty Brier Rose,
What will become of you, my child,
The Lord Almighty knows."

Lasca

"I want free life, I want fresh air,
I sigh for the canter after the cattle."

YOUNG HOUSEKEEPER

I have given the floor oil formula before, in fact just a few weeks ago but will gladly re-print it. Someone else may have missed it also. 2-3 Parafin oil, 1-3 Gasoline, 1 tablespoon full of turpentine to one quart of the liquid.

This is splendid for cleaning and polishing all woodwork. It will keep your varnished floors looking fine. I always use it on my dust cloth. Just put a little on a white dust cloth and do the dusting, it will prove to you how efficient it is. It is something like putting a good cold cream on your face, it will sink in and take off dust that soap and water will not touch. If this is a confession I will let it go at that.

SCALE ON FERN

Mrs. L. H. S.—There is no way to rid a fern of the scale shown on the leaf you sent me. I would destroy the fern and thus protect the other plants from the insect.

YULETIDE SWEETS

At the Christmas season one's thoughts naturally turn to candymaking, especially now that the price of sugar is "sliding." When the war was still being fought, every loyal citizen gave up the making of candy, and since the Armistice was signed sugar has been so expensive that it was only used when absolute necessity demanded.

The place of candy in diet is undoubtedly at the end of a meal. If eaten between meals, the digestion is forced to work when it should be resting, and the appetite for the meal is apt to be spoiled. Home made confections are more wholesome than those made commercially, as the ingredients are purer, and are thus better for children. They should on no account be persuaded to do things with the promise of candy as a bribe.

Our old friends, stuffed dates, peanut brittle and divinity fudge are shown in the illustrations to remind readers of recipes they have used before and the following recipes may give some new ideas:

White Creamy Fudge

3 cups of sugar, 1 tablespoon fat, ¾ cup condensed milk, ¼ cup water, 2 cups shelled walnuts, 2 teaspoons vanilla.

Place sugar, fat, milk and water into a saucepan and boil until a soft ball is formed in cold water. Remove from the fire, add vanilla and let stand undisturbed until cold. Stir in the nuts and work with the hands 15 to 20 minutes. Shape into rolls and slice. Milk may be substituted for the condensed milk and water, but the flavor is not as good. While being worked in the hands, this candy gets very soft, but will finally come off easily.

Lemon Taffy

3 cups sugar, ¼ teaspoon cream of tartar, 1 teaspoon lemon extract, and 1 cup water. Put sugar and water on the fire to heat, stirring until dissolved. See that there are no crystals of sugar sticking to the sides of the pan. Boil until the mixture reaches the "crack" degree, remove from the fire, cool slightly and add the lemon extract. Turn on to a greased pie plate and when it is partly cold mark into squares with a sharp, greased knife.

Raisin Delights

½ pound seeded raisins, ½ pound figs, ½ pound shelled nuts, ¼ cup pulverized sugar (if desired.) Run the fruits through the food chopper and if they are not too smooth consistency, put them through a second time. The sugar can be added here but it is not necessary. Shape the mixture into a cylindrical roll about two inches in diameter, wrap in waxed on oiled paper unitl ready for use. The candy can be served in slices. If the mixture is rather dry it may be moistened with orange juice.

Velvet Fudge

3 tablespoons fat, 2 tablespoons chocolate or 2 teaspoon cocoa, 3 cups sugar, 1 cup milk, 1 cup nuts. Put the fat, chocolate, sugar and milk into a saucepan and cook to the soft ball stage when tried in cold water. Do not stir. Remove from the fire and set aside to cool. When cold, add the nuts and work in the hands 15 or 20 minutes. Shape in long rolls and slice.

Molasses Chips

2 cups brown sugar, ¼ cup molasses 4 tablespoon butter, ¼ teaspoon salt, ½ cup water, 1 teaspoon vanilla. Dissolve the sugar in the water; add butter, molasses and salt. Boil until a hard ball is formed in cold water. Remove from fire, add vanilla and pour into rough shaped pieces.

"THE HUNTED WOMAN"

(Continued from page 7)

"Get out of Tete Jaune to-night!" he cried in a low, hissing voice that quivered with excitement. "Hit the trail before dawn! Strike into the mountains with our outfit—far enough back—and then wait!"

"Wait?"

"Yes—wait. If they follow us—fight!"

Slowly Aldous held out a hand. The old mountaineer's met it. Steadily they looked into each others eyes.

"If it had been two days ago I would have said yes. But to-night—it is impossible."

The fingers that had tightened about his own relaxed. Slowly a droop came into MacDonald's shoulders. Disappointment, a look that was almost despair settled in his eyes. Seeing the change, Aldous held the old hunter's hand more firmly

"That doesn't mean we're not going to fight," he said quickly. "Only we've got to plan differently. Sit down, Donald. Something has been happening to me. And I'm going to tell you about it."

A little back from the fire they seated themselves, and Aldous told Donald MacDonald about Joanne.

He began at the beginning, from the moment his eyes first saw her as she entered Quade's place. He left nothing out. He told how she had come into his life, and how he intended to fight to keep her from going out of it. He told of his fears, his hopes, the mystery of their coming to Tete Jaune, and how Quade had preceded them to plot the destruction of the woman he loved. He described her as she had stood that morning, like a radiant goddess in the sun; and when he came to that he leaned nearer, and said softly:

"And when I saw her there, Donald, with her hair streaming about her like that, I thought of the time you told me of that other woman—the woman of years and years ago—and how you, Donald, used to look upon her in the sun, and rejoice in your possession. Her spirit has been with you always. You have told me how for nearly fifty years you have followed it over these mountains. and this woman means as much to me. If she should die to-night her spirit would live with me in that same way. You understand, Donald. I can't go into the mountains to-night. God knows when I can go—now. But you——"

MacDonald had risen. He turned his face to the black wall of the forest. Aldous thought he saw a sudden quiver pass through the great, bent shoulders.

"And I," said MacDonald slowly, "will have the horses ready for you at dawn. We will fight this other fight—later."

(Continued in Jan. 6th issue.)

THE SIGN ROWENA OF QUALITY
For Your Protection

Lily White
"The Flour the Best Cooks Use"

Is Quality Flour

There is a great difference in flours. A good bread cannot be expected from a poor flour. From a high-grade flour the best baking is assured. Lily White is the highest quality flour on the market. The finest wheat grown in America is used. The grain is absolutely clean. The milling process is extensive and backed by 60 years of experience. Every step is made for the purpose of producing the best.

A GOOD RECIPE FOR RAISED BISCUITS

Scald 1 pt. milk, or milk and water. Add 2 teaspoons butter or lard, 2 teaspoons sugar and 1 teaspoon salt. When luke warm add ½ yeast cake discolved in ½ cup water. Add Lily White flour to make a soft batter. Mix well; add flour to make a dough. Knead. Let rise until it is double in size. Knead again and shape. Let rise 1½ hours. Bake in a quick oven 20 minutes.

Why You Should Use Lily White
REASON No. 18
A favorite flour for three generations.

For three generations Lily White has been the accepted flour by the best cooks. These good cooks have passed it on to their daughters and their granddaughters. It is the best flour for general baking and they know it. That's why the use of Lily White is constantly increasing. Your grocer has Lily White.

Our Guarantee

We Guarantee you will like Lily White Flour, "the flou. the best cooks use" better than any flour you ever used for every requirement of home baking.

If for any reason whatsoever you do not, your dealer will refund the purchase price.---He's so instructed.

The Children's Hour

DEAR Neices and Nephews:—Just a line to let you know who won the prize for describing how to make Christmas gifts. The winner is Anna Madzelan, R 1, Manton, Michigan, and the prize a package of holiday postcards. And Anna was the only one to guess what the prize was so she received two packages of cards.

Many did not understand about the prize offer and sent stories believing that I was offering a prize for the best Christmas story instead of how to make Christmas gifts so I am going to award a prize to the best story writer. I think the most interesting story I have received is "Pablo's Christmas" by Ruth Vandebogart of Augusta, Mich. She receives a package of holiday cards.

I suppose many of you think "Why does he give postcards when there are other things that would be more interesting and useful? If I won I would rather have a book or pencil box or something I could use every day" You all remember that recently I asked you to remember all your friends this Christmas, although you may only send them a Christmas card. Well, I gave cards so that the prize winner could do this.

When I began this letter I only intended to write a few lines to tell you about the prize winner but when I get started on letters to you girls and boys it seems there are so many interesting things to write about that I run on and on. But I must say good-bye. I wish you all a merry, merry Christmas and a happy New Year.—UNCLE NED.

OUR GIRLS AND BOYS

Dear Uncle Ned—I read in the November 11th issue about your Christmas contest, and as I was busy last week making cheap and simple gifts I might give a few suggestions to my cousins in this circle.

The five gifts that I decided to explain how to make are a sewing box or case, a handkerchief box, a calendar, a vanity case and a pretty handkerchief.

The simple way to make a sewing case is: You first get a box of suitable size and cover it up with cretonne, crepe paper or wall paper is good enough, then you line the inside with some nice soft cloth or paper will do. Then make six partitions in the box, leaving six compartments, one for needles, one for pins, another for buttons, another for thread, one for thimble and another for goods or material.

The handkerchief box is very simple to make too. A match box is suitable for that. Cover it with crepe paper, wall paper or cretonne. The inside is lined and then a little bag is made, filled with sachet powder and given along with the box.

A calendar is suitable for the older persons. It is made by getting a clean white paper, and a piece of card board about nine inches by four. Cover this up with the white paper. Then a nice design can be drawn on the front of it. A winter scent or something like that. You can buy those little calendars for a penny. Then paste this just under the picture. This makes a very nice gift especially if the picture is drawn by some daughter or son and given to their parents.

A vanity case is very nice and easy to make too. All you have to do is get a box, good size, sort of oblong shape, cover with black satin or most anything is suitable. Line the inside with bright colors, partition off little places for powder and puff, hairpins, handkerchief, money and miscellaneous articles. A looking glass can be pasted on under side of the cover. This is very nice for young girls.

And the pretty handkerchiefs that can be made are nice for almost any one. You can get a piece of lawn, cut in suitable sizes. Hemstitching makes it very pretty. A pretty design can be embroidered in one corner. Crochet edge makes it attractive. ?

Well I think I will fill up the whole page pretty soon so I will close hoping to win a prize. Also hope to hear from all the cousins. I remain, Your niece, Miss Anna Madzelan, R. 1, Manton, Michigan.

P. S.—I think the prize you are giving away is a pretty story or a package of cards.—Anna.

Dear Uncle Ned—I have been reading the letters in the M. B. F. and enjoy them very much. I read about your contest in the paper, so I thought I would try and win a Christmas present. I think the present will be a pencil.

Pablo's Christmas

Quite a long time ago there was a little Mexican boy named Pablo. He was tall for his age, his hair was black, and his eyes dark. Pablo was a very bright little fellow. His clothes were patched, he had never remembered of getting a nice new suit of clothes. Christmas was drawing near. Oh how he wished he could have some money to buy his dear little sister and mother and grandmother a Christmas present, but he could not get any money, so what was Pablo to do. His father had been killed in a coal mine.

Pablo went and asked them what they wanted for Christmas, Grandmother said she had seen a picture of a little boy and dove, she would dearly love to have that picture. His mother wanted a music box, she wanted so much to hear someone sing while she done her work, his little sister wanted a fairy book,

Next door to Pablo was an Indian woman who said she would teach Pablo to sing. So when Christmas morning came Pablo stood in the doorway of his grandmother's home with a dove. She said iti was a great deal better than the painted one she saw. Then to his mother he sang and how she was pleased to think her son could sing so well. To his little sister he told the stories he read at school and that was her fairy book. That night Pablo went to bed thinking he was the happiest boy that ever lived. After a while he heard someone walking on the porch, he got up and to his surprise there was a brand new suit of clothes that his little friends had given him. Pablo was a very much surprised boy that Christmas eve.

I will close, from your neice.—Ruth Vandebogart, R 2, Augusta, Michigan.

Dear Uncle Ned—May I join your merry circle? We take the M. B. F., and enjoy it very much.

Does any of the neice's or nephew's know Helen Steel's address? She and I corresponded with each other for about a year, then I did not hear from her any more. I am making a number of Christmas presents. I am 13 years old and have blue eyes, brown hair, and am 63 inches tall, and weigh 117 pounds. I think that "Curiosity Carmella" contained a very good lesson and I think that everybody who reads it ought to learn a lesson from it. I am in the eighth grade at school and I have a very good teacher, his name is Mr. George Robbins. I think the present that Uncle Ned is going to give away is a good story book. Am I right Uncle Ned? Wishing Uncle Ned and all the neice's and nephew's a merry Christmas, will close, hoping to hear from some cousins. I remain as ever.—Miss Eva Hall, R. 3, Springport, Michigan.

A Happy Christmas

Jack McMaster was a rich boy. His father was very rich and Jack had everything that he could wish for. One day Jack generously thought that he would get some of the poor boys of his school some nice presents for he had a kind heart. He said to his father "I thought I would get some of the poor children in the school some Christmas presents." To which his father made the reply, "I have no objections if you earn the money yourself." This hurt Jack's feelings very much but he resolved to do it just the same. He found many small jobs as unloading a load of coal, 75 cents. His father gave him 25 cents for carrying an invitation to his friend. Mr. Smith gave him 50 cents for carrying some cabbage to their house. He received a $1.50 for leading a cow a half mile from the city to the country. At last he went to the store to see what he could buy with the $3.00. He bought a pocket knife, a sled, a mouth organ and many other things for the boys. That Christmas he was happier than he had ever been before for he had helped to make other people happy. Violet E. Grandy, Evart, Michigan.

Dear Uncle Ned—I just thought that I would write to you. I am a farmer's daughter 12 years of age. I've been on the farm two years and would hate to go back to the city.

On Saturday I always sit by a window and watch the mailman for the M. B. F, I enjoy reading the Children's Hour. I am going to try my luck at a Christmas story.

A Russian Santa Claus

In Russia the Santa Claus is different from the American. There a man dresses up very funny and then he goes to the childrens homes on Christmas day or the day before. But he has no sleigh full of toys or the tiny reindeer. He takes a strong whip with him. When he gets to the boys' and girls' homes he walks right in and the children must read or write whatever he tells them to do. If they do not mind or read quite poorly Santa Claus whips them. But now I'll tell you a story of one of these Santa Claus.

One day old Santa Claus started out for a house where a little boy and girl lived. When he got to the house he met the mother of these children. She took him into the house and showed him where the children were. He went over to them and when the boy, who was sitting behind the stove saw him, he picked up a club and hit old Santa Claus on the nose and smashed it. Besides he broke a piece off of his mother's kitchen stove. Poor Santa went home with a smashed nose. "It's the last time I'll be Santa," he said. Let some one else get their nose smashed.

I hope this story is all right. It's a true story, told to me by my mother. She used to live in Russia and I did too. I have three brothers and one sister. I'm in the 7th grade Well I think I'd better leave off. I think the Christmas gift is a school bag with an assortment of pencils, tablets, etc. I wish some of the children would write to me.—Lydia Sounart, R. 1, Milford, Michigan.

Dear Uncle Ned—This is the first time I have written to you. But I thought I would write a little story, to try my luck. I am 12 years old and in the sixth grade at school. I have five brothers and no sisters. I guess I had better start my story.

The Time That Santa Got Lost

One time Santa started out on his annual round on Christmas eve. After he had gone a long way and had seen no house, he reached for his compass to see where he was, but alas,—he had forgotten to bring it along. "What shall I do," thought Santa. The only thing to do is to drive straight on, so on he went. And soon he came to a tall gate. "This is queer," thought Santa "I never happened to come across this before." So he rode on, and again he came to a gate, he came to it three times and was just wondering what to do when, lo—he saw some smoke curling up among the hills, his heart was filled with thankfulness. He got his task completed for another year, and never again did he forget his compass. I will close wishing you a merry Christmas. I am your loving little neice.—Thelma M. Shine, R. 1, Cadillac, Mich.

Dear Uncle Ned—I am a farmer girl, 14 years old and in the 10th grade at school. I have two sisters whose names are Laura and Pauline. Laura is in the same class with me at school and Pauline goes to the country school, is in the 4th grade. I was beginning to be afraid of there being a "green Christmas" but it was quite cold today and it snowed, so I have my hopes. I suppose you cousins are all looking forward to Christmas. I am. Do any of you know anything about a girl whose name is Georgia Brown? The last I knew of her she lived in Globeville, Michigan. She was my twin, her birthday being the same day, she being the same age, and in the same grade. If any of you know anything about where she is please let me know. Your neice, Ina B. Lake, Homer, Michigan.

Dear Uncle Ned—How are you these days? I live four and one half miles south and east of Sherwood and west of Union City.. It is very very lonesome where I live. I live on a farm of 120 acres. I go to the Smith school, we have a basketball team. Well I will close with hopes that I will get many letters from the boys and girls. Signing off at 8:00 P. M.—Richard Gaw, Sherwood, Michigan.

—I bet you have a radio in your home. Haven't you?—Uncle Ned.

Dear Uncle Ned—May I join your merry circle? I am 5 feet 7 inches tall and weigh 140 pounds, I have dark brown hair and blue eyes, and am in the seventh grade at school. Who can guess my age? Who guesses my age correct will receive a long letter from me. I have three and one half miles to go to school. Our nearest neighbors live 1 mile from us and it is lonesome here I wish some of the boys' and girls' would write to me. I will have to say good-bye to Uncle Ned and Cousins. —Evelyn Grandy, Evart, Michigan.

HOW MANY BUGS?

Start with any letter. You can move to the right, to the left, upwards or downwards, or diagonally in any direction. How many bugs' names can you make out?

Answer to last puzzle: **Beet, Corn, Turnip, Cucumber, Beans, Pepper, Tomato, Parsnip, Peas, Onion, Carrot.**

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

RAILROAD FARE, BOARD AND LODGING ONLY EXPENSES

I have been requested by the master of our Grange to write to you to get some information regarding your offer to give a demonstration of radio for actual expense. We do not know whether our grange could stand the expense to White Cloud if we meet you there and provide you with board and lodging while there? My husband is a subscriber to the Business Farmer and I saw your offer and brought it up before the grange, hence this letter.—Mrs. H. S., White Cloud.

—As stated in our last issue the only cost will be actual traveling expenses and board and lodging for a night. By traveling expenses we mean railroad fare from Benzie county to your nearest station, or if you live near this county you can go and get the editor and take him home by auto. This would make the traveling expenses only cost of gasoline, wear and tear on the auto and time spent by a man calling for and taking the editor back to his home, the amount depending upon the distance you live from the editor's home. We already have requests from several different parts of the state, from granges, gleaner organizations, churches, etc. and as soon as we have dates arranged we will publish them in this department We will have this all arranged by our January 6th issue. In the meantime if you would like to have the editor come to your community for an evening do not hesitate but write at once or someone else will secure the date you would like.

THREE BIG FARM ORGANIZATIONS AGREE

(Continued from page 3.)

bring pressure to bear on the Legislature to enact a gasoline tax. They want the revenue turned to highway maintenance and bond retirement.

The farmer organizations, it was indicated, will favor appropriations for the Michigan Agricultural College, but are likely to oppose large sums for the University of Michigan. A resolution was offered suggesting that the mill tax for the university be cut one mill.

An effort will be made by the Grangers and their allies to have trust companies put on the same taxation basis as banks. They also want building and loan associations reasonably taxed, are against tax-exempt bonds, and would like a tonnage tax on railroad cars and ships to fatten the state treasury and reduce the property tax.

The outstanding sentiment of the convention was that the farmer is overtaxed, that he has not been getting a fair share in state tax matters, and that every possible means to produce revenue for the state from other sources than real property taxation must be encouraged.

The Grange went definitely on record against capital punishment and in favor of continuing rigid prohibition enforcement. It also let it be known that it is against extravagance in public life, including automobile for public officials at public expense.

American Farm Bureau Meet

Chicago, Dec. 11 to 14—Outstanding attention to co-operative marketing problems and a policy of strengthening and encouraging co-operative commodity marketing organizations were made the policy of the American Farm Bureau Federation according to resolutions adopted by the delegates to the fourth annual meeting of the organization held at Chicago, December 11-14. The Farm Bureau also took a positive stand on transportation and immigration problems as they affect agriculture. The ship subsidy was rejected. Congress was asked to grant adequate financial support to the U. S. Department of Agriculture and the Federation again voiced its objection to transferal of any bureaus of the department of agriculture to other government departments.

O. E. Bradfute of Xenia, Ohio, vice-president of the A. F. B. F., was unanimously elected president for the coming year. He succeeds J. R. Howard, who served three years. Mr. Howard stood fast to his previously announced intentions of retiring at the close of his present term.

W. Walker of Willows, California, was elected vice-president. Employment of a secretary and treasurer rests with the national executive committee. John W. Coverdale of Iowa is the present secretary. Charles W. Gunnells, treasurer, has resigned. Several changes were made in the national executive committee. In the Central region, wherein Michigan is most interested, J. F. Reed of Minnesota replaced Ralph Snyder of Kansas and W. H. Setle of Indiana replaced John G. Brown of Indiana.

Transportation resolutions included such items as demands for further reduction of freight rates until they shall be brought into proper working relation to the selling price of farm crops, a demand on the railroads to provide equipment sufficient to prevent the congestion of freight traffic which makes impossible the proper distribution of farm crops. State and national government were called upon for highway improvement and improvement of commercially feasible inland waterways. Opening of the Great Lakes-St. Lawrence waterway was stressed.

The U. S. Senate was asked for prompt passage of the Voight anti-filled milk bill. Previous resolutions in favor of Truth-in-fabrics legislation and acceptance of the Henry Ford offer for completion and operation of the Muscle Shoals Nitrates projects were asked.

The bureau went on record as in favor of immediate and thorough investigation by the Tariff Commission of tariff rates on all imports which farmers buy and an immediate reduction of excessive rates to such lower levels as shall only equal the differences in production here and abroad.

The Michigan State Farm Bureau was represented by nine member of its state executive committee and its secretary. They took an important part in the convention. Michigan made the outstanding report of Farm Bureau accomplishments, particularly in the matter of successful co-operative marketing agencies developed by the Michigan State Farm Bureau.

JOHN HOBART MAKES A NEW YEAR'S RESOLUTION

(Continued form page 8.)

haven't been drinking any of that spoiled cider, have you?"

Her husband laughed—loudly and long, setting echoes to ringing thru the house, and three young people to wondering.

And then John Hobart confessed.

"I've been an awful brute, honey," he said afterward, "but I never knew it until I overheard the girls. I've been thinking I was a successful farmer, but all I've been is a barbarian. But I'll make amends, by heck!"

And the light in his wife's eyes would have rewarded any one.

"TRUTH ABOUT HENRY FORD"

(Continued from page 11.)

threatened to have Mr. Ford arrested for causing a runaway. Years after this same Detroiter told of the incident with much amusement. He had called Mr. Ford "a public nuisance" for driving an automobile in the street.

Long afterward Mr. Ford saw in a French magazine a picture of a car which a Frenchman had invented and which was called an "automobile." This was the first time he er heard the word that everyone knows today.

HUGH REID, Clifford, Mich.

POLAND CHINA

SELL REGISTERED SPOTTED POLAND China Pigs. 7 months old, Boars $25. Gilts $20. **Dr. Erwin Meyer, Drayton Plains, Mich., Box 43.**

DAIRY and LIVESTOCK

BETTER QUALITY LAMBS MEANS INCREASED CONSUMPTION

IMPROVEMENT in the quality of live stock is undoubtedly one of the most practicable and profitable ways of increasing meat consumption. No branch of the live stock industry offers more promising possibilities than the production of sheep and lambs. The annual consumption of mutton and lamb in the United States is only about six pounds per capita, or about 4 per cent of the total consumption of all meat.

The head sheep buyers of one of the larger packers is authority for the statement that the consumption of "native" lambs (which means lambs produced East and South of the Missouri River) could be increased 550 per cent "on quality alone", if the producers of these lambs could be induced to castrate their ram lambs when they are young. This, he states, would eliminate the large number of cull and medium natives we get, as the ram lambs are after two or three months of age worry the ewe lambs in the flock, as well as themselves, and prevent the entire flock from fattening.

The same authority states that certain sections of the country market as high as 85 per cent of their lambs undocked and uncastrated. Every one who has observed the large percentage of inferior lambs coming to large central markets will agree that the income of sheep producers could be greatly increased by the adoption of these modern practices in sheep management.

There is much evidence to indicate that a shortage of sheep and lambs is impending, and the sheep raisers can ill afford to neglect these simple operations that have such an important relation to profits.

The profit-making possibilities of the small farm flock have never been fully appreciated in this country.

New Zealand, with nearly twice the area of Illinois, has over half as many sheep as the entire United States. This indicates the opportunity for developing the industry in this country, by a substantial increase in the number and quality of our farm flocks.

BIG-TYPE HOGS FAVORITES, SAY NEW U. S. BULLETIN

THERE is no "best" breed of swine but within the different breeds the "big-type" pig is now finding most favor in nearly all parts of the country, says the United States Department of Agriculture in a recent Farmers' Bulletin, 1267 Breeds of Swine, by E. Z. Russell. The bulletin, which is well illustrated with photographs of specimens of all the leading breeds of some minor ones, gives a brief history of the origin of all these breeds now found in the United States, descriptions of their characteristics, and names of the record associations, with names and addresses of the secretaries.

The unusual classification under lard and bacon types is given. The breeds included under the first are the Duroc-Jersey, Poland China, Chester White, Berkshire, Hampshire, and Spotted Poland China. The Tamworth and the Yorkshire are the only breeds of the bacon type grown to any extent in this country and the only ones concluded.

The big-types animals, says the author, are found in all breeds, but are more numerous in some breeds than in others. Owing to an increased demand for cured hams and bacon of high quality, the type of hog becomes a matter of much importance. Hams weighing from 12 to 16 pounds are more likely to cure with high quality and flavor than lighter or heavier pieces. Neither hams nor bacon should carry excessive quantities of fat, but should be "well marbeled." The opportunity for producing meat of this character is greater in the quickly grown big-type than in the distinctly small-type. The most profitable hog is the one that can be grown to the required market weight in the shortest time. Well-bred and well-fed animals of the right type will make the market weight in 7 to 10 months. The market weight is generally from 175 to 225 pounds.

Copies of the bulletin may be obtained free by adressing the department at Washington, D. C.

VETERINARY DEPARTMENT

FISTULA

I have a horse that has a fistula. Can anything be done for it? Is an operation effective?—A Reader, Kalamazoo County, Michigan.

—A surgical operation, properly performed should perfect a cure, however, it depends a great deal upon the location. In conjunction with the operation I would strongly recommend the use of vaccine injections. Employ a good surgeon and you will be ahead in the long run.

COW NEARLY BLIND

I have a cow that went blind about one month ago. I first noticed that she would go around the pasture field with her head down and I finally discovered that she was practically blind. I consulted a veterinary and he pronounced it, contagious abthalmia, and left some eye medicine for the treatment, but she did not improve and she seemed to be in pain when being milked, and in fact she nearly quit giving milk entirely. I again called up the veterinary, and told him the circumstances. He said for me to put her in a pen by herself and fatten her, as I had lost her, as for the use of a cow. Now she keeps turning in circles. When she walks, she never walks straight. She can see a little but very little. She is very thin, but she eats, drinks and chews her cud. Now, I want your opinion about this cow and just what you think I ought to do with her.—R. D., Yale, Michigan.

—It would appear that the veterinarian had given you some sound advice. Evidently the cow's sight has been destroyed as the result of abcess or ulcer formation and the fact that the animal keeps turning in circles would indicate that pressure at least is being exerted upon the brain. If this is true, unless the brain involvement can be relieved which is not probable, the animal will die in a short time.—B J. Killham, State Veterinarian.

SELLING COW SUFFERING FROM LUMP-JAW

Would like to know if it is unlawful to sell for beef a cow that has lump-jaw.—Farmer, Montcalm Co.

—This disease is not ordinarily considered as contagious but it is infectious. Section 10 of Act 181 of the Public Acts of 1919, as amended, states in part, in referring to animals afflicted with contagious, infectious or communicable diseases, "Nor shall any person sell, ship, drive, trade or give away any such diseased animal, any animal which has been exposed to contagion or infection or move or drive any domestic animal in violation of any direction, rule, regulation or order establishing or regulating any quarantine." In making a disposition of an animal afflicted with lump-jaw, it would be advisable to ship to some point where an efficient inspection is maintained. The animal should be shipped subject to post mortem inspection and the examination would reveal whether or not the carcass was fit for food.—B. J. Killham, State Veterinarian.

COWS HAVE BUNCHES ON BACKS

My cows have bunches on their backs with a small opening in them. Would you please tell me what this is and the cause?—Reader, Oakland County, Michigan.

—I would say that these bunches are caused by a parasite, the Hypoderma lienatum. The only treatment is to squeeze out the worms and disinfect the openings with a mild coal tar preparation.—John P. Hutton, Asso. Prof. Med. and Surg., M. A. C.

M. A. C. Big Winner At International Show

WITH the exception of one, the Michigan Agricultural College won more prizes at the International Live Stock Show at Chicago, than any other state institution having entries at the show. Never before has a Michigan exhibitor received as many rewards.

The college won many firsts in the classes entered, one of the most prominent being that which fell to Jupiter, head of the Belgian herd at the college, who was shown in the four year old Belgian stallion class. Other first included: Yearling Belgian mare, wether lambs in both Oxford and Hampshire sheep classes, yearling Ramboullete ewe (Grand Champion), Berkshire hog in the 450-550 pound class (Reserve Champion), and Tamworth hogs in both 350-450 and the 450-550 pound classes, the latter being Grand Champion of the breed. The total winnings of the college were as follows:

Cattle

Aberdeen-Angus: Senior yearling, 7th place, 26 shown in this class; junior yearling, 3rd, 9 shown; herd, 5th, 10 shown.

Hereford: Junior yearling, 6th, 29 shown; herd, 5th, 9 shown.

Grades and Crossbreds: Senior calf, 2nd, 26 shown.

Swine

Poland China: 350-450 lb. barrow, 7th; pen 250-350 lbs. 4th; pen, 350-450 lbs. 3rd; pen of five 7th.

Duroc Jersey: Pen 250-350 lbs. 6th; pen of five 6th.

Hampshire: 150-250 lb. barrow 6th; pen 150-250 lbs. 4th.

Chester White: 150-250 lb. barrow 6th; 350-450 lb. barrow 3rd; pen 150-250 lbs. 4th.

Berkshire: 350-450 lb. barrow 2nd; 350-450 lb. barrow 6th; 450-550 lb. barrow 1st; pen 350-450 lbs. 2nd; Reserve Champion.

Tamworth: 150-250 lb. barrow 2nd; 250-350 lb. barrow 3rd; 350-450 lb. barrow 1st; 350-450 lb. barrow 2nd; 350-450 lb. barrow 3rd; 450-550 lb. barrow 1st; pen 350-450 lbs. 1st; pen of five 1st; Champion Barrow; Champion Pen.

Sheep

Shropshire: Wether lamb 3rd, 24 shown.

Hampshire: Yearling wether 3rd, 11 shown; yearling wether 4th, 11 shown; wether lamb 1st, 10 shown; pen of 3 wethers 2nd, 3 shown.

Oxford Down: Yearling wether 3rd, 9 shown; wether lamb 1st, 6 shown; wether lamb 2nd, 6 shown; wether lamb 3rd, 6 shown; pen of 3 wethers 1st.

Southdown: Wether lamb 3rd, 22 shown.

Cotswold: Yearling wether 3rd 4 shown; wether lamb 4th, 12 shown; pen of 3 wethers 3rd.

Rambouletto: Aged ram 4th, 4 shown; yearling ram 5th, 7 shown; yearling ewe, 1st, 15 shown; flock 3rd, 4 shown; pen of 3 ram lambs 4th; pen of 3 ewe lambs 4th; Champion Ewe.

Horses

Belgians: Stallion 4-5 yrs. 1st, 6 shown; mare 3-4 yrs. 4th, 7 shown; mare 2-3 yrs, 3rd, 6 shown; mare 1-2 yrs 1st, 9 shown; Filly Futurity 1st; Res. Jr. Champion Mare.

Percherons: Stallions 1-2 yrs. 4th; stallion futurity 4th; mare 4-5 yrs. 3rd, 8 shown; mare 3-4 yrs. 3rd, 9 shown.

Clydesdale: stallion 2-3 yrs. 5th, 7 shown; stallion foal 4th, 8 shown; Stallion Futurity 4th.

Carcass Classes

Hogs: 300-400 lbs. 1st, Chester White; 300-400 lbs. 2nd, Berkshire; 300-400 lbs. 3rd, Berkshire.

SHORTHORN DEMAND GOOD

The two white bulls we have advertised in your paper have been sold. Remington & Graham of Caro, Mich., buying the white bull, Meteor and Peter Zimermman & Son, of Traverse City, buying Richmond Choice.

We have just shipped the show cattle home from the International show at Chicago. Were quite successful this year and won the following prizes: First on Junior yearling bull, second on two year old bull, second on best pair of bulls by one exhibitor, fourth on three bulls by one exhibitor, fourth on get of sire class and seventh on young herd. The majority of the young calves in this season's show herd were sired by Sterling Supreme. It was a great misfortune that we had to lose this bull last March.

The demand for good Shorthorns is very keen and we look for a good trade through the winter and spring. C. H. Prescott & Sons, Tawas City, Michigan.

HOLD FIRST FAT STOCK SHOW

FORTY stock raisers of the southern part of Michigan exhibited the choice of their herds at Detroit's first fat stock show conducted last week, Monday to Wednesday evening, at the Michigan Central Stock Yards by the Live Stock Association. The show was conducted in the interest of the production of better beef and prizes to the aggregation of $1,100 were given away. No entry fee was charged and prizes were awarded for health conditions of the car lots regardless of strain or breed. Exhibits totaled 400 head of cattle, 1,000 lambs and 1,000 hogs. At the judging on Tuesday the following awards were made:

Cattle, carload lots—First premium, August and Ezra Lesser, Dexter, Mich., Aberdeen Angus steers; second, R. Binder & Co., Battle Creek, Mich, Herefords; third George B. Conley, Marshall, Mich., Herefords; fourth, C. A. Beamer, Blissfield, Mich., Herefords.

Cattle, single head—First, W. E. Scripps, Detroit, Aberdeen Angus steer; second, R. Binder & Co., Battle Creek, Mich., Durham steer; third, R. Binder & Co., Hereford steer; fourth, August and Ezra Lesser, Aberdeen Angus yearling steer.

Hogs—First, J. .L. Underwood, Britton, Mich., carload of Chester Whites; second, Owosso Sugar Co., Alica, Mich., Duroc-Jerseys; third, point exhibit of A. J. Spittler, Herman Gross and F. R. Clements, Saline, Mich., Poland China and Chester Whites. The prize winners were sold at auction on Wednesday, and the first prize steer brought 80 cents per pound, the highest price ever paid in Michigan for a steer.

SIXTH WEEK OF THE INTERNATIONAL EGG LAYING CONTEST

THE high pen for the week of December 12 comes in the Wyandotte class when the Evergreen Poultry Farm completes the week with a production of 42 eggs.

In the Barred Rock class, Dennison's pen still leads but with a decreased margin. Brummers' still holds second place but Christophel's pen exceeds Kent's pen by one egg.

In the Wyandotte class the Evergreen Poultry Farm has the lead of 7 eggs over Sink's pen who still holds second place. Hollis's pen takes third place with a total production of 138. Murphy's pen drops to fourth place with a total of 135 eggs.

The first three places in the Ancona class remain the same, being held by Van Ralte, Degroot and Beckwith respectively.

The Red pens remain unchanged in their standings.

This week Shaw's pen is again holding first place with a production of 235 eggs which is 10 eggs over the production of Hanson's pen. Taylor's pen has dropped down to third place with a production of 222 eggs. Thompson's and Hollywood remain the same.

The honor at the close of the first month for the individual bird goes to the Barred Rock class when one bird completes the month with a total of 27 eggs to her credit. A pen sister completes the month with a total of 24 eggs; also one in another shares second honor with 24 eggs during the month.

In our pen of White Rocks one bird has a total of 22 eggs to her credit.

Of the nine White Wyandotte pens one bird completes the month with a total of 23 eggs. Three others have a total of 22 eggs each for the month.

In the Rhode Island Red pens one bird finishes the month with a total of 23 eggs. In the White Leghorn class four individuals complete the month with a total of 23 eggs.

Artificial lights are now being used on the contest birds, having been turned on this week. Morning lights are being used and it is expected that lengthening of the days will help bring production up during the next few weeks.

The birds at the contest are receiving a standard ration, having a scratch feed of equal parts cracked corn and wheat. It is fed in the litter twice a day, a light feed in the morning and all they will clean up at the evening feed. The mash consists of the following constituents:

Corn, 30 parts; oats, 20 parts; bran, 20 parts; middlings, 20 parts; meat scrap, 20 parts.

The birds are supplier with grit, shell and charcoal in hoppers and are given two feeds a day of sprouted oats for a green feed. Oats can be readily sprouted where a warm basement or room is available. The grain is soaked for 24 hours; allowed to drain for 24 and it is then spread out on trays to a depth of 2 inches and fed when the sprouts are about three quarters of an inch in length.

"AMERICAN BRED SHORTHORNS"—WHY NOT?

AM enclosing check for renewal of my paper which I enjoy reading on account of the fearless stand you take on any question regardless of who it hits. Long may you continue on that line. You have my best wishes for succes.

As I am a breeder of shorthorn cattle I would like to see a discussion or views of other breeders on a few questions of breeding. I do not wish to find any fault or cast any shadow on our great families of shorthorn cattle as we have some great shorthorns in this state as well as other states, but I am what you might call a full fleged American. I believe we could beat the world if some of our big men as breeders would have the nerve to head a big herd with this heading: "American Bred Shorthorns." I belive we have men big enough and cattle good enough to beat the world. What do you think?—Peter Kunz, Barry County.

FRUIT and ORCHARD

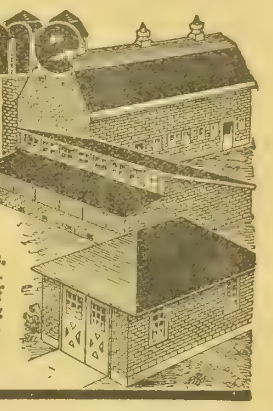
EDITED BY FRANK D. WELLS

NOTES AND COMMENTS

The San Jose scale is not altogether a thing of the past, but it has been robbed of its terrors. Spraying has helped some, but the little insect friends have done many times more. However, the scale did some good while it lasted. It taught fruit growers the importance of attending to business and it put the careless, indifferent man out of the game.

Nurserymen are preparing for an unusually large amount of business this winter. So many fruit tree growers have given up that the amount of stock is small. Orders should be placed early. Apples are liable to be scarce next spring, so are cherries.

The diseases that have been killing the raspberries have been worse than was supposed at first. A shortage in this fruit looks like a certainity. Now is the time to plant, if it is possible to get plants free from disease.



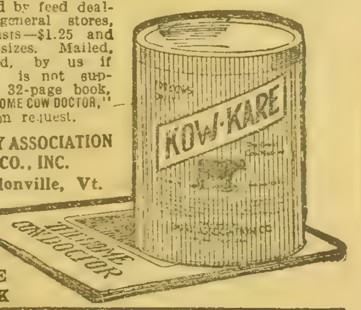
BUILD For All Time

Investigate for yourself the great superiority of Kalamazoo Glazed Building Tile for permanent, attractive, economical farm buildings. Warm in winter, cool in summer, storm-proof, rot and rat-proof. Save cost of paint and expensive upkeep.

Kalamazoo GLAZED BUILDING TILE

Positively without a superior in any way. Impervious to dampness. Ample air cells make insulation perfect. Single blocks withstand 40 tons pressure. FREE estimate of cost furnished if you send rough sketch of building wanted. Send us your name for full particulars.

KALAMAZOO TANK & SILO CO.
Dept. Kalamazoo, Mich.



WHY DREAD CALVING?

Take no chances with your valuable cows at this serious period. There's no need of it. If the cow's health is fully up to par, nature will do the rest. Two weeks before calving and about three weeks after, feed the cow a tablespoonful of Kow-Kare morning and evening. Her health will be assured and a strong calf result.

Kow-Kare acts directly on the genital and digestive organs, making them strong and active. Disease has no chance to get a foothold.

Kow-Kare is a sure, safe remedy for the ailments of milking cows, Barrenness, Abortion, Retained Afterbirth, Scours, Milk Fever, etc.

Sold by feed dealers, general stores, druggists—$1.25 and 65c sizes. Mailed, prepaid, by us if dealer is not supplied. 32-page book, "THE HOME COW DOCTOR," free on request.

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

MRS. ROBT. EMERICK, Harrisville, Mich.

Poultry for Profit

FOR BEST RESULTS HENS NEED OUTDOOR EXERCISE

GOOD results in egg production cannot be obtained when the flock is confined during the entire year, according to tests that have been made by the United States Department of Agriculture. The Department has kept a pen of 50 Rhode Island Red pullets and one of 50 White Leghorn pullets confined in poultry houses throughout the year, giving them a good variety of feed, including sprouted oats, and alfalfa meal, the later being used in the mash. These trials have extended over three years and the result has always been the same—lower egg production and excessive mortality.

The Leghorns stood the confinement much better than the Rhode Island Reds, but even in this case the production was too low to be profitable. In the different years the pens averaged 98 to 109 eggs per hen while the other hens on the farm, given good yards or free range, produced from 125 to 160 eggs.

The hens that were confined to the house produced well during the winter months, but in the spring the yield was only fair and during the summer production almost ceased. Many poultrymen keep hens used for egg production confined during the winter months, and this practice is satisfactory if the hens are not used to breeding. Hens kept as breeding stock should be given as much freedom as possible and it is the policy of the Department to let their hens out every day regardless of the weather.

In these flocks that were kept penned up during the entire year there was a death rate of almost 50 per cent in the case of the Rhode Island Reds and 25 per cent in the Leghorn flock. Most of this loss occured during the summer and fall months. Normal mortality in good-sized flocks kept in yards or given free range averages about 10 per cent, according to the Department's experience. The mortality is usually higher with general-purpose breeds than with the Leghorns.

There is no definite amount of yard space that must be supplied for hens, but the larger the yard the better. More hens can be kept on a certain space of light, sandy soil than on a heavy soil because the light soil is more easily cleansed by rain and sunshine. When only small space is available it is advisable to use the double-yard system so that one yard can be used in growing a crop while the other is used for the poultry. Alternating the use of these two yards for the hens keeps the soil in good condition and does not endanger the health of the hens.

DO NOT FEED WHOLE RYE TO TURKEYS

THE writer has before him a situation regarding a flock of turkeys, that came under his observation recently. These turkeys were feeding where a large crop of rye has been thrashed and the turkeys were allowed to range freely about the thrashing ground. The owned of these turkeys owned a fine herd of high class registered Berkshire swine and they too were permitted to pasture around this rye thrashing lot. The turkeys were first noticed to go wrong, first becoming lame and would fall over and laid around for several days and finally die. Not one of the flock escaped. To make a bad matter worse, they were a high class flock of exhibition turkeys that were maturing for exhibition and breeding turkeys.

Very soon the hogs were acting very much the same way. Some of the sows had good litters of pigs, some almost ready to farrow and other gilts of the finest quality. The sows mothering pigs soon failed on their flow of milk, the pigs could be found laying around over the lot weak and unable to get up, in few days they were seen over the lot dead, the sows became lame, could not walk, and some of the fine gilts died. A veterinarian was consulted and he pronounced it as usual genuine hog cholera. I examined both the hogs and turkeys and I found that the hogs were suffering with poison rye ergot, and the turkeys were suffereing from the same poison, but it was acting on their liver. Rye is the most dangerous feed that could be given to brood sows or turkeys. It may not injure any other fowls or animals, but I know from my own personal experience, that feeding rye on two occasions cost us thousands of dollars, before we knew what was the trouble. This convinced me that ignorance was the most costly disease of all. Now, since this trouble with rye, has just come under my observation again recently, I am positive that whole grain rye will kill turkeys, as rapidly as any poison you could give them and if fed to brood sows it will cause loss of pigs, death to the sows and effect the sows so severely that it would take from two to three years for them to get over the trouble if they ever did.

The way we handled our turkeys, when we found out what was the matter, was using a remedy an old pioneer turkey grower gave me for any form of liver trouble in turkeys. This same remedy is great for the so-called "black-head" in turkeys. Go to your druggist and procure crystals of copperas and sprinkle it in the drinking water. Confine the turkeys for a few days until they get their system well charged with the medicine and compel them to drink this water and no other. This was his remedy for rye poison in hogs, except he sprinkled the copperas in ashes and salt. The hogs will eat the ashes and copperas freely and there is nothing that will relieve them as quickly.

However, it's much better to not allow turkey or brood sows to feed on rye, as it is sure death to the pigs and frequently to the sows. However, rye shorts or ground rye make a fine feed for fattening market hogs, but being full of ergot, it is unfit for brood sows and it will not do for turkeys for any purpose. Only two years ago, we purchased some commercial wheat shorts of a feed merchant here in our town and sloped our brood sows. Very soon we noticed, one going wrong, in a day or two we found she had lost her pigs. In having her shorts analized, we found they contained 1-6 per cent rye bran, so that accounted for the trouble we noticed approaching in our herd. We never buy shorts any more except from the flour mill here, that is guaranteeed to be pure wheat shorts.—J. C. Clipp.

MARKINGS OF RHODE ISLAND RED

Please advise me regarding the markings of a purebred Rhode Island Red.—H. M., Mt. Clemens, Mich.

—The proper shade of red that is demanded by poultry judges is very difficult to describe. Rhode Island Reds vary in color from cherry to a deep mahogany brown. At the present time the mahogany color of Red is the most popular. It is easier to eliminate the slate or dark under color if this shade of surface color is used in selecting birds for breeding purposes. The lighter colored reds that may be classified as the cherry, usually show too great a variation in shade of color over various sections of the body. For instance, the hackle or neck feathers usually run light red, the back a shade darker, and the saddle or back feathers will take on a different shade of red. The standard Exhibition Red should be of the same shade of red in every section. The under color should also be a deeper red avoiding the light or dark under color.

The primary feathers of the wings have the upper web red in color and the lower web black. The maintail feathers are usually black in color with a red border. The sickle feathersand coverts that hide the

A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.

Working along entirely original lines Mr. Smith discovered why hens lay less in winter than in summer, and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certaian to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large $1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only $1 on this introductory offer, otherwise, nothing.

Send no money—just your name and address to M. B. Smith, 1261 Coca Cola Building, Kansas City, Mo. The two $1 packages will be mailed immediately.

When they arrive, pay the postman only $1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

TURKEYS—DUCKS—GEESE

Cured Her Rheumatism

Knowing from terrible experience the suffering caused by rheumatism, Mrs. J. E. Hurst, who lives at 608 E. Douglas Street, C-489, Bloomington, Ill., is so thankful at having cured herself that out of pure gratitude she is anxious to tell all other sufferers just how to get rid of their torture by a simple way at home.

Mrs. Hurst has nothing to sell. Merely mail your own name and address, and she will gladly send you this valuable information entirely free. Write her at once before you forget.

maintail feathers should be of the same red that is found in every other section of the body. In other words, the birds should be red in every section except in the primary and secondary wing feathers, and the maintail feathers.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

DETROIT POULTRY SHOW LARGEST EVER HELD IN STATE

ON Sunday evening of this week the largest poultry show ever held in Michigan came to a close. It was staged in the Light Guard Armory under the name of Detroit National Poultry Exhibit and Rabbit Show and opened on Wednesday of last week. Breeders from seven states gathered at this show and displayed 2,000 chickens and rabbits, the finest ever shown in this part of the country.

In the poultry section Rhode Island Reds and Wyandottes led the field in number exhibited.

The quality of entries this year was well above the average. Some idea of the competition may be gained from the fact that it took the judge more than an hour to name the winner in the Single Comb Rhode Island Red class.

Ewald Schelwe, of Detroit, exhibiting for the first time, showed Buff Wyandottes. He took two firsts, four seconds, a third and a fifth. This is considèred a record for a first time exhibitor. One of his birds, the cockerel, which headed his young pen, was called by the judge in this class "the finest specimen I have ever seen."

An educational display by Prof. M. E. Dickson, formerly of Michigan Agricultural College, Poultry Department, and the University of Wisconsin, included culling demonstrations as well as on the correct methods of feeding the Winter egg production. He explained the latest scientific methods as determined by him at experimental stations. A senic display of manufactured feeds en-route from mill to consumer by use of electric train loaded with minature bags of feed was about the most interesting feature of the show.

POULTRY NOTES

Selection of a Breed

Leghorns, Minorcas, Spanish, Blue Andalusians, Campines and Anconas are egg breeds.

Plymouth Rocks, Wyandottes, Orpingtons, Javas, Dominiques, Rhode Island Reds, and Cornish arè general purpose breeds.

Brahmas, Cochins and Langshans are meat breeds.

Size is sacrificed when we breed for egg production. One of the general purpose breeds is best for the farmer because he usually desires both meat and eggs.

The strain is more important than the breed. Get stock always from some one who has developed a strain bred to lay. The trap-nest is the only test.

FARM MECHANICS

HOW TO STORE EXPLOSIVES

ALL explosives, including caps and fuse, dumorite, picric acid, or dynamite, that are to be kept over winter, should recieve the care necessary to keep them in good condition for use next spring. All of the explosives mentioned will be just as good next spring as they are now if proper storage conditions are provided. Cold, freezing temperatures will not do them any harm provided they are dry when placed in storage.

Water is practically the only enemy of modern explosives. For all practical purposes the explosives available to land clearers these days will keep a long, long time if they are protected from moisture at all times. If they have been kept dry up to this time and are stored over winter in a dry, well ventilated building, they will be as good a year from now as they are today.

It is very treacherous to store explosives in a basement, a root cellar, or any similar damp place. Dynamites do not have to come in direct contact with water to become dampened; they will absorb moisture from the air and the effect is just the same as if water is mixed with them. That is the reason the building in which they are stored should be well ventilated.

Stored explosives are dangerous. Every precaution against possible accidents should be taken. If a farmer must store explosives over winter, he should observe the following dont's:

Don't store explosives and blasting caps in the same building.

Don't store explosives or caps where children or irresponsible persons can get at them.

Don't cover explosives with old dirty rags, straw, etc.

Don't store caps "under the eaves" of a building; they may be disturbed and fall with disastrous results.

Don't fail to remember that explosives will deteriorate if they are not stored in a dry, well ventilated building where snow and rain cannot blow in on them.

WINTER MONTHS OFFER BARGAIN COUNTER TO BUILDERS

MORE Americans are flocking to the building bargain counter this fall than at any time since the war halted home construction. Contractors and architects, usually the first to feel the approaches of cold weather with a slump in business, report a steadily increased volume of inquiries and city officials are writing more permits for erection of homes.

Men in the building industry, from material manufacturers to carpenters and masons, have long known the economic advantage of building in the "slack season." For several years the industry has waged a steady campaign to bring this fact before the public and spread the congested activity of a few months over the entire year.

When the greater portion of building is crowded into seven months, prices reach their highest in the spring and summer when the demand crowds supply. The same situation obtains in the labor phase of the work.

By building in the fall and as far as possible into the winter ,this demand is more nearly proportioned among 12 months of the year; mills and factories are able to maintain a steadier flow of production; raw material is stabilized; workmen are not shifting, jobs are often, and the contractor and architect are able to keep their basic organizations intact, thus decreasing overhead expenses and assuring more satisfactory and efficient work.

Men in the industry see in this autumn's increased building, the prospect of a broadening of the old short season and a consequent stabilization of building costs, in estimating that the certain success of the home owners who are building this winter will prompt many others to take the step in succeeding seasons.

The manufacturers of cement particularly have waged steady campaigns on this one subject, in perfecting methods of using their product in cold weather to the best advantage, and to bring a realization of the savings to be affected before the public.

That such campagns have borne fruit is evidenced in reports for proposed construction from many cities which show a greater volume of all classes of building on the books for fall and winter than ever before.

The sigh on the little weather-beaten shop read: "Five miles to Hillsdale. If you can't read, ask the blacksmith."

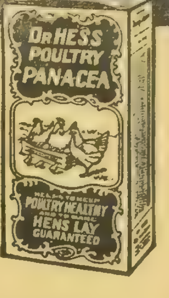
After the tourists had forgotten the laugh provoking sign board, and jolted a mile or so further along, the silent, solemn-faced man from His Majesty's Navy broke upon the silence: "I have it! Bah Jove! Rippin', too! Suppose the beggar wasn't in!"—Judge.

Young Lady: "Were you pleased with the new school, little boy?"

Little Boy: "Naw! They made me wash me face an' when I went home de dorg bit me 'cause he didn't know me."

Leslie had always been very much afraid of dogs. One day, after a struggle to get to pass a large dog on the corner, his mother scolded him for the unnecessary fear.

"Well,' was his reply, "you'd be afraid of dogs if you were as low down as I am."—Chicago Herald-Examiner.



Get Winter Eggs!

See to it that there is song and cackle, scratch and action, going on in your poultry yard.

That's when the eggs come.

Feed

Dr. Hess Poultry

PAN-A-CE-A

See them get busy. It gives hens pep.

Nux Vomica is what does it—that greatest of all nerve tonics. A Pan-a-ce-a hen can't hold still. It's her good feeling that makes her hop around.

Pan-a-ce-a has Quassia in it to make hens hungry. Great combination! One makes them eat—the other helps them digest what they eat.

No dormant egg organs when that combination gets to work on a hen's system. You just get eggs—eggs.

A Pan-a-ce-a hen is always a hungry hen—an industrious hen. She gets off the roost winter mornings, ready to scratch for her breakfast.

Tell your dealer how many hens you have. There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

CURED HIS RUPTURE

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 210J Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of ruture and the worry and danger of an operation.

MARKET FLASHES

MARKET SUMMARY

Bullish reports of crop conditions give strong tone to wheat market. Corn firm. Oats steady. Rye advances. Beans unchanged after recent advances. Supply of butter and eggs small and demand good. Poultry firm but inactive. Dressed hogs wanted. Cattle active and strong. Hogs higher. Sheep in demand.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor)

TRADE AND MARKET REVIEW

Advances in prices for all grains have been in gratifying feature of the developments in trade and industry the past two weeks. Farmers are getting good prices for the new crop of corn, which is being marketed freely, as well as much better prices for their remaining stocks of wheat, corn and rye. The increase in aggregate buying power of the producers is great in actual money, and the effect of the stronger markets has been welcome from a sentimental standpoint as well. The improved agricultural conditions, as reflected in the higher markets, has been coupled with further improvement in general industry.

Money conditions are still favorable and rates for loans are at about the same levels as recently, with ample funds available for commerical and industrial enterprises. Collections are reported good for this time of the year, and there has been an excellent retail trade as a general proportion, although some lines of seasonable goods were slow, owing to the open weather up to this time. For holiday goods the trade reports indicate an excellent business, comparing favorably with any previous recent year.

The steady gain in the steel and iron business, with the exception of a seasonable slowing of trade, has been gratifying. However, there is every indication of great building activity for at least another year, judging from the plans projected, both in way of big building and a continuation of the small buildings erected on a large scale the past year.

The wind-up of the year shows the automobile industry going ahead at full speed, on a scale seldom, if ever witnessed before.

Wholesale trade reports are favorable. In the shoe and leather trade the outlook is said to be much brighter than a year ago. Rubber company officials are more sanguine as to the future outlook also, and believe that in the coming year they will make more progress towards normal than was the case this year.

As an indication of the changed situation in agricultural communities as a result of the better prices prevailing for farm products, agricultural implement manufacturers report sufficient demand from the interior to warrant increases in their production programs, which is the first time this has occurred in some time. Railroads are placing orders for equipment and supplies in substantial volume and this is a favoring feature of the situation.

WHEAT

Wheat prices advanced sharply last week and attained new high points for the season. Strength was more pronounced during the early part of the week than it was later on. A great deal of the buying was in anticipation of better export trade. This, it was expected, would be brought about by some legislation which would be the means of furnishing credit to importing nations. The time of the year is coming when foreign demand for American wheat should improve. Lake navigation is closed and after the Canadian supplies now at eastern ports are exhausted Europe will be forced to depend more upon the United States for grain. By that time Argentine wheat will be on the market in larger quantities, but the southern hemisphere cannot ship enough wheat each week to supply the European requirements. Unfavorable crop news from Argentina, the strength in sterling exchange and the fact that premiums for cash wheat are steadily maintained were also bullish influences. There was a big improvement in the volume of trade. Interest was stimulated by the advance in prices and more general trading was done than for some time. The movement of wheat to primary markets showed some falling off. Trading in cash wheat was quiet.

Prices

Detroit—Cash No. 2, $1.42; No. 2, white and red mixed, $1.40.

Chicago—No. 2 hard, $1.27¼@$1.29.

New York—No. 2 red, $1.38¾.

Prices one year ago—Detroit, Cash No. 2 red, $1.19; No. 2 white, $1.16; No. 2 mixed, $1.16.

CORN

Corn also worked to a new high level, selling at Detroit on Friday of last week at the highest price yet reached by the new crop. The market followed the trend of wheat closely and at times the trade was active. Trading was fair on the closing day of last week. The government report for December gave the total production of the United States for 1922 at 2,890,712,000 bushels. Although this report was in the favor of the bears the market was not inclined to be affected by it. Shipping demand was light last week. Receipts were large but prices held their own as bulls would not allow enough to accumulate on the market to be a drug. Reports state Argentine corn is being offered abroad at lower prices than American. As a whole the market looks fairly good and as long as it continues to hold up in the face of bullish news and conditions as during the past week we need not feel alarmed.

Prices

Detroit—No. 2 yellow, 80c; No. 3 yellow, 79c; No. 4 yellow, 78c; No. 5 yellow, 67c.

Chicago—No. 2 mixed, 76½@76¾c.

New York—No. 2 yellow, 94¼c; No. 2 mixed, 93¼c.

Prices one year ago—Detroit, No. 3 yellow, 52½c; No. 4 yellow, 50½c.

OATS

Oats continue to act in sympathy with wheat and at the close of last week the market was higher and the trading larger. The market received considerable support from commission houses at Chicago. Receipts were somewhat smaller last week and domestic shipping demand slow. The government report for December gives the production of the United States for 1922 as 1,215,496,000 bushels, compared with 1,078,341,000 bushels in 1921 and 1,569,281,000 bu. two years ago.

Prices

Detroit—No. 2 white, 52½c; No. 3 white, 51c; No. 4 white, 49½c.

Chicago—No. 2 white, 47@48c; No. 3 white, 45@46½c.

New York—No. 2 white, 58@58½c.

Prices one year ago—Detroit, No. 2 white, 39½c; No. 3 white, 36½c; No. 4 white, 33½c.

RYE

Trading in the rye market was inclined to be quiet last week but the price at Detroit managed to advance 1 cent during the week, and tone was steady at the finish. The report of the Department of Agriculture on the crop was decidedly bearish. Their final report raised the total production to 95,597,000 bushels, compared with 61,675,000 bushels last year. This year's crop is the largest on record.

Prices

Detroit—Cash No. 2, 94c.

Chicago No. 2, 92c.

Prices one year ago—Detroit, Cash No. 2, 87c.

Official U. S. Marketgram

U. S. Bureau of Agricultural Economics

Washington, D. C., week ending December 16th.

Dairy Products: Butter markets barely steady. Prices at Chicago have declined account accumulation resulting from high prices. Eastern markets ruled steady during week. Some foreign imports coming in, but quanties not large. Closing prices 92-score butter: New York 54½c; Phila. 55⅛c; Boston 54c; Chicago 52 1-8c. Cheese markets firm but trading is slow, partly due to usual seasonal dullness. Wisconsin production holding up well, but cold weather is hampering shipments. Movement of goods from storage light. Dealers view general situation with confidence. Cheese prices at Wisconsin primary market: Dec. 15: Daisies 27¼c; double Daisies 27c; Longhorns and Square Prints 27¼c.

Feed: Western feed markets steady. Offerings for deferred delivery good. Transit shipments in fairly good request. High protein feeds dull especially cotton-seed meal, which is quoted 50c-$1 lower in many distributing markets. Corn feeds in good supply, demand fair. Production most feeds good. Demand from interior in most sections below normal with supplies in dealers hands slightly above normal. Receipts and movement good. Quoted Dec. 15: Bran $23, middlings $22.50, rye middlings $21.50, flour middlings $26, Minneapolis; 36 per cent cotton-seed meal $42.50, Memphis; $43.50 Atlanta; white hominy feed $28.50 St. Louis; $30 Chicago; 34 per cent Linseed meal $49.75 Minneapolis; $52 Buffalo; gluten feed $39.35 Chicago.

Live Stock and Meats: Chicago hog prices were from 25 to 35c lower for the week. Cattle prices were on the downward trend also. Beef steers were 25 to 75c lower. Beef cows, heifers, canners, cuters, bulls and veal calves remained about steady. Stocker and feeders were 25 to 40c lower. Choice fat lambs were steady to 10c lower, feeders strong to 25c lower. On Dec. 16 hogs closed active; steady with Friday's close. Cattle and sheep practically steady. Dec . 16 Chicago prices: Hogs, top $8.20, bulk of sales $7.85 to $8.10; medium and good beef steers $7.50 to $11.50; butcher cows and heifers $3.50 to $10.50 feeder steers $5.35 to $7.75; light and medium weight veal calves $8.50 to $10; fat lambs $13.25 to $15.60; feeding lambs $12.75 to $14.75; yearlings $9.25 to $13; fat ewes $4.75 to $7.75. Stocker and feeder shipments from twelve important markets during the week ending Dec. 8 were: Cattle and calves 92,929; hogs 19,909; sheep 66,798. In eastern wholesale fresh meat markets beef and veal ranged from steady to $1 higher; lamb $1 to $2 higher; mutton firm on good grade, $1 to $2 higher on medium grade, light pork loins $1 to $2 lowed and heavy loins $1 to 50c higher for the week. On Dec. 6, beef, veal, lamb, mutton and pork were practically steady. Dec. 16 prices good grade meats: beef $14.50 to $16; veal $15 to $19; lamb $23 to $26; mutton $11 to $17.

BEANS

Our belief that the biggest share of this year's crop of beans are still in the farmers' hands became stronger when last week the price on the Detroit market made several advances, aggregating 65c in all and the tone of the market was firm right along. It appears to us that dealers want the beans quite badly and they think a sudden spurt upwards of prices would flood the market with beans. Maybe it will, it generally does, but we wouldn't sell all of our surplus at this price nor would we advise holding your entire supply for still higher prices. Beans are worth a pretty good price now and if you can sell at a profit on the present market we say sell, and sell at least enough to take care of your present, and hold the rest if you wish and can afford to wait.

The U. S. Department of Commerce advises the farmers of this country to plant more navy beans. "For," it states, "this nation has become such a country of bean eaters that world markets are searched by American importers, the domestic supply not keeping up with the demand." The Department goes on to say "Rumania is an important bean producing country and the navy bean is the most extensively cultivated and is exported in large quantities. During the first seven months of this year nearly 40,000 tons were exported from that country." This would lead one to believe that the navy bean would be a profitable crop for the American farmer to plant every year—if the hands of the market manipulators could be tied in some way. However, the manipulators have seen the writing on the wall, in the form of cooperative marketing and their power to control the trend of the market is fast waning.

Prices

Detroit—C. H. P., $7.50 cwt.

Chicago—C. H. P., $8.50.

Prices one year ago—Detroit, C. H. P. $4.30.

POTATOES

Prices gained from 5c to 15c in the majority of the large potato markets of the country last week. The market had a stronger tone at shipping points north and east but weaker at western points. Receipts have been small. Contributary causes to the decreased movement are a rather evenly distributed yield, sufficient local supply at many points together with low prices, and the continued car shortage. Movement for the four weeks ending December 9th was nearly 15,000 cars, compared with 28,000 cars the previous four weeks. While shipments during the past few weeks from 18 of the leading late shipping states were heavier than for the corresponding period last year the total movement for these states is about 15,000 cars behind last season to date. The final estimate of the government on this year's crop is 451,185,000 bushels, or more than a million bushels over the final estimate on the 1921 crop.

Prices

Detroit—94c@$1.00.

Chicago—85@$1.00.

Prices one year aga—Detroit, $1.70.

HAY

Prices in the hay market rule unchanged and the tone is quiet with the usual holiday dullness. Receipts are about normal and demand light. The government in its final estimate places the production of all hay in the United States this year at 112,971,000 tons, compared with 97,770,000 tons last year and 105,351,000 tons in 1920.

Prices

Detroit—No. 1 timothy, $16.50@$17; Light standard, $16@$16.50; Light mixed, $16@$16.50; No. 2 timotmy, $14@$15.

Chicago—No. 1 light clover mixed $19.@$20; No. 1 timothy, $20@$22 No. 1 clover, $18@$19.

Prices one year ago—Detroit, No. 1 standard timothy, $18@$18; No. 1 clover and No. 1 clover mixed, $16@$17.

MISCELLANEOUS QUOTATIONS

Detroit, Tuesday, Dec. 19th.

APPLES—Greenings, $1.50@$1.75; Baldwin, $1.25@$1.50; Spy, $2@$2.50; Jonathan, $1.75@$2.25, other varieties, $1@$1.50 per bu; western boxes, $2@$3.

CHESTNUTS—28@30c per lb.

HONEY—Comb, 23@25c per lb.

CABBAGE—Home grown, 75@80 cents per bushel.

POPCORN—4@4½; Little Buster, 7½@8c per lb.

CELERY—Michigan, 30@50c per doz; square, $1.25@$1.50; California celery, Jumbo, 60c, extra Jumbo, 85c@$1; mammoth $1.10@$1.25 per dozen.

ONIONS—$2.75@$3 per sack of 100 lbs; Spanish, $2@$2.25 per per crate.

DRESSED HOGS—90 to130 lbs. 11@12c; 130 to 160 lbs, 10c; heavy, 6@8c per lb.

DRESSED CALVES—Choice, 15c; medium, 12@14c; large coarse, 5@10c perlb.

FURS—Mink, dark No. 1 large, $10; No. 1 medium, $7; No. 1 small, $5. Raccoon, No. 1 large$6; No. 1 medium, $4.50; No. 1 small, $3.25. Skunk, No. 1, $3.75; No. 2, $2.75; No. 3, $1.75; No. 4, $1. Muskrat, large fall, $1.50; medium fall, $1; small fall, 75c.

HIDES—No. 1 cured, 12c; No. 1 green, 11c; No. 1 cured bulls, 8c; No. 1 green bulls, 7c; No. 1 cured calf, 15c; No. 1 green calf, 14c; No. 1 cured kip, 12c; No 1 green kip, 10c; No. 1 horsehides, $3; No. 2, horsehides, $2. Sheep pelts 50c@1.50. No. 2 hides 1c under No. 1; calf and kip 1½c under No. 1.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS

(Editors Note—Read the introduction of our new weather forecaster, on the editorial page 12, this issue. Mr. Pritchard welcomes letters from readers of The Business Farmer and will answer them when addressed return envelope is enclosed, address him in care of this office.)

Week of December 24

The predominating features of this week in Michigan will be the cold weather.

The early days of the week will be especially cold in Michigan; this includes Christmas day which is also expected to be fair.

About the middle of the week the weather will be cloudy and windy continuing until near the close. During this period there will be numerous snow flurries throughout the state.

The temperature in this state will fall again at the end of the week.

Week of December 31

The last day of 1922 and the first of 1923 is expected to be mild in temperature. New Year's day will be stormy with rain, snow and high winds. Precipitation if it falls during the mid-day hours will be rain or sleet or at best, very wet snow but if precipitation falls during the night, late afternoon or early morning, it will be in the form of snow.

These conditions are figured for central Western Michigan and hold good for the southwest part of the state also. For sections to the north, east and southeast most of the precipitation will be snow and not rain.

By Tuesday or Wednesday this rain period will have passes eastward bringing fair, cold weather that will continue for the remainder of the week in Michigan.

"January Thaw" Late in Month

The weather conditions during January, 1923 will average pretty close to normal but we expect many sudden extremes during this period. Most severe storms will occur during first half of month. Temperatures will average low during first two decades of January but during last ten days average temperatures will show marked change to warmer. The usual "January Thaw" will come during the last mentioned period in Michigan.

We believe the greatest amount of moisture in this state, either in form of rain or snow, will occur before the 15th. After that date evaporation will be greater that condensation although the latter condition will not be entirely absent in the Lake region or Eastern states but will break out for short intervals.

WOOL MARKETS

A continuation of very quiet trading, but with prices firmly maintained at ther recent levels, is reported in the middle western markets. Some dealers are looking for an increase in activity before long, but at any rate the tone seems to be one of optimism, as far as the keeping up of present price levels is concerned. Trade is limited not only by lack of insistent buying demand, but also by shortage of stocks. Manufacturers are not inclined to force the market by buying much at the present time, when stocks are so low.

PRODUCE MARKETS AT THE YEAR'S END

The general trend of the market the middle of December was upward. Cabbage and onions were higher while apples and potatoes held firm. Shipments of a dozen leading fruits and vegetables were only 58,025 cars for Nevember compared with 111,303 for the previous month, but were heavier than for November 1921 when 44,725 cars moved. Apples, cabbage, grapes, onions and white potatoes show greatest decrease.

Onion Market

The steady advance of the onion market has been a feature of the month. The rise started the third week in November and continued until Middlewestern Yellow Globes had gained $1 and were selling in leading markets at $2.25-$3 per 100 lb. sack. Eastern stock followed the trend of the market closing at $2-$2.50. Spanish Valencia declined slightly to $1.50-$1.75 per crate. Shipments for the past four weeks were around 1,500 caars compared with 900 for the same period last year.

Barreled Apples Firm

firm tone prevailed in apple markets for leading varieties of barreled stock but box apples weakened slightly. New York Baldwins A 2½ advanced to $5 per bbl. in a few markets early in December, but closed slightly lower at $4.24-$4.75 a net gain of 25c. Prices ruled firm at $4 f. o. b. shipping points, while Rhode Island Greenings from cold storage ranged $4-$4.50. Virginia York Imperials strengthened 75c to a close of $3.75-$4.25 and Middlewestern Jonathans held at $4.25-$6 in city markets reaching high point in Chicago. Northwestern boxed stock was slow and weak in most leading markets. Extra fancy Jonathans and Spitzenburgs brought $1.50-$2.50 and Delicious $2.25-$3. Carlot movement decreased rapidly. Movement for the past four weeks was about 5,000 cars from barrel shipping areas and nearly 9,000 from box areas, compared with 1,700 from barrel sections and 7,000 from box States for the same period a year ago.

Cabbage Market Strong

The carlot movement of cabbage decreased about 400 cars a week early in December, but a strengthening market encouraged heavier shipments during the weed ending Dec. 9 they increased to 757 cars, making a total for the month of more than 2,300. New York Danish type stock advanced $10-$12 per ton in eastern markets to the season's high point of $22-$30, while at shipping points prices more than doubled reaching $14-$15 f. o. b. Northern Danish stock advanced in Chicago to $24 and in St. Louis to $35, but receded at the close to $30-$32 in the latter city, and held at $15-$16 f. o. b., Wisconsin points.

Pat: "Have you christened your new baby yet?"
Mike: "We have."
Pat: "And phwat do you call it?"
Mike: "Hazel."
Pat: "Sure, bad cess to ye, with two hundred and twenty-three saints to name the kid after, ye had to go and name it after a nut."

HOWELL, MICH.

December 15, 1922.

TO OUR MEMBERS AND THOSE WHO OUGHT TO BE:

GREETINGS:-

It is with no small feeling of pride that the officers of the Citizens' Mutual Automobile Insurance Company point to the record of the year just closing.

The December 31st figures are not, of course, as yet available but will only enhance the statement of November 31st, which showed assets as follows:

Cash in banks	$173,047.91
Accrued Interest	1,716.10
Salvage and Accounts Receivable	11,207.20
Office Site and Building	27,727.44
Office Furniture and Equipment	16,894.83
Total Assets	$230,593.48

To date the Company has paid out for its members $1,236,169.87 in settlement of fire, theft, liability and collision claims.

It must be a feeling of security to our members to know that they are protected from the risks involved when they drive their automobiles or trucks and we, as officers, feel that there is no better or more practical manner in which we can guarantee each and everyone of you,

A HAPPY NEW YEAR!

Whatever else may fail

Linking city, village and farm, crossing mountain and wilderness, the telephone system challenges Nature in her strongholds and battles her fiercest moods.

Out on his lonely "beat" the telephone trouble-hunter braves the blizzard on snow-shoes, body bent against the wind, but eyes intent upon the wires.

North, south, east, west—in winter and summer, in forest and desert—the telephone workers guard the highways of communication. Traveling afoot where there are no roads, crawling sometimes on hands and knees, riding on burros, or motorcycles, or trucks, they "get there" as they can.

When Nature rages to that point where few things can stand against her, when property is destroyed and towns cut off, the telephone is needed more than ever. No cost is too much, no sacrifice too great, to keep the wires open. If telephone poles come down with the storm, no matter how distant they may be, no matter how difficult to reach, somehow a way is found, somehow—in blizzard, hurricane, or flood—the service is restored.

Whatever else may fail, the telephone service must not fail, if human effort can prevent it. This is the spirit of the Bell System.

Current Agricultural News

STATE TAX LEVY CUT 2 MILLION

A REDUCTION of $2,000,000 or more in the state tax levy next year is forecast in the closely trimmed budget for the coming biennial period, which the budget committee of the State Administrative Board was completing today.

Although no official announcement regarding the budget had been made, it was believed that the total for the fiscal year of 1923-24 would be approximately $2,000,000 less than the state tax levy of more than $17,000,000 this year. Further reductions, in the recommendations of the budget committee, may be ordered by the State Administrative Board before the budget is finally presented to the Legislature next week.

A $30,000,000 Budget

It is understood that the budget total which will represent the recommended appropriations for institutions and departments—with the exception of the State Highway Department which members of the budget committee hope to finance from sources aside from the general tax—will be in the neighborhood of $30,000,000 for the coming two years.

If that sum should represent the total appropriations made by the incoming Legislature for which state taxes would be levied during the next two years it would represent a saving of more than $7,000,000, as the state tax in 1921 was more than $20,000,000 and in 1922 more than $17,000,000.

Two years ago the Legislature was presented with requests totaling nearly $70,000,000, and the Legislature allowed but half the amount requested. The budget, as it will be presented to the Administrative Board, represents only the tax clause appropriations. In addition the corporation tax brings in something like $6,000,000 a year, which goes into the general fund. It is reported that Gov. Groesbeck will urge the Legislature to remove the limit of $10,000 provided in the Corporation Tax Law and if the Legislature makes the change the revenue from that source will be considerably increased. Whatever amount it is increased will probably mean a corresponding cut in the state tax.

Closing General Fund

The needs of the highway department are understood to constitute the principal worry of members of the budget committee. The department, it is said, would like a total of about $8,000,000 or more a year for maintenance and the creation of a sinking fund for highway bonds. It will get $3,500,000 or $4,000,000 in 1923, from the automobile license fees. In addition, if its requests were to be met, it would take $4,000,000 or $5,000,000 from the general fund. That this amnout will not be taken from the general fund, however, seems to be the prevailing opinion among members of the committees. A majority of them believe the legislature will enact a gasoline tax or boost the automobile license fees sufficiently to provide the needed money to take care of the highway department.

The prospective $2,000,000 reduction in the state tax levy is based on the state tax as it now stands. The reduction may be much greater —from other causes taken the budget—before the Legislature concludes its deliberations. It will have tentatively before it a suggestion from a special tax commission that it abolish, or nearly abolish, the state property tax, and operate the state with the specific tax money now being paid into the primary school fund—about $12,000,000 a year—and the corporation tax—about $6,000,000 a year.

NEBRASKA FARMERS RUN OWN ELECTRIC PLANTS

NEBRASKA farmers, having failed in getting the electric companies of the state to supply them with light and power at a reasonable rate, have undertaken to do it themselves. The first of a number of farm electric companies to be organized under a new law has just received the approvel of the state railway commission.

The farmers are mortgaging their homes to get current but doing it under the modern way of issuing bonds. By petition of 10 per cent of the farm land owners in any described area the county board is obliged to order an election at which is submitted the question of whether the district shall bond itself to build a transmission and distributing system. If a majority votes in the affirmative all that is necessary is to invoke the powers of the state to get the current.

CHICAGO GETS TEN CENT MILK

THANKS to the Milk Cooparative Marketing Company the people of Chicago are saving thousands of dollars monthly on their milk bill. The Cooperative has broken the grip of a consciousless milk trust, which was recently found to be dumping good milk into the sewer in order to keep up the price by offering the storekeepers in the great city any quantity of milk to sell to their consumers provided the price is kept down to the cooperative level, which is two cents a quart less than the combine's prices. Nearly 200 grocery and delicatessen stores have taken advantage of the offer of the Milk Cooperative and are now selling pure, rich milk for ten cents a quart.

EIGHTH WEEK OF EGG LAYING CONTEST

THE week of December 26, concluded the second fourth weekly period. The standing of the pens for this period were as follows:

Evergreen Poultry Farm, W. W. 170; W. H. B. Kent, B. R., 155; J. A. Hanson, W. L., 149; Robt. Christophel, B. R., 147; H. E. Dennison, B. R., 146; Carterloa Farms, W. W., 143; F. W. Sinks, W. W., 139; L. W. Alstine, B. R., 137; Brummer's Poultry Farm, B. R., 136; Hollywood Poultry Farm, W. L., 131; H. A. Keister, W. W., 131, and E. E. Shaw, W. L., 130.

While Evergreen Wyandottes have made a remarkably good record for the month the high pen of the contect is still in the Leghorn class wren J. A. Hanson's Leghorns finished with a weeks total of 43 eggs; 3 eggs below Evergreen bringing their total up to date of 303 eggs. Shaw's pen of Leghorn's have dropped to second place with total production of 296 eggs. In the Leghorn class Hollywood's pen remains in third place, Taylor's pen fourth.

Dennison's Barred Rocks still lead this group with 279 eggs which also puts him fourth place for the entire contest. Kent's pen with a production of 269 moves up to second place and holds sixth place in the contest. Brummer's Poultry Farm dropped to third and Christophel remains in fourth with 257 eggs.

The exceptional good record main-[illegible] by the Evergreen Poultry Farm has put this pen in the lead in the Wyandotte section. The production of the Ancona class increased very slightly but the birds in this section are showing considerable improvement and we are expecting to see an increase here before very long.

Dunnings Reds maintain their position at the head of the Red section and Mrs. Travis' pen beat the College Reds to second place when they scored 25 eggs for the week and a total to date of 177.

The Wyandotte section is leading the contest with a 40% production. The Barred Rocks show 4% increase over last week. The Anconas a slight increase, the Reds and Leghorns show a slight decrease and the miscellaneous breeds are holding their own.

TO MARKET POULTRY AND DAIRY PRODUCTS

Co-operative dairy marketing associations of the United States plan to set up a national sales agency for collective selling of butter, cheese, condensed milk, eggs and poultry, E. B. Heaton, director of the dairy marketing department of the American Farm Bureau Federation, announced recently. A committee will meet in Chicago Jan. 16, to work out details for establishing the cooperative sales force. Branches are planned for all large consuming centers, he said.

Says Gasoline Tax Will Solve Highway Problem

F. S. Newton, of Saginaw County, takes Issue with Horatio Earle who Advocated One Mill Property Tax as More Equitable

The Business Farmer has opened its columns to a general discussion of the Gasoline Tax proposition believing it is of the utmost importance to the tax-paying farmers of Michigan. Mr. Earles article referred to appeared in the December 9th. issue on this same page. Now what do you say?

"FARMER" Earle is worried lest the State Highway Department have to go to the legislature and "beg for money."

He says we support the University of Michigan to educate the rich and propose to exempt the rich from taxes on their land. Who owns the big cars by the way? The hard pressed farmers. They are not, generally speaking sporting Cadillacs, Winton's and Paiges. On the other hand who are the majority of the land owners? The dirt farmers—not the dude farmers, like the distinguished advocate of an extra mill tax on real estate.

Considerate isn't it proposing to the discouraged farmers to sell or give away their property if unwilling or unable to pay their over-weening taxes.

Again the city "farmer" falls over in his attempt to excoriate the gasoline levy in one breath as discriminating in favor of Henry Ford and against the small car owner and in the next declaiming it is a thrust at the auto industry! That's the cat let right out of the bag. The oppressed motor manufacturers aren't concerned lest the owners of Fords pay a dollar or two more a year to help in the highway upkeep and the buildings. Oh, No! They're bothered about the possible check that might be put on the auto industry by requiring it to stand on its own feet and pay for the roads itself demands. Let them, in the words of the noble Roman, "if they don't want to pay, sell or get out!"

Too bad! That army of gasoline collectors! How about the swarm of employees, runners up and runners down, of our State and County highway departments? Surely Horatio should be better informed than to imagine such mountainous difficulties in a tax collected at its source.

In this connection note that Ohio and several of our neighboring states have adopted a gasoline tax. That means that the Michigan people who drive across the state line pay for the roads of Ohio, etc. Yet we are urged to impose no return tax on Ohio tourists who travel over Michigan's highways.

As to fairness, why should the owners of land, who may not own a car, pay for the hard surface type of roadway heavy cars require, while the benevolent owners of limousines and 8 ton trucks are let off free? Shouldn't those who dance pay the fiddler? Don't for heaven's sake compel the poor farm and home owners to fiddle and dance at the same time.

Mr. Earle is a Detroit manufacturer. He farms by proxy and evidently is in blissful ignorance of the desperate plight the agriculturalists are in.—I would like to take him over a six-mile section of a trunk line in Arenac County which traverses light land. Four residents only along the six-mile stretch have the pleasure of owning either Fords or cars. Several live in log cabins. A considerable portion have been compelled to borrow money to meet recent taxes. Some are also in the district of the Covert road and levied on for that. Of course they have the priviledge of seeing many fine cars whiz by their doors, kill their chickens and menace their children. Perhaps this show is worth paying for. But in the name of common sense is there to be no limit? Who then will buy the automobiles of Detroit factories. The fact is we are rapidly reaching the precipice. And such thoughtless, reckless urging of extravagant highway construction as our state is now rioting in will soon drive us over. Once the farmers of Michigan are forced to quit, we'll then realize that agriculture was indeed our basic industry. We can't go on much longer pyramiding property on a single industry, and that of a mushroom sort. As between the motor industry and agriculture it is plain which way "Good Roads Earle" leans. He says, "Let the farmers sell out." How can they when all want to sell and no one to buy? Where have his eyes been as he tours about in his fine car, that he has failed to note the pathetic "For Sale" signs on farm after farm and if he ever drove off the trunk line he'd see enough abandoned farms and not bad ones either, to set him thinking in a more prayerful mood. When the American farmer's back is broken what do you suppose will happen to the automobile and tractor industry.

"Good roads for the farmer" has been a very much abused shibboleth. The program of our State Highway Department has been to put all the emphasis and spend all the public money on trunk lines with no regard to farm and marketing needs or with those needs treated as purely incidental. Why is it that very many roads thru our best farming country are now, after this orgy of spending, in worse condition than in the old dirt road days? Because the highway taxes are so over-burdensome that townships have felt it unavoidable to cut off at the one point possible and in ever so many townships of Central and Northern Michigan no work has been done on local roads for the past two years.

What benefit having a $35,000 a mile concrete boulevard that the produce can only reach by being hauled thru trackless mud? Again these pieces of state built pavement thru our up state villages, which our Highway Department designed to ornament the Dixie and other snake trails, are of no use to anybody-except the few contractors who were enriched by the building. When the farmer with his wagon reaches this insult to his intelligence, his haul is done. There is no escape from the conclusion that our state highway officials have been guilty of wilful extravagance or worse. Had the bond issue been suspended and the petition of over 100,000 real Michigan farmers for a road holiday been considered by our State Administrative board, we should for one thing have witnessed a big come down in the prices demanded by the little pool of road contractors. The farming industry would have had little chance to recover from the smashing blows of 1920, and our State would not suddenly find itself saddled with a billion dollar load of highways built by federal, state and county appropriations, but everlastingly costly and difficult to maintain. We have simply gone highway mad.

But now the question is. How are these collosal works which were expensively, and as a rule, poorly constructed to be kept in repair? Ex-officio Eearle shouts, "Let the land owners foot the bill. That's nice. They paid for these monumental works which have made many a small man great and lined up in favor of the road officials all the politicians thru the pork-barrel allotment of bits of pavement to every little town. Yes, dump on to the hapless land owners more taxation. They're getting off too easily. But don't, for goodness sake, rub the fur of the foreign tourist or the commercial truck operator the wrong way. They are performing too important a public service speeding with heavy loaded cars over our costly roads. They haven't had enough unearned favors with their snouts in the public throug and should be freely permitted to get their feet in too.

What does H. S. say to the declaration pust passed by the Ohio State Grange that land is too heavily taxed?

The fact that Brother Earle and the writer are both non-resident farm owners. But the writer, not being a wealthy manufacturer, not a high salaried state official (nor ex-official) and also living out of the confines of the metropolis, happens to be closely in touch with the hard working tillers of the soil. No one, who knows their harassed condition at the present time, can fail to be impressed wth the fact that their limit has been reached. After years of hard sledding and a complete smash in prices of everything they produce with no corresponding drop in the prices of what they have to buy, they now see skyrocketing taxes. They cannot stay on the farms and continue to produce if it continues.

What it means to our institutions to have our land workers menaced with extinction may be faintly imagined when we recall that in every past crisis in our Country's history the American farmer has been the bulwark of liberty and of law and order. They have been the saving element in cosiety, without which it would surely have gone on the rocks. What now is to save our social fabric most seriously jeopardized as it is by national and international strife, if the independent yeomanry of our nation is wiped off the slate—or forced into factory jobs? Is the motor industry, with its breeding of discontent, luxury and laziness?

Ill fares the land, to hasten ills a prey,
Where wealth accumulates and arts decay,
Princes and lords may flourish and may fade,
A breath can make them as a breath hath made,
But a bold peasantry, their country's pride,
When once destroyed, can never be supplied.

It is a brilliant flash of imagination to conjure up an army composed of all owners of motor vehicles. "Richmen, poor men, beggar men, thieves; lawyers, doctors, merchants, chiefs," with the enraged washerwoman of our households bringing up the rear, and all this motely host flourishing bludgeons and broomsticks over the oppressive penny tax on gas. But a clearer insight into prevailing public sentiment of the times would have suggested that a movement like the gasoline tax which has in the short space of two years been enacted by 18 states and is being urged by farm organizations throughout the country is considered eminently just by a great number of owners of motor cars as well as plain citizens generally, and like the illustrious old Roman from whom he took his name, Horatio is apt to find himself left alone to defend the bridge.
—F. S. Newton, Saginaw, Michigan.

Says Feeding Potatoes Will Save Market

WHAT is the matter that we farmers can not find some way to take care of the over-production of potatoes this year? Are there not men among us that can start a successful feeding campaign?

We are told by our Experiment Stations that potatoes are worth from 25c to 30c per bushel for feeding to cows. Now if people do not want potatoes to eat suppose we turn them into butterfat. We surely cannot lose anything by feeding them they are only worth about 18c a bushel and the chances are that they will not be worth much more unless we do feed them.

If everyone would feed obout four bushels out of every eight they have there would be no potatoes to throw out next spring and we probably would get 50c or 75c a bushel for what we have to sell.

I am feeding all I can and intend to feed as long as they stay below 30c a bushel. Now if everybody would feed we could sell at a profit instead of a loss. Other businesses stick together and make it pay, why can't we? Come on farmers, let us feed. W. N. Stephens, Edmore, Michigan.

Hints on Feeding Potatoes to Livestock

ACCORDING to the U. S. Department of Agriculture, potatoes may be fed to livestock in small amounts in connection with other feeds.

While they may be sliced and fed with dry feeds, it is best to cook them before feeding, as heavy feeding of raw potatoes will cause scouring. Under ordinary farm conditions, boiling or steaming is the most economical method of cooking the potatoes for livestock. Steaming increases their feeding value about 60 per cent.

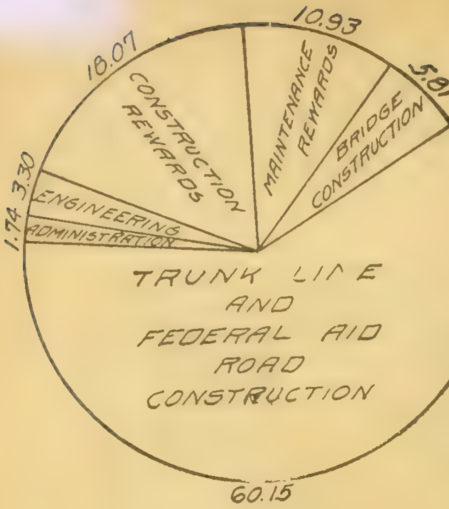
The low protein content of potatoes makes it advisable to feed them in connection with feeds that are relatively high in protein content.. Feeding investigations indicate that when potatoes are fed with other feeds to balance the protein requirements, from 350 to 450 pounds of cooked potatoes have a feediing value equal to about 100 pounds of corn, while from 500 to 600 pounds of raw potatoes are required to equal 100 pounds of corn.

Horses—Potatoes are palatable and well suited for use as a horse feed. It is safe to feed as high as 15 pounds a day to work horses. They are equivalent to aboutone-third their weight in hay. When potatoes are fed, a legume hay is a desirable supplement. If a grass hay, such as timothy is fed, the ration should contain feeds rich in protein, such as concentrates, legume hay, etc. It is advisable to chop the potatoes to lessen danger of chocking.

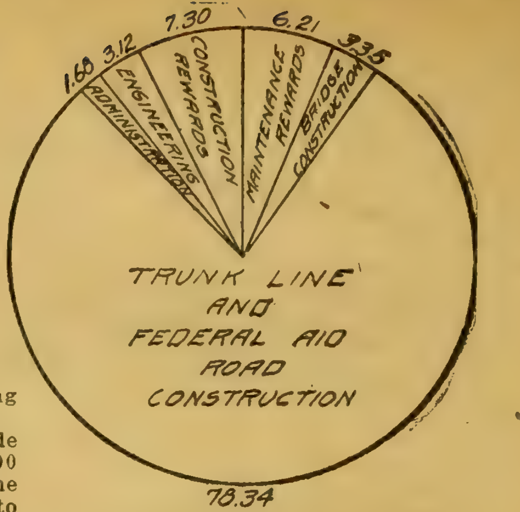
Cattle—Cooked potatoes may be fed to cattle at the rate of from 25 to 30 pounds a day per 1.000 pounds liveweight. The allowance should be lessened somewhat if they are fed raw, on account of their tendency to produce scouring. A heavy allowance of potatoes, however, produces milk and butter of poor flavor.

Where Your Highway Tax Money Went

The Question now uppermost in every Taxpayers' Mind is answered by Frank F. Rogers, State Highway Commissioner



How your 1921 dollar was spent.



Your 1922 dollar bought more roads.

MOST State Highway Departments started from small beginnings, probably none of them smaller than the Michigan Highway Department when it was first organized, July 1st, 1905. It then consisted of a Commissioner with a salary of $2,500 a year, a Deputy at $1,800 a year and a stenographer at $1,200. That year there was an appropriation of $30,000 of which $10,000 was for departmental expenses and $20,000 with which to pay state rewards on roads for one year, but since only 20 miles of roads were built that year there was plenty of money to meet all the demands for state rewards and some money to spare.

It is also of interest to note that as late as 1912, the appropriation for departmental expenses had not exceeded $10,000 a year. It is worthy of note, however, that the Legislature of 1911 passed a budget allowing the Department $15,000 a year but $5,000 of this was cut off by the Governor when he signed the bill so that for the first eight years the department was obliged to scrimp along with this small amount which covered salaries, traveling expenses and other departmental items.

This caused the Commissioner to remark in 1913: "The work of the Department has necessarily increased in proportion to the number of miles constructed but on account of the fact that no greater appropriation is available for the expense of the Department than there was when organized, it has been impossible to give the Commissioners building roads, the detailed instruction which is for the best interest of the State and the community where the road is being built. Many counties are adopting the county road system, nine during the past year, making 44 in all. Many of these are bonding for large sums for improving roads and unless careful supervision is provided to direct construction, much money will be wasted."

This condition of things existed until the Legislature of 1913 made an appropriation of $18,000 for departmental expenses for the year ending June 30, 1914 and $20,000 for the following fiscal year. In addition to that the Legislature of 1913 passed the State Trunk Line Act which made appropriations of $200,000 for the first year and $300,000 for the second year for the purpose of paying trunk line rewards and building trunk line bridges and "paying salaries and running expenses incurred by this Act." This was the beginning of great things for the Highway Department and also marked the beginning of trunk line highway and bridge construction on a scale heretofore thought to be impossible in Michigan.

I have before stated and wish to again repeat my regrets that this Trunk Line Act was not called the Alswede Act, thus giving due recognition to Senator Alswede through whose untiring efforts in the Legislature it became a reality.

Under the provisions of this Act the Highway Department expanded rapidly. The Commissioner was instructed to "cause preliminary surveys to be made and establish routes of the several divisions of the state trunk line highways herein provided and he is empowered to employ such engineers, clerks and other employees as may be necessary to carry out the provisions of this Act," which was given immediate effect.

The State Highway Commissioner was also directed "to design all bridges and culverts and construct all bridges greater than 30 ft. clear span on state reward trunk line highways," which made the employment of a bridge engineer an immediate necessity.

In this connection it is again worthy to note a recommendation of Mr. Earle, first State Highway Commissioner, in the first Biennial Report of the Department, which was as follows: "Give the State Highway Department the means to employ a first class bridge engineer who will save the state, through the townships and counties, many times his salary and expenses each year."

As the result of the expansion of the Department made necessary by these new laws, at the close of the fiscal year 1914, the Department had 35 employees and a monthly payroll amounting to $2,673.52.

In 1915 the Legislature passed the so-called Covert Act, Act 59, P. A. 1915, which provided an additional method for improving and constructing public highways, paid by a special assessment upon the lands benefitted thereby. Under the provision of this Act, petitions come direct to the State Highway Commissioner for all inter-county roads, and also for all roads that might be petitioned for in counties not working under the county road system. At present all of the counties of Michigan have adopted the county road system and all are functioning under it except Oceana and Benzie which counties have never put the county road law into operation.

In 1916 the first Federal Aid Act in recent years was passed by Congress which was followed by the Michigan State Federal Act passed by the Legislature of 1917. It was impossible to begin actual construction of Federal Aid roads until the Michigan Act was passed assenting to the provisions of the Federal Government and also appropriating funds to meet Federal money.

This first Federal Aid Act made a cash appropriation of $75,000,000 which was to be divided among the several states, one-third according to area, one-third according to population and one-third according to post road mileage. This provison brought to Michigan nearly three per cent of the Federal appropriation or a total of $2,173,510.04

Under the provisions of this Federal Aid Act and all subsequent acts up to this time, the states must match Federal money, dollar for dollar, in order to secure it but under the terms of this particular Act the maximum that could be received from the Federal Government was limited to $10,000 a mile.

While Michigan, under the provisions of the Trunk Line Act, had been building trunk line bridges and even now was constructing roads under the provisions of the Covert Act, this Federal Aid Act made it manditory that the states, in order to secure this money, should take active charge of the construction and maintenance of all roads in which the Federal Government participated. In order to comply with these requirements the Legislature of 1917 provided an appropriation of $225,000 for the fiscal year ending June 30, 1919. This Act placed much responsibility and all of the details of construction upon the state and the department grew rapidly until in June, 1917, it had 67 employees and a monthly payroll of $5,965.18.

During February of 1919, the Federal Government passed another appropriation of $200,000,000 which made available for Michigan $5,786,785.48. By this time, however, the state began to see the necessity of completing the state trunk line mileage of Michigan which now covered nearly 6,000 miles under the provisions of the Trunk Line Act of 1913 already mentioned in the article.

It became apparent, however that if the Federal funds were to be matched promptly and if the trunk line system of the state was to be completed within the lifetime of the present generation, that work on these roads would have to proceed more rapidly.

Accordingly the constitutional amendment was submitted to the people at the April election of 1919 which provided that the Legislature might issue not to exceed $50,000,000 in bonds for highway construction. This money, for the most part, was to be used in the building of trunk line roads and bridges including such roads as the Federal Government was willing to participate in.

The bond issue carried by an overwhelming majority at the April election of 1919 which was followed by the passage of the so-called Aldrich Act, Act 19, P. A. 1919, which provided among other things that "all trunk line highways established under provisions of Act 334, P. A. 1913, as amended, shall hereafter be constructed, maintained and improved in accordance with the provisions hereof under the direction and control of the State Highway Commissioner.

The Federal Aid Act originally passed in 1917 was also amended so as to co-ordinate with the Aldrich Act just referred to, both of which provided for a certain amount of financial participation from the counties on all trunk line and Federal Aid construction, the financial assistance from the counties being the same whether the roads were constructed wholly from the bond money or partly from the bond money and partly with Federal Aid.

These laws are still in force, having been amended slightly by the Legislature of 1921 but still call for assistance from the counties as follows: Counties with a valuation per trunk line mile of less than $50,000 pay only five per cent of the cost of building trunk line and Federal Aid roads while counties with a valuation of over $50,000 per trunk line mile pay 25 per cent of the cost of construction of such roads. Counties of intermediate valuations range in between these extremes, the rise being by steps of 2½ per cent in each case as the valuation increases.

A third Federal appropriation of $75,000,000 was made in November, 1921, which made available to Michigan $2,249,532.43 of additional Federal funds, the total Federal funds being more than $10,000,000.

Again in June, 1922 the Federal Congress made a fourth appropriation of $50,000,000 of which Michigan's share was $1,499,688.29. This Congress also tentatively agreed upon an additional appropriation of $65,000,000 and $75,000,000 for succeeding years but this money will not be available until it has again received the approval of Congress.

Under the provisions of the several Acts above referred to, viz. the Covert Act, the Federal Aid Act and the Trunk Line Act, the State Highway Department has already placed under construction 2,821 miles of road at a total contract price of $46,886,421.68.

It goes without saying that these millions of dollars worth of road construction in charge of the Highway Department each year during

The Truth About Henry Ford

By Sarah T. Bushnell

Early Struggles—Ford's Failures—Organizing the Present Company

MR. HENKY FORD

(Continued from Dec. 23rd issue.)

Before long others than Mr. Ford were convinced that the horseless vehicle was a practical commercial proposition, and a company was organized in Detroit with Mr. Ford as the chief engineer. But at the end of the year little progress had been made in perfecting the machine and it was decided to let Mr. Ford go and employ another draftsman. This company later became the Cadillac Motor company. Mr. Ford's car was returned to him and the inventor organized a company of his own. This second venture likewise proved a failure, but reverses served only to strengthen Mr. Ford's confidence in the future of his invention.

He decided to perfect a racing car, sold his old machine and devoted all his energies to devising a car that would establish a speed record. Rumors of his new plans spread and many Detroiters visited the Ford shop to inspect the new marvel—that was to be. Tom Cooper, the champion bicycle rider, visited Detroit and offered his cooperation and financial assistance. Cooper later was killed in an automobile accident in Central Park, New York. An interesting story of this period has to do with one "Coffee Jim" and his financing the Ford racer. The story, sad to relate, is unfounded; a man who operated a night lunch car in Detroit took a great interest in Mr. Ford's work, but advanced him no money. The financing of the racer, which was called 999, came from the farms in Springwells and Dearborn township.

Mrs. Ford has vivid recollections of that period. "Expenses were so great that I thought we never again would have any money for ourselves," she said.

Work on the car went steadily on, for a race had been arranged and Mr. Ford was eager to win it. To test the carburetors a steep grade was necessary and the steepest the inventor could find was in the cemetery. Here the final tests were made and the car was finished on the day set for the race, which was held on the Grosse Point race track, ten miles away. For days Alexander Winton had been on the ground with his car tuning it up for the great event. No other cars were entered, but a hilarious crowd was present to see the strange contest. The Winton car was finely finished and the low-slung, strange looking 999 seemed outclassed. But the race is not always to the beautiful, and 999 won.

In 1902 Mr. Ford began experimenting with a two-cylinder car. The work was carried on in a small wooden shop on Park avenue and Grand River, back of the Parker and Webb building. The messenger and handy man about the place was John Wandersee; Gus Degner was the mechanic, and C. H. Wills was draftsman and "boss" of the "force." The wages paid averaged twenty-two cents an hour. Mr. Ford gave up his position as coal buyer for the Edison company and devoted all his time to the new car. One of his friends was Alexander G. Malcomson, a prominent Detroit coal man. Mr. Malcomson was greatly interested in Mr. Ford's project and often visited the shop. Sometimes he was accompanied by his bookkeeper, James Couzens, in whose judgment he had great confidence.

One day Mr. Malcomson remarked to Mr. Ford, "Henry, my boy, you are working mighty hard, but you are not getting ahead fast enough. What you need is a barrel of money."

Henry Ford's gray eyes twinkled. "I reckon I'll have to make haste slowly," he replied. "I've tried two companies already and it looks like I am too venturesome. I'd better stick to the slow pace I am following now. If we could build a lot of machines and make them cheap enough all of us working in this little shop would be rich."

"You've got grit and it takes grit to put over a new idea," declared Malcomson. "I've had my eyes open and before you know it Haynes, Duryea and Winton will be so far ahead that you'll never catch up. It looks like we'll be obliged to organize a company—a big company. We ought to get together a hundred thousand dollars; that would be enough to start the wheels going. I would be willing to put up about twenty thousand in cash. You can put in old 999," and he pointed to a corner where the machine stood. "You've used up a deal of money in experiments—I expect you have spent all of seven thousand, and your time has been worth a lot. Suppose we start in as equal partners; I'll furnish the money and you the hard work—and genius."

Henry Ford, a joker himself, feared his friend was jesting. "And then what?" was his guarded question.

"Why then, we'll move this big working force of yours over to a building in Mack avenue. I'm nearly positive I can organize a company. Jimmy Couzens has saved up about two thousand dollars. He is young and level-headed and can afford to take a chance. Besides, Jimmy knows a lot about business. I'll add him to the force and I'll peddle the stock. We can try it anyway. If we fail –"

"We won't fail," Henry Ford interrupted; "we can't fail. We'll either succeed or I'll die in the attempt." He shut his lips grimly; then a cheerful smile appeared and he added, "we can have a lot of fun doing the right thing."

Even at the time it was Mr. Ford's idea to make good cars in large numbers and for a low price. In a few months the plant was moved to the Mack building and Mr. Ford was enabled to devote his time to perfecting his machine. The astounding success of the Ford company dates from that day.

It is interesting to note the rise of the men who worked with Ford at that time. As the business grew Mr. Ford sent John Wandersee all over the country to investigate and study chemistry, and today Mr. Wandersee is head chemist at the Ford company. Gus Degner is superintendent of inspection at the same plant. Harold Wills was sent about the country to study steel. It is he who invented molybdenum, the toughest and lightest of steels. At the time of the Chicago Tribune libel trial it was testified that Mr. Wills had received a salary of $80,000 a year for some years. Mr Wills is now a motor manufacturer himself. Enough has been said here to show that these men, although they did not buy stock in the Ford company have been rewarded with salaries and bonuses that have made them rich. They have shared in Henry Ford's prosperity just as if they had shared in the original risk.

Mr. Couzens invested twenty-five hundred dollars in the company and organized and directed five departments—bookkeeping, time clerk, purchasing agent, sales manager and business manager, but he had no assistants; he did all the work. Mr. Malcomson found it more difficult than he had expected to sell the company's stock but finally secured the following purchasers:

John S. Gray, a rich candy maker, who put in ten thousand, five hundred dollars in cash.

John Anderson of the law firm of Anderson & Rackham, attorneys for the company, who invested five thousand dollars.

Horace Rackham, his partner, who likewise invested five thousand dollars.

Albert Shelow, who invested five thousand dollars and later sold his holdings to Mr. Couzens for twenty-five thousand

V. C. Fry and C. H. Bennett, who bought five thousand dollars' worth of stock each and later sold out to Mr. Ford and Mr. Couzens for twenty five thousand each.

Alexander G. Malcomson, who put in twenty-five thousand, five hundred dollars in cash.

Mr. Ford was given an equal amount of stock for his assets.

At the end of two years the largest stockholders in the company were Alexander Malcomson, Henry Ford, James Couzens and John S. Gray. The Dodge brothers offered their foundry for the making of the car parts and each invested five thousand dollars in the company and became a director.

Back of the selling of one block of stock is an interesting story. Both Mr. Anderson and Mr. Rackham were young attorneys and Mr. Malcomson was their client. He talked to them of the company he was organizing, and Mr. Anderson, at once put his money into it, "taking a chance, as he said. Mr. Rackham's case was different. He lived only two doors from the Ford home and had nodding acquaintance with the inventor, but his health was poor and he could not afford to speculate with his savings. So he went to a leading banker for advice.

The banker took him to a window. "Look," he said pointing to the street. "You see all those people on their bicycles riding along the boulevard? There is not as many as there was a year ago. The novelty is wearing off; they are losing interest. That's just the way it will be with automobiles. People will get the fever; and later they will throw them away. My advice is not to buy the stock. You might make money for a year or two, but in the end you would lose everything you put in. The horse is here to stay, but the automobile is only a novelty—a fad."

Mr. Rackham was convinced. But a few days later he met Mr. Malcomson who showed him facts and figures and talked eloquently. Rackham was convinced again—but the other way. He sold some real estate and took the money to Malcomson. "Here, take this money and buy the stock before I have time to change my mind again," he said. Anderson and Rackham drew the incorporation papers for the company and each man held his stock, selling it finally for twelve and one-half million dollars.

CHAPTER V.

The Story of Magical Success

On October 1, 1902, Mr. Couzens took a trial balance—in pencil—which showed that the Ford company after three months of operation was making rapid progress. By January, 1903, the first commercial car was sold, and soon orders began to come in faster than they could fill them. One hundred and sixty-five cars were sold that year. A larger factory, located on Piquette street, was secured and the work went forward rapidly. In 1905 the company began to pay 6 per cent dividends.

In this Piquette street plant a young bookkeeper named Klingensmith was employed at a salary of sixty-five dollars a month. Mr. Ford advanced him rapidly and in time Mr. Klingensmith became Vice-President and Treasurer of the Highland plant. He testified in the Tribune suit that for several years his salary had been $75,000 a year. The drafting room at the Piquette street plant was in charge of Carl Emde, a German, who took out his first naturalization papers in 1902, and his second papers in 1911. When the company moved to the Highland Park plant Emde was put in charge of the tool room. This employee suddenly found himself in the spotlight of publicity in the last days of the Ford-Newberry senate campaign, as will be told later.

Another employee at the Piquette street plant was a pattern maker named Sorenson, a Dane who for years has been manager of the River Rouge foundry and tractor plant.

These are some examples of the way in which Mr. Ford has rewarded the men who have worked faithfully for him during long years. It always has been a source of pleasure to him to share his prosperity with his employees.

* * * *

Following the famous race at Grosse Point, when the Ford 999 defeated the Winton car, there were other races in various parts of the country, but in these Mr. Ford had no part. Finally, however, he decided to rebuild 999 and make it the "fastest thing on wheels." Soon afterward it was decided to hold a race against time on the frozen surface of Lake Sainte Claire in the hope of breaking the record then held by Vanderbilt. The race track was built of cinders laid on the ice and racing officials had come from many cities to serve as judges and time keepers. Mr. and Mrs. Ford and their small son, Edsel, had gone to the lake the evening before and Mr. Couzens followed them on the morning of the race. Mr. Ford was to drive 999, for the event was all important to him.

Early in the morning the engine was tested as a precaution, and to the consternation of the officials in the factory did not run well. They toiled over it like mad and finally, two hours before the time set for the race, the trouble was corrected, and the start made for Lake Sainte Claire, then considered a long way out in the country, although only ten miles from Detroit. Distances have shrunk since that day. The weather was cold and raw, with a high wind that added to the discomfort of the spectators. Mr. Ford huddled in a short thick coat of black curly astrakan and wished 999 would arrive.

Finally the car appeared down the road and preparations for the start were completed at once. Mr. Ford took his seat, and at the crack of the pistol threw on the power. For a moment 999 stood on its hind wheels, as if imitating a broncho,

(Continued on page 17)

HENRY FORD ON SLEEP

"Don't you think 10 or 12 hours a day is a fearful long time to spend in bed?" Mr. Ford was asked.

"It all depends on the individual—on his or her recuperative powers," said Mr. Ford. "I have no particular rule about sleeping except that I sleep whenever I feel tired and I stay in bed until I am rested."

"How long does it generally take—your night's rest" he was asked.

"Oh, it depends on a lot of things—and it varies. As a general rule I like to go to bed early and get up early. Pretty frequently 9 o'clock sees me abed; sometimes earlier. Then, sometimes, I wake up at 5 o'clock in the morning. If I feel fine and rested I get up—I can't lie in bed if I'm rested—and I like few things better than a good walk in the early morning—helps keep a fellow young.

"But if, on the other hand, I don't feel rested and stay in bed until 7:30 or 8 o'clock—well, that's all right, too. That's what beds were made for—to give rest, and there's no use getting up before you're rested."

NATIONAL LIGHT KEROSENE
Heat-Light Power

For Oil Lamps

Forty years ago the first National Light Kerosene was sold for oil lamps. It gave a steady white, bright light with a clear chimney and a clean wick. Almost immediately it lifted itself out of the ordinary Coal Oil class of oils and became famous as a Kerosene with no smoke or odor. People traveled miles out of their way to buy it.

Today National Light Kerosene is known as the highest quality Kerosene on the market.

For Oil Stoves

Use it in your oil stoves and heaters. No impurities to clog wick or burner. No smoke or odor to cause ill health.

For Incubators

Use it in your incubators, its uniform heat will hatch healthy chicks from every fertile egg. No poisonous fumes to clog egg shell pores when used in Incubators or fumes to kill little chicks in the Brooder.

For Tractors

Use it in your Tractor, it will develop more power than ordinary Coal Oil because every drop is consumed in the firing chamber, eliminating any chance of the unused portion diluting Lubricating oil in the crank case.

For Lighting Plants

Use National Light Kerosene for your Lighting Plant, Lanterns, every purpose where Kerosene is used you will find "National Light" more satisfactory and economical.

You can use a drum or more. Mail your order if your dealer cannot supply you and we will ship from one of our 96 Distributing Branches nearest to you.

Use En-ar-co Motor Oil; En-ar-co Gear Compound; White Rose Gasoline.

UNLAWFUL FOR COUSINS TO MARRY

Is it unlawful for Cousins to get married in Michigan? If so, what States is it lawful? How old must a female be to get married without permit of parents?—J. K., Zeeland, Michigan.

—Section 11356, of the C. L. 1915 prohibits marriage of cousins of the first degree. I do not have a list of states that permit cousins to marry. Act 195 of the Public Acts of 1917 requires written consent of parents or guardian if the female is under 18 years of age.—Legal Editor.

KEEPING CIDER SWEET

What can I put into a 50 gallon barrel of cider to keep it sweet?—D. E. W., Hale, Mich.

—A fifty gallon barrel of cider may be kept sweet by the addition of 0.1 per cent benzoate of soda. This perounces of benzoate of soda to fifty gallons of cider.

Care should be taken in measuring the cider to which benzoate of soda is to be added as too little will result in no preservative action, while if too much is added it might have a harmful effect.

Cider to which benzoate of soda has been added cannot be used for vinegar-making as vinegar is the result of microbial fermentation and the growth of microbes is inhibited by the benzoate of soda.—R. L. Tweed, Res. Asst. in Bacteriology, M. A. C.

ERROR IN "RIGHT OF TEACHER TO PUNISH CHILD" ARTICLE

In the December ninth issue of the Michigan Business Farmer on the Farmers Service Bureau page, you published an article entitled "Right of Teacher to Punish Child" and included in connection with this a letter from me but you did not publish this letter as I had given it to you. I made the following statement:

"The law does give the school board the authority to make and enforce suitable rules governing the external affairs of the school."

You have given it in such a way as to convey the opposite meaning from what it is intended to convey. In your article it reads as follows:

"The law does not give the school board any authority, etc."

Will you kindly give the necessary explanation and print this in the correct form in your next issue.—B. J. Ford.

MORTGAGE

If A gave B a mortgage on 40 acres of land and A being a married man and his wife refusing and not signing the mortgage can B collect the same by law; or is there certain clauses that would make a difference. —B. H., Boyne Falls, Michigan.

—If the land mortgaged was a homestead the encumbrance would be void. The land would be free. If the land mortgaged was not a homestead the mortgage if not paid could be forclosed and deprive the husband from any interest therein. The mortgagee could hold the land during the life of the husband subject only to the dower of the wife if she lived longer than he. If she died first the mortgagee would obtain the whole title. If the husband gave a note with the mortgage that the wife refused to sign he would be holding for the note and it might be collected from other property of the husband besides the homestead.—Legal Editor.

PAYING TAXES

We came up here in August, 1920 and bought this place in Osceola county, for $5,000 with $1.000 cash and possession in November. We moved here the first week in Nov. 1920, paid the taxes for that year, interest due March 1st. We paid our interest in March that year. Now at prices the way things are, we feel we can not go on and pay for the place, we are back $220 and our last years interest. The man will take the place back, but says we shall pay the taxes for this year, 1922, as we had the use of the place, but he had the use of the place in 1920 and we paid the taxes also taxes last year of course. Will you please tell me if we will be made to pay taxes for this year? We would like to keep the place, but how can we with potatoes at 30 cents, hay at $5 and $6, etc.? This man claims he had to pay $28 to have the sale of this place recorded, is this true? Can such charges be made?—G. B., Sears, Michigan.

—If the taxes of 1922 were assessed to you and you have any personal property from which the tax could be made the town treasurer would be under obligations to levy upon the personal property to pay the tax. If the tax was not assessed to you then the tax would be returned against the land and hold against the land the same as a mortgage. The owner can not compel you to give up the land without foreclosure of mortgage, if you gave a mortgage, or steps to forfeit the land contract, if you gave a contract. You did not say which. You do not tell what the deal was in getting the place. If you took a deed there would be revenue stamps of 50 cents for each $500. If there was a mortgage or a land contract that would have a tax of 50 cents for each $100. The recording fee alone would not amount to $28 but the revenue stamps and tax might amount to $28 on a $5,000 farm. The purchaser of a farm under contract or by giving a mortgage can not be required to give up the property until the time provided by law for forfeiture in one case and foreclosure in another.—Legal Editor.

CULVERTS TOO SMALL

We live on State Reward Road M10. When the builders put in the culverts they were informed by the land owners that the culverts were too small to carry off the water in the spring but they put them in just the same. Can we ask damages done by water in cellars caused by culverts being too small? If the culverts had not been there the water couldn't do any damage as it could get away.—M. H. Hawks, Mich.

—You would not be in a position to press your claim for damages. You would receive more benefit if you would call the attention of the District Engineer or the County Highway Engineer to the condition which exists by reason of the inadequate culvert, asking that the same be enlarged and if his contention is correct the request would be granted.—H. H. Partlow, State Highway Dept.

MORE ABOUT COST OF LAND CLEARING SCHOOLS

In a recent issue I note a query asking as to who pays the expenses of the land clearing special trains and crews which have been operating in northestern Michigan. I also note the answer which Mr. Baldwin of the Extension Department of the Agricultural College says, which answers fully as the question goes, but I believe the writer of the question would be interested in knowing that there is much more to this than simply Mr .Baldwin's answer.

For instance the land clearing special work has saved the farmers $132,000.00 in explosive alone and in addition to that has saved them $30,000.00 by buying of explosives in carload lots; thus a nice saving of $162,000.00 as a result of the work which Mr. Baldwin points out costs the tax payers of Michigan such a small amount.

I know of one particular instance where the County Road Commissioner required a ditch through a swamp which would cost him $75.00 and Mr. Livingston with one helper from the land clearing crew in one hour's time and with $10.50 worth of dynamite completed the ditch, giving a larger and better ditch than would have been constructed by team or man labor.

Farmers of the state and others should not get the notion that this

AEROLECTRIC

ELECTRICITY from the WIND!

A new, better, and cheaper way to get electric light and power for your farm. The AEROLECTRIC, like a windmill, gets its power from the wind and is a complete plant. A faint breeze starts the aerolectric charging and it generates electricity as the wheel turns in the wind. It was invented and perfected by Perkins, for 60 years America's leading windmill makers.

No Cost for Fuel!

Aerolectric has a 14 ft. wind wheel which has a Westinghouse generator built in. The current as generated is carried along wires to the large capacity storage batteries, where it is ready when, and as, you need it, without one cent of cost because you know wind power is free power.

Current for 11 Days Calm

Even if no wind blew for 11 days—which never happens—you would have current enough to last that long because the big batteries have 11 days storage capacity. A faint breeze is as good as heavy wind, because Aerolectric charges in as low as 6 miles an hour wind.

land clearing work is in behalf of clearing up a lot of wild or new land. Perhaps this may be a result, but the effort being put forth is to clean up land which is already beoing tilled, getting stumps and snags out of these fields, and this demonstration work shows the best way that this cleaning up can be done and at the least cost—T. F. Marston, No. Eastern Michigan Development Bureau.

CAN COLLECT FROM ALL

Three years ago last spring I purchased a farm of 80 acres, which had an encumbrance of three thousand five hundred dollars in a mortgage long past due. Giving second mortgage of fifteen hundred dollars to the same party that held the first, in the fall I sold the place subject to the encumbrance, after which the place has its second owner after myself. No interest, taxes, or insurance have been paid since that time. Said encumbrance amounting to more. Nearly seven thousand dollars or more. Now if this place is sold at auction for less than the price against it, is it possible for them to collect the difference from me, as the other two parties are not worth anything now?—V. A. H., Holt, Michigan.

—A mortgage may be foreclosed in Chancery and the original maker of the mortgage, and note accompanying the same, and all subsequent purchasers who assumed the mortgage and agreed to pay the same may also be made parties, and if the land does not sell for enough to pay the mortgage, the mortgagee may take judgement against all who agreed to pay the mortgage for the balance and costs and require them to pay it if they have property from which it may be collected above exemptions.—Legal Editor.

READJUSTMENT ON TIRE

Some time ago I bought a tire, guaranteed, but after running it 200 miles it gave out. We took it to the agent, who sent it to the company for readjustment. He gave me a new tire in place telling us there was a flaw in the tire and did not think we would have to pay for it. The first tire was returned with a bill of $3.85 for repairs, the company saying it was no fault of the tire. Is the guarantee any good and do we have to pay for the tire and readjustment also?—E. W., Boyne City, Michigan.

If it was not the fault of the tire you would have to pay for the repair of the tire if you ordered it repaired. If you did not and they were not authorized to make any repairs you can tell them to keep the tire.If it was the fault of the tire you are entitled to be protected upon the guaranty and your dealer should assist you.—Legal Editor.

QUESTIONS ANSWERED

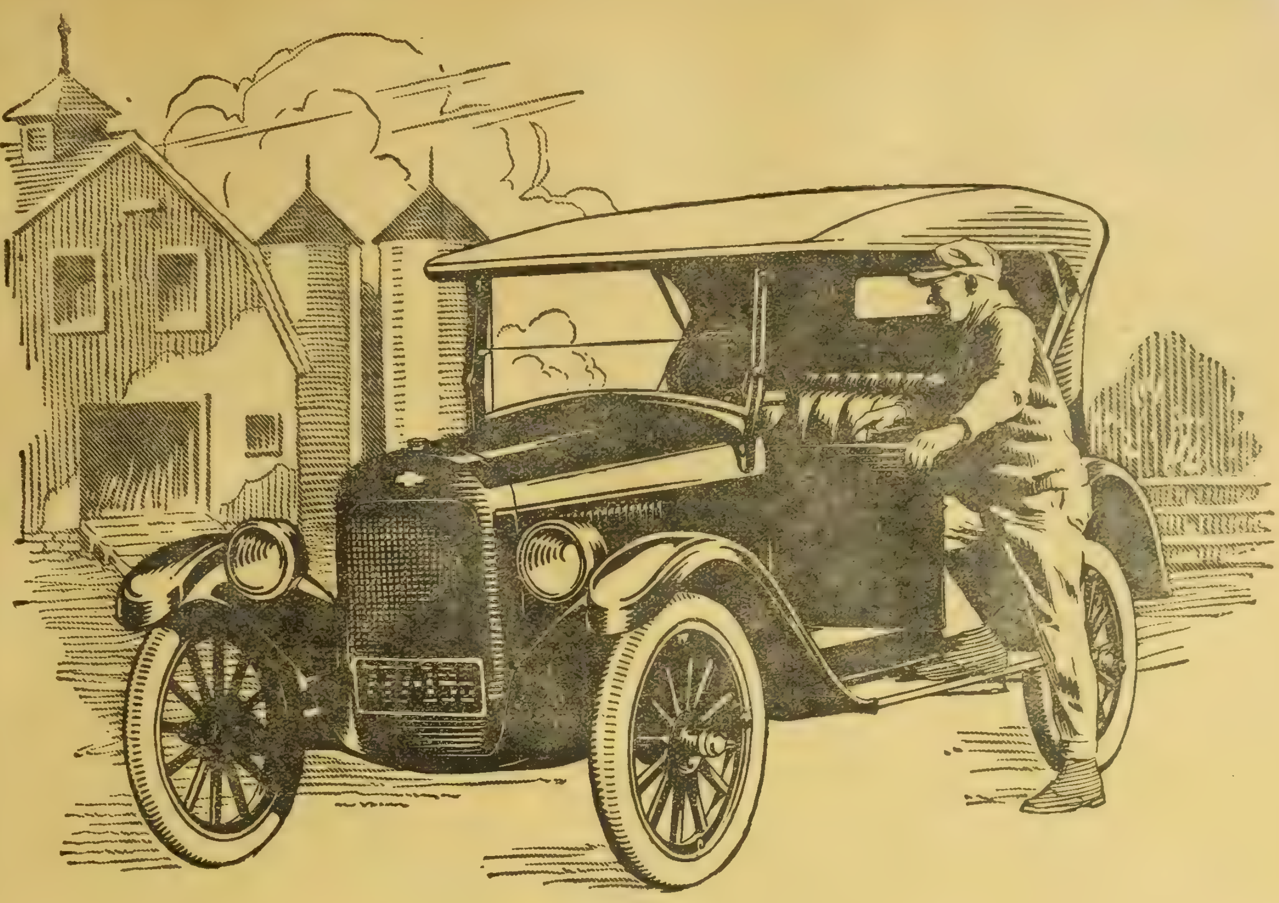
HIDES AND FURS

Will you please tell me if it hurts hides or fur to let them freeze after skinning them? How to take care of them?—B. C. N., Lawver, Wyo.

—Freezing does not hurt or lessen the selling value of either. Hides—cattle, horse, calf, sheep are usually salted heavily a few hours after killing, using say two gallons of salt on a hide that weighs 40 pounds. The object of not salting immediately after skinning is to allow the animal heat to get out. In some parts of the country—Wyoming for instance, where the altitude is high hides will cure without salt and are known as flint but are not as convenient to ship and handle as salt cured.

Fur pelts, such as fox, wolf, skunk, mink, etc., are stretched on a board made shape of the pelt and nailed. Fur pelts do not need any salt. Surplus fat and flesh should be removed. The pelts can be removed from the stretching boards after they have dried sufficiently to hold their shape. Pelts are placed on the stretching boards pelt side out—fur in.

Farmer: "See here, young feller, what are you doing up that tree?"
Boy: "One of your apples fell down and I'm trying to put it back."—Pathfinder.



Why Farmers are Turning to

CHEVROLET

for Economical Transportation

In 1922 Chevrolet jumped from seventh to second place in sales of all cars, and to first place in sales of fully equipped modern cars.

Purchases by farmers were the chief factor in this remarkable development.

Farmers are shrewd buyers and study costs and values carefully.

They want automobiles not only of low first price, but also of low later cost for operation and maintenance.

They want room, comfort and the ability to stand up under hard conditions.

They find that Chevrolet, fully equipped as sold is the best value per dollar in the low-priced field, and neighbors tell them it costs least per mile to operate.

They find it roomy, easy to handle and reliable.

They like its finish and its long stream lines.

That is why the farmer demand for Chevrolets is daily increasing its lead among modern, quality automobiles.

Shell and Grind . . . . . .
with McCormick-Deering Shellers and Grinders driven by International Kerosene Engines

EVERY man who grows stock for profit should be equipped to grind the feed. It is not hard work when you have an International Kerosene Engine for power, and McCormick-Deering Shellers and Feed Grinders to do the work. A few hours on a rainy day now and then will give you a supply of nutritious stock food that will add many dollars to your year's profits.

If you will stop in at the store of the McCormick-Deering dealer, he will show you International Kerosene Engines in 1½, 3, 6, and 10 h. p. sizes. And while you are there, ask him about McCormick-Deering Feed Grinders. The shellers are made in sizes ranging from hand shellers to 2 and 4-hole and cylinder power shellers for custom work. The grinders are built in sizes and styles for every farm. Find out about these necessary machines next time you are in town.

(Copyright by James Oliver Curwood

SYNOPSIS

JOANNE GRAY is one of the passengers on the train bound for Tete Jaune Cache, the home of "The Horde," where she has no friends and all will be strange to her. The train stops at a town composed of several tents, she goes in search of food and a bath. She is directed to "Bill's Shack" and here she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass out of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which they have passed. In but a moment the girl steps out, face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl money but before he can do so Aldous steps to the girl's side and floors Quade with a terrific blow. Aldous hurries the girl away from the scene to the home of friends. Joanne tells Aldous she is going to Tete Jaune to find her husband, Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner Culver Rann. Aldous believes FitzHugh is dead and locates a friend who declares he has seen the grave. Upon their arrival at Tete Jaune they are met by friends of Aldous at whose place they are to stay during their stop.

(Continued from Dec. 23rd issue)

CHAPTER XII

For an hour after Donald MacDonald had pledged himself to accompany Jaonne and Aldous on their pilgrimage to the grave in the Saw Tooth Range the two men continued to discuss the unusual complications in which they had suddenly become involved, and at the same time prepared themselves a supper of bacon and coffee over the fire. They agreed upon a plan of action with one exception. Aldous was determined to return to the town, arguing there was a good straegic reason for showing himself openly and without fear. MacDonald opposed this apprehensively.

"Better lay quiet until morning," he expostulated. "You'd better listen to me, an' do that, Johnny. I've got something under my shoulder that tells me you'd better!"

In the face of the old hunter's misgiving, Aldous prepared to leave. It was nearly ten o'clock when he set back in the direction of Tete Jaune, Donald accompanying him as far as the moonlit amphitheatre in the forest. There they separated, and Aldous went on alone.

He believed that Joanne and the Blacktons would half expect him to return to the bunglow after he had seen MacDonald. He was sure that Blackton, at least, would look for him until quite late. The temptation to take advantage of their hospitality was great, especially as it would bring him in the company of Joanne again. On the other hand, he was, certain that this first night in Tete Jaune held very large possibilities for him. The dectective instinct in him was roused, and his adventurous spirit was alive for action. First of all, he wanted proof of what MacDonald had told him. That an attempt had been made to assassinate the old mountaineer he did not for an instant doubt. But had Joe DeBar, the half-breed, actually betrayed them? Had he sold himself to Culver Rann, and did Rann hold the key to the secret expedition they had planned into the North? He did not, at first, care to see Rann. He made up his mind that if he did meet him he would stop and chat casually with him, as though he had heard and seen nothing to rouse his suspicions. He particularly wanted to find DeBar; and, next to DeBar, Quade himself.

The night carnival was at its height when Aldous re-entered the long, lighted street. From ten until eleven was the liveliest hour of the night. Even the restaurants and soup-kitchens were crowded then. He strolled slowly down the street until he came to a little crowd gathered about the bear equestrenne The big canvass dance-hall a few doors away had lured from her most of her admirers by this time, and Aldous found no difficulty in reaching the inner circle. He looked first for the half-breed. Failing to find him, he looked at the woman, who stood only a few feet from him. Her glossy black curls were a bit dishevelled, and the excitement of the night had added the vivid colouring of her rouged lips and cheeks. Her body was sleek and sinuous in its silken vesture; arms and shoulders were startlingly white; and when she turned, facing Aldous, her black eyes flashed fires of deviltry and allurement.

For a moment he stared into her face. If he had not been looking closely he would not have seen the swift change that shot into the siren-like play of her orbs. It was almost instantaneous. Her slow-travelling glance stopped as she saw him. He saw the quick intake of her breath, a sudden compression of her lips, the startled, searching scrutiny of a pair of eyes from which, for a moment, all the lanquor and coquetry of her trade were gone. Then she passed him, smiling again, nodding, sweeping a hand and arm through her handsome curls as she flung a shapely limb over the broad back of the bear. In a garish sort of way the woman was beautiful, and this night, as on all others, her beauty had nearly filled the silken coin-bag suspended from her neck. As she rode down the street Aldous recalled Blackton's words: She was a friend of Culver Rann's. He wondered if this fact accounted for the strangeness of the look she had given him.

He passed on to the dance hall. It was crowded, mostly with men. But here and there, like so many faces peering forth from living graves, he saw the Little Sisters of Tete Jaune Cache. Outnumbered ten to one, their voices rang out in shrill banter and delirious laughter above the rumble of men. At the far end, a fiddle, a piano, and a clarinet were squealing forth music. The place smelled strongly of whisky. It always smelled of that, for most of the men who sought amusement here got their whisky in spite of the law. There were rock-hogs from up the line, and rock-hogs from down the line, men of all nationalities and of almost all ages; teamsters, trail-cutters, packers, and rough-shod navvies; men whose daily task was to play with dynamite and giant powder; steel-men, tie-men, and men who drilled into the hearts of mountains. More than once John Aldous had looked upon this same scene, and had listened to the trample and roar and wild revelry of it, marveling that to-morrow the men of this saturnalia would again be the builders of an empire. The thin, hollow-cheeked faces that passed and repassed him, rouged and smiling, could not destroy in his mind the strength of the picture. They were but moths, fluttering about in their own doom, contending with each other to see which should quickest achieve destruction.

For several minutes Aldous scanned the faces in the big tent-hall, and nowhere did he see DeBar. He dropped out, and continued leisurely along the lighted way until he came to Lovak's huge black-and-white striped soup-tent. At ten o'clock, and until twelve, this was as crowded as the dance-hall. Aldous knew Lovak, the Hungarian.

Through Lovak he had found the key that had unlocked for him many curious and interesting things associated with that powerful Left Arm of the Empire Builders—the Slav. Except for a sprinkling of Germans, a few Italians, and now and then a Greek or Swiss, only the Slavs filled Lavok's place—Slavs from all the Russias and the nations south: the quick and chattering Polak: the thick-set, heavy-jowled Croatian; the silent and dangerous eyed Lithuanian. All came in for Lovak's wonderful soup, which he sold in big yellow bowls at ten cents a bowl—soup of barley, rice, and cabbage, of beef and mutton, of everything procurable out of which soup could be made, and, whether of meat or vegetable, smelling to heaven of garlic.

Fifty men were eating when Aldous went in, devouring their soup with the utter abandon and joy of the Galician, so that noise they made was like the noise of fifty pigs at fifty troughs. Now and then DeBar, the half-breed, came here for soup, and Aldous searched quickly for him. He was turning to go when his friend, Lovak, came to him. No, Lovak had not seen DeBar. But he had news. That day the authorities—the police—had confiscated twenty dressed hogs, and in each porcine carcass they had found four-quart bottles of whisky, artistically imbedded in the leaf-lard fat. The day before those same authorities had confiscated a barrel of "kerosene." They were becoming altogether too officious, Lovak thought.

Aldous went on. He looked in at a dozen restaurants, and twice as many soft-drink emporiums, where phonographs were worked until they were cracked and dizzy. He stopped at a small tobacco shop, and entered to buy himself some cigars. There was one customer ahead of him. He was lighting a cigar, and the light of a big hanging lamp flashed on a diamond ring. Over his sputtering match his eyes met those of John Aldous. They were dark eyes, neither brown nor black, but dark, with the keeness and strange glitter of a serpent's. He wore a small clipped moustache; his hands were white; he was a man whom one might expect to possess the sang froid of a devil in any emergency. For barely an instant he hesitated in the operation of lighting his cigar as he saw Aldous. Then he nodded.

"Hello, John Aldous," he said.

"Good evening, Culver Rann," replied Aldous.

For a moment his nerves tingled—the next they were like steel. Culver Rann's teeth gleamed. Aldous smiled back. They were cold, hard, rapierlike glances. Each understood now that the other was a deadly enemy, for Quade's enemies were also Culver Rann's. Aldous moved carelessly to the glass case in which were the cigars. With the barest touch of one of his slim white hands Culver Rann stopped him.

"Have one of mine, Aldous," he invited, opening a silver case filled with cigars. "We've never had the pleasure of smoking together, you know."

"Never," said Aldous, accepting one of the cigars. "Thanks."

As he lighted it, their eyes met again. Aldous turned to the case.

"Half a dozen 'Noblemen'," he said to the man behind the counter; then, to Rann: "Will you have one on me?"

"With pleasure," said Rann. He added, smiling straight into the other's eyes, "What are you doing up here, Aldous? After local colour?"

"Perhaps. The place interests me.

"Decidedly . And I understand that you've played an important part in the making of it," replied Aldous carelessly.

For a flash Rann's eyes darkened, and his mouth hardened, then his white teeth gleamed again. He had caught the insinuation, and he had scarcely been able to ward off the shot.

"I've tried to do my small share," he admitted. "If you're after local colour for your books, Aldous, I possibly may be able to assist you—if you're in town long."

"Undoubtedly you could," said Aldous. "I think you could tell me a great deal that I would like to know, Rann. But—will you?"

There was a direct challenge in his coldly smiling eyes. "Yes, I think I shall be quite pleased to do so," said Rann. "Especially—if you are long in town." There was an odd emphasis on those last words.

He moved toward the door.

"And if you are here very long," he added, his eyes gleaming significantly, " it is possible that you may have experiences of your own which would make very interesting reading if they got into print. Good-night, Aldous!"

For two or three minutes after Rann had gone Aldous loitered in the tobacco shop. Then he went out. All at once it struck Aldous that he should have kept his eye on Quade's partner. He should have followed him. With the hope of seeing him again he walked up and down the street. It was eleven o'clock when he went into Big Ben's pool-room. Five minutes later he came out just as a woman hurried past him, carrying with her a strong scent of perfume. It was the Lady of the Bear. She was in a street dress now, her glossy curls still falling loose about her—probably homeward bound after her night's harvest. It struck Aldous that the hour was early for her retirement, and that she seemed somewhat in a hurry.

The woman was going in the direction of Rann's big log bungalow, which was built well out of town toward the river. She had not seen him as he stood in the pool-room doorway, and before she had passed out of sight he was following her. There were a dozen branch trails and "streets" on the way to Rann's, and into the gloom of some one of these the woman disappeared, so that Aldous lost her entirely. He was not disappointed when he found she had left the main trail.

Five minutes later he stood close to Rann's house. From the side on which he had approached it was dark. No gleam of light showed through the windows. Slowly he walked around the building, and stopped suddenly on the opposite side. Here a closely drawn curtain was illuminated by a glow from within. Cautiously Aldous made his way along the log wall of the house until he came to the window. At one side the curtain had caught against some object, leaving perhaps a quarter of an inch of space through which the light shone. Aldous brought his eye on the level with the space.

A half of the room came within his vision. Directly in front of him, lighted by a curiously shaped iron lamp suspended from the ceiling, was a dull red mahogany desk-table. At one side of this, partly facing him, was Culver Rann. Opposite him sat Quade.

Rann was speaking, while Quade with his bullish shoulders hunched forward and his fleshy red neck rolling over the collar of his coat, leaned across the table in a tense and listening attitude. With his eyes glued to the aperture, Aldous strained his ears to catch what Rann was saying. He heard only the low and unintelligible monotone of his voice. A mocking smile was accompanying Rann's words. To-night, as at all times, this hawk who preyed upon human lives was immaculate. In all ways but one he was the antithesis of the beefy scoundrel who sat opposite him. On the hand that toyed carelessly with the fob of his watch flashed a diamond; another sparkled in his cravat. His dark hair was sleek and well brushed; his bristly little moustache was clipped in the latest fashion. He was not large. His hands, as he made a gesture toward Quade, were of womanish whiteness. Casually, on the street or in a Pullman, Aldous would have taken him for a gentleman. Now, as he stared through the narrow slit between the bottom of the curtain and the sill, he knew that he was looking upon one of the most dangerous men in all the West. Quade was a villain. Culver Rann, quiet and cool and sauve, was a devil. Behind his depravity worked the brain which Quade lacked, and a nerve which, in spite of that almost effeminate immaculateness, had been described to Aldous as colossal.

Suddenly Quade turned, and Aldous saw that he was flushed and excited. He struck the desk a blow with his fist. Culver Rann leaned back and smiled. And John Aldous slipped away from the window.

His nerves were quivering; in the darkness he unbottoned the pocket that held his automatic. Through the window he had seen an open door behind Rann, and his blood thrilled with the idea that had come to him. He was sure the two partners in crime were discussing himself and MacDonald—and Joanne. To hear what they were saying, to discover their plot, would be three quarters of the fight won, if it came to a fight. The open door was the inspiration.

"The Farm Paper of Service"

AGRICULTURAL RESULTS

AN increase of nearly $2,000,000,000 in the buying power of the farmers of the country is the outstanding feature of a survey of the soil crops and their markets for 1922. The valuation of farm crops last year was $7,572,890,000, according to the final returns of the Department of Agriculture, a gain of $1,842,978,000, or 32.1 per cent., over the valuation placed on the crops on December 1, 1921. The big increase in the wheat yield—about 46,000,000 bushels over last year's—was made on an acreage 2,466,000 less than that of 1921.—From R. G. Dun & Co's. Annual Review of Business, Dec. 30, 1922.

THE SLOW ROAD UPWARD

"EVENTUALLY, why not now!" is a famous slogan. The farmers would like to apply it to the farm market situation. Every month shows an improvement in the trend of prices paid for farm crops. Every report shows Europe buying more of our surplus crops that have hovered over us like threatening clouds the past two years.

Things have undoubtedly improved for the farmers of America!

But it is a slow grind up the hill. Reminds us of the days we used to slide swiftly to the bottom of the long icy hill. Once in a while there was a bare spot or a stone at the bottom. Then we stopped with a dull, sickening thud. Climbing out of the scrambled pile, tired and bruised, we had to climb the long hill again. Sometimes our feet slipped and we seemed to lose what we had gained. It used to seem O, so much farther back up the hill than it did sailing swiftly down.

Now, its a long way up the farmers hill. But, we are already three-fourths of the way back to where we started in 1913. It does you good to pause a moment and look back over what you have passed thru these past two years. That is why the thoughtful reader will get a lot of boiled down information and some satisfaction out of the Agricultural & Business Survey, the second report of which you will find on page 21 of this issue. Study it!

THE SUGAR BEET PROBLEM LOOMS AGAIN!

WHY is it impossible for the two interested parties to the successful marketing of beet-sugar from the state of Michigan to get together? Has it come to the point of an ancient fued, which smells of dark-ages or Italian vendetta? Is the whole industry in Michigan to be sacraficed on an altar of false pride, which keeps stubborn heads from getting together as sane men should, laying the facts on the table and arriving at a sensible and practical solution.

The Business Farmer speaks now for the ordinary, every-day sugar-beet grower who asks only a fair profit over and above his actual cost of production. Surely the sugar-beet factories are not so near-sighted, but what they can see that unless they can continue to satisfy the men who grow beets, each year the problem of getting acreage will become harder, until finally the actual cost of maintaining the necessary supply will eat up all the profits.

There are enemies without the sugar-beet industry in America who are bent on wrecking it or making it impotent. They will find it much more easy to count the empty factories and smokeless chimneys of beet-sugar factories in not only Michigan but California and Colorado, if the present dissention within the ranks continues much longer.

It is costing the factories of Michigan many times what it should cost them to induce farmers to grow beets. There is no excuse for this. This waste of effort is costing the grower and the stock-holder money, which should be saved and put where it belongs if there was a friendly feeling between grower and factory.

Some one man is responsible for this "grower-be-damned" attitude which, varnish it with prize money as they may, still lurks between the lines of every sugar beet contract written. This man, wherever he is, is a traitor to the farming business in Michigan, and we propose to hunt him out and crush him as we would a snake. For this service, we will be thanked equally by the men who grow the beets and the men who own the factories.

Will you help us find him? We'll guarantee to so present the facts to the board of directors of the company that is hiring him, that he will be fired on the spot!

SHALL THE GOVERNMENT FIX THE PRICE

EVER since the government relinquished control of grain prices following the war there has been an insistent demand that this control be restored. The farmer has suffered severely the past several years because of the unstable condition of his markets and the low prices, and it has been argued that it would be to the benefit of the entire country for the government to create a subsidized board for the purpose of purchasing grains outright from the farmer and disposing of them as the demand would warrant. Nor has this suggestion come solely from the ranks of "small-fry" critics. No less a personage than a former Secretary of Agriculture has carried on an extensive propaganda to create sentiment in favor of such a scheme, and there are a number of intelligent men in Congress who are known to be in sympathy with this proposal.

Congressman Sinclair of North Dakota, a former Michigan boy, and not by the way a Non-Partisan Leaguer, has introduced several bills along this line. One of them was "pigeon-holed" in turn at the last election. Sinclair expects to re-introduce his bill at the next session, and he will have strong support from most of the members of the "farm bloc."

If the Senate finally puts its approval on the merchant marine bill, Congressman Sinclair will have an excellent argument to present in support of his own measure. The merchant marine bill is in fact a subsidy to ship owners, and if Congress can conscientiously and with good reason vote to subsidize a few hundred private ship owners it will have an embarrassing time explaining why it cannot also vote to subsidize six million farmers, if in the final accounting the subsidization does not cost the government a cent.

Until the affairs of the world become a little more ordered the prices of farm products will fluctuate over a wide range. Would not some kind of government control and price-fixing prove a great influence in stabilizing the markets and restoring prosperity to the farms?

WHAT WILL THE POOR BUYERS DO?

WHEN crop prices got caught on the tail of the war-aeroplane, prices of farm lands everywhere went up. Nowhere, however, did they reach the fabulous prices which were paid in Illinois, Iowa and some of the Mississippi valley states. Five hundred dollars an acre bought only an average quality of farm land. Most of the sales were made by farmers attracted away from the farms by the prospects of selling their homesteads at unheard-of prices. In some localities it became sort of a wild speculation, like the "tulip-bulb bubble" of Dutch history, when the prices of single bulbs, much sought-after, passed from hand to hand, though they were of little intrincic value, until the market burst over night.

There were hundreds of farms sold in these states for prices so out of proportion to actual producing value, that the buyer could never expect, except during peak-war-time prices to make a fair profit from his investment.

It is a pathetic picture. These families, chained down to high-priced land. Working a tread-mill that leads no nearer their goal of ownership at the end of a hard years work.

Michigan was remarkably free from this wild land speculation. Though it is true many farms were sold at seemingly high prices, they shrink in comparison. Michigan too, is so climatically fortunate that specialty crops, like celery, sugar-beets, pepper-mint, chicory and all fruits can be grown profitably, which are unknown in the western states mentioned. America's fourth city is our metropolis and still growing. Chicago, one of the world's largest cities, is but a few hours water-haul from our shores. We are but a few miles from the center of population. We have thousands of acres of as good land as America can boast. Michigan land might with equal justice, have sold as high as Iowa and Illinois land, but luckily for us now, it didn't!

DANGER IN THE SHREDDER

IT is a common thing these days to pick up a newspaper and read an account of some farmer losing one or both of his hands in a corn shredder. To lose one's hands is not a pleasant experience. Hands are very useful things to have. Even the man who works most with his brain finds his hands convenient at times. But for the farmer whose brain is practically useless unless he can execute its bidding with his hands, the loss of those eppendages is certainly most tragic.

Most accidents are preventable. There are few victims of the ordinary run of accidents who cannot say, "If I had only been a little more careful this would not have happened." So with the farmer who loses his hands in the corn shredder or ensilage cutter. He would never let his familiarity with the machine breed contempt for its dangers. Danger lurks in every mechanism driven by mechanical power. The very whirr of revolving knives spells DANGER. "Beware," "beware," they sing. But despite the warning many stick their hands into the maw and the terrible accident occurs.

Take heed, dear reader, it may be your turn next unless you are careful. Let safety come before every other consideration, whatever your work may be.

MICHIGAN CITIES PROSPEROUS

ONE department store in the city of Detroit is reported to have done a business of $280,000 in one day during Christmas week. All stores reported the largest business in their history. Detroit is undoubtedly the most prosperous city in America today. Manufacturing plants, of course, did it. Lansing, Flint, Grand Rapids are prosperous too. All growing and will need more fresh vegetables, fruit, dairy supplies, etc., from our farms. They ought to help lower the taxes too, if they pay their just portion of the states expense. One way would have been a state income tax on incomes over $5000. Things do not look so bad for farmers in Michigan as they do in other states. That is if we continue to work together and are not led astray by rattle-brained prophets of a farming business millenium.

Clemenceau says that Germany is preparing for another war. If the French Tiger should contend that an egg which is crushed could again gather its component parts together again and mount of its own accord to its former resting place, we might believe him, for we have great admiration for the doughty old Frenchman. But when he says that Germany is capable of waging another war now or a quarter of a century from now, we know that he is talking in his dreams. No egg was ever so helplessly crushed as the German military machine.

* * *

The tax on gasoline to raise funds for highway maintenance is a subject we are discussing pro and con in these columns. It reminds us of the sales tax discussion. The folks you expect to be for it, are against it, and vica versa. It is a live issue in Michigan. You cannot avoid arriving at a decision regarding it, because nothing can prevent its coming up for settlement by a popular vote. We are presenting both sides by the best authorities available, so if our readers do not get all the facts, it will not be our fault.

* * *

One writer says "he hears" we have sold out to Henry Ford, another that an agent for another farm paper told him The Business Farmer had been sold to Armour. We published a list, (in accordance with postal regulations) of the owners of this publication in our October fourteenth issue. There has been no change in the ownership since. As Abe Martin says: "Rooms must be a'getin scarse agin, thars so many rumors goin' round!"

What the Neighbors Say

ACKERMAN NOT SATISFIED WITH CONTRACT

I AM enclosing a letter from the Owosso Sugar Company which I understand has gone out to all large growers generally. You will notice the tone is very personal and is I think, an attempt to break the stand of the growers that are through with raising beets until a fair 50-50 contract can be secured.

The Owosso Company is also out offering a span of Belgium horses to the man growing the largest acreage in a township and also a job working to get contracts for 304 weeks for a contract. Well you can say to the growers, organized and unorganized that I believe, we through the Michigan Sugar Beet Growers' Association never asked for anything but what was right. I will say, as far as I am concerned personally that unless a fair 50-50 contract can be offered which expresses the same tone of fairness that the company in the enclosed letter seems to want the farmer to give their contract labor, I am done with growing beets forever, to any extent at least, under present conditions.

Now we come to the old, old question. What is a fair contract? We will answer the question just the same as we have always answered it. Let representatives of the growers and the factories meet together, place their cards on the table, face up, go over the local conditions that change from time to time and get out a contract and then go to it. However, I have a feeling that the sugar beet business in Michigan is on the decline and the greatest effort on the part of growers and factories must be used through earnest cooperation to ever bring it back to where it was once.

W. H. Wallace says, "When you try to find out what the growers want for a 50-50 contract they head off on something which shows they don't know what they want!" You see we never have been together in a real conference, therefore cannot understand each other. All we can do is to again come out in the press with our claim.

The grower has more invested in growing a ton of beets than has the factory in milling a ton into sugar and we employ six times the labor. Therefore, are we unfair in asking for one-half the sugar in a ton?

Take the last twelve years extraction and average it and you will find there are 260 pounds of white sugar in a ton of beets. We want a contract which pays us an amount equal to the price of 130 pounds f. o. b. New York or one-half the amount received by the factory, an amount which is still not really all the grower is really entitled to. We never did receive any good from a guaranteed minimum so why consider it?

The factories will have to hold the 80,000 acres they had this year and get 100,000 acres more to get themselves back to full capacity. Can they do it? On a $6 contract with $23.00 an acre, can they get the labor for that? This is a poorer contract than offered last year which was $5.50 beets and $16.00 an acre labor. Where can fertility and manager costs come in on either of these contracts? C. E. Ackerman, Shiawasse County, Michigan.

—It is high time for the growers and the beet sugar factories of Michigan to get together on a plan which is equitable to both parties. The stand of the factory owners in refusing to meet with the organized growers was in defensible. The sugar beet industry is in too precarious a position for either factory or grower to refuse to cooperate on a plan which will work to the mutual advantage of both. One thing is certain. The factories have expert accountants who can tell them exactly what it costs to produce sugar from beets. If they will go 50-50 with the growers on their profit, we believe the grower can be satisfied and the factory, thru lessened cost of maintaining acreage, solicitors, attorneys, etc., will actually make more for their stock-holders and save their management all the disagreeable feeling which has existed practically from the day the first factory in Michigan started to grind beets. —Editor.

TAX EXEMPT—WHAT IT MEANS!

I HAVE read the editorial in the Michigan Business Farmer of December 9th headed "Tax Exempt." I agree with your sentiments thoroughly. Millions and millions of dollars that are usually available for the financing of farm operations and industrial plants have been withdrawn from active service and returned to the safety deposit boxes in the form of tax exempt securities. Naturally, the income from tax exempt bonds is not taxable.

That was one of the principal points that we tried to make with the farm organizations in the income tax campaign. A good many of the farm organization representatives thought they might reach the income from these tax free bonds by a state income tax. Such, of course, is not the case, and an income tax for Michigan (had it been adopted) would have fallen upon the shoulders of those who are already paying the taxes, namely the farmers and manufacturers. In other words, most any form of taxation will be loaded on those who now pay them unless we can change the situation in reference to tax exempt securities. We now penalize initative and genius and business ability, whether on the farm or in the factories, by our form of taxation. When, as a matter of fact, the producers should certainly be encouraged rather than penalized. We encourage, by our laws now, the hiding away of wealth which should be active.—John L. Lovett, Wayne County.

The Week's Editorial

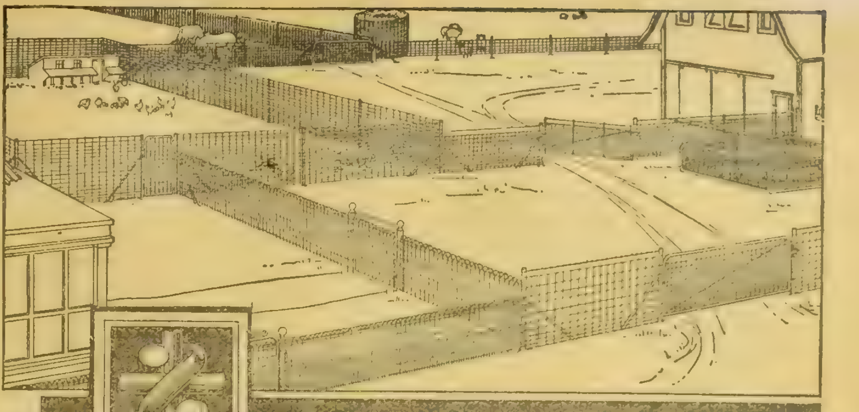
FARMER-LABOR FALLACY

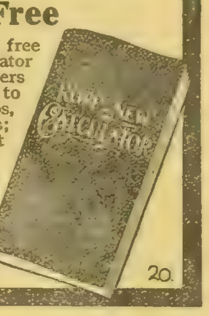
Two paragraphs in Secretary of Agriculture Wallace's annual report should not be lost on those who dream of a Farmer-Labor combination as the popular third party of the near future.

In one paragraph it is declared that the farmers have gained nothing from Labor's success in keeping its wakes from 50 to 100 per cent. above pre- war levels. On the contrary, as a direct consequence, farmers have had to pay more for transportation, fuel, implements, clothing and everything else they buy, without getting larger markets or higher prices for what they raise. And it might have been added that competition has drained the farmers' labor supply and raised his labor cost.

In another paragraph it is shown that the farmer has paid the cost of Labor's right to strike. Interruption of industry has reduced the food demand, stopped the marketing of some farm products, forced down the prices of others, raised fuel costs enormously and clogged the transportation lines with coal just when they should have been open for the crops.

If the farmers are to join forces with Labor, they will have to get something better than this out of the alliance. They have no means of coercing Labor, as Labor, by striging, can coerce them. If they ever join forces, it will be with a real partner, not a taskmaster. They want to see Labor fully employed, and at good wages. But when wages are forced beyond the points where consumption of products is increased, the farmer becomes a victim of Labor's cupidity. He is not likely to look with favor on any nation-wide merger to form a Farmer-Labor party so long as the Labor end of the partnership wants to dictate the policy for its own selfish advantage. —Philadelphia Bulletin.





SQUARE DEAL LONG-LASTING PRODUCTS

Hog and Field Fence—With famous "Square Deal" knot, full gauge wavy or crimped strand wires, picket-like stay wires and always live tension.

Poultry Fence—Keeps chicks in and pests out.

Lawn Fabric—Beautifies the home; costs little.

Sheep Fence—An economical fence because of its wide spacing.

Steel Posts—Last longer; look better than wood; save expense and repairs.

Steel Gates—Save labor; won't sag; always look neat.

Tilting Gates—Can't bank snow, freeze in or drag.

Handy Panels—Necessities for breeding and show use.

Corn Cribs—Cheapest for temporary storage.

Barbed and Smooth wire, nails and staples and fence stretchers are dependable when they bear the Keystone mark.

Use Square Deal Everywhere

Many thousands of careful buyers who know true economy buy "Square Deal" fence in preference to all others. These five points decide them:

1—**Full gauge wires** are stronger and last longer than the skimped kind.
2—**Good galvanizing** keeps out rust and decay.
3—**Square Deal Knot** holds stay and strand wires in a vice-like, yet flexible, grip.
4—**Stiff stay wires** act as pickets—keep fence tight and trim.
5—**Wavy or crimped strand wires** provide elastic tension that prevents bagging and sagging.

"Square Deal" fence adds beauty; increases farm values; is easy to put up and economical because of its long years of service.

Two Fine Books Free

If you own land we will send you free a 50c copy of Ropp's New Calculator —a handy farm book that answers 75,000 farm problems; tells how to figure capacities of barns, cribs, silos; shows tonnage of hay stacks; gives commercial law, parcel post rates. Also Square Deal Farm Book that tells what fence is best suited for every farm need. Write postal today for both books. Send no postage.

PARENT-TEACHER ASSOCIATIONS

A PARENT-teacher association is a voluntary partnership of parents and teachers and others whose object it is to surround little children with the environment most favorable for their development.

This organization brings parents and teachers together to study child life in regard to care and proper guidance in the home, in the school and in the community.

It aims to cooperate with educational institutions intelligntly; to work for public welfare with regard to health, morals, playground facilities, children's courts, mother's pensions, etc.

What would it mean to the children and the schools of the United States if every school would have the cooperation of a wide-awake, progressive parent-teacher association.

In the state of California there are more than 1,100 of these organizations connected with the public schools, with an individual membership of over 53,000 parents and teachers.

State Superintendent Wood, of California, says of the movement: "I believe in the Parent-Teacher Association because of the good it has done and the good it promises to do. An association of mothers and fathers deeply interested in the schools is certain to improve not only the school but the entire community. Our Parent-Teacher Associations are little democracies devoted to the advancement of the interests of boys and girls. I am deeply gratified by the growth of the Parent-Teacher Associations throughout the 'State during the last three or four years. Ere long we shall realize our aim to have a Parent-Teacher Association in every community." This is the testimony of the State Superintendent of Public Instruction in the State having the largest membership. In the United States there are now more than a half millon members in parent-teacher associations. There are organizations in every State.

Where does our State stand on the list? Can we afford to let other communities progress while ours stand still? Why not have a parent-teacher association in every school by 1924?

Call the parents together with the teachers in the schoolhouse, and see what can be done to make your school district the model for your State. Communicate with other organizations in your State and find out how they do it; exchange experiences; cooperate; work together for better citizenship, because the children of today are the citizens of tomorrow.

BETTER BUSINESS BUREAU

DETROIT has a Better Business Bureau and the bureau issues a timely warning. This government is about ready to pay out several hundred millions of dollars to the holders of war savings stamps and victory bonds. The parasites who make a living out of other people's misfortunes are all ready with their get-rich-quick investments, in which to place your money, promising a small fortune in a short time; there are people who will be taken in, that is the pity of it, in spite of all advice but be one of the wise and make no investment that is against the best judgement of your banker or of some reliable trust company. These agencies are always willing and anxious to help as prosperity for one man helps his neighbor and we are all neighbors of each other, tho miles intervene. This is verily the age of inter dependence and no man liveth unto himself either in matters of business life, social life or morality. The big financial concerns of the country are anxious that you reap the full benefit of your savings and that not one cent be lost to the unscrupulous promoter.

STOP, LOOK AND LISTEN, GIRLS

AT the Banker's Convention held recently in New York City, the wives of the bankers were beautifully entertained at lunch at the homes of some of the wealthiest and most exclusive of New York women. Their homes are most elegantly appointed and the guests were attended by inumerable servants in livery. Mrs. Douglas Robinson, Theodore Roosevelt's sister assisted one of the hostesses in the receiving line; but we are coming now to the matter of real importance. These society women wore no rouge, little powder, hair done most simply and eye brows au natural (not plucked.)

The Farm Home
A Department for the Women
Edited by MRS. GRACE NELLIS JENNEY

A JUST CRITICISM

THIS is one of Margot Asquiths criticisms of us and one we might well take to heart.

"As a complete outsider with a short and hurried experience of the United States, this has struck me more than anything else. Beauty, which is so obvious in the architecture and other things, seems to be underestimated, and where nature should dominate, I have been shocked on every road that I have traveled by huge billboards and advertisements of the most flamboyant kind, which irritate the eye and distort the vision of what otherwise would be unforgetable and inspiring. It is much the same everywhere. In Chicago the Michigan Boulevard, with the lovely lake on one side and grand buildings on the other, running at enormous width for a long distance, is one of the finest broadways in the world; but it is spoilt by a vulgar erection at the end, advertising something or other against the sky in electric bulbs of rapid and changing colors."

THE VILLAGE WEEKLY

AT last the floundering carrier bore
The village paper to our door.
Lo! broadening outward as we read
To warmer zones th' horizon spread;
In panoramic lengths unrolled
We saw the marvels that it told.
Its corner for the rustic Muse,
Its monthly gauge of snow and rain,
Its record mingling in a breath
The wedding-knell and dirge of death;
Jest, anecdote, and love-torn tale;
The latest culprit sent to pail;
Its hue and cry of stolen and lost,
Its vendue sales and goods at cost,
And traffic calling loud for gain.
We felt the stir of hall and street,
The pulse of life that round us beat;
The chill embarge of the snow
Was melted in the genial glow;
Wide swung again our ice-locked door,
And all the world was ours once more.

—From Whittier's "Snowbound"

SCHOOL LIBRARY

I wrote you some time ago and wish to thank you for your answer. Now I want to ask another question. Our Sunday School which is quite small has a small fund wish to start a library. Considering the high price of new books we have decided to see what we could do about getting second-hand books or perhaps get in touch with some other Sunday School that has an old library to sell. We would greatly appreciate any help or suggestions you may be able to give.—Mrs. B. L. F.

—I am publishing this letter so that if there are any Sunday Schools that have found a way thru this difficulty, they may give our subscriber the benefit of their experience. Some public libraries in the large cities make a practice of sending out quite a number of books, well selected, to smaller communities for a stated time and for a nominal sum, the books to be returned and others to take their places. The Public Library of Detroit has such a service. Why not write and find out what arrangement can be made. That plan would give you a circulating library which has some decided advantages. Address, Service Department, Detroit Public Library, Woodward Avenue, Detroit, Michigan.

PANCAKE RECIPE WANTED

I am a reader of the Business Farmer and receive lots of help thru the Woman's Department. I would like to see a recipe for pancakes, that can be made in the morning, quickly and easily and in time for breakfast.

I am having trouble with my starch, after I have it boiled as the directions say on the box and set it aside to cool, it gets lumpy and a thick film is all over the top; and when I want to iron my clothes the starch sticks to the iron, what makes this? I hope I have not asked too much.—A Reader.

—Is it a recipe for wheat or buckwheat cakes that is wanted? Perhaps we can have some recipes for both.

—Mix the starch with cold water and then slowly add the boiling water, first being sure that there are no lumps in the cold starch, put on the stove and boil slowly, carefully stirring all the time, do not allow it to get too thick. Add a little turpentine to the starch to prevent the iron from sticking. Smoothness and glossiness can be secured by stirring the starch with a parafin candle two or three times. Use two or three tablespoons of starch to one quart of boiling water, a teaspoon of kerosene oil to one quart of starch will also prevent sticking. If any reader has any further suggestions to offer we will be glad to print them.

ONE MORE DILL PICKLE RECIPE

I saw your request for dill pickle recipes in the best of farm papers. I have tried the following several years but never had it fail.

Pack cucumbers in layers with dill and a large grape leaf between each. Then cover wiith a brine made of 2 quarts of water, 1 quart of vinegar and 1 cup of salt. These can be packed either in open or sealed jars. I pack some in 2 quart jars and seal and they are good the second season. —Mrs. C. S.

HUNGARIAN GOULASH RECIPE

Peel and cut into pieces, 2 large carrots, 1 white turnip, 3 potatoes, 6 large onions, let cook in a little water until tender, then add 6 tomatoes or 1 can, 6 bay leaves, 1 green pepper, sliced, 2 large apples, peeled and sliced. Cook until tender, add a good sized piece of butter and thicken with browned flour. This makes a good supper or lunch dish. —Ed.

FRUIT CAKE RECIPE No. 1

2 cups sugar, 1 cup butter, 5 eggs, 1 cup buttermilk, 2 wine glasses boiled cider or some fruit juice, ¼ pound citron, ¼ pound almonds, 1 pound raisins, 1 pound currants, ½ cup molasses, 1 teaspoonful cloves, 2 teaspoonfuls ginger, 2 teaspoonfuls soda, 2 teaspoonfuls cinnamon, 2 teaspoonfuls allspice and 5 cups flour. The above is a "corking" good recipe and produces three good sized fruit cakes.

Fruit Cake Recipe No. 2

2 cups brown sugar, 2 cups ground dried apples, 1 cup molasses, 1 cup ground salt pork and ½ cup shortening. Let all boil up until pork is melted, spices, cinnamon and nutmeg added, 1½ cups sour milk, 1½ teaspoonful soda, 1 pound raisins, 1 cup nut meats, citron, orange peel, if you like, add the flour.

Fruit Cake Recipe No. 3

2 cups sugar, 1 cup lard, 1 tablespoon nutmeg, 1 teaspoon cloves, 1 tablespoon cinnamon, part teaspoon salt, ½ cup buttermilk or sour milk, 1 teaspoon soda (dissolved with water) 2½ cups flour and 1 cup of raisins or currents.

Bread Recipe

1 pint of potato water, 1 pint of milk, 3 quarts flour, measured before sifting, 1 cake compressed yeast, 2 tablespoon sugar, 2 tablespoon shortening and 1 tablespoon salt. If you make your yeast, ½ cake dry yeast in 1 quart of liquid will give the same results.

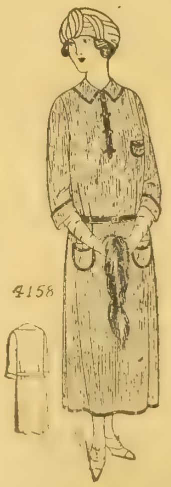
Soak yeast with 1 teaspoon of sugar in enough lukewarm water to cover it. Scald the milk. Place the rest of the sugar, the salt and the shortening in the mixing bowl and pour the scalding milk and potato water on them. (The water in which two or three medium sized potatoes have been boiled may be used if one has not saved the water in which the potatoes were cooked for dinner.) When cooled to lukewarm, add the yeast and about half of the flour. Set it to rise in a warm place for a half to three-quarters of an hour, then add the rest of the flour, enough to make a dough that will not stick when kneaded with but a slight sprinkling of flour on the kneading board. Stir in the mixing bowl or knead until the flour is well worked in. A cup of mashed potato will improve the quality of the bread. Let it rise in a warm place until almost double in volume, then knead

AIDS TO GOOD DRESSING

For Simplicity, Service and Style

Address orders to Mrs. Jenney, Pattern Department, M. B. F.

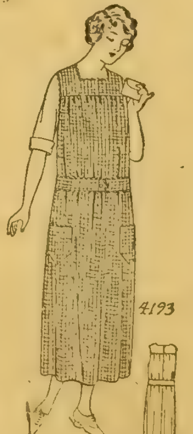
Catalog 15c—Pattern 12c



A Popular Day Dress

4158. A frock of this kind is neat and chic, and simplifies the work of the woman who makes it. The model is in "slip on" style. The bell shaped sleeve is comfortable and up-to-date. Plaits at the side seams, give added fulness to the skirt portions.

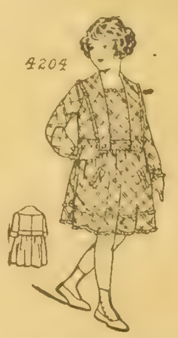
This Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46, and 48 inches bust measure. A 38 inch size requires 3 1-4 yards of 54 inch material. The width at the foot with plaits extended is about 2 1-4 yards.



A Comfortable Protective Apron

4193. Blue and white check gingham with rick rack braid for trimming is here illustrated. Crepe with a finish in colored yarn would be nice, as would also be percale of sateen with binding in a contrasting color.

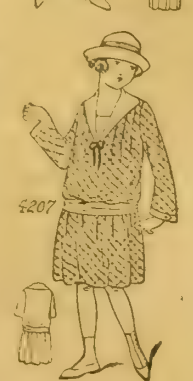
The Pattern is cut in 4 Sizes: Small, 34-36, Medium, 38,40, Large, 42-44; Extra Large, 46-48 inches bust measure. A medium size requires 4 1-2 yards of 36 inch material.



Girls' Dress With Sleeve In Either Of Two Lengths

4204. Plaid suiting was used for this design, with ruffles of taffeta. Inserted pockets are a pleasing feature of this style.

The Pattern is cut in 4 Sizes: 4, 6, 8, and 10 years. A 6 year size requires 3 yards of 36 inch material.



A Jaunty Frock For The "Young Miss"

4207 Checked woolen and serge would combine well in this model. It is also good for wool knit fabrics, and for velveteen. The sleeve may be in wrist or elbow length.

The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 3 1-2 yards of 32 inch material. To trim as illustrated will require 3-4 of a yard of 32 inch material.

until smooth and velvety and mould into loaves. Put in tins and when it has raised so that the volume or size has about doubled, it is ready for the oven. Bake about 45 minutes in a moderate oven.

REMOVING INK

Would it be possible for some of your readers to describe how to remove lettering from unbleached muslin feed sacks? I have tried various methods without success.—S. L. F.

ADDRESS WANTED

Will our Subscriber who makes sleeveless sweaters please send me her address? It is wanted and I have mislaid it.

NOT ADVERTISING

While we cannot use this column for advertising purposes, we will mention anything that promises to be a mutual help. This department has been the means of getting a good deal of help to a number of people, thru their making their wants known here.

J. D., Hastings,—Your card with the canning recipe did not reach me. If you will write again I will gladly publish it. Address your letter to me, in care of Home Department.

If you will send me an addressed envelope or postal card I will give you the address of a firm selling Rust Proof.

Well I'm back again to thank all those who helped me with my bread problem and those who gave the fruit cake recipes. I tried the bread recipe and it proved very satisfactorily, and as for the cake recipes I have not used all of them but I am keeping them for future use.—Nellie Isles.

NANCY HANKS

1 1-2 cups white sugar, 1-2 cup butter, 3 eggs beaten separately, 2 cups of flour, 2 teaspoons baking powder, 2 squares Baker's chocolate dissolved in 1-2 cup hot water.

Icing for Nancy Hank: 1 cup brown sugar, 1 cup white sugar, 1 desertspoon vinegar, 1-2 cup water. Boil till this forms a soft ball in cold water. Remove from fire. Beat in the whites of 2 eggs (beaten) put back on fire and add 8 marshmallows, stir until these disolve. To be put on cake when cold.—Canadian Subscriber.

GRAPE CONSERVE

1-2 peck grapes, 2 oranges (juice) 2 lemons, 1 c. chopped nut meats, sugar equal quantities as you have mixture. Wash fruit, remove grapes from stems. Remove skins from pulp. Cook pulp until soft. Strain to remove seeds. Place the strained pulp and skins in the preserving kettle. Add orange and lemon juice.

BEAUTIFUL ANGELS

(By request)

Beautiful angels are guarding us ever,
Sent by our Savior above;
Beckoning earnestly t'wards the bright river,
Sweet guiding angels of love.
Guarding us ever as onward we struggle,
Over life's ocean so broad;
Vigils they're keeping thro' joy and thro' trouble,
Beautiful angels of God.

Coming with heavenly mercies abounding,
Coming on missions of joy;
Life's flitting journey with brightness surrounding,
Coming its griefs to destroy.
And as we pass from its changes forever;
Leaving its glitter and gloss,
When we arrive at the beautiful river,
Angels will guide us across.

Angels will strengthen our faltering footsteps,
If their still voices we heed;
Sweetly they'll teach us the Lord's holy precepts,
Unto his kingdom they lead.
And when at last, we, through portals of brightness,
Enter the mansion above,
There we shall see in their heavenly whiteness,
Beautiful angels of love.

Uncle Rube Spinach Says

JUST THINKIN'

THE holiday season is just past an' gone an' of course most of us has had a great time. The weather was fine an' everything turned out as we would have it—for most folks any way. An' I'm thinkin' now of all the happy kiddies—happy 'cause Santa Claus came to them an' gave them the very things they wanted an' some of them the things they really needed.

An' I am also thinkin' of the little fellers that Santa missed this year jest as he has missed them every year since they were born. Say folks! Do you know I am sorry for the man or woman that has no little kiddies to make happy when Christmas times comes?

I know the joy that comes to one plannin' and buyin' the little things or maybe, bigger things to make the kiddies glad.

An' it takes so little to make a child happy! So you see I pity the ones who have no kiddies to buy for. An' oh how sorry I am for those who have little fellers an' yet, on account of sickness or misfortune, are not able to do what they would like to do an' have to tell the little ones that Santa could not come this year. I can feel for them as I picture the disappointment of the little boys an' girls to whom some of them Santa never omes—to them Christmas means nothin'—it's the same as any other day unless some one with a big heart, who knows conditions an' considers it a priv'ledge to step in an' help Santa out.

Yes, I pity those who have no little fellers an' I sympathise with those who have an' can't do anything for 'em. But I have no patience an' no love for the man or woman to whom God has given little ones—who are able to do everything for them an' yet do nothin'. Such folks don't know the joy of livin'! They care nothin' for the happiness of little folks; they forget they were ever children themselves. Some of 'em are so wrapped up in makin' money they pinch a dollar or a nickle so tight an' have pennies always before their eyes so they can't see anything else an' they don't want to see anything else 'cause money is their God an nothin' else counts with them.

If they lose a horse or a cow or hog, they take on somethin' awful—an' yet they neglect the most valuable thing they have on earth except the mother of the little ones an' the chances are they neglect her too.

I always look with suspicion on the man or woman who has no love for children. There is somethin' wrong in their makeup. An' somehow, I always feel like puttin' my hand on my pocketbook—if I have one—whenever I meet up with one of the kind.

Children were given us to be loved an' it's up to us to love 'em an' treat 'em right. Not only our own little fellers but every child for they have the same right to live an' enjoy life as we have. We were all little fellers once. Many there are what act as though they never were—they have no patience with kiddies—act as though they'd like to see 'em boiled an' made into soap or somethin'. An' yet the boys an' girls of today will be the fathers an' mothers of a few years hence—they will be runnin' things then an' the old curmudgeons who are so cranky to them now will be in their second childhood—if they are allowed to encumber the earth that long—an' will be dependent on the very kiddies whom they now look on with disdain.

Well, anyway its been a great holiday season an' now as I get back into the harness for another year's work I look back at the last few weeks an' find that I stored up happiness enough to last me for the time until we go through the same thing again.

If there is any one thing that I am more thankful for than any other it is—that God has given me children to live an' a heart to love 'em. An' not only the ones He has given to me but a love for childhood in gen'ral.

An' so here's wishin' for all that is brightest an' best for the little folks all over this great land of ours. Cordially yours—UNCLE RUBE.

Lily White
"The Flour the Best Cooks Use"

A GOOD RECIPE FOR MILK BREAD
3 quarts of Lily White Flour, 3 pints of lukewarm milk, 1 cake of Fleischmann's yeast. Set in morning in warm place and rise until light. 3 teaspoons of salt, 1 tablespoon of sugar, 1 tablespoon of melted butter or lard. Mix with Lily White Flour until stiff, or from 20 to 25 minutes. Set in warm place and let rise until light. Make in loaves and work each loaf from six to eight minutes. Set in warm place until light. When light take warm milk and sugar and put over top. Keep good fire and bake slow one hour and when baked wash over again to make nice smooth brown crust.

Our Guarantee
We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.
If for any reason whatsoever you do not, your dealer will refund the purchase price.—He's so instructed.

Must Please You
Lily White Flour contains all the prime goodness of the finest wheat grown in the world. We know—and thousands of the best cooks for three generations know—that Lily White is as good as a flour can be milled. It must please you. To make sure that you will find Lily White unexcelled for the baking of delicious breads it is sold under a rigid money-back guarantee.

Why You Should Use Lily White
REASON No. 19
Bakes the very best breads
Breads baked with Lily White possess everything you look for in a good bread. Flavor! Lily White breads have that clean, wholesome taste plus the flavor of the superior wheat. Lily White is clean. Breads are light, firm of even texture, appetizing and easily digested.
You can join the growing army of good cooks by telling your grocer to send you a sack.

Never Let a Cold Get a Start
Break it up overnight
THE quick direct treatment for colds of children and grown-ups too, is an application of Vicks over throat and chest at bedtime. Not only is Vicks absorbed thru the skin, but its healing vapors of camphor, menthol, eucalyptus, turpentine, etc., are breathed all night directly into the affected air passages. Relief usually comes by morning. Just as good, too, for cuts, burns, bruises, stings and itching skin troubles.

REG U S PAT OFF

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

The Children's Hour

DEAR Nieces and Nephews:—Again Christmas has come and gone and we are on the threshhold of a new year. Most girls and boys go forward with shining eyes eager to see what the future has in store for them but the majority of the older people like your fathers and mothers or grandparents, or like Uncle Ned, hesitate and take inventory. We stop a moment in our daily work to balance the books, or to count the good deeds we have done during the past year and then compare them to the bad ones we did. Sometimes we are pleased with the results but many times we are not and then we decide that we will increase the number of good deeds and decrease the bad ones during the next year. I know that many girls and boys also do this but I think it would be a great step taken toward making this world of ours a finer and better place to live in if everyone, both large and small, would stop and take inventory every now and then.

If you will notice the people that pass your home you will soon be able to pick out the ones that stop each day to perform some good deed and the ones that do not. And, dear boys and girls, you will find that the tramp who calls at the back door for something to eat and the man known as "the miser" in your neighborhood are not of those trying to make our world a little better and brighter. Learn to stop and take inventory of yourself.

I certainly received a fine lot of Christmas stories. Some of them did not arrive until after the prizes had been awarded. I wish that we had space on our page to print them all even though Christmas is over but we cannot. However, we will try and have another contest soon so that all those who lost out this time can try again.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned and Cousins:—May I snuggle in your cozy corner and enjoy "The Children's Hour" with you? I read our corner each week and enjoy my cousins' letters very much.

I am fifteen years old and I am in the eleventh grade in school. I, and a brother and sister go to the Elsie high school. I am taking four subjects, American literature, physics, modern history and algebra II. We have our semester tests in about three weeks. I like to go to high school better than I did at the country school. We have a high school assembly each month. The freshmen had charge of the assembly this month and they gave a very fine entertainment..

I am taking piano lessons now. I am in the fourth book. I like music and so I get along all right.

I think Lydia Sounart's story entitled "A Russian Santa Claus" very good but I am glad our Santa Claus drives a reindeer, aren't you?

I am sorry to leave your corner but I expect you will think I am taking all the room. Won't some of the boys and girls who read this corner please write to me. I will try and answer all who write to me. Well, good-bye Uncle Ned and Cousins. Your neice and cousin, Margaret Cook, Elsie, Michigan.

Dear Uncle Ned—Hello, everybody! How's the world treating you? If I'm thinking correctly, and I think I am, I said in my last letter that I was dreadfully lonesome here, but it must have been my imagination, as it's not a bit lonesome, now at least. If I had not had my age 'own pat I'm sure I wouldn't have nown how old I really was, I'm not sure yet. It sure kept me guessing for a while to know how old I really was. Those who guessed sixteen were right, those who did not guess that were wrong (naturally). I certainly like to read, and my favorite author is Zane Grey. Of course I like many more but I believe I enjoy his books the most. I intend to spend my spare time during the Christmas vacation reading. I wish some of the boys and girls would write to me. Did I hear you sigh? I know I did! Yes, I know Christmas is coming on and you most all are busy making gifts,—but can't you spare,—well, say five minutes,—to write to me? I assure you that I'll answer back so prompt that you'll be shocked. Try it, will you? Well I know Uncle Ned's eyes are tired reading my scribbling, so we'll say "Au-rovoir". Your neice, Venus Gazlay, Sidnaw, Michigan.

Dear Uncle Ned and Cousins:—I just read the December 23rd issue and though I would try my luck again. I have described myself before but probably you have forgotten what I look like. I am five feet and one inch tall, blonde complexion, and 16 years old. My birthday is the 17th of August. I wish those who have a birthday on the same day would write; not only them but all of the cousins around my age. I will gladly answer all that write. I am a freshman in high school.

How many had a merry Christmas? I hope you all did. Santa was very good to me this year.

I am a member of the Junior Red Cross. Our school made wreaths and calendars and sent them to the hospital in Newberry. It sure is great fun to join together and work. How many of the cousins joined the J. R. C.

My fountain pen is soo poor tonight that I mispelled almost every other word. I would like to hear from the cousins. A happy New Year to all.—Lillian Kuivinen, Box 71, Lewiston, Michigan.

Dear Uncle Ned:—I am a farmer boy and I am ten years old. My birthday is on the tenth of February. I go to school and I am in the sixth grade. There are twenty scholars in our school. For pets I have about thirty rabbits and one cat. It is snowing today. There is about four inches of snow and in some places it is about a foot deep. I went skiing and sleigh riding. We are going to have a program for Thanksgiving at our school. I earned $8.33 picking up potatoes this fall. We have taken the Business Farmer several years and I like to read it. I will close. from your nephew, Hugh Evan Good, Lake Ann, Michigan.

Dear Uncle Ned—May I join your circle of happy boys and girls? My father takes the M. B. F., and I have been a silent reader of the Children's Hour for some time. I would like to become acquainted with some of the boys and girls that write to the Children's Hour. I am ten years old and go to school every day. I am in the fifth grade and have about one mile to walk to school. I live on a 180-acre farm. We have 29 head of cattle, 6 horses and 14 pigs. For pets I have a little puppy, and a pony. I call my puppy collie and my pony's name is Baronet. I am sending you a photo of our pony. I have two brothers and three sisters. I would like to hear from some of the boys very much. Well I guess I will close for this time. From your friend, Alma Miller, Herron, Mich.

Dear Uncle Ned—I would like to join your merry circle. We take the M. B. F. and I like it very much. I enjoy reading the children's letters. I go to the Spicerville school. It is a little over a mile and a half. There are 9 children in our school. I am in the sixth grade. I have one brother. He is in the eighth grade. He is two years older than I am. We live on a farm of 80 acres. For pets I have two cats. We have two colts and two horses. We have one cow and three calves, and some chickens. We live a mile and a half from town. From your friend, Marion Wedon, R. 7, Eaton Rapids, Michigan.

Dear Uncle Ned:—I am a new writer and like to write letters. We take the M. B. F. and like it very well and I like to read the children's page.

The answer to the riddle that Francis wrote is "coal," because coal is stone at first and fire is the blaze, dust is the ashes, black is the color, red is the fire, white is the ashes.

I have brown eyes and hair, I am 12 years old and am in the the 7th grade. I am four feet and five inches tall. I have a sister 9 years old and a brother 7 years and a baby brother 16 months old, which has a head of yellow curls. Well I will close. Your friend, Hope Kratzer, R. 1, Allen, Michigan.

Dear Uncle Ned—Well it is not so very long ago since I wrote my last letter. We are having quite cold weather now days. I did not know what to say when I got up this morning and the ground was all covered with snow. We have lots of fun at school if there is snow on the ground. The boys make a big ring and then we all play fox and geese. The other morning we had a little snow. Of course the boys thought they could snowball us girls, but the teacher told them the first one that threw a snowball, would have to stay in all their noon hour and recess all winter through so we got along very good.—Esther Mann, R 1, Mount Clemens, Michigan.

Dear Uncle Ned—How are you these days? The most snow we have had this month is 1 inch and that did not last only a day, but father says we can go skating next Sunday and I am as glad as can be. I got a pair of skates last winter and it didn't take me long to learn to skate. My sister and I went skating and we had a lot of fun. The ice on the lake is about two inches thick. Goodbye, from Jeanette Sass, R. 1, Clayton, Michigan.

Dear Uncle Ned:—May I join your merry circle? My father takes the M. B. F., and enjoys it very much, and I read the Children's Hour. I am a girl 13 years of age, am in the 7th grade at school. I am taking up a health course and in one month I gained 7 pounds. My height is 60 inches. I have two brothers. We live on a 120 acre farm. Hope to hear from all the cousins.—Mary A. Brassinger, R. 1, Amadore, Michigan.

Dear Uncle Ned:—I am writing just a few lines. I am a girl of 12 years of age. I am in the sixth grade. My father takes the M. B. F. Your niece, Leota Way, 213 Meek St., Caro, Michigan.

Dear Uncle Ned:—May I join your merry circle? We take the M. B. F., and enjoy it very much. I am 14 years old and in the eighth grade. My birthday is October 26th. If I have any twin sisters or brothers please write to me. If I have no twins I would like to hear from any boy or girl. I have two sisters and one brother. For pets I have two cats. I hope you enjoyed your Christmas as I did mine. Love to all.—Helena E. Van Ouden, Webberville, Michigan, Box 96.

LAUGH IT OFF

Are you worsted in a fight?
Are you cheated of your right?
Laugh it off.

Don't make tragedies of trifles;
Don't shoot butterflies with rifles;
Laugh it off.

Does your work get into kinks?
Are you near all sorts of brinks?
Laugh it off.

If it's sanity you're after,
There's no recipe like laughter—
Laugh it off.

—Modern Methods.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

RADIO LECTURE DATES

January 29th, 7:30 p. m., Baptist Church, Tekonsha, Michigan.

January 31st, 7:30 p. m., Community Club, Cressy, Michigan.

HAVE YOU ARRANGED FOR LECTURE AND DEMONSTRATION

IN order to save extra letter writing and the wait for a reply, the following arrangement is being made to enable you to figure the exact cost to you for a lecture and demonstration on Radio.

1st. Railroad fare from Elberta and return is to be paid.

2nd. Board and lodging and transportation to and from station for one night.

3rd. Estimated cost of necessary supplies and incidental expenses that are incurred in giving demonstration, breakage of parts and wear and tear due to rough handling by transportation companies, such as vacuum tubes (each one broken or burned out costs us $6.50 and this is one item only.) Therefore a fixed charge of $10 is necessary in addition to items 1 and 2.

4th. If dates are arranged at places close to each other the railroad fare would then be divided and the cost would be less, but this would have to be in the nature of a rebate to you.

It is our effort to arrange the schedule, in so far as possible, so that railroad fare will be divided between two or more places.

You can charge admission to these lectures and in that way pay all expenses and in fact make a little extra money to put into your treasury.

We will supply you tickets free, all you have to do is to fill in the date and time of the lecture.

What You Will Get!

1st. An actual demonstration of receiving by radio, hearing music and speeches or other entertainment.

2nd. First hand demonstration of the working of a receiving set, actually seeing it work.

3rd. An opportunity to ask questions and receive answers at once.

4th. Hearing a lecture (or talk) in plain language that you will understand, about Radio, where to buy your parts for making sets, what to avoid and what you will need.

5th. How to apply radio to your actual benefit as well as entertainment.

PUBLISHER'S DESK

PATENT ATTORNEYS

I notice that you are handing out a lot of good advice in every issue, so I come for a little myself.

I have an idea which I think might be patented, and have been corresponding with a man in Washington, D. C., who says it is possible to legally protect an idea before patenting, so that it may be made known to manufacturers and their opinions solicited as to its commercial value, or even sell it without running the risk of losing your rights by making the idea known.

I am enclosing a treatis sent out by this man and would like your opinion as to its soundness.

He also sent me a blank form to be filled out and signed by witnesses and a notary public. It also has blanks for sketches. What is your opinion of this?

I agree with him when he says it is better to spend twenty dollars than seventy-five or more in finding out if an idea is of commercial value. But I would like to have someone elses opinion before investing even twenty dollars. Hence this letter.

—The gentleman from Washington may be all right and his may be a good plan, but we have never heard of Mr. Green and I wonder why he does not give his post-office address so we, or you, might look him up. I am sure your state representative at Washington would be glad to have someone in his office look Green up for you or recommend a good patent attorney. Without the address I cannot even find him in a commercial rating book.

SONG POEM "BUYERS"

I sent the Lenox Company a poem a year ago, they said it was good and they wanted me to accept their offer, since then I have heard from them several times. Now how can I find out if they will deal square. I like to write poetry and would like to make some money from my talent. Can you tell me how to procede. I first read their ad in "Comfort."

—I hope you have not sent the Lenox Company or any other any money. Their scheme is to get you to pay for seeing your own poem in print. Few copies are ever sold, if any. We have had several experincss with thse people, but have never known of anyone writing a "hit" for them. If you have real talent, send your material to any legitimate song publisher, they are anxious to buy suitable material and will not ask you to pay them first.

THE TRUTH ABOUT HENRY FORD

(Continued from page 6)

then the tires gripping the surface of the track and the machine was away like a shot. The hundred or more spectators held their breath as the little car tore along the track, then cheered wildly as it crossed the finish line. In a few minutes the timekeepers announced that Mr. Ford had broken all records by making the mile in 39 4-5 seconds. This feat made the car and its designer known the world over.

That race and the previous one in which he defeated Alexander Winton were the only speed contests in which Henry Ford drove his own car. Shortly afterward Barney Oldfield drove 999 at New York, Chicago, Los Angeles and other cities and won many successes, but the company's racing was destined to end soon in a near tragedy. Frank Kulick was driving a six cylinder car in a race at the Michigan State Fair when a rear tire exploded, flew off and struck him on the head. The blow stunned Kulick and the speeding car crashed through a fence. Kulick was extracted from the tangled wreckage and hurried to the hospital. As the unconscious driver was carried away Mr. Ford declared: "Never again will I risk the life of one of my men in this way."

Never, since that day, has the Ford Company entered a race.

Kulick recovered and is still in the employ of the Ford company. Likewise all the men who prepared the car for the race now hold important positions with the company. A picture was taken of them when the racer was completed. They were Peter E. Martin, now general manager of the Highland Park plant; Charles Hartner, now assistant plant superintendent, Gus Degner, now superintendent of inspection at the Highland Park plant, Fred Rockelman, now manager of the Indianapolis branch; Fred Haas, now in charge of all branches, and Ray Dalinger, who will be mentioned again in the account of the peace ship. This racer was the first of its type ever built.

Further chapters of "The Truth About Henry Ford" in Jan 20 issue.

BILLS AND NOSES

"There was a strange man here to see you today, papa" said little Ethel, on meeting her father in the hall.

"Did he have a bill?"

"No, papa; he just had a plain nose."—Everybody's Magazine.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

ISBELL'S SEEDS
1923
S. M. ISBELL & CO.
JACKSON, MICH.

For 44 Years

Isbell's have been improving seeds—developing hardier, earlier, bigger yielding strains—adapting crops to northern soil—improving methods of preparing seed. That's why Isbell's Seeds are the favorite whenever tested—why they give sure, abundant harvests and withstand adverse weather and soil conditions.

Hardy, Big-Yielding, Michigan Grown

Isbell's Seeds
"As They Grow Their Fame Grows"

FOR FIELD TRADE MARK FOR GARDEN

It pays to plant pedigreed seeds—the labor is no greater and the crop is more certain; and often is double or triple the yield. Pure bred seeds pay big profit, for the same reason that thoroughbred stock does—generations of selections has built the strain.

Write for Your FREE Catalog, Today

Isbell's 1923 Seed Annual is ready and your copy will be sent on request. It tells of seed, their growing, selection, testing and cleaning—gives cultural directions—tells what crops to grow and how. It is a mighty helpful catalog—and it is authoritative.

Cured Her Rheumatism

Knowing from terrible experience the suffering caused by rheumatism, Mrs. J. E. Hurst, who lives at 608 E. Douglas Street, C-489, Bloomington, Ill., is so thankful at having cured herself that out of pure gratitude she is anxious to tell all other sufferers just how to get rid of their torture by a simple way at home.

Mrs. Hurst has nothing to sell. Merely mail your own name and address, and she will gladly send you this valuable information entirely free. Write her at once before you forget.

Make Your MILKERS PAY

Every cow in your herd can be made to produce up to her full capacity

—if you look well to her ration, her health, her appetite and her digestion.

Balance the ration. Feed bran, oats and corn, or their equivalent, cottonseed or linseed meal, clover hay, alfalfa, silage—pasture in season.

Remember, the better the appetite the greater the food consumption, the greater the milk production.

DR. HESS STOCK TONIC

Keeps Cows Healthy Makes Cows Hungry

It conditions cows to turn their ration of grain, hay and fodder into pails of milk.

It contains *Nux Vomica*, greatest of all nerve tonics. *Quassia* produces appetite, aids digestion. *Salts of Iron* keeps the blood rich. There are *Laxatives* for the bowels, *Diuretics* for the kidneys, to help throw off the waste materials which so often clog the cow's system.

Excellent for cows at calving. Feed it before freshing. Good alike for all cattle.

Tell your dealer how many cows you have. He has a package to suit. GUARANTEED.

I spent 30 years in perfecting this Tonic.
GILBERT HESS, M.D., D.V.S.

25-lb. Pail $2.25 100-lb. Drum $8.00

DAIRY and LIVESTOCK

CONTROL OF CATTLE LICE

CATTLE lice are more or less common in all parts of the United States. They are found mostly on underfed and poorly housed cattle, although they often occur on cattle in good flesh and kept in sanitary quarters. As a rule individual members of a herd are not infested equally, some being infested much worse than others, because some cattle seem to be practically immune. Young and old stock, and weak poorly fed cattle suffer the most from lice. Infested calves do not thrive or gain weight normally during the winter season and will remain stunted until the coat is shed in the spring at which time practically all the lice will disappear. The loss in weight is sufficient to warrant adopting some method of treatment.

Cattle lice live upon food obtained from the body of the host. The irritation caused by their feeding is shown by the efforts of the infested animals to obtain relief by rubbing and scratching, and one will often see animals with areas of skin where the hair has been rubbed off and the part bruised and raw from rubbing against objects.

There are three kinds of lice that are usually found on cattle, and are commonly known as "Short nosed cattle lice," "Long nosed cattle lice," both of which are blood sucking lice, and the "Biting lice of cattle," whose presence is not as serious as that of the former. All, however, are treated in the same manner.

In the control of cattle lice, plenty of nutritious food are essential to success, whatever method of control you choose to adopt.

There are two commonly used methods of treating cattle for lice; first, hand applications and, secondly, by spraying. The method to adopt will depend upon the season of the year, the remedies selected, the number of cattle to be treated and the facilities available. All animals in the herd should be treated regardless of whether they show evidence of being infested or not.

Of the hand applications, the common prepared louse powders that are on the market are useful in helping to hold in check the parasites during the season when the weather is too cold for dipping or spraying.

Grease and liquid preparations can be made up at home which are fairly effective and practicable where the farmer has only a few head to treat and will give the matter his personal attention. A small quantity of raw linseed oil applied with a stiff brush over the surface of the body is very efficient. A mixture containing equal parts of lard, kerosene and sulphur is very useful when applied in the same manner.

An efficient decoction can be prepared by placing a pound of larkspur seed in a gallon and a half of water and boiling down to a gallon, this preparation has worked well in the treatment of many herds. This may also be applied with a brush.

For spraying the coal tar dips will be found efficient if in making up the solutions you will add about ten ounces of vinegar to each quart of the coal tar solution. The vinegar is added for its destructive action upon the eggs of the lice. As soon as you have finished spraying an animal it is well to rub the solution in well with a brush. Further information on this subject may be obtained by sending for "Farmers Bulletin No. 909," United States Department of Agriculture, Washington, D. C.—Edw. K. Sales, Veterinary Division, M. A. C.

MEANING OF "TANKAGE"

Please give me the defination of the word tankage. I notice it so much in Farm Journals but it is new to me.—H. H., Lyon Manor, Mich.

—The word "tankage" refers to the by-product from the tanking of dead animals, and waste meat scraps, such as are found about abattoirs. All animals which arrive at terminal markets dead, those that are so severely injured as to be unfit for human food, or are diseased rendering them unfit for human food, are first skinned and then placed in a tank where they are thoroughly cooked until the flesh all falls apart and all of the grease is removed. The grease is drained off and used for inedible purposes. The meat is dried and then ground, the product being called tankage.

—Tankage is in several grades. A great deal of low grade tankage is sold to fertilizer manufacturers, whereas the better grades of tankage are sold for animal feeds. Tankage is used almost entirely as a hog feed, not being palatable to other classes of livestock. In purchasing tankage it is usually best to buy one of the better grades of "digester tankage," the word "digester" indicating that it is a feeding tankage. We always buy the grade containing 60% protein and take pains to see that we get it from an abattoir which has Federal inspection, so as to be absolutely sure that it has been thoroughly sterilized.—George A. Brown, Prof. of Animal Husbandry, M. A. C.

WILL SILAGE DETERIORATE?

Does ensilage deteriorate in feeding value if thrown down in a pile and let to heat twelve to twenty-four hours before feeding.—J. E. S., Edmore, Michigan.

—During warm weather silage should be thrown out of the silo as it is used, as it will deteriorate considerably if allowed to lay in a pile and heat from twelve to twenty-four hours before feeding. In cold weather, however, it will not deteriorate any and it is often advisable to throw it down at least twelve hours ahead of feeding, throwing any frozen of the top of the silo down first and then some of the warm silage from a little lower down on top. If this material is then slightly packed in the silo chute, it will often warm up enough to expel the frost from that which was thrown down first and the entire mass will be better as feed. This last will only apply where the chute is warm enough so that further freezing will not take place. George A. Brown, Prof of Animal Husbandry, M. A. C.

FATTENING COW

I have a cow to sell, one of our cattle buyers offered 1½c a lb. alive, calls her a canner. I asked him what she would be worth if I fattened her, he said he would give me 3c.' What I would like to know is if I can't get more for my corn if I fatten her than to take 1½c per lb. for the cow and 30c per basket for corn, have a feed grinder also. I have never fed cows or fattened them. How long does it take?—W. F. C., Standish, Michigan.

It would not be profitable to fatten a canner cow with corn at present prices. It would be much better for you to take 1½c per pound for the cow and sell your corn at 30c per basket than to feed the corn to the cow and later sell her at 3c per pound.

The transaction, if you were to fatten the cow, would figure out something like the following: One canner cow weighing 800 lbs. would be worth at 1½c, $12.00. To make her weigh 1000 lbs. and sell for 3c per lb. would require in the neighborhood of 800 lbs. of corn and 800 lbs. of clover hay, for each 100 lbs. gain or you would increase the value of the cow from $12.00 to $30.00, or $18.00 worth. To do this would require about 1600 lbs. of corn and a like amount of hay, which would be worth more than $18.00.—George A. Brown, Prof. of Animal Husbandry, M. A. C.,

VETERINARY DEPARTMENT

TAKING CATTLE FROM STATE TO ANOTHER

Do milk cows have to be tested for tubercular trouble when taking from Illinois to Michigan? If so, for how long will the test hold good? Do horses have to be inspected in order to take them?—L. A. R., Cordona, Illinois.

—The importation of cattle into this state for breeding or dairy purposes is prohibited except when such cattle are accompanied by a certificate of inspection made by a duly qualified veterinary surgeon who is a graduate of a recognized veterinary college in

20 Cents

to keep this separator in perfect running order for one year is the testimonial of 51 American farmers who purchased Melottes **over eight years ago.** They are still giving perfect service every day and skimming so close that not a single trace of cream is left in the milk. We will send you a Melotte right to your farm on

EASY TO SUGAR CURE MEATS ON THE FARM

With Simple Mixture, Farmer Can Produce Better Hams and Bacon Than the Packers

Any farmer can produce high-priced sugar-cured meats, better than packing house products, by using a simple, quickly-prepared mixture. Besides sugar curing ham and bacon, the mixture preserves spare parts and makes cured mutton delicious.

To make it add a large jar of Wright's Ham Pickle to 27 pounds of salt and use as dry pack or brine. Let the meat cure 4 to 8 weeks. Then smoke it with Wright's Condensed Smoke, which will take only a few minutes, and you'll have meat that will delight the family or bring fancy prices. Wright's Smoke and Ham Pickle are fully guaranteed. They cost little at any drug store.

Send you name to the E. H. Wright Co., 850 Broadway, Kansas City, Mo., and receive, free and postpaid, a new $1 book, "Meat Production on the Farm," which tells how to cure every kind of meat. This book is free to farmers only. Write for it today.

United States, Canada or Europe. Such certificate shall show at the time of said inspection and within sixty days prior to shipment said cattle had been subjected to the tuberculin test and were free from tuberculosis.

The tuberculin test should not be considered as holding good for any length of time. If an animal passes a negative test, the result obtained merely indicates that the animal is not tuberculous at the time of the test.

It is unlawful to import horses into Michigan for any purpose except when such horses have been subjected to the mallein test by or under the direction of a graduate of some recognized veterinary college. A certificate shall accompany such horses and shall show the time and manner in which said test was conducted. The certificate shall further state that at the time of the inspection which shall not be more than sixty days prior to the importation, such horses were free from any contagious or infectious disease.—B. J. Killham, State Veternarian.

COW SUFFERS FROM MASTITIS

I have a young cow that shortly after calving began giving long strings of curdly, clotted blood from one of her teats. The other teats do not seem to be affected at all. This is her first calf. Would be very grateful for information as to cause and cure. Is the milk from the other teats fit for use?

We saved a colt by taking advise given in your paper, and have pasted all your columns in a scrap book for reference. Thanking you in advance, I am, A Constant Reader, Decker, Michigan.

—The history indicates that your cow is suffering from mastitis, the causes of which are infection, refrigeration due to lying on cold floors and traumatism. The milk from the other teats would be fit for use providing the quarters are not all effected. As there is no specified treatment for mastitis I would advise you to consult your local veterinarian relative to treatment as it is very unsatisfactory to successfully treat diseases by mail.—John P. Hutton, Associate Professor of Surgery and Medicine, M. A. C.

HOG LAME IN FRONT LEGS

I have a large O. I. C. boar that got lame in one of his front legs. The shoulder is swelled badly but the foot isn't. I can see nothing the matter with it.—M. G., Clarion, Michigan.

—It would be useless for me to try to prescribe treatment for a case of this kind without knowing more about it. The foot may have something in it or it may have gotten injured in some other way. If the boar is valuable better get a good veterinarian on the job and make a thorough examination of the foot.—John P. Hutton, Associate Prefessor of Surgery and Medicine, M. A. C.

WHERE YOUR HIGHWAY TAX MONEY WENT

(Continued from page 4)

the past few years, has made further expansion necessary and during the month of June, 1922 the Department had 551 employees and a total monthly payroll of $54.586.43

Notwithstanding this large force, the total overhead of the Department including surveys and supervision of road construction this year, has been kept down to 3.1 cents on the dollar. In other words 96.9 cents of every dollar has gone into the actual construction of the roads, or looked at from a different angle, during June of the same year there were 252 road and bridge contracts under construction or an average of about two employees for each live construction project.—Michigan Roads and Pavements.

(Editor's Note: The cuts used with this article are by the courtesy of Michigan Roads and Pavements.)

"And what did the poor little dog do when you brutal boys tied the can to his tail?"

"Oh, he just went broadcastin' down the road."

A drunken Congressman once said to Abraham Lincoln: "I am a self-made man." "Then, sir," replied Honest Abe, "that relieves the Lord of an awful responsibility."

At Calving —when a cow needs a friend

"The Home Cow Doctor"

—this is the title of a genuinely authoritative book on cow diseases, and how to successfully treat them at home.

We want you to have a copy of this book, and will send it free on request. We merely ask you in return to give us the name of your local dealer.

Drop us a postal today for your copy. The book has been worth hundreds of dollars to many cow owners by telling them just what to do at critical times.

NO NEED to tell you that calving is a severe strain on the vital organs of even the most vigorous dairy cow. In the shock and strain lurk many hazards to health and milk-giving.

The genital and digestive organs, carrying the burden of this function, need help. They need a real friend—before, during and after.

Here is where *Kow-Kare* comes in strong. It contains the medicinal properties to build up the genital organs to vigor, and regulate the digestive functions as nature requires. Because of its success in bringing cows safely thru calf-birth in perfect condition its use in this emergency is known in most well-regulated dairies.

The use of *Kow-Kare* is neither expensive nor difficult. Just a tablespoonful of the medicine in the feed twice a day for two weeks before and for two or three weeks after calf-birth. A few cents spent to assist nature will repay you with a healthy, productive milker and a vigorous calf.

Kow-Kare is equally effective in treating *Retained Afterbirth, Abortion, Barrenness, Scouring, Bunches, Milk Fever, Loss of Appetite,* etc. Many dairymen feed Kow-Kare one week each month to every cow, and realize big increases in milk yield thru the added vigor of the herd.

Try *Kow-Kare* and you will use it always. Feed dealers, general stores and druggists sell it, large size $1.25, medium, 65 cts. Sent prepaid if dealer is not supplied.

CEDAR BEND FARM, Okemos, Mich.

TOULOUSE GEESE ARE MONEY MAKERS. Two pounds cost less to raise than one of pork. Water not necessary. Every farmer should raise a few. **ALDEN WITCOMB, Byron Center, Mich.** Breeder Giant Toulouse Geese, White Holland Turkeys.

POULTRY

FEEDING VALUE OF MEAT SCRAPS

I have a flock of Barred Rocks which I am anxious to have lay thru the winter. I can get the meat scraps from one of the local meat markets free. How would you prepare them for the chickens? Some say just throw them out as they are, but seems as though there would be a better way. The use of these scraps will save the buying of commercial meat scraps and cut down expenses. Are the commercial scraps that come in big cakes cooked or raw?—Mrs. F. E., Flushing, Mich.

—Meat scraps are extremely palatable and stimulating. The common method, however, of feeding the green bone is to run them through a regular bone grinder which reduces the bone to smaller particles all of which can always be taken into the digestive tract. There is a high feeding value to the bone which, of course, is lost, unless the bone can be finely ground. There are a number of commercial bone grinders on the market and frequently the butcher will install one if sufficient people will show interest in purchasing the green bone. The green cut bone is used to advantage in forcing early maturity, or heavy production. This has an extremely stimulant effect on the entire digestive tract and causes ovarium activity. It should not be fed in quantities above ½ ounce per bird daily. One should be rather cautions in feeding it during warm weather. It is frequently unsafe to feed the regular commercial beef scraps because I have noted numerous cases of cannibalism where feeding of raw bone was practiced and suddenly this ply was curtailed. The commercial scraps that comes in large cakes referred to are undoubtedly pork cracklings. These have not the feeding value of the beef scrap and are rather inferior for poultry feeding. The beef bones and scraps are more palatable and have a higher feeding value.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

TURKEYS AND CALVES IN SAME BUILDINNG

What do you think of housing calves and turkeys in the same building with just a light partition between? Is it harmful to either one? J. W., Levering, Michigan.

—I believe you could house the calves and turkeys in the same building if partitioned off. Turkeys do not require a particularly warm building as long as it is airy and well ventilated. I do not believe there will be any dangers arise from this house combination. Turkeys can not, however, be housed with poultry very successfully. I have noted in practically every case where chickens and turkeys are housed together that the turkey stock is low in vitality and rather a high death rate occurs in every case. It seems to me as long as the turkeys are housed separate adjoining the calf pen that they could be maintained in a healthy vigorous condition.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

MONROE COUNTY POULTRY AND PET STOCK SHOW

DURING the week that closed December 23rd the Monroe County Poultry Association held its first show. The exhibits were of high class and there was a plentiful showing in all classes. The majority of the winners were located in and around Monroe but the show attracted breeders from Ohio and Illinois, and exhibits from those two states carried away some of the prizes. Other Michigan winners were located at Ida, LaSalle, Maybee, Strasberg and Royal Oak. Awards included over 100 ribbons besides several offers by individuals, companies and banks. Attendance at the show was rather disappointing to many but as a whole the members of the association feel well satisfied with their first attempt.

"BEST IN THE HOME"

"I don't want to miss a single copy of the M. B. F. I want to keep it up. It is the best paper in the home."—James C. Bell, Montcalm County.

A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.

Working along entirely original lines Mr. Smith discovered why hens lay less in winter than in summer, and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certain to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large $1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only $1 on this introductory offer, otherwise, nothing.

Send no money—just your name and address to M. B. Smith, 1261 Coca Cola Building, Kansas City, Mo. The two $1 packages will be mailed immediately. When they arrive, pay the postman only $1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

PRICES WAY DOWN On Radio Round Hatchers

Cut prices now on the famous Radio-Round Incubators of all sizes. Cost no more than cheap incubators. Radio-Round has 16 wonderful patented features make it practically self-operating. 3 minutes a day takes care of everything.

Hatch Eggs New Way

Radio-Round is built round like hen's nest; no cold corners. Fill lamp only once, 1 1-4 gallons oil to a hatch. Powerful Center Heater, Self-operation Flame Controller, Self-regulating Vaporizing Moisture Attachment. Don't miss free 36-page book.

Book Free Mail card NOW for free book telling all about patented features and giving rock bottom, new low Factory Prices. Write!

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

An understanding of the figures on this page as they are revised and presented each month, enables the farmer to see the position of the important factors which indicate the trend of business and prices and give a basis for judgment concerning future agricultural operations.

SUMMARY:

For the United States as a whole, the agricultural outlook is encouraging. The purchasing power of agriculture is 20 per cent stronger than a year ago, although still over 25 per cent under 1913. The rising price of English drafts is a factor in favor of higher prices for exports. Farmers are reducing their short-time borrowings. In spite of big crops, the present price ratio shows a slight gain for farm commodities over the low point in December, 1921.

I. PRODUCTION AND TRADE:

Combined sales of Montgomery Ward and Sears Roebuck for the five months ending November 30, 1922, are 16 per cent more than for the corresponding period in 1921.

The number of building contracts awarded in 27 states is 40 per cent greater for the first eleven months of 1922 than for the same months in 1921. On a value basis the increase in 1922 is 45 per cent. November, 1922, contracts show a 32 per cent gain in number over November, 1921, while October, 1922, showed an 18 per cent advance over October, 1921.

II. FOREIGN TRADE:

Encouragement in the outlook for foreign trade is found in the rise in price of drafts on British merchants and banks. Great Britain is the outstanding purchaser of American exports. Exporters, knowing that the drafts which they draw will sell for more dollars, are able to offer higher prices for goods which they buy to send abroad. Agriculture as the leading export interest shares largely in this advance.

A draft on a London business man or bank to pay 1 pound sterling sold for $4.49 November 20, and for $4.61 December 19, a gain of 12 cents in one month. It has 26 cents yet to go to reach par, namely $4.87. The price of London drafts has shown a gradual recovery since the low of $3.38 in February, 1920.

III. MONEY AND CREDIT:

The Federal Reserve Bulletin for November says: "From the peak of credit expansion in November, 1920, up to July 26, 1922, member banks in leading cities liquidated their indebtedness to the federal reserve banks much more rapidly and completely than did member banks outside of the leading cities. During recent weeks (namely, up to October 25) the resumption of borrowing from the reserve banks has been almost entirely by the city banks, the country banks in all districts except St. Louis reporting further liquidation."

IV. PRICES:

From their low point in December, 1921, prices of farm products increased much faster than prices of other commodities up to March, 1922. At this peak farmers had least to sell. From March until the present time other prices have advanced much more rapidly than farm prices. For the whole period, from December, 1921, to the present, farm prices show a slightly bigger increase, the purchasing power of farm products figure, representing the relationship of the two sets of prices, having advanced from 62 to 66. This ratio was maintained in face of the third largest crop output ever produced in the United States. The estimated total value of farm crops for 1922 is 32 per cent higher than for 1921. The figure for purchasing power of farm products, on total value instead of price basis, computed on December crop estimates and prices, and prices of other commodities in November, is 73. This is over 25 per cent under 1913 but 20 per cent better than last year.

On December 19, compared with the month previous, 15 out of 24 farm products advanced in price, 8 declined and 1 remained unchanged. Compared with a year ago there are 19 advances and 4 declines while 1 remains stationary.

Eggs	195	156	229
Butter	142	134	151
Wool	193	188	95

4. Relative Purchasing Power of Farm Products:

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in October, 1922. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	118	96	80	134	99	103

MARKET FLASHES

FOOTES MARKET REVIEW—ANOTHER NEW FEATURE

WITH this issue we introduce to readers of The Business Farmer, Mr. W. W. Foote, of Chicago, who will have a letter direct from the Chicago markets each issue on general financial conditions, world grain markets, and most important, a direct review of the Chicago live stock markets from a man who has been in intimate, daily contact with that market for more than thirty years. Mr Foote has volunteered to answer any questions from our readers addressd in care of The Business Farmer. We want the best that can be had served on these tables for the consumption of our folks, so we editorial cooks are glad to move over one place to make room for Mr. Foote, who will hereafter be responsible for a very important course in the Business Farmer's bi-weekly banquet!—Editor.

IMPROVED BUSINESS OUTLOOK

BRINGING about a return to normal financial conditions in the war-stricken countries of Europe is not as rapid as might be wished, but the outlook is at least better than it has been, under the prevailing sentiment is more optimistic than a year ago. Even under present unsettled conditions, we are exporting large amounts of commodities across the Atlantic, these consisting mainly of grains and meats. As soon as it becomes definitely settled how to establish credit in Germany and other countries it may be taken for granted that our foreign commerce will show marked improvement. The United States is now by far the richest country in the world, and we are large importers, while our home trade is extremely large. Nearly everybody in the middle west is at work, and more money is being spent than a few months ago, while savings deposits in the bank are ahead of a year ago. Farmers are buying more foods than for months, and the Chicago mail order houses have closed the year with net gains in sales over 1921, the gain of a leading firm being around 20 per cent. Labor is actively employed as unusually high wages throughout the country, and the high wages offered in the cities are responsible for many farm helpers leaving for the cities, thereby creating a scarcity of agricultural workers. Farmers are obtaining high prices for most of their products, including grains, live stock, etc., and these are selling much above values of a year ago. Country banks generally are doing their part in helping farmers needing assistance in carrying their crops, and the reserve banks are accomplishing great things, reasonable rates of interest being asked. The railroads are doing a much larger business than a year ago, and enormous shipments of grain have taken place during the month of December. Two important events are the burning of the Live Stock Exchange Building in Chicago and the merger of Armour and Morris packing companies in progress. The Exchange Building is to be replaced by a fine eight story building in the spring.

Large Demand for Wheat

The large domestic and foreign demand for wheat which began to develope several months ago has been gaining in volume, and recent sales have reached extremely liberal proportions. There is pretty unanimous agreement that all the wheat we can spare is going to be wanted by the importing countries of Europe, and it is estimated by the best authorities that Europe will require approximately 400,000,000 bushels from exporting countries during the first half of this year. The wheat crop of the United States has been marketed freely, and it has gone into consumption at home and abroad so rapidly that it was found a few days ago that the stock held in Chicago, Kansas City, St. Louis, Omaha and St. Joseph aggregated only one-half of such holdings twelve months ago. The weekly exports of wheat and flour from our shores have been for many weeks far heavier than a year earlier, and rye has been exported with unusual freedom because of its relative cheapness, Germany taking especially large supplies. A short time ago it was reported that Greece wanted immediately three million bushels of wheat from this country, and on the same day sales were announced of 600,000 bushels of Manitoba wheat for export. A great deal of corn and oats are exported from this country in the course of a year but for some time past such exports have fallen off in volume. Corn is being largely fed to cattle and hogs on the farms at the present time, some 27 per cent more cattle being held in feeding districts, it is estimated, than a year ago, while hogs are known to be in large supply. The visible wheat supply in this country is unusually small, while that of corn is placed at 14,788,000 bushels, comparing with 21, 586,000 bushels a year ago. Quite recently sales were made on the Chicago market of wheat for December delivery at $1.27, comparing with $1.12 5-8 a year ago; corn at 73 1-2 cents, comparing with 48 cents a year ago; oats at 43 1-2 cents, comparing with 34 1-2 cents last year; rye at 91 1-4 cents and barley at 63 to 74 cents. Clover seed sells at $15.50 to $20.50 per 100 pounds, timothy at $6 to $6.75 per 100 pounds and flax seed at $2.61 a bushel.

Decline in Cattle Prices

Early sales of beef cattle on the Chicago market during the two days following the Christmas holiday on Monday was very slow, and despite much smaller receipts than usual, prices declined from 50 to 75 cents below the low time of the previous week. Recent supplies were mainly short fed offerings, having been fed from 75 to 100 days, and on most days there was a lack of prime heavy steers. By Thursday there was a rally of about 25 cents under small offerings and a better demand, and some 900-pound yearlings brought $10.50. Choice heavy cattle have been selling at $11 to $11.90, with strictly prime beeves pretty much nominal at $12 to $12.50. A pretty good class of steers which averaged 1,500 pounds brought $8.50, and medium grade lots sold at $7.50 and over, with sales of common to fair light steers at $6.10 to $7.25, and a few inferior little steers at $3.60 to $6. Butcher stock had a better demand at higher average prices, cows and heifers going at $3.75 to $9.50, while canner and cutter cows sold at $2.25 to $3.60, bulls at $3 to $7.50 and calves at $3 to $11.50, light vealers selling at $9 and over mostly. A limited trade is going on in stockers and feeders, sales being mostly at $5 to $7.25. Dairy cows have sold at $40 to $60 per head mostly, a few Holsteins being salable up to $75. A year ago the best steers sold for $9. Beef steers sell mainly at $7.50 to $10.40. Prices broke 25 cents on Friday, no cattle selling above $10.25.

The Hog Market

Prices in the Chicago market broke from 5 to 15 cents on Thursday last week, when the receipts mounted up to about 60,000 hogs, but prior to that they advanced on moderate receipts, Monday being a holiday. The Thursday receipts were among the largest of the year. Eastern shippers are most of the time very good buyers, and at times speculators take a hand. Hogs are coming to market in good quality, and the bulk sell within a range of only 15 cents, prime light bacon and heavy butchers selling the highest. Recent receipts have averaged 232 pounds, comparing with 226 pounds a year ago. A good demand for fresh pork prevails, pork being much cheaper than beef, and provisions are exported much more freely than a year ago. Hogs are selling around $7.60 to $8.60, comparing with $5.90 to $8.25 a year ago.

Big Prices for Lambs

These are times when farmers who have stuck to raising flocks of sheep thank their lucky stars that they remained in when others were abandoning the industry because of the unsatisfactory returns. A short time ago a young Michigan farmer who is in the habit of buying feeding lambs in the Chicago markets said he had fed lambs for thirteen years, and in all that time he had lost money only once. Lambs are coming largely clipped at this time, and the packers prefer the wooled flocks, the latter selling at $13.25 to $15.40, while feeder lambs sell at $14 to $14.75, with few offered. Lambs avering 90 pounds and over have to sell at a discount, and sheep are marketed sparingly. Breeders are scarce too, owners keeping them for breeding yearlings are selling at $10 to $13, ewes at $2.50 to $8.25, wethers at $7.50 to $9.35 and bucks at $3.50 to $4.25. A year ago prime lambs sold at $11.75 and nine years ago at $6.60.—W. W. Foote.

WHEAT

The market closed last week with the bears in charge and holiday dullness prevailed. Receipts have been large and declines in the price plentiful. Every decline brought out many buyers but not enough to cause prices to advance to their previols level. The Detroit market lost 2 1-2 cents for the week. Milling demand was slow but a few inquiries were received from seaboard and some business was reported from that source. European demand for American grain is curtalied owing to the financial conditions. If Europe's credit is improved through giving her more time to pay her debts demand will improve. Heavy receipts are expected this week and the tone of the market will be about the same or easier, dealers believe.

Prices

Detroit—Cash, No. 2, $1.36½; No. 2 white and No. 2 mixed, $1.34½.

Chicago—No. 2 hard, $1.25½@$1.26½.

Prices one year ago—Detroit, No. 2 red, $1.17; No. 2 white, $1.14.

CORN

Corn followed the trend of wheat last week the greater part of the time although the tone was stronger at the close in corn than in the later grain. Corn lost only 1c on the Detroit market during the past couple of weeks. Indications point to a good export demand in the near future. Foreigners are trying to buy on the basis of 70c for May corn. Receipts at Chicago last week aggregated 3,667 cars compared with 1,411 last year.

Prices

Detroit—Cash No. 2. 79c; No. 3, 78c; No. 4, 77c; No. 5, 75c.

Chicago—No. 2 yellow, 74½@75c; No. 3, 71@73c; No. 4, 70@71c.

Prices one year ago—Detroit, No. 3 yellow, 53c; No. 4, 49c.

MARKET SUMMARY

Wheat quiet. Corn and oats steady with some grain going to seaboard. Rye inactive. Beans firm. Demand for potatoes improves. Butter and eggs easy with demand fair. Poultry in demand and receipts small. Large receipts weaken cattle market. Hogs strong to higher. Sheep easy.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

OATS

The oat market is in about the same condition as it was when our last report was made. Commission houses and large elevator interests continue to support the market. Shipping demand is better than it has been for some time past, with reports coming from Chicago of shipping sales of 340,000 bushels.

Prices

Detroit—No. 2, white, 51½c; No. 3, 50c; No. 4, 48½c.

Chicago—No. 2 white, 44@45½c; No. 3, 42¾@43¾c.

Prices one year ago—Detroit, No. 2 white, 40c; No. 3, 38c; No. 4, 35c.

RYE

Rye also followed the trend other grains the past fortnight and the price is slightly under that quoted in our last issue. The market is steady in tone with nothing to indicate any immediate change.

Prices

Detroit—Cash No. 2, 93c.

Chicago—Cash No. 2, 88½@89½c.

Prices one year ago—Detroit, Cash No. 2, 90c.

BEANS

A decline of 10c took place in the Detroit bean market during the past fortnight. The decline was not due apparently to any decrease in consumption or heavy receipts but was a result of the holiday dullness in the grain market. The tone remains firm.

Prices

Detroit—C. H. P., $7.40 per cwt.

Chicago—C. H. P., $.50@ $9.00 per cwt.

Prices one year ago—Detroit, C. H. P., $4.30 per cwt.

POTATOES

The condition of the potato market shows further improvement. This commodity is steady on the leading markets of the country but continues to show some weakness at northern points. Supplies are moderate and demand is on the gain.

Prices

Detroit—Michigan, $1.00@$1.10.

Chicago—Northern Whites, 79@90c.

Prices one year ago—Detroit, $2.25.

HAY

A quiet tone prevails in the hay market. Receipts are generally light and country loading is nearly at a standstill. Prices are practically unchanged and demand is for current needs only.

Prices

Detroit—No. 1 timothy, $16.50@$17; standard, $16@$16.50; light mixed, $16@$16.50; No. 1 clover, $14.50@$15.

Chicago—No. 1 timothy, $20@$22; No. 1 light clover mixed, $19@$20; No. 1 clover, $16@$18.

Prices one year ago—Detroit, No. 1 timothy, $19@$20; Standard timothy, $18@$19; No. 2 timothy, $17@$18.

OFFICIAL U. S. MARKETGRAM

U. S. Bureau of Agricultural Economics

Washington, D. C.,—For the week ending December 30, 1922.

FEED—Western markets report a slight improvement in the demand but eastern markets continue dull. The interior demand in light and stocks in hands of dealers appear ample for present needs. Production of most feeds is fairly good and storage stocks appear burdensome in a few sections. Linseed and cottonseed meal hold firm. Hominy feed on increased production and light demand is offered at lower prices. Other quotations generally steady. Receipts and movement good.. Dec. 29 quotations, Bran$25; Middlings $25; Flour Middlings $27; Rye Middlings $23 Minneapolis; Gluten feed $40.35 Chicago; Thirty four per cent linseed meal at $52 Minneapolis, $52.50 Buffalo. Thirty six per cent cottonseed meal $42.50 Memphis, $43 Atlanta, White Hominy feed $30 St. Louis, $31.50 Chicago, No. 1 Alfalfa meal $28.50 St. Louis.

DAIRY PRODUCTS—Butter markets barely steady; dull demand has followed holidays. Dealers have been free sellers and in some cases granted concessions to keep floors cleared of accumulation. Arrivals at New York included fairly good shipments of Danish butter. Closing prices, 92 score butter: New York 53½c; Phila 55c; Boston 54c; Chicago 50c. Cheese markets steady although trading is very quiet. Better demand looked for after first of year. Cheese prices at Wisconsin Primary markets, December 29; Flats 27¼; twins 26¾.

CURED HIS RUPTURE
I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 210J Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of ruture and the worry and danger of an operation.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Tuesday, Jan. 2nd

BUTTER—Best creamery, in tubs, 46@48c per lb.

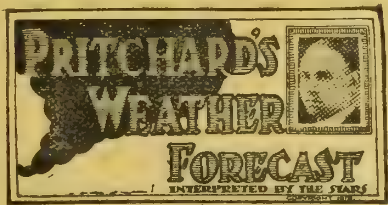
CELERY—Michigan, 40@75c per doz.; square, $1.25@$1.75; California celery, Jumbo, 75c; extra Jumbo, 80@$1; mammoth, $1.10@ 1.25 per doz.

WOOL

The mid-western wool trade closed the year 1922 with a firm tone prevailing, recent sales being reported at top quotations in several of the leading lines, and with dealers showing a feeling of optimism in regard to the future business. An increase in inquiry from mills is reported, tending to help the tone of the market, though prices are quoted unchanged.



THE average temperature in Michigan beginning January 7th is expected to range below normal. Temperatures for the first half of the month will also average with a downward trend but more moderate conditions will occur during latter half.

At the beginning of this week temperatures will be cold with little variation, especially on the upward movement.

About Tuesday or Wednesday increasing cloudiness, snow flurries and winds will affect Michigan and continue in the state over the middle days of the week. About Thursday strong west and north winds will sweep over Lakes Superior and Michigan into the lower peninsula of the Mitten state sending the mercury in the thermometer way down. Temperatures in this state will remain cold for the season during the balance of the week.

Week of January 14

Average weather conditions for week beginning January 14 will be windy with precipitation about or above normal. Weather conditions may be expected to be full of extremes, more especially in temperatures rather than precipitation. In the latter case, rain or snow fall is expected to be as heavy and possibly heavier than during the first week of January.

During the early part of week temperatures will rise in Michigan and during this same period some rain or snow will fall in most sections of the state while during middle days of week we expect a greater amount of rain or snow. The last half of week will be free of moisture with clear skies and colder temperatures.

About Saturday of this week we are expecting a great moderation of temperature in this state.

Less Moisture Last Half Month

We do not look for as much general precipitation or as severe stormy weather in Michigan during last half of January as during first half. In fact, we belive the state will show quite an uneven distribution of rain or snow during this and next month.

SPECIAL PRICE CUTS
SEND NO MONEY Examine goods and if you are not convinced that you have more than your money's worth we will gladly return your money. Don't delay. Order now before the article you want is sold out. PAY ON ARRIVAL

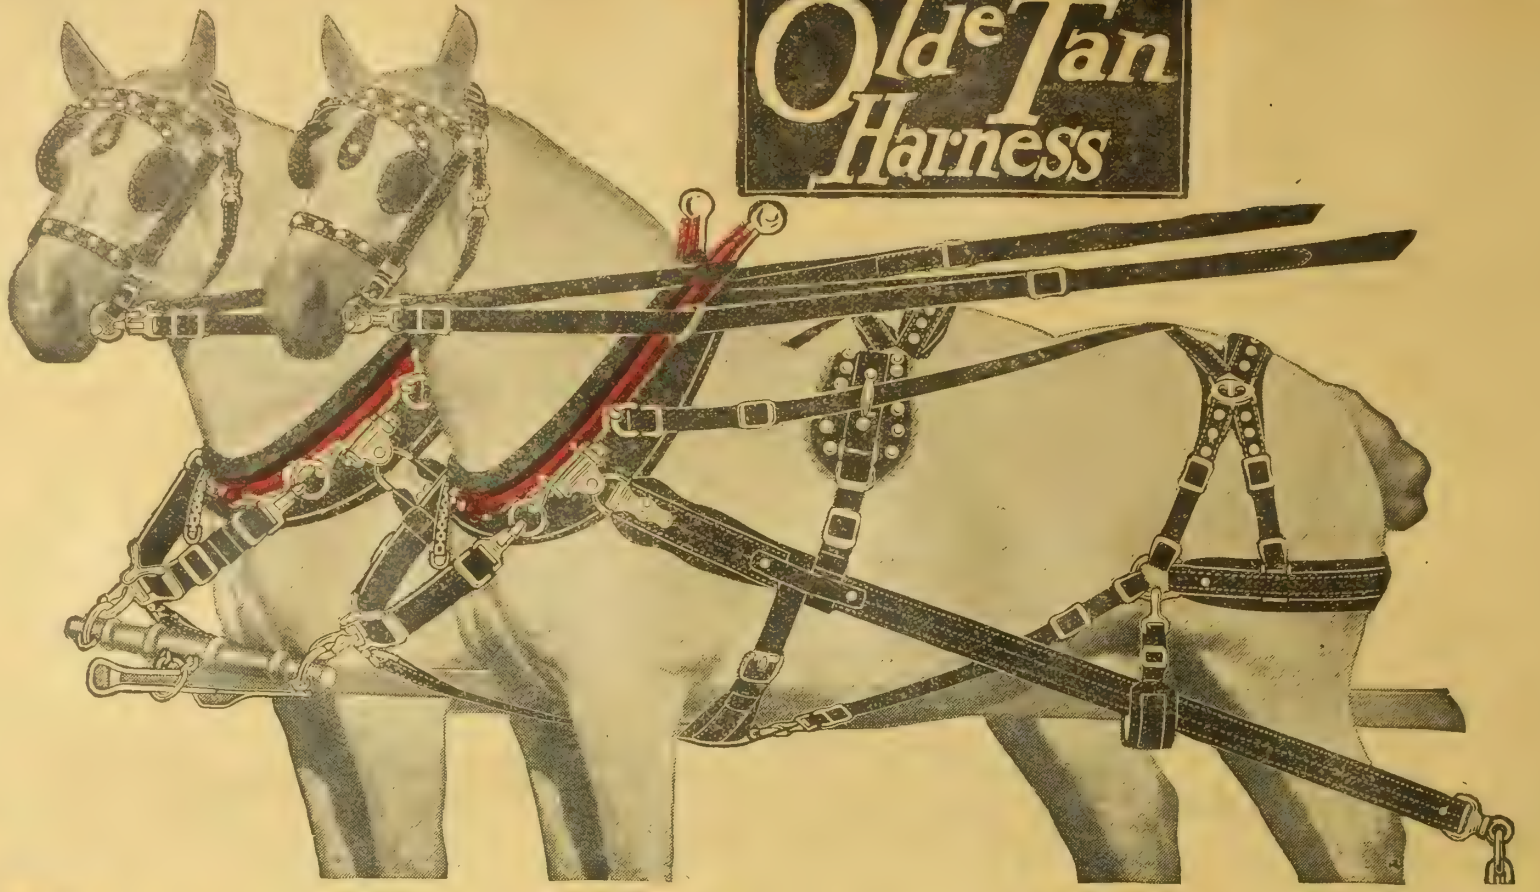
Olde Tan Harness



Double Wear Certain!

Metal-to-Metal Does It

WRITE for the free Harness Book which tells you why Olde-Tan harness wears twice as long as any other high grade harness.

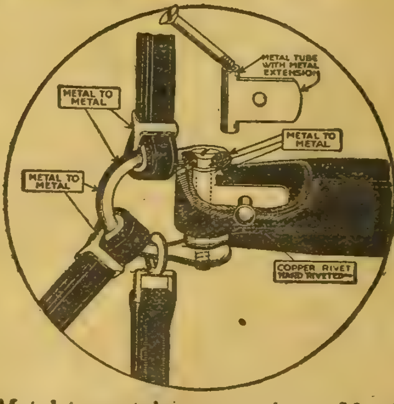
Every spot where there is excessive wear, strain or pull is protected by tough metal, shaped and fitted so that rounded metal parts are adjusted one against the other, thus taking away all corner pulls and sharp strains. No patching or mending of this harness because there are no places for Olde-Tan Harness to wear out. When you buy Olde-Tan Harness you do away with repair bills.

There is 70 year-old tanning skill behind Olde-Tan leather. Three generations of tanner-manufarturers have supervised the production of Olde-Tan Harness, following every step through the tannery and harness factory until the harness is ready for your horses. No wonder that it is known throughout America for its superior quality!

Olde-Tan Harness has every adjustabe feature—yet few buckles are used. These are placed only where convenience in putting on and taking off the harness is essential. No place where there is excessive strain or pull will you find a buckle on Olde-Tan harness.

You don't have to worry about your harness, if you are sure about the quality of the leather and if it has metal-to-metal constuction. Olde-Tan Harness is nothing radical or "new style". We just recognize the fact that nothing wears like metal. We merely place metal against metal to make sure of longer wear. Then, in addition to that, the finest leather that can be tanned is used.

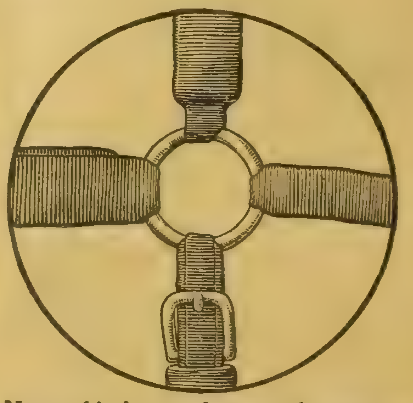
Every Olde-Tan Harness is sold under a guarantee which protects you during the entire life of the harness. Make no mistake. Find out all about Olde-Tan before you buy another set of harness. Write for the free Harness Book today. You may as well have the last word in harness—especially when it costs no more than any other harness you would buy.



Metal-to-metal construction. Metal bushing. Leather held tight without play or friction. Note special riveted metal extension in breeching.

$7.50 Down Puts This Harness On Your Horses

Write today for Free Olde-Tan Metal-to-Metal Book which tells you how for only $7.50 down you put this Olde-Tan Metal-to-Metal harness on your horses. You will find in this book information which any man buying harness should know. The Olde-Tan Harness book tells how Olde-Tan Leather is tanned, all the different processes from the raw hide through the liming and washing pits into the tanning drums and out again, finally to be made into what leather experts declare is the finest leather to be found in the whole world. Remember, our offer is to send you an Olde-Tan Harness absolutely no money down. After the first payment of $7.50, you may pay the balance in easy monthly installments.



Never this in metal-to-metal construction. All pull strain and wear is on metal.

Current Agricultural News

JERSEY MEN MEET DURING FARMERS' WEEK

THE annual winter meeting of the Michigan Jersey Cattle Club will take place during Farmer's Week at the Michigan Agriculture College January 30th and 31st, Tuesday and Wednesday. The first meeting will be held at 10:30 a. m., Tuesday and the members will be addressed by three speakers. Prof. O. E. Reed of the College will speak on "The Future of the Jersey in Michigan." Mr. H. F. Probert will address the assembly on "Breeding for Type and Production." Also an interesting talk will be given by Prof. H. E. Dennison of the College. A business meeting is to be held on Wednesday and at that time officers for the new year will be elected. Also there will be a general discussion on breeding, feeding and testing led by Pres. Probert. All Jersey breeders in Michigan are cordially invited and urged to attend.

CHICAGO PRODUCERS IN FIRST PLACE

THE Chicago Producers' Commission Association stepped into first place at the Union Stock Yards in Chicago the week ending January 6th. The weeks business of 246 cars was greater than that of any other firm at the yards, where there are more than 100 commission houses. The Chicago Producers have been juggling between second and third place for several months, and have finally reaches the top at the Chicago terminal. It is regarded as a sensational achievement of the farmers' live stock marketing program.

The Producers stood in first place at Buffalo, Indianapolis and Peoria last week as well as in Chicago. This is the association of which Michigan is a member. The Producers' Live Stock Commission Association at East St. Louis stood in second place with 135 cars.

The Producers at Indianapolis marketed 230 cars, or one-fourth of all the live stock in the Indianapolis yards. At Buffalo the Producers had 16 per cent of all the live stock—116 cars.

POTATO PRODUCERS MEET FEBRUARY 1 AND 2

THE Michigan Potato Producers' Association will hold a big annual meet and potato show during Farmers' Week. The meeting will last for two days, Thursday morning at 9:00 and the last meeting will begin Friday at the same hour. "What the College is doing for the Potato Producers" will be the topic discussed by Prof. J. F. Cox, Farm Crops Department of the College. Thomas Buell, president of the association will take for his talk "Michigan's Place in the Production of Certified Seed Potatoes." Hal B. Fullerton, director of agriculture, Long Island Railroad, Medford, Long Island, N. Y., will talk on "Healthy Spuds for Long Island." Prof J. W. Weston, potato specialist of the College will give a report of the season's experimental work with potatoes. And Prof. J. E. Kotila of the Botany Department of the College will discuss the potato diseases in Michigan. On Friday Prof. Wm. Stuart, U. S. Department of Agriculture, will talk on "Interstate Tests for Bettering the Quality of Certified Seed Potatoes." Sec'y-Treas. H. C. Moore will make a report for the past year. Also a general business meeting and election of officers will take place. Classes and list premiums in the potato show are as follows:

Petoskey Golden Russet (Russet Rural) Exhibit of 32 potatoes: 1st prize $20; 2nd prize $15; 3rd prize $10; next 3 best exhibits, each $5.

Any other variety, exhibit of 32 potatoes; 1st prize $15; 2nd prize $10; 3rd prize $5; next 5 best exhibits, each $2.

Boys' and Girls' Potato Club, Individual exhibits of 32 potatoes each, (any variety) 1st prize $5; 2nd prize $3; 3rd prize $2.

The Michigan Potato Growers' Exchange will award a silver cup to the individual winner of the State Club Championship provided there at least 20 exhibits entered. The State Championship will be decided on the Four Point Basis: Quality, Yield per acre, Report and Profit, being considered according to percentage given on report blanks for the various projects. No exhibits will be eligible to compete for championship prizes unless the report and story have been sent to R. A. Turner, State Club Leader, East Lansing, Michigan.

Certified Seed Sale Exhibit: Entries in this class are not in competition for prizes. They are composed of sample 100 pound bag seed stock. Growers of certifiied seed are encouraged to exhibit samples of their certified seed that are representative of the stocks they have for sale. The samples will be seen by several thousand farmers and will furnish the exhibitors a good means of advertising their seed potatoes.

General Suggestions for Selecting

Select 32 potatoes that are uniform in size, shape and color and that average from 8 to 10 ounces each in weight. The potatoes should be of the same variety and true in type. Do not select potatoes that show scab, black scurf or other diseases. The potatoes should be clean, bright, firm and free from blemishes, growth cracks and any mechanical injuries.

Clean the potatoes with a soft brush or woolen cloth. Do not wash them. Wrap the potatoes separately in paper and pack them tightly in a stout wooden box that is well lined with paper.

Shipping Suggestions

The grower should place on the inside of the box a card bearing his name, address and the name of the variety. Ship the potatoes by prepaid express so that they will arrive at East Lansing on or before Jan. 25. Ship the potatoes to the Michigan Agricultural College, Farm Crops Department, East Lansing, Michigan and mark the package, "Potatoes for Exhibit."

Potatoes that are sent by a Boys' and Girls' Club member should be marked "Club Exhibit." Certified seed potatoes for the 100 pound Seed Sales exhibit should be double sacked.

Competition is open to any potato growers in Michigan. No entry fee will be charged exhibitors. If interested write Mr. H. C. Moore, Sec'y-Treas., East Lansing, Michigan.

SAGINAW COUNTY GRAIN SHOW

A MEETING of the Saginaw Grain Growers Association was held at the Court House, January 2nd. Arrangements were completed for the First Annual Grain Show to be held in Saginaw, January 18th, 19th, and 20th, 1923.

Secretary Douglas Bow announces there will be complete classes for corn, wheat, oats, rye, barley, beans, and other small grains, seeds and potatoes. There will be about 60 premiums in each class.

All grain growers in Saginaw and adjoining counties are competing at this show. There will be no entry charges and admittance is free. Judging will be by competent judges from M. A. C.

Saginaw Valley Grain Growers have recently won many honors at the National Show just concluded at Chicago. They won places on all entries sent and brought home more honors than any other county in Michigan.

FOR FARM LOAN INCREASE

HERBERT Quick, who was one of the Federal Farm Loan Commissioners at the time the Federal Farm Loan System was established, has declared himself in favor of the Strong-Norbeck bill which would amend the Federal Farm Loan Act making it possible to lend as high as $25,000 to an individual through the Federal Farm Loan Banks instead of $10,000, the present limitation, and would permit the appointment of agents of the 12 Farm Land Banks to make loans without the forming of local co-operative organizations providing for a permanent board for the land banks and permitting farmers to place mortgages on their land in order to pay off debts already contracted.

Mr. Quick said: "The Joint Stock Land Banks enjoy the privilege of making larger loans and that the same privilege should be accorded to the co-operative loan associations which can make amortized loans from one-half to one per cent cheaper than the Joint Stock Land Banks. By increasing the individual loan limit from $10,00 to $25,000 the interest of the small borrower will not be jeopardized and the Federal Land mortgages will continue to be the excellent investment which they have been to date.

Nearly half the exports of corn from the United States in 1921—58,582,806 bushels—went to Canada, according to the United States Department of Agriculture. Much of this corn, however, was later shipped to Europe, Canadian statistics showing that only 12,000,000 bushels were imported from the United States for consumption.

How to use Long Distance Economically

In your use of Long Distance, you can get better and cheaper service if you know the way in which Long Distance messages have been classified for your convenience.

"ANYONE" CALLS—When you do not need to speak with a particular person but will talk with anyone who answers the call, tell your operator you wish to make an "Anyone" call. "Anyone" calls can be made quickly and cost less.

"CERTAIN PERSON" Calls—These are calls in which you tell the operator you wish to speak to a particular person. "Certain Person" calls cost more and take longer than "Anyone" calls because more time and expense are required to locate the person wanted.

On a "Certain Person" call, if you do not talk with your party, through no fault of the Telephone Company, a "Report" charge applies, providing you are given information concerning the person called.

EVENING CALLS—Between 8:30 and 12 o'clock in the evening, "Anyone" calls can be made at a reduced rate—approximately one-half the day cost. "Certain Person" calls cost the same day or night.

NIGHT CALLS—After midnight and before 4:30 a. m., "Anyone" calls may be made for about one-fourth the day rate.

APPOINTMENT CALLS and messenger Service—You can arrange an appointment to talk at a definite time by telling the operator. You can have a messenger bring your party to the telephone by requesting message service. Both of these calls cost more than "Anyone" or "Certain Person" calls.

Entered as second-class matter, August 22, 1917, at the post-office at Mt. Clemens, Mich., under act of March 3rd, 1879.

We'll Meet You Farmers' Week at East Lansing

This is the year you ought to take Mother and Enjoy a Profitable Week at the Biggest Round-up of Farmers Ever Staged in Michigan

A PERSONAL INVITATION TO READERS OF THE BUSINESS FARMER FROM PRESIDENT FRIDAY!

TO the Editor of Michigan Business Farmer:—Will you kindly extend to the readers of your journal an invitation from the State Board of Agriculture and myself to be present at the Michigan Farmers' Week which will be held at the Agricultural College at East Lansing, January 29th to February 2nd.

During this week we hope to have at the College the leaders of every phase of the agricultural industry in the state. Special programs have been arranged at which the problems of the various phases of agriculture will be discussed by people technecially competent to bring to their audiences the latest developments and discoveries.

In addition to these meetings there will be general meetings every afternoon and evening at which men of national reputation will address the conference. The subjects of taxation, transportation, the future of prices, and general agricultural policy will be especially featured at these afternoon and evening meetings.

I consider such a gathering of the people engaged in agriculture especially important at this juncture in the affairs of our state and nation. There are an unusual number of problems confronting our industry which call for sound leadership based upon a competent knowledge of facts. This meeting will do much to discover and develop just such leadership.—David Friday, President.

INDICATIONS are that this year will see the largest attendance in the history of Farmers' Week. More than 5000 registered in 1922, and this record will be broken, it is expected by a considerable margin.

Thirty different state agricultural associations and groups will hold their annual meetings at M. A. C., during Farmers' Week. This number is nearly twice as large as that for any previous year. The Michigan Livestock Breeders and Feeders Association, with its dozen or more association groups, will meet during Farmers' Week for the first time. In other years, the livestock men have held a separate meeting earlier in the winter. Their addition to the Farmers' Week groups has brought the number up so high this year. Attendance at these association meetings alone will guarantee a big crowd for Farmers' Week, in addition to those who do not belong to any of the different groups.

Speakers listed for Farmers' Week this year include many national figures and the program will be one of the strongest ever given during Farmers' Week.

David Friday, new president of the Michigan Agricultural College, will be appearing before his first Farmers' Week crowds, and is scheduled for two stirring addresses, which will be full of "meat" for agricultural people of the state. Friday was unable to attend last year's Farmers' Week because of important investigational work at Washington, and his addresses this year are looked forward to with double interest.

Other headliner among the speakers will be Congressman Sydney Anderson, of Minnesota, brilliant agricultural leader at Washington; Signora Agresti, of Rome, Italy; Eugene Davenport, former dean of agriculture at Illinois University, and famous writer; Donald Conn, transportation expert of Washington; Dr. G. F. Warren, famous farm management specialist at Cornell University; and Charles E. Snyder, editor of the Chicago Drovers Journal.

Many other prominent figures in state and national agricultural life will appear upon the individual programs of the different association meetings.

Exhibits at this year's Farmers' Week are to be new and interesting. Most of the material will center around livestock production, in honor of the attendance of the various livestock associations at Farmer's Week.

One of the interesting displays will be the educational farm crops exhibit which won high praise for Michigan at the recent International Grain and Hay Show. Entries in the annual Michigan Crop Improvement Association show will also be on display. This show will bring together the finest grain samples of its class in America, and will include many of the entries with which farmers of Michigan cleaned up at the International.

The Horticultural Show, an annual feature of Farmers' Week prepared by students of the college, will be housed as usual in the College Armory. Extensive displays of fruit and flowers will transform this building into a veritable fairyland.

Special exhibits on home economics, farm mechanics, soils, dairy, livestock, and all ither phases of agriculture and rural life will be on display in their respective booths.

For the Women

A special program of interest to the women has been planned which will be vital to every woman in the state, and to the farmer's wife especially. A large attendance this year, as in previous years, is being looked forward to.

Dean Louise H. Campbell, State Leader of Home Economics Extension Work, who has this year been made head of the Home Economics Division of the College, with her staff of Extension and Resident Instructors, have been working on the program for several weeks and they insure to every woman who attends, a week of profit and pleasure.

Dr. Marie Dye, Research Specialist in Nutrition, who has come to the College from the University of Chicago, has been feeding a group of rats with special diets for experimental tests. Dr. Dye appears on the program for Farmers' Week and will illustrate her talk on "Experimental Work in Nutrition" with her rat colony. The Nutritional Research Department is in a position to render valuable assistance to the home makers of this state, under Dr. Dye's able leadership.

PROGRAM OF THE WEEK

GENERAL sessions—Afternoons and evenings on Monday, Tuesday, Wednesday, and Thursday, January 29—February 1, and on Friday morning, February 2. (These meetings will all be held in the college gymnasium. Motion pictures and other entertainment features will be mixed in with the main Farmers' Week addresses at these meetings.)

Housewives Congress—Tuesday, Wednesday, Thursday, Friday, January 30—February 2. All meetings to be held in College Womans Building.

Michigan Rural Press Association

Miss Mariel Hopkins, Nutritional Specialist with the Extension Department, will discuss the "Extension Program of Nutrition." Miss Hopkins is well known throughout the state for her splendid work in behalf of better health through correct feeding.

Michigan Agricultural College has always given to her women students unusually fine social supervision, through their home life in dormitories, supervised by competent and able House Mothers. Mrs. Maude C. Thompson, Social Director at M. A. C., is in charge of this work and will speak on "The Home Life of Girls at M. A. C." The Shephert-Towner Maternity Bill, recently passed by Congress, is vitally important to every woman at this time. No person in Michigan is better prepared to discuss this subject than Dr. Blanche Haines, of the State Department of Health, who is in direct charge of the administration of this Act in this state.

Miss Ethel G. Webb, who has been connected for several years with the Clothing Economics Departments of the University of Chicago and Carnegie Institute of Technology, has recently joined the college faculty. Her long experience with the work of clothing selection and construction makes her especially suited to discuss "Some Stumbling Blocks in Clothing Construction," for the women in attendance at Farmers'

Miss Eunice Ryan, who has recently joined the Extension Faculty as Clothing Specialist, is bringing to the women of Michigan the benefit of years of special training in clothing work. She has a real contribution to make to every farm woman and farm home in her talk on "Hygienic Requirements of Clothing."

In addition to the speakers, several prominent persons from outside will have leading places on the week's program for women.

Mrs. W. R. Alvord, Ex-president of the State Federation of Women's Clubs, appears on the program at one of the joint evening meetings. Mrs. Alvord is a speaker of poise and forcefulness and always has a message of vital interest for everyone.

Miss Grace E. Frysinger, Field Agent in Extension Methods, States Relation Service, Washington, D. C., will speak on the subject "The Farm Home as the Fountain Head of Social and Economic Organization of the Nation."

Miss Bess Rowe, Field Editor of the Farmers' Wife, is to talk on the results of the contest recently conducted by her paper on "Do You want your Daughter to marry a Farmer?" This contest attracted nation wide attention and the conclusions drawn by Miss Rowe are sure to be of interest.

Between the regular meetings, many special features will be offered. Exhibits of work done by the home economic students, in all of their courses, will be on display during the entire week. Through these the regular worg of the College can be observed and judged.

A rest room, or silent room, will be provided in the basement of the Woman's Building, where women may lie down and rest at any time There will also be a nursery where children may be left in charge of competent students trained in the health and care of children, so that mothers may be free to give their whole attention to the meetings.

The teaching staff and students want every woman in the state to feel that M. A. C., is her College and their whole time and effort will be spent during the Farmers' Week in

James Oliver Curwood

Born near Owosso, Michigan and a resident of this state who has won international fame as the author of books on the great Canadian Northwest. Author of "Nomads of the North," our recent serial and "The Hunted Woman," the wonderful story now appearing in every issue of the Business Farmer.

MORE than once I have been asked to give the fundamental reason for my fight to preserve what remaining wild life and forests we still have in my native state of Michigan—a bitter fight waged against those same elements of political machinery, incompetence and lack of practical intelligence which have played such deadly parts in the slaughter of natural resources throughout our country, and always my mind has swept back over the tragedy of the last fifteen years to find its answer. While my own state, where I was born and where I have lived for almost forty years, is in my opinion the darkest blot on the map of the American continent when it comes to the matter of forest destruction, and while I am confident it will take a quarter of a century of intelligence and technical ability to give back to us the wild life which lack of conservation has lost to us in a pitiable fraction of that time; and while, moreover, I shall continue to wage war until big and broad-minded men specially fitted to direct the conservation machinery of a mighty state replace the present system of political appointments, I am convinced that every true conservationist should put his shoulder to the "national wheel," and pull for the country at large as well as for his local environment if the ultimate and greater triumph is to be achived.

We Americans are, and have been, a breed of destroyers and of monumental egoists; in the blindness of self-conceit we have reaped but we have not sown; on the treacherous sands of human "almightiness" we have set ourselves up on pedestals, and we are only now beginning to see our sins and our weaknesses. My own life has been typical of millions whose boyhood began a generation ago. From the beginning, as a boy, I did not need argument or education to tell me that I was the greatest of all created things—that my particular brand of life, of all life on earth, was the only life that God intended to be inviolate. That fact was pounded home to me in the public schools; it was preached to me in the churches. I was part and parcel of the great "I Am." For me, all universe had been built. For me, the Great Hereafter was solely created. All other life was mere incidental, and made especially for my benefit. It was mine to do with as I pleased. In a mild sort of way, the school and the church told me to have a little charity, and not to "hurt the poor little birdies." But at the same time both religion and school instilled into me that I was next in place to God, and that all other life, from the life of trees and flowers to that of beasts and birds, was put on earth for my special benefit, and that no other life had a right to exist unless the human egoist saw fit to let it live.

While we are slowly but surely awakening to the deadly error of these teachings of our youth, and while the necessity for a proper conservation of the resources which God gave to us in the beginning is becoming a living thought throughout our commonwealth, in our homes, our churches and our schools, one still cannot feel himself a fighter in the ranks until he or she realizes the aweful devastation of the past few years. Our youth did not pass through the grimmest of that tragedy, and millions of boys and girls now in our public schools, our conservationists of tomorrow, must depend upon us for those visions of the past by which they will be guided to the possibilities of the future.

Fifteen Years Ago

For those who have not seen the Great Change with their own eyes, and who have not been in a position to witness the tragedy of destruction—not only in a local environment but in a scope covering two-thirds of a continent, my own experience of fifteen years in the open spaces may be of interest, if not of actual value, in showing how swiftly the destruction of our wild life has swept upon us, and how quickly we must now act to save it from utter annihilation.

With the beginning of those fifteen years, almost the entire northern half of our continent was one vast breeding ground of wild life and this in spite of the fact that for nearly two hundred years the Hudson's Bay Company had steadily used large areas of it as their hunting and trapping grounds. Fifteen years ago the buffalo were gone, it is true, with the exception of a few survivors in the Athabasca country. In those days I was employed by the Canadian Government as a sort of "last frontier" investigator and explorer, and I had unexcelled opportunities for coming in contact with the wild life between Montreal and the Pacific. On every railroad then running in western Canada the daily recreation of passengers was counting coyotes and antelopes. The buffalo trails and wallows were then, and even later, plainly visible from the car windows, and over vast areas the prairies were criss-crossed with them. But in the face of this tragedy of the recent passing of the buffalo people marveled at what seemed to be the inexhaustible supply of wild life still left. From the car windows wildfowl could be seen not only in thousands, but in countless millions. Every bog-hole and lake was black with them. One early autumn, when I rode several hundred miles horseback from Medicine Hat to the Caribou Mountains to run down a rumor of buffalo living there, I was not for an hour at a time where I could not hear the thunder of the wings of rising wildfowl. For years I looked upon the tragedy of settlers slaughtering ducks and geese literally by the wagon load. At Dundern, Saskatchewan, I was the guest of a wealthy rancher when a hunt was planned. There were six of us in the party that visited a lake several miles out in the prairies. Shooting began at dawn. Marksmanship was not necessary, and by the time the evening shoot was over the kill was over six hundred ducks and filled a wagon. In those days game was slaughtered in this way, cleaned and placed in ice houses for winter use.

Occasionally, in the years that followed, I went over these same tramping grounds. Year by year I watched the going of the wildfowl and the prairie chicken. During a "flight" season of wild geese I have counted as many as thirty straw-stacks on a single night, around which the slaughterers were gathered to kill the geese that circled low in the illuminations.

Result Appalling

The result was appalling. Today, at the end of those few years, if you ride from Winnipeg to the mountains on either the Grand Trunk Pacific or the Canadian Pacific the probability is that you will not see even a coyote. Surely you will not see an antelope. The ponds and lakes once black with wildfowl will occasionally hold a family of ducks, or a small flock. There are no wild geese; even prairie chickens create an unusual interest when they are seen. The greatest breeding grounds that North America has ever known outside of the Arctic tundras, are gone. In those days of a wild life paradise I saw a letter to the factor at Fort Churchill, on Hudson's Bay, from the factor at York Factory, lower down on the Bay, in which the latter asked if he might purchase or trade for a supply of wild geese, as his own luck had been poor that year. In reply, the factor at Churchill sent back word that he could not spare any geese, as his hunters had also had exceedingly bad luck that autumn, and had only succeeded in killing eight thousand geese, which was not as many as he could use in his district during the coming winter.

And yet, in spite of that, it has not been the Hudson's Bay Company's trappers and hunters or the Indians who have destroyed the wild life of Canada, from which the United States have very largely drawn their supply. The settler and the hunter, together with political stupidity and selfish ambition, have been almost entirely responsible in our own country. Not only have they "hogged" the wild life of lake and stream and forest, but so long as their own immediate wants have been filled they have not cared but little of the future. They have not made intelligent laws, and when such laws have occasionally been made they have not used the power of their vote to demand an enforcement of them. In almost every instance true conservation, where it has won out at all, has had to ride over rotten politics.

Within these same fifteen years I went ahead of the "line of rail" of the Grand Trunk Pacific, through Yellowhead Pass and the British Columbia mountains. This was before a mile of steel had been laid beyond the prairie foothills, and I found a game paradise which some might consider an exaggeration if I could describe it as it actually existed. Bear, deer, sheep, goat and caribou literally swarmed in these regions. At one time I counted eleven bears on one mountain slide, all visible at the same time, and I have seen bands of sheep which numbered as high as a hundred. Several times since those days I have gone through these same regions. The so-called "sportsman" with his automatic and his pump-gun, has wrought frightful havoc. Today one must outfit a pack-train and go deep into the mountains for days and weeks at a time to find a single grizzly or sheep, and he is a fortunate hunter if he brings home either. During one season which I spent in the Firepan Mountains gathering material for my "Grizzly King" I saw twenty-seven grizzlies, innumerable blacks and hosts of other game. On my last trip I spent six weeks and saw three bears.

Destruction Farther North

Still farther north one sees the result of modern day destruction. Less than fifteen years ago I was in the Artillery Lakes country at the time of the annual migration of caribou. All one day what was supposed to be the main herd crossed a stream, and three different individuals made their estimate of its numbers, added the estimates, then divided the total by three, which approximately figured the herd at thirty thousand head. Two days later an Indian brought information that this was not the main herd, but a branch of it, and that the main herd was still farther north!

Today, even to the Arctic coast, a caribou herd of a thousand head, even in migration, is unusual. All through the northland they have split into smaller bands. Rifles have come in with the white man. The slaughter of the wildfowl life of North America on the prairies of Western Canada and our own western states has also sounded the doom of the hoofed beasts. We must remember that the geese and ducks on Lake Superior today were on the Arctic tundras a few weeks ago, and will be in the tropics a few weeks hence. A slaughter in Florida may bring hunger and starvation to the Indian three thousand miles north. There was a time when the Arctic tundras were what the Indians conceive their Happy Hunting Grounds to be. They were the Canadian prairies, multiplied ten times; it seemed as though the wild life of the earth gathered there to breed. But the man from Saskatoon, Winnipeg, Topeka, Milwaukee, Detroit, and St. Augustine has rob-

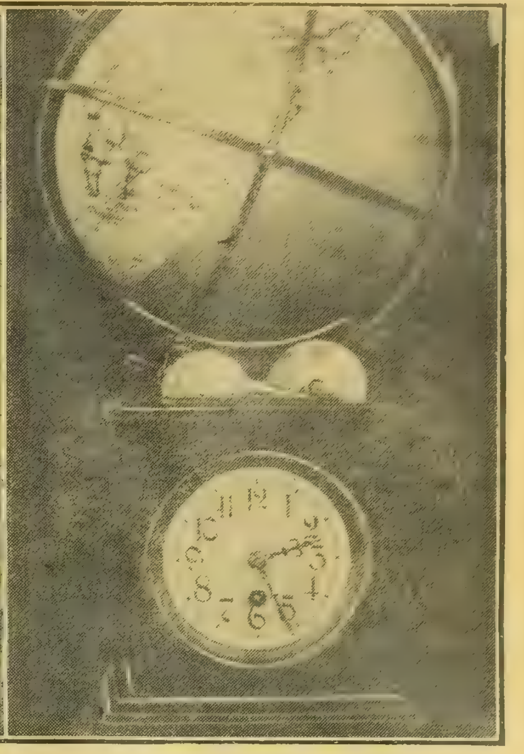
James Oliver Curwood at his camp with his Indian guide and dog team, on the shores of Great Slave Lake, north of the arctic circle in northern Canada. Mr. Curwood is a true sportsman and believes in getting the material for his wonderful fiction stories at first hand, spending part of each year in the great Canadian Northwest. His home is at Owosso, Michigan.

PICTURES FROM FAR AND NEAR

No necessity for attending congressional debates.—Representative Vincent M. Brennan, (Republican) of Michigan, demonstrates that in the future it will not be necessary for a congressman to attend sessions simply to listen to debates. He has had a radio installed in the House Office Building, Washington, D. C., and through the instrument he hears all that is going on.

A sight that thrills thousands.—To the many foreigners coming to American shores, the Statue of Liberty is a symbol of freedom and enlightenment. It is a thrilling and heartening sight, this statue on Bedloe's Island, in the New York Bay, the gift to this country from French school children. This unusual picture was taken from an airplane encircling New York.



A unique clock.—Invented by Johann Verndel of Atzgersdorf, near Viennia, Austria, which tells the time in every part of the globe at once. This clock and its globe-like attachment shows even more than the time of day. It indicates the exact time of sunrise, when it is noon, the time of sunset, the year, month and day, at all points of the earth.

JUDAS
Heute Nachmittag: Judas

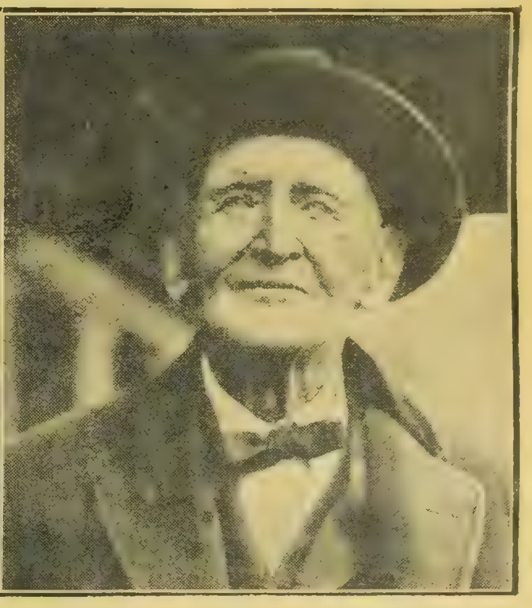
Where coal is more precious than gold.—Some of the German Provincial towns are hard up for coal, and that commodity is becoming the rate of exchange, instead of German paper marks which have lost their value. Here are a group of kiddies in front of a movie theatre ready to pay their admission fee in "black diamonds." I suppose we would be considered multi-millionaires if we lived in Germany because we have a couple of tons of coal.

Putting the prohibit in prohibition.—Fifteen Governors met with President Harding at the White House while the chief executive expressd his ideas on prohibition. Left to right;—Gov. Ritchie, Maryland; McKelvie, Nebraska; Kilby, Alabama; Secretary of Treasury Mellon; Gov. Trinkle, Virginia; President Harding; Vice President Coolidge; Gov. Davis, Idaho; Cox, Massachusetts; Allen, Kansas; McCray, Indiana and Campbell, Arizona.

Youthful musician plays way to fame.—Max Goberman, aged 11, of Camden, N. J., created quite a furore in eastern musical circles recently when he won the scholarship to the Philadelphia Musical Academy, the only one to be granted. This young prodigy is the son of a motorman, and is in his junior year in high school. Max has won several honors during the past year and musical authorities predict a great future for him.

FATHER TIME'S DIARY

An interesting page in Father Time's diary.—Billie Dove, of movie fame, declared that 1922 was the happiest year of her life. A contract, a fine home and important roles in two notable productions, this is what this fair young lady had to be thankful for in 1922. She has been going through Father Time's diary and says that while she is pleased with past years she is going to make 1923 the best of all.



Still swings a wicked axe at 103—"Uncle Joe" Daubeney, as he is known to all Taylor's Falls, Minn., is that state's oldest citizen and entering his 104th year he is still on the job as wood chopper. "Uncle" reads without glasses and often drives 50 miles in his flivver to Stillwater to see the latest movie. At the age of 100 he gave up smoking, but still chews tobacco.

Gasoline Tax Becomes the Burning Question

MICHIGAN has just reason to be proud of her highway system. One can now drive from one end of the state to the other over roads such as our fathers never dreamed of. It is now almost possible to go from Detroit, Grand Rapids, Flint, Saginaw, Lansing or any of the principal cities of the state to any other city, village or hamlet over highways which may be traveled with perfect safety and comfort at any season of the year. But it is costing a large sum of money to carry out this program and it is well for us to consider whether or not that cost is being properly apportioned to those who are most directly benefiting from it. At first the entire cost of constructing a highway was paid by the township in which it was built; then to encourage faster progress in road construction, laws were passed by which a certain amount of financial aid was given from State funds, provided the road was built according to certain specifications, but by far the greater portion of the cost was still borne by the taxpayers of the township in which the road was built; then the "County Road System" was adopted, by which certain roads were constructed by the county and the cost charged to the taxpayers of the entire county, including the cities, state aid being given on these roads also the same as on those entirely constructed by the townships; then the State Highway Department was organized and the amount of State aid was materially increased on all roads designated as part of the state trunk line system. These funds for payment of State aid have come out only from licensing motor vehicles but also largely from appropriations by the legislature, met by general taxation. Within the past few years in order to make more rapid progress so that we who are alive today could receive good roads benefits, funds for giving State aid have been provided by the issue of bonds to the extent of $50,000,000 if necessary, the voters of the State having so voted by an overwhelming majority, the proceeds to be expended under the direction of the State Highway Department. These bonds have not as yet all been issued, but the interest on those already outstanding even now constitutes a substantial item in the State tax budget, and provisions must also be made in future budgets for a sinking fund with which to retire the bonds when due. Thus far the principal part of the cost of our highways has been borne by the general taxpayers of the State in the manner here described. The great increase in the amount demanded each year for highway purposes, together with the constantly increasing cost of practically every activity supported by the taxpayers of Michigan, and especially school and municipal expenses, constitute a burden on the property owner so large that it is now a serious question with thousands of taxpayers how the load can be borne.

There is no question but that the remarkable improvement in our highways is due almost entirely to and in fact demanded by the advent of the automobile. Until we began traveling in the fast moving motor car, comparatively few people other than residents of the agricultural districts made any extended use of the country roads. The farmers were able to haul their produce to market fairly well on existing highways and very little effort was made to secure better roads. Today our improved highways are crowded with motor vehicles carrying people through the country, giving them both pleasure and profit, and thousands of people are now becoming acquainted with distant parts of the state, and with other states as well, who until they began traveling in automobiles rarely, if ever, went outside the corporate limits of the cities in which they reside, except on a railroad train. It is true that almost every farm is considered increased in value when a good road connects it with the market-place, and the property in the city or village is likewise increased in worth, as improved highways make it easier for the farmer to transport his product to market, yet can it be said that the benefit is as much more to the property owner, either in city or country, as is indicated in the proportionate cost of the highways he is at present called upon to bear? The injustice would not exist to the same extent if every owner of an automobile was the owner also of other taxable property for then all would be contributing in fairer proportion. The condition would be much better even if the automobile was taxable in the same manner as real estate and tangible personal property, or if the license fee now required equalled the amount of tax an automobile owner would be required to pay were his car subject to a general property tax; but there are thousands of owners of motor vehicles in the State of Michigan who are not owners of property taxable under the general tax law and whose contribution toward supporting the highways is limited to the amount paid for their automobile licenses, and they contribute nothing whatever, as they should, to the other activities of government that are supported by a general property tax. It seems to me that those who travel by truck or car are deriving the greatest, most direct, and immediate benefit from the highways and that therefore they should bear a greater and more reasonable portion of the cost. I can see no fairer method of accomplishing this than to levy a tax on every gallon of gasoline sold within the State. The tax would naturally be added to the price of gasoline, but would be paid in such small amounts that one would hardly realize that it was being paid; no more attention would be paid to the matter than is now given when the price of gasoline is raised or lowered. No one purchases any less gasoline for use in a motor vehicle when the price advances a cent or two cents per gallon; now would the tax have the least effect upon the motor car industry. The sale of cars does not depend upon the price of fuel, but upon the condition of the times. When one considers the purchase of a car he gives no thought whatever as to whether gasoline will cost him twenty cents per gallon or twenty-five cents. This is proven by the fact that gasoline costs more than double to-day what it did when the automobile industry was started, yet the industry has grown faster than any other in the history of the world. It is to be presumed that the benefit and pleasure derived from good roads is in proportion to the use made of such roads and to the grade of the vehicle used in traveling the roads; a tax on gasoline therefore would be a levy almost in direct proportion to the benefit and pleasure received, for the greater the distance traveled or the larger and more powerful and comfortable the car driven the greater would be the consumption of gasoline. Likewise in the case of the truck and the bus, the consumption of gasoline being greater than that of the ordinary car, the contribution would be proportionately greater, as it should be. Then, too, the tourists from other states and countries, and no one derives more pleasure from our good roads than they, would also contribute toward the cost of our highways in proportion to the use they make of them and while the individual payment would not be large enough to be burdensome, the aggregate received would be large enough to be of very material assistance to Michigan taxpayers.

That the enactment of a law taxing gasoline would require the establishment of a large department and the employment of "practical proteges" is ridiculous and positively not true. The law should and undoubtedly will provide that the tax be paid by the person, firm or corporation to whom gasoline is shipped within the State; in other words, the tax should be collected on bulk lots only from the wholesaler or distributor. This would necessitate but a very small force and could be made a part of the duty of some department already in existence. Settlements would have to be made with comparatively few dealers and the cost of collection should be lower than for almost any other tax now being collected. The wholesaler would simply add the amount of the tax to the price charged the retailer and the consumer would pay the slight added charge when purchasing at the fiilling station. With the unquestioned cooperation of the railroad companies a very close check could be made on the gasoline shipped into the State and evasion of the law be effectively prevented.

The only possible excuse for the levy of new taxes is that the over burdened property taxible under our present general property tax law may be relieved. The farm, the home, and even the factory are to-day actually taxed up to and in some cases beyond their ability to pay, and relief must come from some source and that right soon. It is estimated that the whole tax burden is borne by less than one-half the actual wealth of the State and a tax of this character is one of the means students of the subject of taxation believe will help to remedy conditions with the least hardship to others. To make sure that the right result will be obtained care must be exercised in drafting the law to the end that the proceeds will be so disposed of that the owners of taxable property will actually benefit. The proceeds must be devoted entirely to the payment of charges which must otherwise come from the general property tax. If any attempt is made to divide the receipts and distribute them to the localities in which they are collected there is great danger that the money received will be considered as just so much more money available for spending and no relief would be obtained. A tax of more than two million dollars must be levied by the State each year for interest alone when the highway bonds authorized by the voters of the State have all been issued, and a sinking fund must also be provided with which to retire the bonds as they become due. At present there is no source from which these funds can be obtained except the general property tax. It is estimated that a tax of one cent per gallon on gasoline would yield approximately three million dollars; how could the proceeds of such a tax be more effectively expended than for the payment of interest on the highway bonds and for the creation of the required sinking fund? Under the present system every property owner in the State will have to pay his share of these obligations, that share being based upon the value of the taxable property he owns; then, if these funds can be provided through a gasoline tax, every owner of taxable property in the State will be directly benefitted and the funds will actually be raised from those who are deriving the most good, either in pleasure or profit, from the highways of the State.

It is objected to a gasoline tax that a large part of the automobile mileage is on city streets and that the cities to receive no outside help toward construction or maintenance of these streets. This objection would be well founded if the proceeds were to be based only for the maintenance of the country highways, but if applied on State highway bonds, as here recommended, the receipts will then be used to pay charges toward which city property will eventually be called upon to pay in exactly the same proportion as other property, i. e. in proportion to the actual value of taxable property within the district.

It is suggested by some that this highway budget should be met by a mill tax on all property in the State. This would provide no relief whatever, as the entire amount would be collected from property which is now bearing practically the entire burden and which already is paying much more than its fair share of the cost of the government. A one-mill tax sounds like a very small amount and so it is of itself, but wiith a one-mill tax for this purpose, another tax for another purpose and so on ad infinituum, the burden becomes heavier than the taxpayer can bear; and it is for the one and only one reason that that point has already been reached that we are now seeking new sources from which to obtain help.

A proposal has been made that two propositions for maintaining a highway budget be submitted to the voters of the State: One—the gasoline tax; the other—a one-mill tax on all taxable property of the State. This would be a perfectly fair proposal if every voter was a property owner. but it is hardly to be expected that thousands of automobile owners who are not owners of other taxable property would vote in favor of a tax upon themselves if there was a possibility of requiring someone else to stand the burden. This, then, is a question not to be so decided. The decision must be made by the Legislature, a body chosen by all citizens, and the rights and interest of all the people must be impartially considered to the end that the highway burden may be borne in the most equitable manner possible.—B. F. Burtless, Sec'y, Michigan Board of Tax Commission.

BOARD OF TAX COMMISSIONERS FAVOR TAX

"THIS Board is on record as favoring a gasoline tax, believing that the general property of the State is, under our present system, required to pay more than its fair proportion of the cost of our highways."—B. F. Burtless, Secretary, Michigan Board of State Tax Commissioners.

Not for Either Plan

I am neither an advocate of a tax upon gasoline or a mill tax upon property, for road maintenance, but I do not know that unless something is done soon you will find a greater problem ahead of you.

At present there are 50 per cent of the farms for sale and no chance to sell. Mr. Earle said that those who did not want to pay a mill tax to sell or give away. Now if Mr. Earle will please explain himself, some of we farmers will be very grateful, we are unable to do either, and with the tax rate where it is, about 75 per cent cannot keep this up very long. Locally the tax rate is 5.3 per cent plus special on roads, making some taxes $5.00 per acre. This is as much as you have to pay to rent the best of land.

If Mr. Earle is in the market for good land at give away prices, send him up here and I can show him lots of it, even in Midland county.

I do not believe Mr. Earle can show us that he has made his money at farming and he talks just like most all men do that have money in the bank and can check it out for taxes. But how about the man who has some interest to pay also, or even the man just out of debt, he cannot borrow the money, here at least, even if his credit is good.

I noticed also that the Highway Department plans to finish spending that $50,000,000 in the next two years. Why do we need six or seven trunk lines to the northern part of the state, through state land where no taxes are paid, shifting the expense back to the settled sections? Also why do we need a cement road through towns that have gravel roads already built? Some of these are only a year old and none of them worn out when they come in and tear up for pavement.

We have a very sensible highway department and there is no wonder that Mr. Earle is a pioneer good roads man, as he is president of a Road Builders Supply Company.

Mr. Earle also states that one sharp shod horse does more damage than a thousand autos. He may be right, but I fail to see any horses sharp shod or shod at all except on icy roads. I notice that most horses here travel at the side of these good roads if possible and sometimes go

in Michigan! Read and Judge for Yourself

out of their way to avoid them, being hard on unshod animals.

All of the money that most of us get over a living goes to taxes and about 30 per cent last year did not have that much ahead. We pay the truckman the same rate as we do the railroads for freight, so who wins in this case?

As far as the city worker is concerned, I notice that he goes on vacations and uses the state roads as much as I do. When you pay $5.00 per acre taxes, with markets where they are, you will have no time or money to chase over the country. You know the condition in the city today and you know that there are no young people left on the farms. They know where they can at least have time to enjoy themselves a little instead of slaving all hours to pay taxes. If we fail, we know there are others that will suffer with us, so go to it, you may be fixing your own funeral.

I believe the road user should pay for the road and I also drive an automobile.—E. N., Coleman, Mich.

Mr. Newton's Article Fine

The article by Mr. F. S. Newton of Saginaw, as reported in The Business Farmer of January 6th, I have read with deep interest and consider the article entirely logical, proving Mr. Newton to be a deep thinker.

Everyone who is conversant with present financial conditions, is aware that the Michigan Farmer is already taxed to near the "breaking point" and to place an additional tax upon him, as proposed by Mr. Horatio Earle, would be no less than an unmitigated injustice.

As stated by Mr. Newton, we as a people, have "gone wild" on the subject of "Good Roads" and a halt should be called until better financial conditions prevail. The proposition to make the highway from Detroit to Grand Rapids 100 feet in width illustrates the absurd condition of some men's "think tank". "We Farmers" enjoy riding on good roads but we do not want to "break our backs" with hard work to provide for their making and maintenance.

It would seem to be most proper for Granges and Farmers' Clubs to bombard the Legislature with resolutions, something like the following: Resolved by (name of Grange or Club) that we do hereby ask most earnestly of our members in the Legislature, that the expenses of the State government be kept at the very lowest amount consistent with the proper caring for the financial needs of the State and this we ask in view of the heavy burden of taxation which real estate of the Farmer is compelled to be at under the present unejual and unjust levying of taxes, and we feel assured that it will be far the best interests of all to recognize that upon the welfare of the Farmer depends the welfare of all classes of citizens, it being absolutely and everlastingly true.—"The Farmer: He garners, from the soil, the primal wealth of nations."—J. T. Daniells.

Township Treasurer for Tax

As you have given us the opportunity to express our opinions on this state-wide issue "Gasoline Tax" I'll add a few facts as I see them here in the northern part of the state. I agree with F. S. Newton.

The "One Mill" tax on the farmers of this state would be the last nail in his coffin for today he is little better than a slave to taxation. Who was it that said "Let every man and woman be free and independent?" Are the farmers independent? No, a thousand times no. But thank God they are free—and if anyone well read the reports of the Farm Bureaus, Granges, and Farmers' Clubs, I believe they will wake up to the fact that they are very much alive. The trouble is, we farmers have been too easy and put much trust in our state officials.

Mr. Earle says if we don't want to pay our tax, let us sell, "and get out." This is an insult to the average farmer, the real honest farmer, not the dude. If Mr. Earle will send buyers up in this part he can buy nine out of ten farms, for a lot less than our much talked of State men valued them at. Good farms too, good homes, well tilled fields and well stocked. Why? Because he cannot make a living for himself and family and pay his taxes. Mr. Earle spoke of owning several farms, yes, and when he has only a short distance to haul to a good market, "by truck" thus the holler on gas tax. If his farms were up here where he had to depend on R. R. freight rates, he would sing a different song.

I am in a position to know, being treasurer of this township, where up to date only eight farmers have paid their taxes. Why? Because they cannot sell their produce to get the money. I know of several good industrious farmers that have butchered and hung up most of their cattle and hogs and left wife and children to care for the rest and gone to camp to earn tax money. One man shipped two crates of fifty chickens each to the city, expecting a good return but the market had taken a slump and after paying the railroad he had just four dollars and sixty-three cents for his poultry, about one cent per pound. Now if he had been in Mr. Earle's place he would have phoned out, " take the truck and bring in those 100 good fat chickens, price is high" and presto, it's done! But this is not the life of the common farmer.

Again I take exception to Mr. Earle's remark that "One sharp shod horse did more damage to the good roads on one trip over than a thousand autos." The auto has it all over the poor horse—when it comes to cutting up roads. Now that Mr. Slocum has given us the chance to express our opinion I hope the real farmers will not be backward. Remember the Business Farmer stands for a square deal. Once and for all a good income tax and put the gas tax on to build the rich mans roads. —One of the Northern Michigan taxpayers, Cheboygan County, Mich.

Gas Tax Will Get Outsiders

I have just finished reading an article in the M. B. F. written by Horatio S. Earle on the proposed gasoline tax in Michigan, in fact I have read several articles written by Mr. Earle in opposition to this tax. His argument is applied to Detroit might be good, but as applied to the whole state, I consider it mighty thin.

I live in the midst of a resort region and during the summer months cars pass through here from nearly every state in the union. Some stay several months and some are campers and none of them, except those that own property here, pay one cent highway tax. And this tourist traffic is something immense and growing all the time. They wear out our roads more while they are here than our home people do in the whole year and a tax on gasoline would make those who wear out the roads keep them up whether they are from Michigan or California.

Mr. Earle's argument about the aeroplanes, motor boat and washing machine is a joke and the farm tractors use mostly kerosene.

Another injustice under our present taxing system is that the upper peninsula and northern part of the lower peninsula can use cars about two-thirds of the year and yet pay at the same rate as the whole state. I would say reduce the license tax to two or three dollars regardless of size of car and collect the rest through a gas tax.

Mr. Earle proposes to put an additional tax on real estate when there are thousands of real estate owners who never use the roads for anything more than to walk on.

It seems to worry Mr. Earle that they are going to tax the city of Detroit for helping to keep up the roads in other parts of the state. I know I have seen a lot of cars from Detroit up this way last summer and they don't stay on the state or county roads either. They go over our township roads which we farmers have to maintain without state or county aid. The way I look at it the Farmers ought to stand for it to the man.—N. T. Powell, Emmett County, Michigan.

"Hurrah, for Gas Tax!"

Why I think a gasoline tax a just tax is because it would make them that ride most pay most. Was the trunk line built for the farmers? No. It was built for the pleasure cars and automobile industry and the millionaire, and they bonded our county for millions of dollars with 20-year bonds for the farmers to pay.

Mr. Earle says who shall pay the tax, the truck man that hauls the farmers produce? Now I think Mr. Earle knows the farmers would pay at least the gasoline tax.

Mr. Earle speaks of the poor washer-woman. Now if a man took a dirty shirt to get washed, when he got the clean one who would pay the tax?

He says the cities maintain their streets but 75 per cent of the cars that run over our trunk lines are city trucks. Mr. Earle speaks of marching the Isrealites out of the swamps now I don't know whether he did or not but what has that got to do with the gasoline tax.

Mr. Earle speaks of exempting Mr. Ford from taxation. Would a gasoline tax exempt Mr. Ford? He says Mr. Ford doesn't pay a tenth part of the tax he should pay. Now Mr. Earle lives in that neck of the woods why doesn't he see that Mr. Ford pays his taxes or is he afraid that a gasoline tax would hurt the sale of Ford cars.

My taxes have doubled in four years at the same valuation. Now Mr. Earle says he pays 50 times the taxes of an ordinary farmer and pays them cheerfully and if the farmers don't want to pay their taxes let them give their farms away. Now how did Mr. Earle get his vast wealth, farming or out of the good roads system? Now Mr. Earle wants the farmers to vote a mill tax. I think what Mr. Earle wants we don't and what he doesn't we do. So hurrah for a gasoline tax.—Arthur Sterim, Osceola County, Michigan.

THAT PROPOSED GASOLINE TAX

IN theory the tax proposal has irreparable weakness. It would tax every user of gasoline for the maintenance of good roads when it is perfectly clear that many users, tractor operators, owners of gas engines on farms, and a vast number of vessels, for example, are not concerned with roads at all insofar as these activities are concerned. * * * Suggests a very grave objection to the gas tariff proposition. That is the necessity it would involve immediately of providing a new and highly expensive state agency for its collection.

Instead of the gas tax Col. Waldon suggests an increase in license fees if the automobilist must bear the road cost burden alone. That increase would not involve the employment of another clerk by the state, would add not another penny to the ordinary cost of running the Secretary of State's office.

The gas tax idea is impolitic and unfair in theory; it would prove improvident and wrong in practice. If the automobilist is going to pay a new tax there is now an ample sufficiency of machinery in the state of Michigan for its collection.—Detroit News Editorial.

Taxes on Real Estate High Enough

I note in the December 9th issue, Mr. Horatio S. Earle, on the highway tax problem, and think such an article worthy of notice. His claim of being a farmer and farm owner is a broad claim often used by men that are not dirt farmers, that depend on farming for their income and living.

I think a reasonable tax on property is all right but most dirt farmers and home owners know by this time that they are getting hit hard enough with taxes.

We have no state tax based on the value of motor cars. An old car worth $100 is taxed the same as a new car worth $1,000. A farmer in the north part of the state that makes a few trips to town with car in summer is taxed the same as a car owner in south part that drives car nearly every day in the year.

The statement that motorists are paying 5 per cent tax doesn't seem to balance right as far as state taxes go. Reports from states that have a gasoline tax show that it is one of the easiest taxes they have to collect and motorists do not consider it unreasonable as it is used to improve roads which benefit them and saves them money in running their cars.

I think the more farm and home owners we have the better and it will prove a poor policy to tax the people off from their farms. When the state builds and maintains an improved highway system at great expense it must be met by a tax and I fail to see any injustice in placing part of the tax on the traffic that uses the roads, in proportion to use.

Some states have a 2 cent per gallon tax on gasoline for highway purposes and it works well, why won't it work well here?—Earnest S. Allen, Osceola County, Michigan.

Wants Both Gas and Income Taxes

I was very much pleased to read the article in your paper of December 9th, concerning the gasoline tax by Mr. Earle. He sure brought out some good suggestions, but I hardly agree on the mill tax at present for the highway department, and will try and give my reasons.

I believe the way conditions are in Michigan at present, we should have a gasoline tax and an income tax and every good honest citizen who believes in doing his share and have others do the same will get out and vote for both. They tell us in Michigan 79 per cent of all taxes are on real estate. Real estate represents 35 per cent of the wealth of Michigan. That leaves 65 per cent of the wealth of the state to pay 21 per cent of taxes. Take the man with most of his money in non-taxable property who is probably raising a family has a machine, and is wearing out the roads that real estate pays about eighty-five per cent of the cost when built, or the man who makes his living trucking, some do not own a home, and have their money in trucks and non-taxable property. Where are they to get their just share, will not a gasoline tax help, also an income tax?—Henry D. Phillip.

Gas Engine Owner Speaks

Would a tax on gas be a just tax? How about the man who has no car, but owns a gas engine? Must he pay on power, not using the highway, or such power traveling on water? A tax on gas would make openings for some work dodging individuals to collect said tax. The people are graning under the tax burdens now. That does not indicate they want more. Unload, must be the slogan of every fair minded citizen. Where will we start.—C. H. A., Iosco County, Mich.

Tax-Exempt Securities

How different we see things. I am rather surprised at Brother Earle's article in which he proposes to add a one mill tax on all real estate for highway purposes. There seems to be about all the tax on real estate already that it can stand, more than it ought to stand. There are thousands of small real estate owners who are old, with small income not sufficient to support them, and when they apply to the mill or factory work they are met with this "you are too old to do our work." There are thousands of men that own machines that do not own real estate who would go free under Brother Earle's plan. I think a better plan would be for a vote at the spring election to empower the legislature to amend the constitution to tax tax-exempt securities.—Reader, White Pigeon, Michigan.

Historical Background of Michigan Agriculture

Second Installment of Historical Outline of Rural Life in Michigan, by Prof. L. A. Chase

THE primal need of the settler is for transportation. Michigan's rivers were mostly shallow and crooked, obstructed with drift-wood and sometimes completely blocked for long distances by it, and, after deforestation had advanced, sandbars likewise impeded navigation and there were great fluctuations in the depth of the water from season to season. In winter they were iced over and mill danms were at frequent intervals thrown athwart their channels. Makeshift roads were early constructed—some of the most important ones by the United States government before Michigan became a state, and that for military reasons. Territorial and, later, state roads were laid out by the territorial and state governments in accordance with aets of the legislature, while each township was expected to attend to the building of such portion of these roads as lay within its limits. Working out the road tax was for many years a familiar feature of rural economy in Michigan, with results that were unfavorable to good roads. But for many years the most that Michigan farmers could contribute for this object was labor. The people—pioneers in a wilderness—were poor and distances were great. Often the "road" lacked grading and a metalled surface, although where need was, in crossing a marsh or swamp, the log corduroy gave a painful passage to the wayfarer. The town-meeting, introduced from New York and New England even before statehood was attained, gave most of its attention, it may be presumed, to road work, as it still does in those rural sections where it is still held. It was only with the coming of the automobile that effective county and state highways systems have superseded the township-district system of the earlier period.

Need of Transportation

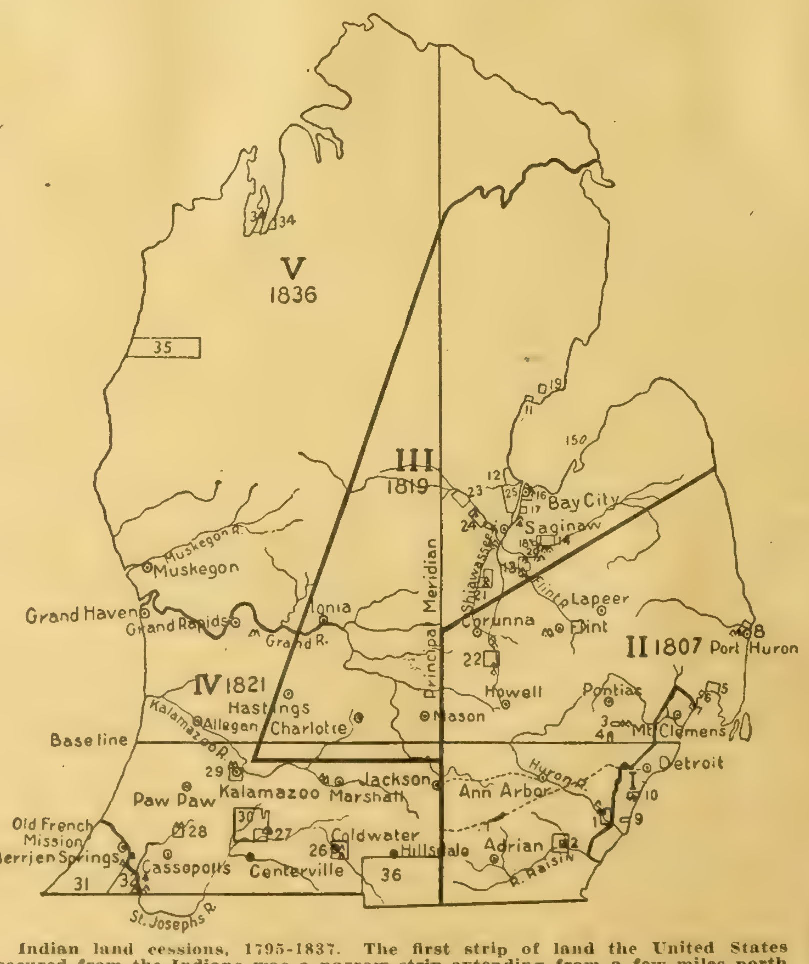
This need for transportation explains the fantastic effects at railway construction and internal improvements which featured the history of Michigan as soon as statehood was secured, and the people became masters of their own governmental affairs. The first railroad—the Erie and Kalamazoo—was opened from Toledo, Ohio, to Adrian, Michigan in 1836, although charters and projects had been provided in plenty during several years previous. This was a private undertaking as was that from Detroit to Pontiac, almost as early; but private effort was too conservative. The young state required vigorous action and got it through its own efforts. A great system of internal improvements was laid out by the governor and legislature in 1837, which with the hard times that came on about that time, well-nigh bankrupted the state and brought, in 1850, a constitutional prohibition of such state enterprises in the future. Three state-constructed railroads were built well into the interior of the state—from Detroit to Kalamazoo (designed to reach Lake Michigan at the mouth of the St. Joseph River) and the other from Monroe to Hillsdale (designed to reach Lake Michigan at New Buffalo). All these railways were built with the wooden rails with a metallic strap to cover the running surface, and some of them used horse-drawn vehicles at first. Indeed it is said to have been designed that farm-wagons should be provided with flanged wheels so that anyone could haul his wagon on the line as if on a country highway—safely out of the mud and sloughs of the public roads. Over these early lines the farmers shipped their grain, flour and other marketable produce to the lake ports and market towns, and received manufactured and non-domestic materials in return. Railway capacity was small. Trains on the state-owned roads ran only in the day time and sometimes it became necessary to call in wagon transport to relive the congestion on the railways. The state went out of railroading in 1846, and it was left to private capital and effort to cover the state with its present system of steam and electric transportation. Chicago was reached in 1852 and the two peninsulas were joined by railroad in 1881. In the southern counties it appears to have been the advancing agricultural frontier that promoted the extension of the railroad system, while farther to the northward, where good agricultural lands were less readily available, lumbering gave the incentive still further north, in the Upper Peninsula, mining, and later lumbering, led to railroad construction. But even in the north, agriculture where it was replaced by forest industries, directly depends upon the railroad. Electric interurban transportation is scarcely more than a generation in developing from its first small beginnings between Ann Arbor and Ypsilanti in 1890. But it, too, has come to have a very great importance to rural life in Michigan. The canal system which the state government contemplated in 1837, soo was dropped after some slight efforts were made close to Lake St. Clair and in the Saginaw valley, although the great lock and canal system at Sault Ste. Marie, first opened in 1855, has come to have a tonnage some three times that of the combined Panama and Suez canal traffic. But this has little direct connection with Michigan agriculture.

Education and Religion

The rural pioneers of Michigan were not indifferent to education or to religion. Territorial legislation had taken in account of public schools, but little seems to have been accomplished before statehood was attained. The state constitution of 1835 gave the state educational leadership by creating the office of superintendent of public instruction and devoted the proceeds from the sales of such lands as might be received from the United States for this purpose to the use of such schools. This primary school interest fund later was increased by the addition of taxes on railroads and certain other transportation companies as well as the tax on inheritances, and has been an important aid especially in some rural sections of the state where the proportion of school children to taxable valuation is high. Yet, the first schools were not free. The teachers kept account of the attendence from each family and at intervals a rate-bill was presented for payment of tuition. The constitution of 1850 directed that the legislature provide free schooling, but it was nearly a score of years before this was done. The teachers were poorly trained and poorly paid. The course of study was limited mainly to reading, writing, and arithmatic (there was for many years no attention given to agriculture). Schoolhouses were made of the same crude construction that characterized the homes of the people. Text-books were few and of all sorts and conditions. Special school equipment was largely lacking. Yet the schoolhouse filled an important place in the rural life of pioneer Michigan. It was a place for public meetings—religious, political, social. It afforded all the schooling that many eminent men and women of Michigan received.

The circuit rider moved about from place to place carrying the Gospel to remote hamlet and lonely fireside. His equipment was in his saddle-bags. His pay was trifling, his zeal was great. Like the physician, he made long and hard journeys. Occasionaly there were settlements of persons having a common religious bond whose members were chiefly engaged in agriculture, such as the Mennonites already referred to, the Quakers, the United Brethren, the Dunkards, the Mormans of Beaver Island, and latterly the Israelite House of David. The most striking example of re-colonization of co-religionists on a large scale is that of the Dutch settlement of Ottawa County, just before the middle of the last century.

As the mainland of Michigan extends through some six degrees of latitude there was found to be considerable divergence in the farm crops that could be grown. Among the early farmers wheat was a favored grain crop and the farmers chief dependence for a cash income. It has from the beginning been a leading crop of the southern counties. It has borne many names and varied greatly in quality. For years after the Civil War the "Clawson" wheat said to have been introduced in New York State stood in high repute. Of late, interest has been shown in the new type, called "Red Rock" bred from a single kernel selected in 1908 by the plant breeder at the Michigan Agricultural College. Under pioneer conditions wheat was sown broadcast from the hand and covered with the spike-toothed drag. Its yield would run from thirty to forty bushels per acre but in time this yield was not maintained and farmers came to plant wheat rather from force of habit or for seeding of the hay-crop than for any good business reason on its own account. From the first winter wheat has been chiefly grown in Michigan, but in the northern sections of the state spring wheat predominates, although an early planting of winter wheat is apt to turn out well.



Indian land cessions, 1795-1837. The first strip of land the United States secured from the Indians was a narrow strip extending from a few miles north of Mount Clemens south to the Rasin river in Monroe county. Through a treaty of 1807 the boundary line was extended from the Michigan-Ohio line through Jackson, Mason, Corunna, along the Saginaw valley to the shore of Lake Huron. The treaty of 1819 ceded territory around Charlotte, Ionia, the Saginaw valley and north to Presque Isle county. The treaty of 1821 ceded the land south of Grand river and through the treaty of 1836 the United States secured possession of all of the lower peninsula and the eastern part of the upper pninsula. In 1843 the Indians ceded their last claim upon Michigan, the western portion of the upper peninsula.

Crops Raised

Corn—already grown in the state by the Indians when the whites arrived, was planted sometimes on the untilled ground among the stumps. The surrounding forest, by interfering with air drainage, increased the liability to frost on the corn-field, until clearing operations reduced this danger. With corn as with wheat there was the same lack of standard varieties until recent years through the efforts of crop improvement associations and the Agricultural College standardization has been brought about. This applies also to other grains. In the pioneer era grain-growing suffered somewhat, too, from the depredations of wild animals. The succulent shoots of the growing grain suited the taste of the deer, and grain in the shock attracted the approving attention of raccoons, squirrels and wild turkeys. On the other hand, many of our destructive plant diseases did not make their appearance for some years. Wheat flour was produced at the water-driven mill reached, it might be, after many days of ardous traveling. The Indians knew how to reduce corn by breaking it in a hollowed end of a log or stump, while the whites improved on these methods by using a hand-mill or even a large coffee-mill.

In the pioneer period the prairies and marshes produces wild hay, and even yet there are times and places in which such wild grass is not scorned. For many years clover and timothy was almost entirely grown as a hay crop, but during the past score of years alfalfa and more recently, sweet clover and sunflowers have been winning favor for forage. The southern counties lead in the hay crop, but the eastern section of the Upper Peninsula in destinctively a hay-producing and hay-exporting region.

It was early discovered that the light soils of the northern counties were suited to the growing of potatoes and this region remains the leading potato section of Michigan and one of the most important potato sections of the country. As with the grains, varieties have become standardized and adapted to local conditions.

Sugar Beet District

The area of sugar beet culture is not far south of the potato belt but on soils that are stronger in clay in their composition. The state legislature in 1881 had tried to stimulate the home production of sugar through a bounty, but efforts to obtain crystalline sugar from the syrup of sorghum, or Chinese sugar-cane were not successful, although considerable sorghum molasses was being produced at that time in Mich-

(Continued on page 23.)

Chicago Daily Tribune

THE WORLD'S GREATEST NEWSPAPER

Announces

A BIG REDUCTION IN SUBSCRIPTION RATES

For the Benefit of the Farmer

THE CHICAGO TRIBUNE, realizing that its phenomenal success is due in a large measure to the fact that for seventy-five years it has numbered among its readers a large proportion of the residents of farms and small cities, announces for their benefit a big reduction in subscription rates effective January 15th, 1923.

The reduction ranges from 1/3 to 1/2 below former rates

In 1917, as a war measure, Congress passed a bill providing for four annual raises in Postal Rates for newspaper subscriptions. As The Tribune had, for many years before, sold its paper to out-of-town readers at less than cost, it felt compelled to add a portion of these postage increases to its subscription rates.

For the past three years The Chicago Tribune has been leading the fight to obtain a reduction in second-class postage rates so that it could reduce to pre-war prices its subscription rates to residents of farms and small cities.

Although every one of the other ten taxes established by the war revenue act of 1917 has been reduced, Congress has not seen fit as yet to reduce the tax on second-class postage.

At the present Postal Rates it costs The Tribune from $3.20 to $6.79 a year *for Postage alone* to send the paper to each subscriber in the States of Illinois, Indiana, Iowa, Michigan and Wisconsin. In many instances this is more than The Tribune's entire subscription price—without considering the cost of the product.

Many of our farmer friends have stated that it required from 10 to 12 bushels of corn to pay for a year's subscription to The Chicago Daily Tribune. The Tribune is anxious to remedy that fact.

TO TAKE ADVANTAGE OF THIS OFFER TEAR OUT COUPON *and*

MAIL AT ONCE!

If you prefer to do so, you may turn subscription coupon below over to your postmaster, publisher, or newsdealer who will forward it to us.

Therefore, without waiting further for Congress to act, The Tribune announces a reduction in subscription rates ranging from 1/3 to 1/2. This cut in rates will cost The Tribune approximately $200,000.00 each year, but The Tribune will pay the bill in the interest of its many country readers.

New subscriptions to The Chicago Daily Tribune, starting on and after January 15th, 1923, will be accepted at the following rates:

THE CHICAGO DAILY TRIBUNE

[*By Mail, Six Days a Week*]

These Rates Apply Only to Subscriptions in States of Illinois, Indiana, Iowa, Michigan and Wisconsin. [Cities, Towns and Rural Routes included.]

Period	*Old Rate*	*New Rate*
1 Month	$1.00	$ .50
3 Months	2.50	1.25
6 Months	3.75	2.50
12 Months	7.50	5.00

The Chicago Daily Tribune today enjoys the largest circulation in its history and the largest morning circulation in America—*averaging over 530,000 copies daily.* It will readily be seen, therefore, that the reduction is not made primarily to secure more circulation.

If you wish to receive The Chicago Daily Tribune—with its many wonderful features—regularly, take advantage of these new, low rates now. Mail subscription coupon below. Note that $2.50 will now bring you The Chicago Daily Tribune by mail for six months, or $5.00 for a whole year.

For the benefit of its country readers The Tribune will continue its fight for fairer postage rates.

FINANCIAL STATEMENT

GLEANER CO-OPERATIVE MUTUAL FIRE INSURANCE CO.,

The following financial statement is a copy of the report submitted to Hon. L. T. Hands, Commissioner of Insurance, Lansing, for the year ending December 31st, 1922. In submitting reports to our members we conform exactly to the requirements of the state, therefore it may be depended upon as absolutely correct.

The Company is in splendid condition, the best since its organization six years ago. In reading this report we want it understood that while the indebtedness of the company is $28,172.40, that the last assessment was called September 1st, 1922, and this twenty-eight thousand dollars has been used to pay the losses and expenses for four months since assessment was called—September, October, November, and December. Our asessment year ends September 1st, and this report is made for the calendar year 1922. Bear in mind, we have operated the company, paying all losses for a third of a year and it has cost us $28,172.40. We have about $28,000,000 at risk. If we assessed $1 per thousand it would raise $28,000, and would pay up everything. If we should run along in the same ratio for the following eight months of our year we would assess $3 per $1,000. It would be very unwise to prophesy the future. We can only tell you what it has cost us to run a third of our next year.

This statement is combined, both Rodded and Unrodded classes made to meet the requirements of the State Insurance Department. We will say, however, that both classes are in equally good condition when separated. We want to call your attention to the fact that this company own no automobiles, the office furniture, safes, fireproof files, typewriters, adding machines, dictaphones, printed matter, etc., which has been paid for and in the office costing a lot of money is not carried as an asset. We have considerable money due us that we are going to get on assessments back of 1922, but as the Insurance Department does not allow us to carry these as an asset they are not included in this report.

We ask that you take special note of the expense of adjusting losses and inspecting risks on the twenty-eight million dollar company. There were 174 losses on both classes, scattered about the state and the expense of adjusting these losses averaged $18.90 each, which covered railroad fare, automobile hire, hotel expenses and salary paid the adjuster.

The exact amount of insurance at risk January 1st, 1923, was $27,697,422.75, or a net gain after all cancellation and decreases, of $4,244,318.50 and a net gain in membership of 911, making a total membership in both classes of 8,011. The two classes are two-thirds Rodded and one-third Unrodded.

INCOME

1.	Total assets at the close of business		$ 4,935.00
2.	Assessments levied during the year	$ 79,054.66	
3.	Premiums paid by new members	5,211.16	
4.	Policy Fees	2,208.90	
5.	Interest Received	2,246.86	
6.	Borrowed Money Received	57,500.00	
7.	Transfer Fees	148.33	
8.	Assessments of Year 1921, paid 1922	8,724.47	
9.	Assessments, prior to 1921	127.37	
12.	Cancelled Insurance	2,646.89	
13.	Excess	205.57	
14.	Total Income for Above Period	$158,074.21	$158,074.21
15.	TOTAL		$163,009.21

DISBURSEMENTS

16.	Amount of Losses Paid	$ 78,381.67	
17.	Adjusting and Settlement of Losses	3,285.06	
18.	Officers Salaries and Fees	4,450.22	
19.	Directors Fees and Expenses	353.05	
20.	Revenue Stamps	57.20	
21.	Clerk Hire	6,106.13	
22.	Advertising, Printing and Stationery	1,5[illegible]0.95	
23.	Postage and Stamped Envelopes	793.42	
24.	Commissions to Agents	3,474.98	
25.	Return to Policy Holders	11.[illegible]	
[illegible]	Borrowed Money Repaid	45,500.00	
	Interest on Same	4,119.06	
27.	Attorney Fees and other Legal Expenses	124.14	
28.	Miscellaneous Account	180.75	
29.	Telegrams and Telephone	215.12	
30.	Rent	600.00	
32.	Office Supplies	274.67	
33.	Notes Receivable	1,499.82	
34.	Inspecting	412.58	
35.	Cash Deposited in Reserve Fund	6,914.39	
36.	Collection Account	180.91	
37.	Bad Debt Charged Off	37.77	
		$158,523.57	$158,523.57
38.	BALANCE		$ 4,485.64

LIABILITIES

Borrowed Money	$ 50,600.00	
Losses Unsettled and Not Adjusted (2)	2,250.00	
TOTAL	$ 52,850.00	$ 52,850.00

ASSETS

Cash on Hand	$ 4,485.64	
Due on 1922 Assessments	12,836.67	
Due on Cancelled Insurance	440.90	
Money Deposited in Reserve Fund	6,914.39	$ 24,677.60
BALANCE		$ 28,172.40

We realize that some who read the above statement may not be able to fully understand same, and our aim has always been to keep our membership well informed, and thus we offer the following explanations:

No. 1—The money we had on hand when we started the year 1922. No. 2—Amount of assessments paid by our members. 3rd and 4th—Money paid by new members to join our company. Some of this was paid to agents for writing the applications. The amount so paid is item No. 24. 5th—This is the amount of interest we received from members who did not pay their assessments soon enough to avoid paying interest, most of whom took the full three months to pay same. We gave them extra time to pay if they paid a small interest. Notice item No. 26. We paid $4,119.06 interest on borrowed money, and our members paid in $2,246.86, therefore we were really out only $1,872.20 for interest the entire year for money advanced by the bank to pay the losses and expenses for the members. No. 7—This is self-explanatory. No. 8—Money received for transferring policies. Nos. 8 and 9—Self explanatory. No. 12—Assessments paid when insurance was cancelled. No. 13—Money sent in by agents more than required which was returned in item No. 24. No. 14—All the money received during the year.

The disbursement explanation is quite clear. Nos. 16, 17 and 18 are self explanatory. No. 19—Paid directors for attending meetings, travel, expenses and perdiem. Nos. 20, 21, 22 and 23 are self explanatory. No. 24—This is the amount paid agents for writing applications. The money they sent in is covered by Nos. 3 and 4, and was returned to them. No. 25—Money sent in above the amount required and returned. Nos. 26 and 27 are self explanatory. See our explanation to No. 5 above. No. 28—Typewriter and other office furniture and fixtures. Nos. 29, 30 and 32 are self explanatory. No. 33—Notes taken in payment and credited on assessment book, charged as a disbursement until notes are paid.

No. 35 is the amount of money received from new members for joining the company, which in most mutual companies goes to the officers as commissions. This is the start in our reserve fund that we are building without assessing our members therefor. It is deposited in the National Bank of Commerce, Detroit, as a savings account and is drawing interest. It will be added to every month.

No. 36—Paid for collecting accounts. No. 37—Bad debts charged off as uncollectable. The liabilities and assets are self explanatory.

Notice the item in liabilities: "Losses unsettled and not adjusted." There were but two losses unpaid at the close of the year, one occurring December 26th, 1922, and the other is a loss where there is a grave doubt as to whether the company is responsible for anything whatever. Isn't this a wonderfully clean slate for a big company?

Never was the Gleaner's Co-Operative Mutual Fire Insurance Company in better condition, financially or otherwise. It is being operated safely and conservatively. Insurance risks have been kept within the safety point and those who joined to sell their property to the company through the incendiarism route have been smoked out, and the suspicious are under surveillance.

We gladly open our gates to every good farm owner, whether he be a member of the Gleaner organization or not. We have issued a booklet covering every detail of the advantages and operation of the company which we will gladly send to anyone who desires same. We can only say to you that if you place your insurance with us we shall do our utmost to give you the best insurance to be had at the least possible cost, and that the management will be safe, careful and conservative.

L. F. BOSWORTH, President. JAMES SLOCUM, Secretary.

Home Office: National Gleaner Temple, Detroit.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

A PATHETIC REQUEST

DURING years of reading your paper, I have seen many troubles cleared up. We would like to know if you can help us by printing the following:

Our daughter, Bernice De Hart disappeared from Harbor Springs, Michigan, Nov. 24th. Her description: age 23, weight 110 pounds, height 5 ft. 3 inches, color of hair, medium brown, color of eyes, blue. Slight scar on right cheek. When last seen she was wearing a small black velvet hat, wine colored coat, with large black collar and black kid oxfords. She is a pianoist of excellent ability.

We will give to anyone who can give us information concerning her whereabout $300.00 in cash.—F. G. De Hart, Post Master, Vickeryville, Michigan.

DEPENDS ON WORDING OF CONTRACT

If A sells B a parcel of land on contract and after two or three years B is unable to meet payments when due, has A the right to step in and take the land back at once? Or has B a right to pay up later and redeem the land the same as on a mortgage? R. P. R., Kingsley, Michigan.

—The time when A may regain possession of the land sold on contract to B depends upon the wording of the contract itself. A notice of forfeiture probably must be served of from seven days to three months depending upon the wording of the contract. Under the statute if B retains possession until A commences an action against him notwithstanding B has not paid he may require the court to find the amount then due on the contract. B would then have five days to pay it or he may be put off the premises.—Legal Editor.

BRIEF COURSE FOR ELECTRICIAN OR PLUMBER

Can you give me any information, as to the learning to be either an electrician or plumber? Is there any other way other than being an apprentice or in the case of an electrician, taking a university course. Are there not some reliable trade schools that one might attend? One similar to the Detroit Automobile School, for learning the trades pertaining to automobiles? Are there any you could recommend?—W. M., Mt. Pleasant, Mich.

—The best place I know of is The Ohio Mechanics Institute, Cincinnatti, Ohio. However, the Detroit University or The Arthur Hill Trade School, Saginaw, or the Milwaukee School of Electrical Engineering might serve your purpose.—A. R. Sawyer, Professor of Electrical Engineering, M. A. C.

HOUSEWORK AND GENERAL HOUSEWORK

Will you please tell me if there is any difference between the terms "housework," and "general housework"?—A. R., Marilla, Mich.

—The distinction is simply one of custom. The term "general house work" is supposed to mean all types which would include the laundry, while "house work" would include only the care of the house and includes neither the laundry nor the culinary work.—Edna V. Smith, Asst. State Home Demonstration Leader.

WHO IS ENTITLED TO PENSION?

What widow and children are entitled to a pension?—Mrs. M. E. W., Honor, Mich.

—The mother of any dependent or neglected child under the age of seventeen years of age who is unmarried or divorced, or is a widow, or has been deserted by her husband, or if her husband has been declared insane or is feeble-minded, epileptic, paralytic, or blind, and is confined in a state hospital or other state institution, or is the wife of an inmate of some state penal institution serving sentence therein for crime, or if an inmate of a hospital for the treatment of insane who is confined therein for the purpose of being treated for insanity or other diseased mental condition and such mother is poor and unable to properly care and provide for said child, but is otherwise a proper guardian, the court may enter an order providing for the payment of not to exceed ten dollars per week and not less than two dollars per week in case said mother has but one child, with an additional sum of two dollars per week for each such additional child.—Charles J. Deland, Secretary of State.

OWE AGENT NOTHING

A year ago last spring an agent came to my place to sell me a cultivator. I wanted an Oliver but they did not have any. They had the Rodcerick Lean. I told them that I would think it over and let them know. I told them not to bring one out unless they heard from me. Two or three days later this man sent out a cultivator and I not being at home he unloaded it and went away. I gave it a fair trial and did not like it so when he came to draw up the papers I would not sign as I did not want it. We later bought an Oliver. I notified the firm I did not want the cultivator, to come and get it. He came out and I told him I did not like it and he put it up in the tool shed in the barn and went away. This fall he sent notice and we payed no attention to it. The other evening he came and said if I would pay him $15.00 he would take the cultivator, if not he would make us pay all of it. I want to know if I have to pay him $15.00 when I signed no papers for the cultivator and have kept it in storage for 16 months.—L. F., St. Charles, Michigan.

—Under the facts related you owe the agent nothing. If he sues you, you will have to defend yourself and if the justice of the peace decides against you get a good lawyer and appeal the case. The circuit court judge will see that justice is done upon the trial.—Legal Editor.

TRAVELING EXEPNSES FOR HIGHWAY COMMISSIONER

Will a highway commissioner serving a township, such service requiring the constant use of an auto, be required to furnish same from his salary or is he entitled to compensation for same?—L. B., Spring Arbor, Mich.

—Act 57, of the Public Acts of 1921 fixes the compensation of the Highway Commissioner at four dollars per day for each day actually and necessarily devoted by him to the service of the township in the duties of his office. This does not include his actual and necessary traveling expenses, which should be provided. —State Highway Department.

TRANSPLANT IN SPRING

Is it advisable to take up hardy plants like flax, peonies and iris now and store them down in cellar through the winter and set them out side next spring?—J. K., Dryden, Michigan.

—Flax, peonies and iris are much better in the ground for the winter than in any cellar protection you could give them. If they have to be moved for some cause or other from the position they are occupying, I would advise planting them in some permanent place protected by leaves or straw but they would be much better if transplanted in the spring. —Thos. Gunson, Ass't Professor of Horticulture, M. A. C.

LANDLORD FURNISHES ALL BUT LABOR

I would like to know your idea of the subject of rent for a one hundred and twenty acre farm; horses and tools furnished, renter doing all the work. If the tennant received one-third of all the crops would this be fair to both? Who should pay, or what part of the threshing expenses should tenant pay? Tenant may keep some chickens, farmer will furnish pasture for one cow.

—The usual practice under the above conditions, where the landlord furnishes everything except labor, is that the landlord receive two-thirds of income and tenant one-third, the tenant to pay one-third of thresh bill, seed purchased etc., and the landlord the other two-thirds.

As to the chickens and pasture for cow, this is an individual matter and can be agreed upon by landlord and tenant to suit conditions.—F. T. Riddell, Farm Management Demonstrator, M. A. C.

NOT OBLIGED TO MAINTAIN SLAUGHTER HOUSE

A butch who has just been compelled to rebuild his slaughter house to make it sanitary, told me that the laws says, that all meat put on the maket for the use of the public must be killed in a sanitary slaughter house. That the farmers could not kill meat and put it on the market. Does this law stop me from killing my hogs and selling them?—L. A. W., St. Clair County, Mich.

—There is no law nor department ruling in existence which seeks to compel a farmer to maintain a slaughter house or kill animals of his own raising in a slaughter house. He has a perfect right to do all of his butchering at any place on his farm, having in mind that if the meat is to be offered for sale it must be prepared under sanitary and clean conditions.

Slaughter house regulations apply only to butchers and others who buy wherever an opportunity affords, and from any source from which animals are available.—M. J. Smith, Solicitor, State Department of Agriculture.

SEE ATTORNEY

One of my neighbors was driving on a highway and was put in the ditch by an auto. This driver was altogether to blame and does not deny it. My neighbor was hurt, the buggy broke and the harness. He went to justice of the town and the justice would serve papers to auto driver to settle, but he never came. This happened some time ago, and I would like to know if the matter could be taken up yet.—Mrs. M. B., Merrill, Michigan.

—I do not understand what is meant by "justice serve papers to settle." If it was a letter from the justice to the party who caused the account he would be under no legal obligations to answer it nor does it lessen the injured parties rights. The justice of the peace if not an attorney at law has no right to practice law. If the injury has not outlawed the injured party should consult a good attorney and he will tell him what to do and what he can do, to collect his damages.—Legal Editor.

MICHIGAN CROPS

WHAT IS DIVERSIFIED FARMING?

WHAT is meant by diversified farming, about which so much has been said of late? Prof. P. E. McNall of the Wisconsin College of Agriculture says it means anything but "jumping in and out of every sort of agricultural activity."

"The farmer who diversifies has important major source of income," declares Prof. McNall. "Usually this is some class of live stock; occasionally in this state it is some cash crop. This one enterprise must form the backbone of the farming business. It is the farmer's specialty. He knows and loves the work with this particular stock. He is in it because he expects to remain in the production of the stock and he will not drop it because prices are not temporarily as he would have them."

In addition to his main line of live stock production, the farmer who pratices a good form of diversification, according to Prof. McNall, keeps stock of other kinds, to make the best use of farm by-products, perhaps; and he generally grows a cash crop as well. The idea is to have a number of sources of cash income, so that there will always be the chance of hitting a good market on some things produced.

Conditions the past two years have emphasized the need for great diversification. "Between 1916 and 1920," says Prof. McNall, "any farmer with energy could make money. A herd of cows, a few acres of crops, pigs, chickens or whatever the farmer had, was effective capital for bringing in the dollars. Neither management nor saving was required to pay all current expenses, and income which could have been used as reserve was expended either to increase the volume of business or to raise the standard of living. Since 1920 conditions have reversed. Very few farmers are making money."

Has diversification made headway the past two years? Think of the increased iinterest in hens. That is one step in diversified corn belt farming. Chicago Daily Drovers Journal.

POTAOTES ON SAND

I have a sandy soil which has been farmed in following rotation as far back as I know. First year clover, second year corn, third year oats, fourth year clover (this was a poor crop) fifth year or 1922 crop soy beans for seed—the roots of which did not seem to have any nodules. There are 90 acres in this field. I want to put this all in potatoes in 1923 but will only have enough manure to cover at the rate of 10 or 12 loads per acre. Do you think this amount is sufficient or would it be best to only plant 6 acres of potatoes and apply manure more heavily Is there any commercial fertilizer suitable for potatoes on sandy soil with gravel susoil? If so what? On the same sandy soil in same field as described on this letter this year 1922 potatoes made 130 bushels per acre. the patch was manured at the rate of 18 loads per acre. This was a very dry year. What I wish to get at is, would not 10 loads of manure produce nearly as good results as the 18 loads? Is the Irish cobbler potato the best early market variety? How many bushels per acre for seed of the above variety?—R. S. Coldwater, Michigan.

—The application of manure, where ground is not so irregular as to cause washing, is best applied the previous fall, during the winter or early spring. Disk thoroughly before plowing. 8 to 10 tons of manure properly incorporated will give very good results. Too heavy an application of coarse strawy manure may cause the land to dry out excessively in a dry season, and especially if the manure is plowed down late and in such a way as to make a mat in the bottom of the furrow.

Slice by thorough discing before plowing, the manure is placed in the soil, in the position of a wick in a lamp and assists the action of capillary water rather than retarding it.

The commercial fertilizer used principally for potatoes is a 3-10-4 of a 2-8-10. The 3-10-4 fertilizer demonstrations applied at 400 lbs. per acre gave an average increase this year of 45 bushels per acre and at a cost of $7.25 per acre or at a cost of 16 cents a bushel, for fall price of fertilizer.

The Irish Cobbler is a good quality, usually good yielding, early variety. It is somewhat later than the Early Ohio, the other standard early variety of potatoes. The planting date for early potatoes should be as soon as danger of severe frost is past in the spring. A good rule to follow would be plant your early potatoes before you plant your oats. The rate per acre, at least 12 bu. per acre, 15-18 inches apart in hills, rows three feet apart should be heavier on early plantings than on late on account of the danger of the frost killing the first growth and if good sized seed pieces are used there is sufficient plant food to start new growth. Where there is danger of frost when plants are small, 2 or 3 inches, high, run through field with a two wheeled cultivator, shovel set to cover potatoes and when danger of frost is past run crosswise with weeder and uncover plants. They will resume growth.—J. M. Weston, Potato Specialist, M. A. C.

The Truth About Henry Ford

By Sarah T. Bushnell

Secures Complete Control of Company—Five Dollar Wage—Refuses War Orders

EVEN though it made no more racing cars the Ford company enjoyed prosperity without limit; likewise the autom‹bile fever grew to white heat in Detroit. Fortunes were made quickly and lost as quickly, but through all the excitement Henry Ford clung to his policy of making a good car at the lowest possible price. In 1916 Mr. Malcomson sold his interest in the company to Mr. Ford and turned his time and attention to his coal business. Had he held his stock until 1919 and sold it then at the same price paid Mr. Couzens he would have received $62,500,000. Mr. Malcomson is a man of wealth, however, although he did not make a dollar out of the company he founded and which has made other men multi-millionaires. Writers frequently come to him for his story. "If you will let me send that around the world I will make you famous," one journalist told him. "Think of what you are missing! This is your biggest opportunity."

Mr. Malcomson laughed. "You don't understand," he explained. "I do not want fame or newspaper notoriety either. Why, the most fun I get is listening to what people say in hotels and on trains. I've heard more versions of how the Ford company was started than you could think up in a year. Sometimes the story is so pathetic that it almost brings tears to my eyes; some times it is so funny that I almost laugh in the speaker's face. I wouldn't miss all this fun for anything."

Mr. Couzens left the Ford company on November 1, 1915, a month before the Peace Ship sailed, but continued as a director of the company until September 1, 1919, when he sold his interest in the company to Mr. Ford for thirty million dollars. As mayor of Detroit Mr. Couzens has made a name for himself, particularly by the fight he won for municipal ownership of the street car lines. He is sponsoring a municipal hospital that in plan and purpose will be wonderful, and he has at every opportunity championed the cause of the people of his city.

After the twelve years' connection with the Ford company the Dodge brothers notified Mr. Ford in February, 1915 that they did not care to handle the work longer, their contract expired in June. They later began the manufacture of their own car and sold their interest in the Ford company to Henry Ford and his son for $25,000,000 each. It is reported that the holdings of the Gray estate were sold for $27,000,000.

* * * *

A young university graduate who expected to be advanced rapidly in the Ford service, remarked one day, "If I had Henry Ford's money I'd never prowl around the Rouge factory the way he does. All I'd know about the Ford industries would be what I read in the newspapers." His "prowling around" is undoubtedly has been one of the important factors in Mr. Ford's success. From the beginning no one in his employ worked harder than he, and no one works harder today. Mr. Ford believes that wealth is trust and he strives to use it accordingly, for the betterment of the workers in the Ford industries. He prefers to raise industrial standards rather than to make more millions by exploiting his workers. His influence extends far beyond his own plants and has proved a boon to the working classes generally.

He holds the affection of the mass of his workmen as no other large employer can hope to. How he will stand by a man was demonstrated in the case of Emde in the Ford-Newberry senatorial race. This incident which contributed to Mr. Ford's defeat will be told in a subsequent chapter. The Ford employes are generally "well fixed." They have bank accounts, they own securities and many of them own their homes. The real test of a man's popularity is in his home neighborhood, where he is best known. Mr. Ford is remarkably popular in Detroit; the mention of his name brings enthusiastic applause and his appearance at a large gathering has, on more than one occasion brought the throng to its feet cheering. Mere money could not do this. His popularity is founded on the fact that he is recognized as the friend of the common people—and that gives him a tremendous personal following throughout the country. This popularity has made him the target of criticism, but the best answer to the critics of Mr. Ford's methods is found in the fact that there never has been a strike in any of the Ford industries during the nearly twenty years of their life—not even in the coal fields he owns.

Mr. Ford's activities in behalf of his employees are enthusiastically supported by Jack Henkel , his employment manager at the Highland Park plant. Henkel is honest and capable, but the heart and brain of the Ford system is Henry Ford himself. As is inevitable in such a large organization inequalities sometimes creep into the system. Those placed in authority have not always been loyal to their trust. But Mr. Ford is always on the alert and wrongs are quickly righted once they are detected.

When the five-dollar wage was put in effect at the Ford plants thousands of workmen were attracted to Detroit, many more than could be given employment. Much distress resulted. Mr. Ford called in a trusted friend and gave him $50,000 with the request that the friend investigate conditions quietly and use the money to relieve the wants of the unemployed. None of those aided knew from whom the money came. Mr. Ford instinctively dreads notoriety and has an iron-clad rule that his name must not be connected with what he gives.

The wonderful achievements of the Ford factories are known wherever manufacturing is known. Industrial experts from far and near have come to Detroit to study the Ford methods. Many of these men have labored in the Ford plants to better acquaint themselves with the workings of the system. Such a man was K. Mimaura, employment manager of the Sumitonio copper works at Osaka, Japan. Although he worked for the Ford company for some time his identity was not learned until he resigned to return to Japan where he is now in charge of a large foundry and smelter. He left behind him in Detroit many friends and a trail of Japanese fans which he had ordered made in Osaka.

Early in the war a German baron went to Detroit and wanted to order five hundred Ford cars for immediate delivery.

"Mr. Ford is not willing to accept war orders," he was told.

"I understand all that," the baron replied impatiently, "but how long will it take you to make the five hundred cars?

Quite patiently the company official explained again Mr. Ford's determination. This was beyond the baron's comprehension. "Don't jest with me he declared," "I want to place this order today. I am willing to pay your price. When can the cars be delivered?"

"It is now noon," the official told him. "It would take until 4 o'clock to make the five hundred cars. But Mr. Ford has issued orders that nothing will be manufactured for war purposes. That is his order. The only condition that would make him change it would be America's entry into the conflict." When America did enter the war the German baron probably recalled what he had been told in Detroit.

A French commissioner who came with a war order had a similar experience. He was shown through the plant. "Time them," said his guide as they stood watching the finished cars rolled away by the mechanical starter. "A finished car every twenty-nine seconds. Take out your watch and time them." The Frenchman did, but he got no cars.

Throughout the country many plants worked day and night during the war turning out munitions and other military supplies. The Ford plant was unique in that no work was done on Sunday. "My men must have their day of rest," Mr. Ford ruled. "We can do our full part without breaking the fourth commandment." And they did. Today one out of every ten of his employees is a returned soldier and half of these veterans are physically disabled. Henry Ford is still doing his part.

CHAPTER VI.

The Peace Ship

The facts about the Peace Ship—how the idea was presented to Henry Ford; the theory of what could be accomplished and the results, direct and indirect, of the undertaking, make a story far different from that believed by, perhaps, the majority of people. The true account set forth in the following pages was given the writer by persons in a position to know the facts, and every statement has been verified. Instead of criticism and ridicule Henry Ford deserves commendation for his endeavor. The person who persuaded Mr. Ford to undertake the strange mission of peace is ommitted here for good reasons. This leader withdrew from the party before the ship sailed and let Mr. Ford to endure the criticism and censure alone. Much as we may deplore the spectacular manner that marked the undertaking, the three hundred thousand dollars that it cost was not money wasted. As will be shown later the country profited by Mr. Ford's expenditure.

Rebecca Shelley and Angelica Morgan, two American women writers, one a delegate to The Hague Peace Conference in 1915, and the other also an ardent peace advocate, brought back to this country the report that Europe was weary of war, and that the battling nations were all eager for peace. These women believed that if a delegation representing neutral countries were sent to Europe the way could be paved for peace negotiations. They wanted President Wilson to appoint Miss Jane Addams of Chicago as America's representative.

Both women tried to see the president and also endeavored to have him receive Miss McMillan, a prominent English woman, then in America and Madame Schwimmer, an Austrian, who claimed to possess documents of vital importance in any effort to end the war. Failing to reach the president, Miss Shelley and Miss Morgan went to Detroit to see Henry Ford, who, they knew, was close to President Wilson. They failed again, but they did meet and talk with a number of prominent Detroiters; also they secured the cooperation of a number of active club women.

As a last resort Miss Shelley and Miss Morgan went to the office of the Detroit News to enlist the support of that paper. To the then editor-in-chief, E. G. Pipp, they stated their case thus: "Jane Addams is willing to go to President Wilson and lay before him all the information she secured at The Hague concerning the sincere desire of the Europan nations to end the war. President Wilson has refused to see her. Miss McMillan has proof that the Allies want peace. Madame Schwimmer has documents which show that the Entente will enter into peace negotiations. These women must return home unless the president sees them soon. At the rate the war is progressing America will soon become involved."

Mr. Pipp went into his private office and soon was talking to Mr. Tumulty, the president's secretary. "Your information must be incorrect," Mr. Tumulty told him. When Mr. Pipp repeated the story just told him. "President Wilson has not refused Miss Addams an interview. Perhaps if she makes another effort to see him it can be arranged. The president can receive only delegations including representatives from both sides in the conflict. They must bring with them authentic information."

Mr. Pipp then got into communication with Miss Morgan and Miss Shelley. Madame Schwimmer came

(Continued on page 23)

This photograph taken in front of the Highland Park plant gives a glimpse of the 29,000 who work in one division of Henry Ford's industries.

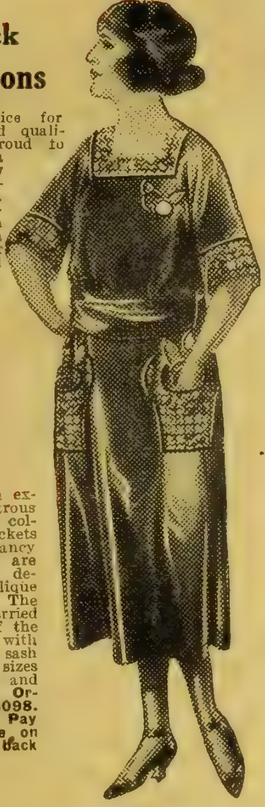
SHAROOD'S OPPORTUNITY SALE

Things You Need Now At Amazing Cut Prices

Don't send one cent. Just letter or postcard brings you any of these smashed price bargains. Merely State Size and Write Your Name and Address Plainly to Avoid Delay. Pay nothing till goods arrive—then only the amazing bargain price and postage. Money cheerfully refunded if you wish.

Sharood leads again in the Bargain World. Never before have you been able to buy at such cut prices while prices everywhere else were soaring skyward. Better buy now, folks. Stock up against the higher prices that will soon be upon us.

Rich Black Sateen Aprons

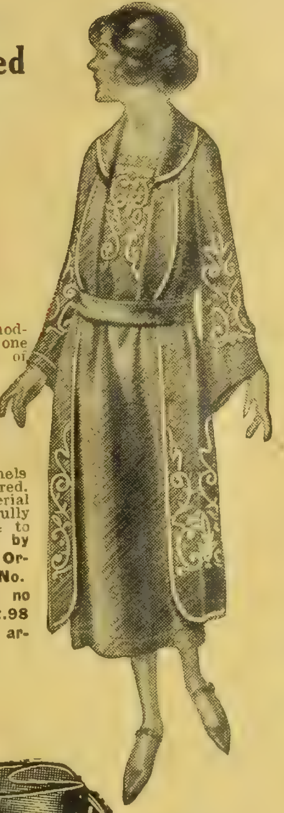


Amazingly low price for such truly splendid quality. Sharood is proud to recommend such a bargain to any woman who appreciates real value. And this apron represents not only a neat saving, but a charming style for house wear. Send for your size today—quick!

$\$1^{79}$

The material is an excellent soft lustrous black sateen with collar, cuffs and pockets of good grade fancy cretonne. Pockets are a novelty basket design with applique flower trimming. The same effect is carried out on one side of the waist. Designed with wide self-material sash belt all around, sizes small, medium and large. Big value. **Order by No. 96E5098. Send no money. Pay $1.79 and postage on arrival. Money back if not satisfied.**

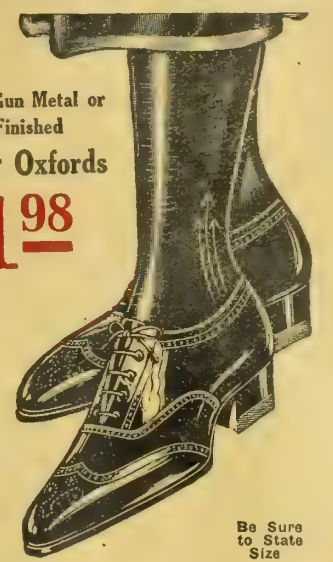
Exquisitely Embroidered Gabardine Dress



$\$2^{98}$

This delightful model is sure to be one of the favorites of the season. It is of beautiful cotton gabardine in navy blue or brown. The vestee, smart bell sleeves and fashionable panels richly embroidered. The self material belt ties gracefully at back. Sizes 34 to 44. **Order Navy by No. 96E5525. Order Brown by No. 96E5526. Send no money. Pay $2.98 and postage on arrival.**

Women's Gun Metal or Calf-Finished Leather Oxfords



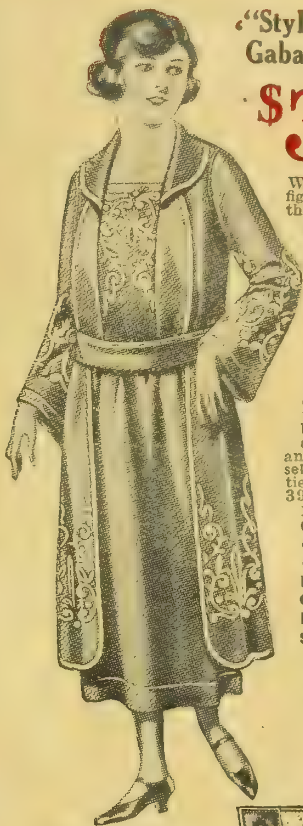
$\$1^{98}$

A REAL MONEY SAVER

Be Sure to State Size

Made with imitation shield tip and medallion perforated vamp; perforated lace stay and circular foxing. Has medium rubber heel and medium pointed toe. Sizes 2½ to 8, wide widths. **Order patent by No. 96A64. Order gunmetal by No. 96A69. Order brown by No. 96A70. Send no money. Pay $1.98 and postage on arrival.**

"Stylish Stout" Gabardine Dress



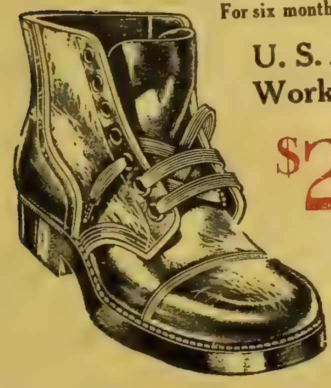
$\$3^{98}$

Women of large figure will see in this new model their ideal dress. This is a special design, planned to give long slendering lines to stout figures. Note how the collar, revers and panels carry out the long effect. Note, too, the attractive embroidery on sleeves, vestee and panels. The self-material belt ties at back. Sizes 39 to 53. In three popular shades. **Order Navy by No. 96E5470. Order Black by No. 96E5471. Order Brown by No. 96E5472. Send no money. Pay $3.98 and postage for any color on arrival. State size.**

GUARANTEED

For six months' wear

U. S. Army Work Shoe



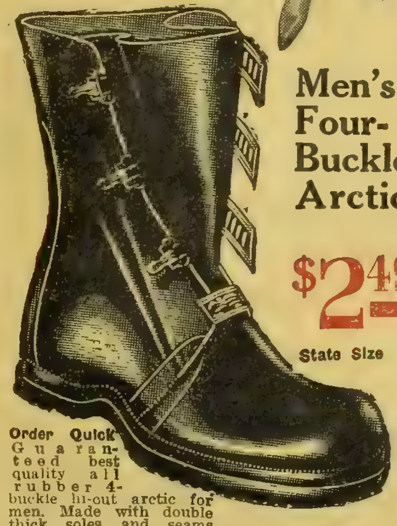
$\$2^{98}$

Men! Don't lose a moment in ordering this wonderful brown work shoe. It is made of leather as near waterproof as can be made—solid leather through and through with full grain leather uppers, guaranteed to wear six months. Easily worth $5.00. Two full, heavy double soles, sewed and nailed for greater strength. Extra wide, full leather counter, riveted to prevent ripping. Sizes 7 to 11, wide widths. **Order by No. 96699. Send no money. Pay $2.98 and postage on arrival.**

Boy's Guaranteed Shoes

Six months' guarantee. Two full green chrome leather soles. Solid leather heels. Made on Munsey type army last. Barnyard acid-proof. Solid leather insoles. Sizes 1 to 5½. Wide widths. State size wanted. Send no money. **Order by No. 96A550. Pay $2.69 and postage on arrival.**

Men's Four-Buckle Arctics



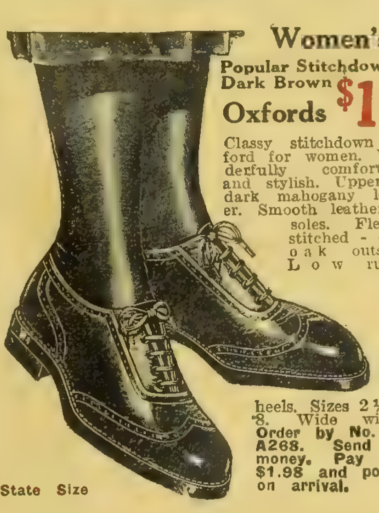
$\$2^{49}$

State Size

Order Quick Guaranteed best quality all rubber 4-buckle hi-cut arctic for men. Made with double thick soles and seams reinforced. Snow-excluding tongue. Furnished in men's sizes 6 to 15. Wide widths. Sensational value. Send quick. **Order by No. 96A990. Send no money. Pay $2.49 and postage on arrival.**

Women's Popular Stitchdown Dark Brown Oxfords

$\$1^{98}$



State Size

Classy stitchdown Oxford for women. Wonderfully comfortable and stylish. Uppers of dark mahogany leather. Smooth leather insoles. Flexible stitched-down oak outsoles. Low rubber heels. Sizes 2½ to 8. Wide widths. **Order by No. 96-A268. Send no money. Pay only $1.98 and postage on arrival.**

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

REGENERATIVE RECEIVING SET

IF you have built a regenerative receiving set as described in our past issue, or if you have bought one or received one for Christmas, you will now be listening-in for the broadcasted programs, and some of you will be having trouble in getting the set to function properly.

Tuning a set would be very simple if the broadcasting stations were all on different wave lengths or if there were only a very few of them, but at present there are over 600 such stations and one must tune carefully to prevent interference from the undesireable stations.

Set your vario-coupler switch on point 1 and then the grid variometer on zero also the plate variometer on zero, turn on the current from your A battery till your bulb burns quite brightly, and the turn grid and plate variometers a little at a time until you hear a hissing in your receivers, then keep adjusting until you can keep the hiss steady, and make it stop by a slight turn of either knob. Try to get this hissing at different points, should you be tuning at about the right wave length for a broadcasting station you should hear a flutelike note that goes up and down the scale as you turn your knobs a very little, the point you must reach is the dead point between two high tones as you bring them down to no note. If you get no flute like note turn your vario-coupler to point 2 and try over again, turning your dials slowly and carefully and not quickly as you will pass right past the correct spot without knowing it and miss the broadcast.

Each adjustment must be made carefully, from step to step, when you once hear the clear flute like note, tune very carfully, first making a note just where you heard it, so that should you lose it you will know where to turn again to hear it. When you have once heard the music or taking, you can tune at different points and try it in clearer and stronger, each time you will get it better.

Don't be discouraged, if you do not get it the first time, try again, and if you can get some one to help you who has a set, you may be saved a lot of time by being guided by the one who has had experience.

BROADCAST BILL'S RADIOLAY

HAD some snow out here last week, first we've had this years' reckon that's to let us know winter's gettin' near. 'Course winter has advantages, there's nothin' much to do, no corn to plow, er cultivate, but there's a cow er two that every mornin', hot er cold, to milk out in the shed, while all you city fellers are aucked in yer comfy bed. With winter there comes Christmas time with all its joy an' cheer, which after all, I reckon, is the bast time of the year. With snow an' sleet comes coastin' an' a lot of bob sled rides an' when the creek is frozen we kin skate a bit besides. I've noticed too, in winter, radio "comes in" the best, which bein' true I spose that I should ferget about the rest of winter's inconveniences like thawin' out the pump, with weather down to zero, when yer swing yer arms an' jump to keep up circulation. Gosh! I hate to do the chores when its as cold inside the barn as it is out of doors. When I get up these mornin's it's as dark as pitch outside an' 'fore I get the chores done I am almost froze beside. Last week I caught an awful cold, worst one I've had fer years. My nose wuz like an eight-day clock, an' eyes chuck full of tears; my back ached an' my head ached, I felt ninety-four years old. I wish some doc could find out how such things could be controlled. I soaked my dainty feet in mustard baths till they were pink—I'd hate to tell you how much lemonade Min made me drink. All wrapped up in a comforter there's nothin' I could do but listen to my Radio an' I wuz feelin' blue because on every Tuesday night they broadcast singin' lessons which helps me find an outlet fer my musical expressions. While I don't need no lessons still it keeps me up to date on how to tell the other boys who ain't so fortunate. But Tuesday I wuz feelin' bad, it kinda got my goat—all stuffed up with that cold of mine I couldn't sing a note.

FARM MECHANICS

BREAKING CONCRETE

FARMERS make very hard work of breaking up concrete structures. As concrete construction is becoming increasingly common on farms, they should understand how to break them up when necessary.

I will describe how I demolished a concrete base recently. It was built in the shape of steps. The top slab was three feet wide and twelve feet long; the one beneath that, five feet wide and fourteen feet long; the third, seven feet wide and sixteen feet long, and the bottom slab was about seven inches thick. Three inch wooden piles with one inch spikes driven in their sides in all directions and extending about six inches above the ground formed the anchorage around which the concrete for the first course was poured. Then four steel bars ran all the way up through the four slabs and all slabs were reinforced by coarse mesh wire incorporated in them. To break this base with sledge hammers would have been a heart and back breaking job.

With fifty-seven pounds of twenty percent ammonia dynamite, it was easy. I borrowed a contractor's compressed and drill and with a 1½ inch drill, put down hole two feet deep and about three feet apart.

I loaded ten holes at a time. The charge per hole was one quarter pound of dynamite. We couldn't use heavier shots because of a five inch steam pipe carrying 175 pounds pressure located within four feet of the base. The charges were fired simultaneously with electric caps and a blasting machine. Damp clay was used for tamping. To prevent damage from flying debris, the blasts were covered with heavy wire screen and six railroad ties chained together.

Each shot broke out a lot of large lumps of the concrete. These were cleared away and other charges placed and fired as before.

When we reached the bottom slap and encountered the spiked piles on which it was built, I drove a pointed bar down under the slap and loaded charges in the earth close up against the concrete. The charges either lifted out the piles or cut them off below the ground level.

This was a simple and practical way to break up concrete. The job which was an unusually hard one was done in twenty hours. The ex-explosives cost $35.34.

Sow Seeds of Success IN YOUR GARDEN

Some vegetable gardens pay their owners $100 in returns for every $5 spent. They are a constant source of big profit. They yield the finest vegetables and yield lots of them, because they are planted with—

Isbell's Seeds "As They Grow Their Fame Grows" TRADE MARK

Isbell's Gardens Pay—for the same reason that pure-bred cattle produce pure-bred off-spring. Every ounce of Isbell Seed is tested. Isbell Seeds are Michigan grown; earliness, hardiness and sterling qualities are bred into them.

Write Today For This Guide to Better Crops

Isbell's 1923 Seed Annual is one of the most helpful catalogs published. It tells what and how to plant to get bumper crops—gives cultural directions—tells of the Isbell way of growing, selecting, testing and cleaning seeds. It's Free! If Ruptured Try This Free

Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands

Sent Free to Prove This

Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 408B Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers from a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risks just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.

Free for Rupture

NEW MEAT CURING BOOK SENT FREE TO FARMERS

It Tells How To Sugar Cure, Smoke and Sell All Kinds of Meat and Meat Products

Every farmer should read "Meat Production on the Farm," a new illustrated book which is being distributed free to farmers only. It tells how to cure, smoke and sell every kind of meat and explains quick, easy methods that produce fancy high-priced sugar-cured meats with no more trouble than plain "salt stuff." It also tells how to save spare parts and make sausages, head cheese, pickled meat and other delicacies.

Send your name to the E. H. Wright Co., 850 Broadway, Kansas City, Mo., and this book, priced regularly at $1, will come to you free. write for it today.—a card will do.

CURED HIS RUPTURE

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 210J Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

Uncle Rube Spinach Says

JEST A HORRID-SCAPE

EVERY little while, bein' gifted that way, I take my lantern an' go out an' see what the stars has to say.

An' you know, I kinda believe in stars? Not so much in movie stars, not since "Fatty" Arbuckle, Wallace Reid, Mary Miles Minter an' several others have fallen from grace—'course Fatty has been reinstated by Mr. Havs but that don't make Fatty a bit different then he wuz when he pulled the party where Virginia Rappe met her death. He's jest the same 'ol Fatty he wuz then—so you see I don't go by movie stars as I did.

I am jest given you what's revealed to me by readin' the stars what I can see with my lantern.

This bein' kind of a dark night there ain't revealed to me so much as there ort to be but I take it as it comes an' give it accordin'.

One of the great calamities 'at I see, first an' foremose is the meetin' of the legislatur'. A lot of men git together an' squabble an' fight for four months to do what ort to be done in thirty days easy.

They'll pass laws 'at nobody understands, repeal laws we've already learned, give work to courts an to city commissioners, raise taxes—whoa there! Say did you ever hear of a session of legislatur' 'at tried to lower taxes? No, by my whiskers! Ya never did—they jest try and see how much money can be raised an' then work overtime to see how they can spend it.

Well, the stars sex they'll be in operation any way so we might as well git ready for that.

An' then I see, by aid of my ol' lantern 'at some of our good citizens 'll try to git a law passed to make the sale of beer an' light wines legal. 'Course that won't cut much figger but it will give our law makers some material to quarrel 'bout for a month or so an' help to make their pay check look larger at the end of the session.

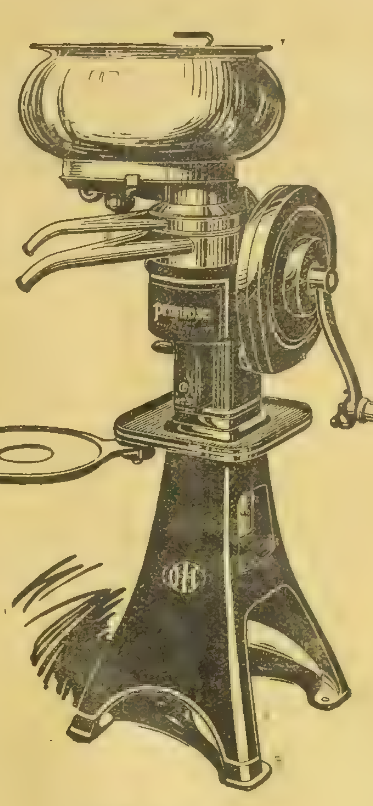
Oh I see a lot of things in the stars—not movie stars ya underunderstand—'cause they'r lots to be seen there but I'm getting 'long in years where such things don't matter so I'm sort of tryin' to forgit 'em—but in the every day life—well stars tell a whole lot of things if we only read 'em right.

And so this year, spite of the legislatur', spite of a good many other things not so bad, its goin to be a purty fair year after all.

Folk'll git married, babies'll be born, many'll die 'at never died before—yes an' be buried without hope—grafters'll ply their trade, coal miners'll talk strike an' prob'ly will strike and' coal'll be high an' you an' I'll cuss some under our breath—coal operators 'll wax rich an' defy the gover'ment' congressmen'll set tight an' let things run along. Mr. Pres'dent Harding 'll ask for more power an' not use the power he already has to control things. Henry Ford 'll pay the biggest wages of any man in this country an' make more money than any of 'em, women will wear skirts long and short—jest as they feel, but most of 'em 'll fail to vote when they have the chance—grass'll grow where it has always grown, farmers 'll git the small end of the deal 'cause they don't hang together as they should, divorces an' remarrages'll continue, wives 'll shoot and poisen their husbands as lovers an' go free. Fatty Arbuckle 'll come back, Wallie Reid 'll get well, bootleggers 'll keep on doin' business, dope 'll be peddled, preachers 'll preach, grafters 'll graft, flappers 'll flap, teachers 'll work for small pay, banks'll prosper and thieves 'll git in their work often an' vanish. In fact 'cordin' to the stars seen by my lantern this year'll be 'bout the same as other years only more so—shucks the ol' wick's burned out an' I 'm all in the dark. Cordially yours, UNCLE RUBE.

THANKS, MR, HALL

I am taking advantage of your offer to renew my subcription at two years for price of one. "I like the "Farmer" better than ever. I see much improvement in the "makin's" especially the last number (Dec. 9) and hope you can continue in the good work. Yours truly,—L. S. Hall, Lapeer County.



Cream Checks!

The Only Harvest That Lasts the Year 'round

The winter winds may blow, but the well-cared-for dairy herd produces valuable butter-fat from one year's end to the other. And the checks you get from this butter-fat come in mighty handy every week.

McCormick-Deering
[BALL-BEARING]
Primrose
Cream Separators

are found on many farms, helping the owners get all of the cream out of the milk, and in good condition to bring the top market price. If you are not familiar with the Primrose, you ought to go to the store of the McCormick-Deering dealer and see the one he has on his floor. It is the highest development in cream separator construction. For years the Primrose has been known to excel others in efficiency, durability, close-skimming, light-running, and long life. And the added feature of ball bearings now places it one more step ahead.

Ask for a Demonstration

You want to know more about how to get the most out of your year 'round cream check "harvest"—why not ask the McCormick-Deering dealer to demonstrate the Primrose to you? He will do it, and it won't obligate you either.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

(Copyright by James Oliver Curwood

SYNOPSIS

JOANNE GRAY is one of the passengers on the train bound for Tete Jaune Cache the home of "The Horde," where she has no friends and all will be strange to her. The train stops at a town composed of several tents, she goes in search of food and a bath. She is directed to "Bill's Shack" and here she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass out of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which they have passed. In but a moment the girl steps out, face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl money but before he can do so Aldous steps to the girl's side and floors Quade with a terriffic blow. Aldous hurries the girl away from the scene to the home of friends. Joanne tells Aldous she is going to Tete Jaune to find her husband Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner Culver Rann. Aldous believes FitzHugh is dead and locates a friend who declares he has seen the grave. Upon their arrival at Tete Jaune they are met by friends of Aldous, the Blacktons, at whose place they are to stay during their stop. Aldous visits an old friend, Donald MacDonald and then strolls about town. He is on the lookout for Quade and Rann and finds them at Rann's home. He spys upon them.

(Continued from Jan. 6th Issue.)

Swiftly and silently he went to the rear of the house. He tried the door and found it unlocked. Softly he opened it, swinging it inward an inch at a time, and scarcely breathing as he entered. It was dark, and there was a second closed door ahead of him. From beyond that he heard voices. He closed the outer door so that he would not be betrayed by a current of air or a sound from out of the night. Then, even more cautionsly and slowly, he began to open the second door.

An inch at first, then two inches, three inches—a foot—he worked the door inward. There was no light in this second room, and he lay close to the floor head and shoulders thrust well in. Through the third and open door he saw Quade and Culver Rann. Rann was laughing softly as he lighted a fresh cigar. His voice was quiet and good humored, but filled with a banter which it was evident Quade was not appreciating.

"You amaze me," Rann was saying. "You amaze me utterly. You have gone mad—mad as a rock rabbit, Quade! Do you mean to tell me you're on the square when you offer to turn over half of your share in the gold if I help you get this woman?"

"I do," replied Quade thickly. "I mean just that! And we'll put it down in black an' white—here, now. You fix the papers, same as any other deal, and I'll sign!"

For a moment Culver Rann did not reply. He leaned back in his chair, thrust the thumbs of his white hands in his vest, and sent a cloud of smoke above his head. Then he looked at Quade, a gleam of humor in his eyes.

"Nothing like a woman for turning a man's head soft," he chuckled. "Nothing in the world like it, 'pon my word, Quade. First it was DeBar. I don't believe we'd got him if he hadn't seen Marie riding her bear. Marie and her curls and her silk tights, Quade—s'elp me, it wouldn't have surprised me so much if you'd fallen love with her! And over this other woman you're as mad as Joe over Marie. At first sight he was ready to sell his soul for her. So—I gave Marie to him. And now, for some other woman, you're just as anxious to surrender a half of your share of what we've bought through Marie. Good heaven, man, if you were in love with Marie—"

"Damn Marie!" growled Quade. "I know the time when you were bugs over her yourself, Rann. It wasn't so long ago. If I'd looked at her then——"

"Of course, not then," interrupted Rann smilingly. "That would have been impolite, Quade, and not at all in agreement with the spirit of our brotherly partnership. And, you must admit, Marie is a devilish good-looking girl. I've surreudered her only for a brief spell to DeBar. After he has taken us to the gold—why, the poor idiot will probably have been sufficiently happy to——"

He paused, with a suggestive shrug of his shoulders.

"—go into cold storage," finished Quade.

"Exactly."

Again Quade leaned over the table, and for a moment there was silence, a silence which Aldous thought the pounding of his heart must betray him. He lay motionless on the floor. The nails of his fingers dug into the bare wood. Under the palm of his right hand lay his automatic.

Then Quade spoke. There must have been more in his face than was spoken in his words, for Culver Rann took the cigar from between his lips, and a light that was deadly serious slowly filled his eyes.

"Rann, we'll talk business!" Quade's voice was harsh, deep and quivering. "I want this woman. I may be a fool, but I'm going to have her. I might get her alone, but we have always done things together—It ain't a hard job. It's one of the easiest jobs we ever had. Only that fool of a writer is in the way—an' he's got to go anyway. We've got to get rid of him on account of the gold, him an' MacDonald. We've got that planned. An' I've showed you how we can get the woman, an' no one will ever know. Are you in on this with me?"

Culver Rann's reply was as quick and sharp as a pistol shot.

"I am."

For another moment there was silence. Then Quade asked:

"Any need of writin' Culver?"

"No. There can't be a written agreement in this deal because—it's dangerous. There won't be much said about old MacDonald. But questions, a good many of them, will be asked about this man Aldous. As for the woman——" Rann shrugged his shoulders with a sinister smile. "She will disappear like the others," he finished. "No one will ever get on to that. If she doesn't make a pal like Marie—after a time, why——"

Again Aldous saw that peculiar shrug of his shoulders.

Quade's head nodded on his thick neck.

"Of course, I agree to that," he said. "After a time. But most of 'em have come over, ain't they, Culver? Eh? Most of 'em have," he chuckled coarsely. "When you see her you won't call me a fool for going dippy over her, Culver. And she'll come around all right after she's gone through what we've planned for her. I'll make a pal of her!"

In that moment, as he listened, to the gloating passion and triumph in Quade's brutal voice, something broke in the brain of John Aldous. It filled him with a fire that devoured every thought or plan he had made, and in this madness he was consumed by a single desire—the desire to kill. And yet, as this conflagration surged through him, it did not blind or excite him. It did not make him leap forth in animal rage. It was something more terrible. He rose so quietly that the others did not see nor hear him in the dark outer room. They did not hear the slight metalic click of the safety on his pistol.

For the space of a breath he stood and looked at them. He no longer sensed the words Quade was uttering. He was going in coolly and calmly to kill them. There was something disagreeable in the flashing thought that he might kill them from where he stood. He would not fire from the dark. He wanted to experience the exquisite sensation of that one first moment when they would writhe back from him, and see in him the presence of death. He would give them but one minute of life—just that one. Then he would kill.

With his pistol ready in his hand he stepped out into the lighted room.

"Good evening, gentlemen!" he said.

CHAPER XIII

For a space of perhaps twenty seconds after John Aldous announced himself there was no visible sign of life on the part of either Quade or Culver Rann. The latter set stunned. Not the movement of a finger broke the stonelike immobility of his attitude. His eyes were like two dark coals gazing steadily as a serpent's over Quade's hunched shoulders and bowed head. Quade seemed as if frozen on the point of speaking to Rann. One hand was still poised above the table. It was he who broke the tense lifeless tableau.

Slowly, almost as slowly as Aldous had opened the door, Quade turned his head, and stared into the coldly smiling face of the man whom he had plotted to kill, and saw the gleaming pistol in his hand. A curious look overcame his pouchy face, a look not altogether of terror—but of shock. He knew Aldous had heard. He accepted in an intant, and perceptibly, the significance of the pistol in his hand. But Culver Rann sat like a rock. His face expressed nothing. Not for the smallest part of a second had he betrayed any emotion that might be throbbing within him. In spite of himself Aldous admired the man's unflinching nerve.

"Good evening, gentlemen!" he repeated.

Then Rann leaned slowly forward over the table. One hand rose to his moustache. It was his right hand. The other was visible. Quade pulled himself together and stepped to the end of the table, his two empty hands in front of him. Aldous, still smiling, faced Rann's glittering eyes and covered him with his automatic. Culver Rann twisted the end of his moustache, and smiled back.

"Well?" he said. "Is it checkmate?"

"It is," replied Aldous. "I've promised you scoundrels one minute of life. I guess that minute is about up."

The last word was scarcely out of his mouth when the room was in darkness—a darkness so complete and sudden that for an instant his hand faltered, and in that instant he heard the overturning of a chair and the falling of a body. Twice his automatic sent a lightning-flash of fire where Culver Rann had sat; twice it spat thread-like ribbons of flame through the blackness where Quade had stood. He knew what had happened and also what to expect if he lost out now. The curiosly shaped iron lamp had concealed an electric bulb, and Rann had turned off the switch-key under the table. He had no further time to think. An object came hurtling through the thick gloom and fell with terrific force on his outstretched pistol arm. His automatic flew from his hand and struck against the wall. Unarmed, he sprang back toward the open door—full into the arms of Quade!

Aldous knew that it was Quade and not Culver Rann, and he struck out with all the force he could gather in a short-arm blow. His fist landed against Quade's thick neck. Again and again he struck, and Quade's grip loosened. In another moment he would have reached the door if Rann had not caught him from behind. Never had Aldous felt the clutch of hands like those of the womanish hands of Culver Rann.. It was as if sinuous fingers of steel were burying themselves in his flesh. Before they found his throat he flung himself backward with all his weight, and with a tremendous effort he freed himself.

Both Quade and Culver Rann now stood between him and the door. He could hear Quade's deep, panting breath. Rann, as before, was as silent as death. Then he heard the door close. A key clicked in the lock. He was trapped.

"Turn on the light, Billy," he heard Rann say in a quiet, unexcited voice. "We've got this housebreaker cornered, and he's lost his

Fruit and Orchard

QUESTIONS INVITED

—:—

Edited by

Frank D. Wells

THE FUTURE

THE indications are that orchard planting will be extensive for at least two years to come. Nursery men are reporting a shortage in some varieties now, with many weeks remaining before orders will cease coming in. Peach stock is in the lead as is to be expected, but apple is a good second, the call for cherry is evidence of a rapidly growing interest in this fruit, while the plum is by no means neglected. On account of the blight the pear has been in disfavor, but even with that against the fruit an unusual number of trees will be set next spring.

Now what will be the result of this heavy planting? Well, for one thing many trees will be set where they ought not to be. Thousands of acres will be used for orchards which better be kept for other purposes. The result is a loss to the growers and little benefit to anybody, except the nursery man who sells the stock.

But there is much to encourage the man who is in the game to stay. The demand for fruit is increasing. It is no longer a luxury, but a food necessary to the health and welfare of the people. Not only is the amount consumed per capita on the increase, but new markets are being opened up and this will continue for many years to come. Better means for transportation ought soon to bring not only Europe, but Mexico, South America and even South Africa within reach of our apple.

At home the uses of fruits are becoming more numerous. A few years ago the suggestion that sugar could be made out of apples would now sounded ridiculous. Now it is to be expected in the near future. If the apple, why not other fruits?

Prohibition has increased the demand for fruits and this will to some extent continue, even though the country again becomes wet. Fruit juices have the virtues without the vices of the stronger beverages.

However we may look at it, the future is bright for the grower who will produce a good class of fruit. As for the other kind, no sympathy need be wasted there anyhow.

SETTING OUT PEACH TREES

I want to set out some peach trees next spring and have not ordered the stock. The two-years trees are much cheaper than the three-year stock. Would you consider them as good? The agent wants me to take the three year trees and says they will bear quicker. I want fruit as soon as I can get it.—H. T. R., Davisburg, Michigan.

—It is not probable that either you or the agent or any of your neighbors ever saw any three-year stock from a nursery. Now and then there are cut-backs', but they are save. Those trees were planted at the same time which was in the fall of 1920, they were budded in 1921 and dug in the autumn of 1922. Those large trees are nearly overgrown stock. Most orchard men of experiences prefer medium trees to the large size. Plant them side by side. The chances are that they will bear at the same time. As for living, the odds are in favor of the smaller trees.

TIME TO PRUNE GRAPE VINES

When is the time to prune grape vines and when should cuttings be made? How long would you make them?—C. J. N., Pontiac, Michigan.

—March is the favorite month for pruning and cuttings are made at the same time. Make them long enough to include three joints. Bury in a box of moist sand, top end up, keep in a cool place.

FUR DEPARTMENT

Edited by A. R. HARDING, America's Foremost Author and Trapper

QUESTIONS INVITED

SKUNK AND MUSKRAT RAISING

I have been thinking of trying skunk and muskrat raising. My farm is mostly work land and if I tried muskrat I would have to make an artificial pond. Do you think muskrat could be raised on grass and green feed in the summer or would they have to have wild grasses and roots? Do they eat the roots of grass in summer or just the wild grass itself? Could they be fed on clover hay in winter? I know they will eat quite a variety of feeds.

I have been told that it is a simple matter for anyone to operate on young skunk and take away the scent sack. Is this so? Can you tell me where there is a skunk farm that I can buy breeding stock from?—Inqurer, Clinton County, Michigan.

—There are thousands of small ponds, lakes, marshes, etc., in the state that it would be best to rent or buy such rather than to go to much expense to make an artificial pond. If you have a place where you can make a pond cheaply then it will pay. Yes muskrat can be raised on "grass and not green feed in the summer" but they like roots best. I do not think that muskrat would relish clover hay, but probably if fed from a silo it would be eaten. I think best to raise turnips, carrots, pumpkins, corn, altho it is roots of flag, wild rice and other water growing plants that muskrat like best. The would-be muskrat raiser had best get the food supply under way before getting too many muskrat for after they are numerous they do not allow the spreading of the food supply. It is a good plan to plant flag (cattail) sow wild rice, etc., even before stocking up a new pond or swamp for the muskrat will increase faster than the food supply. Most ponds and swamps are worth far more, acre for acre, to raise muskrat than is the best of land for farming or pasturing. The time is fast approaching when the many swamps, ponds and small lakes will annually be bringing to their owners a harvest of muskrat pelts, worth far more than any other crop the farm produces on the same number of acres, and at less cost.

Most raisers of skunk now remove the scent sacks which is easily done. The method is fully explained and illustrated in Fur Farming, a 278 page book, dealing with the raising of skunk, muskrat and other fur animals, price $1.00. The book can be gotten of the Michigan Business Farmer.

Coon and mink are two animals that do not require much space to raise and are also money makers if rightly handled. There is room for thousands to engage in fur raising—in fact if many do not the supply will not be enough in a very few years.

The New Improved Walsh No-Buckle Harness

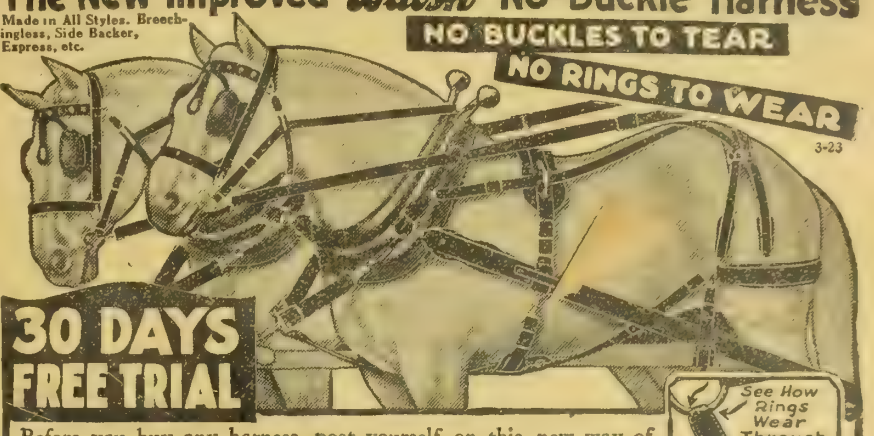
Made in All Styles. Breechingless, Side Backer, Express, etc.

NO BUCKLES TO TEAR

NO RINGS TO WEAR

3-23

30 DAYS FREE TRIAL



Before you buy any harness, post yourself on this new way of making harness, which is three times stronger than buckle harness. Let me send you a set of Walsh No-Buckle Harness on 30 Days' Free Trial. Let me show you why this harness is three times stronger without buckles, also how much better looking and handier in every way. No obligation on your part. If not convinced, send it back at my expense. The Walsh is a proven success on thousands of farms for over eight years.

THREE TIMES STRONGER THAN BUCKLE HARNESS

Buckles Weaken and Tear Straps. As an example, a Walsh 1⅛ inch breeching strap holds over 1100 lbs. The same strap with the buckle will break at the buckle at about 350 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles—easy to see why Walsh is three times stronger, lasts so much longer without repairs.

COSTS LESS — LASTS TWICE AS LONG

The Walsh cuts harness costs. The price is no more than buckle harness, yet it outlasts two buckle harness, and saves many a dollar in repairs. No patching, no mending, because no rings to wear straps in two, no buckles to weaken and tear straps. Easily adjusted to fit any horse, rust-proof hardware, improved hames, etc. Write today for new reduced prices.

$5 AFTER THIRTY DAYS' FREE TRIAL

Balance easy payments, or pay cash after trial if you wish. Selling direct from factory gives you highest quality harness possible to make at lowest prices. Write today for free illustrated book, prices, easy payments and 30 day trial offer, also how to make money showing Walsh Harness to your neighbors.

82¢ Buys All the Wall Paper *for* An Entire Room

Here is a big Montgomery Ward offer! A DOUBLE LENGTH roll of wall paper for only 6c. Enough to paper an entire room 10x12 for as little as 82c! This includes side wall, border and ceiling paper.

Send for our new book of Wall Paper Samples and see the MANY OTHER big values we have ready for you. It shows you our complete new assortment —grass-cloths, tapestries, oatmeal papers, leather patterns, fabrics. And all at prices to suit your pocketbook. Among the better grades, we have a big variety for only 50c and up per DOUBLE LENGTH roll. And remember, you get *twice as much wall paper* in one of our 16-yard DOUBLE LENGTH rolls as in the ordinary 8-yard *single roll.*

This Wall Paper Book FREE

Contains over 100 Actual Samples

Be sure to get a copy of this book before planning your Spring decorating. It is made up of actual large-sized samples. With each side wall is shown a sample of the border to match. Easy and pleasant to select your wall paper this way.

Send for this interesting and valuable book *today.* Ask for Wall Paper Sample Book, No. 1923DD Address our House nearest you.

"The Farm Paper of Service"

DAIRYING LEADS

THE development of the dairy industry has been one of the bright spots in the field of agriculture. It is today by far the largest branch of agriculture as well as the most profitable. The annual milk crop is close to one hundred billion pounds, the value of which in 1922 was greater than the output of the steel industry, more valuable than the combined wheat, oats, cotton and tobacco crops of that year and worth more than all the beef cattle, hogs and sheep put together. This gives one an idea of the magnitude of the business, which has further advantages in that after producing so much wealth the original animals are still left ready to do it over again, less fertility is removed from the soil than by any other crop or stock, and the income is steady—every month in the year.—F. J. Arend, President of the De Laval Separator Company.

THE NEED OF A FARM CREDIT BILL

SEVERAL measures are before congress at this very minute for the extention of credit to the farmers of this country. Luckily, as congress is now balanced there is little fear, but what one of the bills will pass both branches in record time and will find the willing signature of the President, who appears now to be fully awake to the condition which farmers have found themselves in the past two years.

Agriculture offers, the firmest foundation on which credit can be extended and the critics who cry "class legislation" do not take into consideration the fact that upon the farmer and his buying power depends the whole business fabric of prosperity.

The farmer asks only some form of long-time paper, which will permit him to buy his seed, his fertilizer or his live stock and will not force him to sell the resultant product until he can do so, on a profitable basis. The common three month loans, in the majority, fall due at approximately the same time and bankers crowding the farmer for their money, force on the market more that it can assimilate. We call this a "glutted market" and so accustomed has the whole farming business become to it, that we have taken it almost as a matter of course.

The past two years have forced action on this problem of credits and the next two months will, we predit, see one of the greatest steps forward ever made in the history of American agriculture. This may be the silver-lining to the readjustment clouds.

THE ISLE ROYALE PROJECT

DO not be lead quickly to a decision regarding the acquisition of Isle Royale, as a state or national park. This plan mentioned by the Governor in his message, is at present the center of a lively discussion in the metropolitan newspapers and there is such a cloud of propaganda smoke arising from both sides that it is rather hard to see the real facts as they exist.

There is no question as to the beauty of Isle Royale or its fitness to be used as a great natural park, the like of which could be found only by traveling as far west as Yellowstone. There is no question either, but what this and future generations would find full use for it. Each year distance is shortened by improved means of transportation. When Belle Island was acquired by the "village" of Detroit those who opposed it probably pointed out the fact, that few would ever paddle their canoes that distance to have a picnic!

The real question is, how can it be acquired, either by the state of Michigan or the national government without increasing present high taxes? It has been suggested that the copper company which owns it, should give it to the state for some concessions which would not involve the spending of any sum of money at the present time. Other plans too have been suggested, but the one that seems to us most logical, unless the national government should buy it with present appropriations, is that some living citizen or group of citizens should buy it, present it to the state and thus imortalize their names.

No credit can be given anyone for opposing some solution of a plan to retain for the coming generations one of the real gifts of the Almighty to mankind.

CURBING THE STOCK SALESMAN

MILLIONS of dollars worth of now worthless stock was sold in Michigan by glib, easy-talking salesmen who promised that with a small payment down, the stock they were selling, would pay for itself, from the dividends which it earned.

Farmers and city folks alike, took the bait; hook, line and sinker; paid ten per cent down, gave their note for the balance and hoped to pay up their notes with the dividend checks which the salesmen "promised" would be forthcoming, usually within a month, sometimes before the end of the year.

There is a bill before the present legislature which will put a good stiff bit in the mouth of every man who goes out to sell stock. It will make him liable for every statement and keep him properly tagged where the authorities can nab him when he slips back into any of his old, loose habits.

It may be a little late to lock the barn door so far as the farmer is concerned, because we are not exercised at the moment over the amount of stock being sold to farmers at this time, but with the more prosperous days which are flirting with us just ahead, it will be a mighty good protection for the future.

A GOOD TIME TO PUT TOOLS IN SHAPE

A GOOD many harsh and rather pointed remarks have been made about the farm machinery that ones sees standing in the fields where farmers left it when the last season's progress made it no longer necessary.

We do not like to believe, that farmers are, as a class, any less frugal or careful with their tools and machinery than any other group of out-door workers, but often an example of utter wastefulness is driven home to you as you pass a hay-loader, a mower or a binder, standing in an open field half buried by winter snows.

Our cover picture this issue suggests that now, in January, is a mighty good time to take inventory, look over your machinery, repair it where it needs repairing and cover it with rust resisting oil or other preparation so it will be all ready for use next spring and summer.

THE LONG WINTER EVENINGS

THE folks on the farm, of all people, are to be envied for the privilege of the long winter evenings, if the family knows how to enjoy them.

Good books, magazines, a game or some music while the fire crackles and the snow goes scurrying by the windows! That's contentment and if contentment is happiness, and happiness is all we on earth are striving for, then indeed are we rich, altho we have but few of the luxuries.

Now, has been added to the joy of the long winter evenings on the farm a thrill for thoes who are fortunate enough to possess the modern Alladin's lamp, a radio receiving set.

A few wires strung out towards the barn. A little bundle of electric equipment that is not so expensive but what the average farmer in Michigan can afford it and yet here is the key to the whole world of entertainment and education.

Father and the boys can build a good radio set and put it in operation. There are few small towns where this equipment is not sold and the catalog houses all list the complete or partly completed outfits.

We in Michigan are particularly fortunate because Detroit has two of the best sending stations in the country, operated by two of the great dailies who vie with one another in the quality of their daily and evening concerts. On the western part of the state the sending stations at Chicago and Milwaukee can be as easily heard and East Lansing is already broadcasting on a small scale.

Our radio editor, Mr. Ferris, is traveling about the state, carrying his receiving outfit and demonstrating it before local gatherings of farmers to whom he explains it mysteries. If he gets in your neighborhood do not fail to hear him or if your local church or organization want him for an evening, write him in care of this paper.

It will make the long winter evenings even brighter for us when we know there is a radio receiving set in the home of every one of our readers.

YANKS FROM THE RHINE RETURN

IT didn't take long after France had announced her intention of occupying the Ruhr district. for the powers that be at Washington to decide that, after all, there was no real reason for the more than a thousand American soldiers and their officers who were still keeping watch on the Rhine, to be there.

None of the former allies take very kindly to the program which France has set out to accomplish, and it makes the shivers run up and down your spinal column to contemplate what would happen if Grmany, resenting the action of France would call upon Russia and those two should attack France, who, because of her egotism had cut off the support of her former allies.

MICHIGAN'S NEW INFANT INDUSTRY

OVER on the west coast of Michigan there is developing an industry which for daily production makes Mr. Ford's factory look like a piker. The "baby chick" hatcheries in the country surrounding Holland and Zeeland, produce live, peeping little waifs of bird life faster than your Ingersoll can tick off the seconds.

Giant incubators, warmed by great coal-burning boilers, keep the vigil over millions of eggs, which once were intrusted to the motherly hen. Poultry raisers have come to recognize that it is far cheaper to buy "baby chicks" than it is to expended the effort and run the risks of individual

Michigan now leads every state in the United States in the production of "baby chicks" and the far-sighted men who have developed this amazing industry so quickly, have brought new cleaims for world-fame to our state.

OUR LANSING CORRESPONDENT

OVER at the state capitol, one of the most interesting sessions of the legislature, to farmers especially, is now well under way. There is more expected and more must be accomplished by this present legislature, than any which has met in years.

Tax reduction programs galore are offered for the relief of the present situation, many of them undoubtedly to make their sponsors strong with the home folks altho they have little excuse for appearing as practical schemes.

For the benefit of readers of The Business Farmer, we will have a digest of what is being accomplished at Lansing and our correspondent will also be glad to answer any questions or report on the voting of any individual member on any bill.

There are two fellows we never envy and one of them is the country doctor. To be routed out of bed at three a. m., pull on cold shoes, hitch-up or crank-up and drive out, miles and miles, to a house of sadness; or even worse, to get there and find only a case which a tablespoon of castor-oil the night before, would have easily cared for! The other fellow we don't envy is the fellow who has to collect for the doctor!

As the riveter on the 48 story Woolworth building said as he looked down at the street cleaner, on the busy thorofare four hundred feet below: "There ain't money enough to hire me to run the risks that man does!"

The automobile tourist may enjoy the paved roads most in the summer, but it is the farmer who appreciates what they mean during the winter months. Yet, how easy it is to forget that long stretch of clay, the deep ruts and belly-deep mud, when the hard road has covered it and ironed it out! As Eb Jones says: "Good roads are awful expensive, but they're awful nice!"

A noted Frenchman is in this country teaching us to say: "Day by day, in every way, I'm getting better and better!" That ought to be doubly good advice for the whole agricultural business and we would have a lot of good reasons on which to base it, too.

How has Mr. Pritchard been hitting the weather in your locality?

What the Neighbors Say

WANTS ISLE ROYALE

THE future of Isle Royale is at the the turning of the roads. One leads to private ownership, lumbering, fire, devastation and perpetual desolation. The other road leads to the purchase and preservation forever of this last bit of virgin territory by the state. The cost would not be excessive. With the recently acquired tract on the extremity of Kenesaw Point this would form an important link in our rapidly expanding state park system. The more and more picturesque state parks we have the more tourists will visit our state, with resulting benefit to all, not in the least among them the farmers. As the years go by and such places of beauty disappear from other places the more we could appreciate the foresight of our present-day legislators in providing such a refuge.

Opposition to the proposed purchase apparently comes entirely from chronic pessimists who habitually knock all such propositions through narrow-mindedness or fear of increased taxation. One statement was that it would require $4,000,000 to acquire it and twice as much to improve it. According to Governor Groesbeck the highest cost should not exceed $500,000 and might be less or possibly practically nothing. As to improving it it is highly improved already. There is not a foot of road constructed suitable for a whizzing automobile. Nature has taken infinite pains and centuries of labor to improve it; man may destroy it in a day.—Ralph Beebe, Wayne County, Michigan.

ADVERTISING WILL DO IT

DO you have any means of securing accurate statistics on results secured from advertising campaigns intended to increase the demand for different kinds of farm produce.

I am firmly convinced that intelligently conducted advertising campaigns would stimulate the demand for many farm products, such as potatoes, apples and dairy products, to an amazing degree but I fear it is going to require a lot of effort before our organization leaders will be brought to realize the importance of, and necessity for action.

Isn't there some city in Michigan, where the local co-op. or farm bureau would co-operate with city dealers in conducting a potato selling campaign, and secure fairly accurate check on results?

Personal inquiry among farmers seems to indicate that the per capita consumption of potatoes, in the rural districts, varies from three to fifteen bushels per year regardless of the market value of the spud. Imagine the result, if the national consumption should increase even to ten bushel per capita! I might add that strange tho it may sound, in the homes where most potatoes are eaten, the standard of living is often above the average.

When one thinks of a nation wide advertising campaign to increase the demand for essential food products, one is thinking in terms of a vast project, of course. It's going to require a lot of careful thought and planning, but why delay the beginning?

The farmers' business will never be on a sound economic basis, until he places it their himself, coddling and pampering will never do more than prolong slightly the life of the weakling. But the farmers' business will never be upon a sound basis until he adopts modern business methods.—Lisle E. Berry Sec'y-Treas. Cheboygan County Farm Bureau.

Mr. Berry has, in the above letter, struck at a very vital point in the whole present marketing proposition and one in which the Business Farmer is greatly interested. There actually exists in Michigan an opportunity to advertise beans, for instance, to the great consuming public of America, which is as obvious and practical as any staple now being alvertised by the growers' association of California. Citrus fruit growers were first to start the national advertising campaigns to increase the use of oranges, lemons and grape-fruit. Their success was so instantaneous and pronounced, that now prune, walnut, almond, and raisin growers of California advertise their products regularly in the newspapers and magazines which reach particularly the great city markets.

If, as Mr. Berry points out, the average consumption of potatoes could be increased to ten bushels per capita, there would actually be a potato shortage in the United States today! Can you imagine such a condition under present circumstances. Yet, probably a half-a-cent a bushel would have created a fund which would have screamed, hollered and repeated "EAT POTATOES EVERY MEAL!", from every magazine, newspaper and bill-board in the country.

There are a hundred and ten millions of people in these United States and they are easily reached because they all speak the same language. They are in the habit of buying what they see advertised, because they have come to realize that no inferior article can continue to be advertised, but the more advertising, the more sales and consequently the lessened cost to the consumer.

Michigan could afford a nevy bean advertising campaign of her own, because she produces more than 70% of all the beans sold in America. In a potato campaign she would be joined by Wisconsin, Maine and other states. The Business Farmer power to the carefully planned testout of a campaign to increase the sale of any product grown on the farms of Michigan, through advertising direct to the consumer. Let us hear from those who are with us or have suggestions for such a plan.

DEDICATED TO ALL TRUE PATRONS OF HUSBANDRY

PITY the farmer! Of course you do. What else could a human being do? With taxes up and prices down, on everything he hauls to town. He trys to think of the terrible cost of hours of labor that he has lost, for a bumper crop that they didn't need that wouldn't pay for the cost of seed. And a tear goes trickling down his face, as he grates his teeth and quickens his pace. For he knows that the interest has got to come, or, he will do what some others have done. And he turns the alarm on the clock ahead to shorten the hours that he stays in bed. (The efforts that should have made him rich is surely driving him into the ditch.) Then he thinks of Mollie who was fresh as a lark, But is now wrinkled and her face is dark. And he thinks of the Liberty bonds he bought, and almost wishes he'd went and fought, and died perhaps in that terrible hell, and buried beside his boy that fell. Alas! These thoughts have shattered his pride. His hoe has fallen by his side. "My son, to freedom's cause I gave." "Must his poor old father be a slave? "I'll not surrender. I'll try once more," as he gets a vision of the poorhouse door. But a great big motor goes whizzing by on a road he paid for at a price too high. The driver he lives in that fine abode. Why he bought the bonds that built this road. He opposes a tax on gasoline, because, he's driving a big machine. "For two cents a gallon," I've heard him say "'twould cost three shillings to drive all day." They voted the bonds to build the road. It's no more than right they should carry the load. "And father he left me my castle so fine. He made it lumbering Michigan pine. And I'd spend a million to defeat that bill fore I'd give a penny to grade that hill." Well Molly I guess we'll haft to roam when we lose our heart, we lose our home. For the mortgage is held by John McLean, who opposes the tax on gasoline. So we'll leave the place where our children played, where we've loved and enjoyed and worked and prayed. And down in the valley in the quiet shade, where God has promised the rich won't be, you and I may be tax free.—C. P. Barry, County Mich.

Mining German Potash

Good Healthy Crops

It has long been known that *German Potash Salts* prevented certain plant diseases, as well as greatly increased the quantity and improved the quality of crops.

Scientific investigation now shows us that not only *Potash* but also *Magnesia* is required to prevent certain plant diseases.

The *German Potash Salts* contain *Magnesia* as well as *Potash.*

If you insist on having your fertilizer contain from 5 to 10 per cent of *Potash,* derived from *Genuine German Potash Salts,* you will secure at the same time enough magnesia to prevent plant diseases due to magnesia hunger.

For **Tobacco,** and for those **Fruits** which are injured by Chlorin, the fertilizer should carry 10 per cent of *Potash,* derived from *Sulfate of Potash or from Sulfate of Potash Magnesia.*

Use the latter if your tobacco leaves are not sound.

AS THE TWIG IS BENT

SEVERAL letters have come to my desk recently asking me to encourage a discussion on the bringing up of children. Since that to my mind, is women's best and biggest undertaking. I think it eminently fitting that we mothers and teachers and fathers too perhaps, exchange our ideas and speak our difficulties. One letter will be found in to-day's issue, on the subject.

I always feel particularly gentle toward little children, born into this world where everything is so big, so hard to understand, so full of don'ts, so full of places to get hurt, so full of stomach ackes and toothaches and heartaches. If added to all this then life is certainly not a pleasant place. No doubt most children get the love and gentleness they need but we all know that there are cases where they do not, as their are cases where not enough firmness is shown, one is as bad for the child as the other.

We must admit that children are also handicapped from the start by inherited characteristics, the faults if father and mother and many fathers and mothers before them and we must take into consideration that they have much to overcome. Are we not often aghast on coming upon some fault or failing of our own reflected in our youthful progeny?

Childhood is supposed to be the happiest time of life and if a child has favorable surroundings I believe it is, but we must remember that the disappointments of children are just as big to them and troubles are just as large as ours are to us and they have not our philosophy that enables us to hear ours with some degree of calmness and hope. We have learned that nothing is final, that if we are good fighters, which we all need to be that we may turn defeat into success, that, as Kipling says, we may build again with rusty, worn-out tools. A child cannot see beyond the present situation, he has no experience to draw from, so we must kindly and sympathetically, encourage and admonish and let him know that he may always draw upon our love and experience.

Gradually his confidence in our judgement will grow and we may be able to save him from many pitfalls.

I believe too, that when a parent finds he has made a mistake it is a good thing to own up, you can't fool a child very often, do you not often wonder just what children thinks about us grown ups? I believe they are generally to polite or too wise to tell.

This little talk is just an opener, there is much to be said but let us hear from our readers, we might take up topics in detail, such as:

Teaching manners.

Teaching children how to properly care for their bodies.

How to get along with other children.

How desirous it is to tell the truth.

How to get and keep their confidence.

LEAGUE OF WOMEN VOTERS

ONE of the best accomplishments of the League above mentioned, was the passage of the bill in September of 1922, providing independent citizenship for married women. The enactment of this law removed the last federal disability remaining after suffrage was granted.

I will give section 1, which fully explains the act.

"Independent citizenship of women to the end that no American citizen shall lose her citizenship by marrying an alien, and that no alien woman shall acquire American citizenship by marrying an American citizen, the choice of citizenship resting with the individual woman as it rests with the individual man in the present law."

The passage of this act was simply making the status of women equal with that of men, in obtaining citizenship, and on it's face it manifestly fair. Sometimes a peculiar case brings the matter to our minds. I have a friend who was born in Canada, coming here as a child, with her parents, she lived here 50 years, unmarried, and then found that she was not a citizen and the only way she could become one was to marry an American citizen! Her mother, brothers and married sisters were all citizens, but she could never become one (unless married) altho a loyal and patriotic American. This is just one of the good things the League has put thru.

The Farm Home
A Department for the Women
Edited by MRS. GRACE NELLIS JENNEY

POEMS MAY BE FOUND

IN the M. B. F., of December 23 I notice a request for the poems, Brier Rose and Lasca. Both of these poems are found in a book called, "The Speaker's Library." It is an old book. I have had mine about thirty years. It was edited by Daphne Dale and published by Elliot ¼ Beezley, Chicago, Ill., and Philadelphia, Pa.

We have been reading the M. B. F., about two years and I always enjoy the Home Department.

I would like to have discussed in this department the subject of training children. I try to teach and train my children in the right ways but they are so "harum-scarum," not at all the little "lady and gentleman" that some people think children should be and I wonder if I am failing in my duty in this respect.

Wishing all a Happy New Year.—Mrs. Maude Bacon.

HOW DID YOU REST LAST

HOW did you rest last night?
I've hard my Grand'pap say
Them words a thousand times,
that's right—
Jes' them words thataway,
As punctual-like as morning dast
To ever heave in sigh
Grand'pap 'ud allus haf to ast—
"How did you rest last night?"
Us young-uns used to grin
At breakfast on the sly,
And mock the wobble of his chin
And eyebrows helt so high
And kind: "How did you rest last
night?"
We'd mumble and let on
Our voices trimble and our sight
Wuz dim and hearing gone.
Bad as I ust to be
All I'm a wanting is
As pure and calm a sleep for me
And sweet a sleep as his.
And so I pray on Jedgement Day
To wake and with it's light
See his face dawn and hear him
say—
"How did you rest last night?"
—Riley.

UNDER PONTIUS PILOT

A READER of the Business Farmer asks me whether the author of the above mentioned book, Wm. Schuyler, really wrote the book from the letters mentioned in the translator's note or whether the letters themselves are imaginary. I have written a Mr. Chislom of Vermont who helped Mr. Schuyler in the translation according to the author's note, for information. This is a matter of general interest to all who know the book so I publish the request. The book is composed of letters written in Latin, originally, between two Roman citizens, one an officer in the army of Caesar and the other a philosopher and scholar living in Rome.

The book deals with the three years of Christ's active ministry and is most beautifully written and reverently expressed.

It makes the claim that Mary Magdalene was the Mary, who was the sister of Martha and Lazarus, this point has been often disputed. It gives a first hand description of the raising from the dead of Lazarus, with new details, also a conversation and description of Saul of Tarus, later Paul the Apostle, and many other details which I cannot take space to enumerate. If the letters are genuine, it is a valuable book, if fectitious then compelling piece of imagery but without historical value.

Any information that I am able to obtain will be published. I would advise any one to read the book whether the letters are found to be genuine or not. It is well worth the time spent in reading it.

HE REMEMBERED THE BIRDS

CHRISTMAS as I was taking a walk in a place where farmer's respective woodlots join making a tract of some 200 acres of forest, I was following a wood-trail of a neighbor and my attention was attracted to the numerous quail tracks, all seemed to be going in the same direction I was. Suddenly they flew up—two large flocks of them—and I saw a place under some ash trees where several square rods of snow and leaves had been turned over by them. I looked to see if there were many seeds on the ground and I discovered that my neighbor had sown wheat all over the place, and this was what the birds were after. This was a very immaterial act in itself, i.e., of taking a few handfuls of grain and scattering it for the birds, yet it set me to thinking just why my neighbor did it. Surely he did not expect any return from the birds themselves, for he is a renter on the place and the spot was nearly a mile from any fields he expected to cultivate; doubtless he himself would be bothered to explain; yet in reality he did it because his own Christmas would be more sweet to know that the wild things have one too. This goes to show the effect the coming of the Manger Child, nearly two thousand years ago, is still having in the world, and it bespeakes the truth of the prophecy of a time when the "lion and the lamb shall lie down together," and the whole world shall know that 'God is Love'."—A. D.

SOME GOOD RECIPES

Pancakes

1 egg, pinch of salt, 2½ cups of buttermilk or sour milk, ½ cup of cream 1½ teaspoon soda, flour to make batter.

I find by keeping back 1 cup of liquid and stirring balance a little thicker than desired, that the lumps stir out more easily, then last add your cup of liquid. In answer an inquiry in the January 6th issue.

Being the mother of four children under 7 years I find a flour sack at 5 cents each from our bakery makes a combination, or under waist and bloomers as well as linings for some of their dresses, also dish towels.

Here are drop cookie recipes. I find save heaps of time and a holiday cookie that takes a day to bake and lasts weeks.

Cream Cookies

2 eggs, 2 cups sugar, 2 cups sour cream (thick), 2 teaspoonfuls soda, 4 cups flour, pinch of salt and seasoning, nutmeg or vanilla, drop from dessert spoon.

Orange Cookies

2 cups sugar, pinch of salt, 1 cup of shortening (half butter and half lard) cream together, 1 cup of milk. Grated rind and juice of one orange, 5 cups sifted flour, 1 level teaspoon soda and 2 teaspoonfuls baking powder, rounding full.. Drop from dessert spoon and put raisin in top.

Molasses Cookies

½ cup sugar, 1 cup molasses, 2 tablespoonfuls butter, teaspoon ginger and a little cinnamon, 1 teaspoon soda dissolved in ¾ cup hot water. Mix stiff with flour, drop and bake.

Holiday Cookies

1 quart of molasses or 1 pint of strained honey may be used, 1 pint sour cream, 1 pound brown sugar, ½ cup shortening (melt), 1 oz. of cinnamon, ½ oz. cloves, 4 teaspoonfuls soda, ½ pound raisins, ½ pound nutmeats, 1 teaspoon salt and all the flour you can stir in, mix and let stand over night, then roll or cut out either squares or round. For a change one may ice them on top. A prosperous New Year to all.—Mrs. Alice R. Maurer.

PANCAKE RECIPE

1 cup graham flour, 1 cup buckwheat flour, 1 cup white flour, 1 tps salt, 4 level tps baking powder, 1 level tps baking soda, 1 T. syrup or sugar.

Sift together, the buckwheat and white flour, salt and b-powder, add to graham: add slowly, sufficient sweet milk (skimmed) to make batter of proper consistency, then add soda and syrup (or sugar) which have been dissolved together in a little boiling water. A trial or two will determine the quantity of milk required. Water may be substituted, but milk is preferable. The batch may be increased proportionately. This serves five or six people.

Syrup for Pancakes

A good syrup for pancakes is very quickly made by boiling together for a few minutes 1½ cups brown sugar and one cup of water.

Starch for "A Reader"

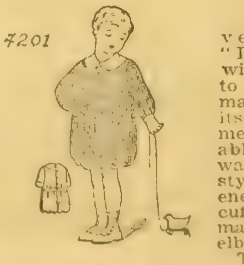
For about one quart of starch, use three level tablespoonfuls starch and dissolve in just sufficient cold water to make creamy, then add water that is actually boiling until starch is clear, stirring as water is slowly added. One teaspoon salt and one-half teaspoon lard, or other white grease should be added. This gives gloss and prevents the iron sticking. Keep covered until ready for use, to prevent the film you speak of. If you are careful to add just the right amount of water and have it always

AIDS TO GOOD DRESSING

For Simplicity, Service and Style

Address orders to Mrs. Jenney, Pattern Department, M. B. F.

Send 15 cents in silver or stamps for our Up-To-Date FALL AND WINTER 1922-1923 BOOK OF FASHIONS

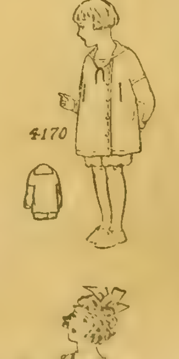


4201

A Popular Play Dress

4201. The simple version of the "Romper" fashion will readily appeal to the busy dress maker, because of its easy development and comfortable lines. Gingham was selected for this style with white linene for collar and cuffs. The sleeves may be in wrist or elbow length.

The Pattern is cut in 4 Sizes: 2, 3, 4, and 5 years. A 3 year size requires 2 1-2 yards of 27 inch material.

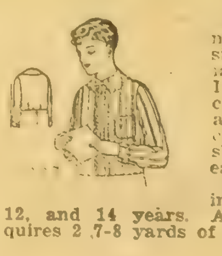


4170

A Natty Suit For The Little Man

4170. This is a comfortable style, with new and pleasing features. The inserted pockets in the smock will please the "little fellow." The "knickers" too boast of pockets that are large enough to hold many things boys like to keep with them.

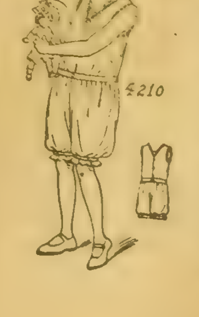
The Pattern is cut in 4 Sizes: 2, 3, 4, and 6 years. To make the suit for a 3 year size, will require 3 3-8 yards of 32 inch material. For knickers alone 1 3-8 yds is required.



A Practical Garment

4223. Gingham, madras, flannel and silk are good materials for this design. It has a comfortable collar, and serviceable pockets. It is cut on regulation shirt lines and is easy to develop.

The Pattern is cut in 5 Sizes: 6, 8, 10, 12, and 14 years. A 12 year size requires 2 7-8 yards of 32 inch material.



4210

A Popular Garment

4210. Both the waist and "knickers" in this style are practical and good for development in muslin, long cloth, creper, or flannelette.

The Pattern is cut in 5 Sizes 4, 6, 8, 10, and 12 years. A 6 year size requires 1 3-4 yards of 36 inch material.

bubbly boiling, you will not need to cook it on the stove. Do not dip garments into the whole amount of starch, but into a second basin put a portion to which you add water to thin it, always keeping the bulk covered. Use it as warm as you can; so that grease will not settle on top and cause garments to show grease spots.

Nut Loaf

2 cups graham flour, 1 cup white flour, 1 cup sugar, (white or brown) 1 cup nutmeats (cut up coarsely), 2 cups sour milk or buttermilk, 1 tps salt, 2 tps baking powder, 1 tps baking soda.

Put all dry ingredients into mixing bowl, sifting baking powder and white flour together; dissolve soda in milk. Bake in a long, large loaf one hour, or two small loaves about forty-five minutes, in slow oven. Pans should be greased and floured. —Mrs. J. C. T.

THE BATTLE OF LAKE ERIE

By Request

September tenth full well I wean
In Eighteen Hundred and Thirteen,
The weather mild the sky serene,
Commandered by bold Perry
Our saucy fleet at anchor lay,
In safety moored on Put-in-Bay.
T'wixt sunrise and the break of day
The British Fleet we chanced to meet.
Our Admiral said he would them greet.
With a welcome on Lake Erie.
Bold Barclay one day to Procter did say,
"I'm tired of Jamica and Sherry,
So let us go down to that new floating town
And get some American Perry,
Oh, cheap American Perry,
Most pleasant American Perry
We need only bear down, knock and then call
And we'll have the American Perry."

The above is taken from the book entitled Naval Battles and our New Navy. It is written on page 67 in the part called Naval Battles of America. It was written by Theodore Roosevelt before he became Vice-President. The book is by Shippen.—Subscriber.

If this bit of rhyme(?) was really composed by Theodore Roosevelt, it not only goes to show that one mind no matter how keen and splendid cannot do everything well.

CORRESPONDENCE COLUMN

Will someone please tell in the household column how to remove rust stains from white linen?—Mrs. K. M.

—Use lemon juice on stain then cover with salt and place in sunshine. This may have to be repeated, but I have never known it to fail.

Can anyone tell me how to make labels stick to tin cans, we make maple syrup and it is impossible to make the labels stick to them.—Mrs. J. A., Honor, Michigan.

I saw in the last M. B. F., that you wanted the address of the subscriber who made sleeveless sweaters. It is Mrs. B. C. Hoover, Tustin, Michigan.

Will the lady who wished to sell her old grand piano send me her full address? A subscriber wishes to purchase one.

Mrs. Rosa E.—If your tooth jumps use oil of cloves on cotton in the tooth. If it has a dull pain, use a good linament on the gums. Then get to a good dentist as soon as possible.

Will Mrs. Dyer, Eaton County, send me her full address? I have a letter here for her.

Miss E. A.—We know of no reliable house that takes handwork. There seems to be no demand to-day for crocheting or tatting. A number of young ladies whom I know, have made up a supply of pretty garments, simple ones for children, aprons and underwear for women, towels with cross-stitching and have sold their supply out time and again. Some have opened small shops and some have sold to private customers.

I have the poem "Lasca", and will mail it to the reader who wants it. Please send stamped and addressed envelope.

We thank Vern L. Doty for it. He would like the poem called "The Dead Man's Hand."

Will you kindly ask the readers of our page, if any one has ever had experience in making wool batts for comfortables "from the fleece as sheared."

I am sending a favorite recipe for desert, especially nice for parties, will serve fifteen people.

Part 1. 1 package of lemon jello, ½ cup of sugar, 1¼ cup of boiling water.

Part 2. 1 pint of sweet cream, 1 can of shredded pineapple, 1 teaspoon lemon extract.

When part one begins to thicken, whip cream, add fruit and cream to part one and whip again, let set, if made the day before needed it is much better.—Mrs. M. F.

REARRANGEMENT OF KITCHEN LIGHTENS HOUSEWIFE'S WORK

NEW equipment is not always required to make home kitchens more convenient and less tiring to work in, says a report to the United States Department of Agriculture on extension-agent work. Much can be done by rearranging the equipment already on hand, such as grouping objects commonly used in the preparation of food, or those used for washing or storing dishes, or articles belonging to the cleaning outfit. In many cases the attention of the housewife is drawn to the need of doing work requiring a good light by a window, or by having a good suspended light at night. One widely adopted improvement is that of giving old floors an easily cleaned surface. A number of simple contrivances can be made at home to lighten the housework, and frequently the farmer himself will assist by building shelves, a folding ironing board, dresser, wheel tray, and other labor-saving conveniences.

Improvements in farm kitchens are being carried on in practically all the States. Last year, through demonstrations given by extension workers, over 21,000 families are reported as adopting suggestions regarding home rearrangements and management; 7,000 kitchens were rearranged, 5,000 water systems installed, 3,000 washing machines and 4,000 steam-pressure cookers purchased, 65,000 homes screened, 4,000 septic tanks installed, and 7,000 lighting systems placed in farm homes.

THE HUNTED WOMAN

(Continued from page 16)

gun. Turn on the light—and I'll make one shot do the business!"

Aldous heard Quade moving, but he was not coming toward the table. Somewhere in the room was another switch connected with the lamp, and Aldous felt a curious chill shoot up his spine. Without seeing through that pitch darkness of the room he sensed the fact that Culver Rann was standing with his back against the locked door, a revolver in his hand. And he knew that Quade, feeling his way along the wall, held a revolver in his hand. Men like those two did not go unarmed. The instant the light was turned on they would do their work. As he stood, silent as Culver Rann, he realized the tables were turned. In that moment's madness roused by Quade's gloating assurance of possessing Joanne he had revealed himself like a fool, and now he was about to reap the whirlwind of his folly. Deliberately he had given himself up to his enemies. They, too, would be fools if they allowed him to escape alive.

He heard Quade stop. His thick hand was fumbling along the wall. Aldous guessed that he was feeling for the switch. He almost fancied he could see Rann's revolver levelled at him through the darkness. In that thrilling moment his mind worked wiith the swiftness of a powder flash. One of his hands touched the edge of the desk-table and he knew that he was standing directly opposite the curtained window, perhaps six feet from it. If he flung himself through the window the curtain would save him from being cut to pieces.

(Continued in Feb. 3rd issue)

THE SIGN For Your ROWENA OF QUALITY Protection

Lily White

"The Flour the Best Cooks Use"

A GOOD RECIPE FOR ENGLISH TEA BISCUITS
4 cups Lily White flour, 4 level teaspoons baking powder, 1 teaspoon salt, 2 tablespoons butter or fat, 1 cup of mashed potatoes, 1 cup of milk. Boil and mash potatoes, having them free from lumps. Sift the flour, salt and baking powder, add potatoes and rub in fat or butter. Mix to a light dough with egg and milk; roll out a little thinner than ordinary biscuits and bake in hot oven Serve hot. Use potatoes while warm

Our Guarantee
We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.
If for any reason whatsoever you do not, your dealer will refund the purchase price.---He's so instructed.

Continues Popular
For three generations Lily White has been "the flour the best cooks use." It continues popular because its quality always has been maintained.
For baking good-to-eat, wholesome breads Lily White has never been surpassed. This is because the wheat is selected and every step of the milling process is made for the purpose of producing breads you will like. But you will never appreciate Lily White to the fullest extent until you have experienced the pleasure of baking with it.

Why You Should Use Lily White
REASON No. 20
Untouched by Human Hands
We cannot over-emphasize the importance of clean flour. Dirt is not good to eat. It destroys flavor, and also it prevents the best baking. The wheat from which Lily White is milled is cleaned, washed and scoured eight times. It is milled until the granulation is uniform and perfect.
And throughout the entire process it is kept absolutely clean.

VALLEY CITY MILLING COMPANY
GRAND RAPIDS, MICHIGAN
"Millers for Sixty Years"

It Builds Strength
You have often wondered why a very little emulsified cod-liver oil, taken regularly, works almost like magic in building up the body.
Scott's Emulsion
enables you to enjoy the fullest benefits of the purest vitamine-bearing cod-liver oil. It helps keep the vital forces of the body strong. Be sure it's Scott's!

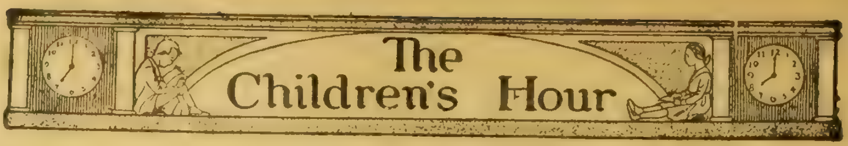
WHEN WRITING TO ADVERTISERS PLEASE MENTION THE M. B. F.



The Children's Hour

DEAR Nieces and Nephews: Did you ever stop to think what we owe the cow and what a great benefactor of mankind she is? Her association with man dates back twenty thousand years and her assistance to him his been such that she is known as man's greatest benefactor. During the dark ages of savegery she was found among the wild animals of the forest but as civilization penetrated the darkness the cow was called upon by man and she responded. She was first brought to America by Columbus on his second trip to this country and from that time to the present day she has been an important factor in making our country the greatest nation in the world. It was her hardy sons that helped the pioneers clear away the forest and fit the ground for crops and as the people moved westward they hauled the the great wagons containing the belongings of man and his family across the sun-scorched plains, thru valley and over great mountains to new lands that were to be future farms and cities. And now, as in those days, thru years of failures and want as well as prosperous times she produces the most nourishing and life-sustaining foods. She is the foster-mother and life itself to thousands upon thousands of little children all over this great world. She complains but little and is friend of man thru fair or foul weather. God bless "bossy", treat her kindly.

I believe several of my nieces and nephews made New Year resolutions, and one of the resolutions was that they would write a letter to Uncle Ned, because during the past couple of weeks I have received a great pile of the most interesting letters that have come to my desk in some time. After you read those on this page, which were taken from here and there from all I received, I am sure you will agree with me. Now, girls and boys, I hope you did not resolve to write just once but several times during the next year. I am always glad to hear from any of you and if you have any suggestions to offer on making our page more interesting write to me about them. This is your page.—UNCLE NED.

INTERESTING FACTS WORTH REMEMBERING

A man will die for want of air in five minutes; for want of sleep in ten days; for want of water in a week; for want of food at varying intervals, dependent on various circumstances.

OUR BOYS AND GIRLS

Dear Uncle Ned and Cousins:—I am a boy 10 years old and in the 5th grade in school. I live on a 40 acre farm. We raise fruit. The name of our farm is "Vinecroft." There is an old lime quarry and a spring just below it. There is also an old lime kiln. We have 2 cows, 2 heifers, 2 calves, one team of horses, and a truck. We have a young peach orchard. We live on a hill and can see the farmers at work in the spring. We also can see the village of Spring Arbor across the valley where my two brothers and sister go to school. My mother has just taken some bread out of the oven and it smells very good. She bakes sixteen loaves a week. She can make very good bread.—Anthony Zeller, Spring Arbor, Michigan.

Dear Uncle Ned:—Is there enough room for another cousin? If there is I would like to become a cousin. I like to read the interesting letters that the boys and girls write. I have been corresponding with Eunice Butler this year. I do not have much time to write letters because I have to help my daddy out doors. My brothers work in Detroit so I have a pair of overalls, a pair of four buckle overshoes and some leather mittens. I can do all the chores but milking.

I am eleven years old. I am in the 6th grade. I weigh eighty pounds. My birthday is July ninth. I have two sisters, and one brother, and one brother-in-law. My oldest sister is married and has two little boys. One is almost ten months old and the oldest will be three years old in May. My married sister teaches the school I go to. My mother takes care of the smallest baby.

Well Uncle Ned I am getting sleepy so I guess I had better close for this time, and I guess I had better go to bed. Good-bye for this time. Your niece and cousin.—Eunice Norma Traver, R. 5, Williamston, Michigan.

Dear Uncle Ned:—Just to begin the new year nicely I will write to the Children's Hour. I am 16 years old. I have one brother and three sisters and I am the youngest of the family. Did you all have a nice Christmas? We did, and we received many beautiful and useful gifts. Did you ever try having the members of the circle tell a story about a picture? Why don't you put a picture on the page and then have several stories told about it? I think that would prove interesting. Try it. Your sincere friend.—Madge Jane Hibberd, Remus, Michigan.

—Yes, Madge, we had a story contest about a picture. That was nearly a year ago. We will have another one of these days, so be ready to write a very good story because you will have some strong competition.—Uncle Ned.

Dear Uncle Ned:—Do you care to hear from a farmer boy? I have a good time reading the Children's page so I thought I'd write to the paper. I am only nine years old and I am the only boy in the family. I have four sisters. Their names are Marian, Ruth, Imogene and Madge. Of course you can imagine that makes life rather hard for me but I'm getting fat on it. I have lived on a farm all my life but maybe we'll go to the city soon. Do you think I'll like it? Will some of the little city boys and girls write and tell me what city life is like?—Charles F. Hibberd, Remus, Mich.

Dear Uncle Ned and M. B. F.:—Out of doors the snow is falling, but indoors it is very bright and cheery. I have finished reading the Children's Hour and have decided to join the circle of boys and girls. Don't you think it would be nice to have a continued story in our page. I think it would be just great. Ask the other boys and girls if they wouldn't like it too. I would like to have the other boys and girls write to me. I go to the Tinker school. It is two miles from my home. My school is in Isabella County.—Imogene Hibberd, Remus, Michigan.

Dear Uncle Ned:—I read the M. B. F., and like it very much. I think the Children's Hour is fine. I am a farmer girl. I am 14 years old and 60 inches tall. I weigh 120 pounds. My father is working in town and I have to do the chores before I go to school in the morning. We have 9 cows to milk, 2 horses to

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the [illegible] without experience or money [illegible] $250 to $500 per [illegible]

take care of 5 pigs and 100 chickens besides we have 2¼ miles to walk to school. I have 2 sisters and 4 brothers younger than I am. I go to the Hollister school and we have a very good teacher. We are carrying out the Health Crusade at our school and I think it is a wonderful help to make clean and honest boys and girls. I will close for this time hoping all the nieces and nephews have started a good New Year. From your niece.—Rosalie M. Dupraw, R. No. 1, Cadillac, Mich.

P. S.—I wish some of the other children would write to me.

Dear Uncle Ned:—I have been reading the letters and enjoy them very much. I am most sixteen. I live on a farm of forty acres. South east of our place is a huckleberry marsh. I have almost two miles to walk to school. We just moved here last month so you see I do not know very many. I get so homesick sometimes I wish I was back where I used to live. But I suppose we have to take things as they come. It is getting late so I will close. I sure would like to hear from some of the cousins. Your niece.—Ethel Philo, R. No. 3, Lansing, Michigan.

Dear Uncle Ned:—My father takes the M. B. F., and likes it very much. I am 9 years of age and in the 5th grade at school. I have one-half mile to go to school. My birthday is in June between the 1st and 15th, and to the one who guesses the right date I will write a letter. I have a brother 11 years of age and in the 6th grade at school and I have a baby brother that will be 3 months old the 13th of January. I have dark brown hair and eyes. I weigh 50 pounds and I am 3 feet and 11 inches tall. I suppose you got a lot of presents for Christmas. I got a doll head with brown curly hair and sleeping eyes, a pocket-book, 2 handkerchiefs, a bottle of perfume, 2 strings of beads, a drinking cup and a soap bubbler, a pin cushion, a sack of candy and peanuts and a big sack of Christmas candy. With love from—Beulah Morey, R. No. 3, Wheeler, Michigan.

The Collection Box

The purpose of this department is to protect our subscribers from fraudulent dealings or unfair treatment by persons or concerns at a distance.

In every case we will do our best to make a satisfactory settlement or force action, for which no charge for our services will ever be made, providing:

1.—The claim is made by a paid-up subscriber to The Business Farmer.

2.—The claim is not more than 6 mos. old.

3.—The claim is not local or between people within easy distance of one another. These should be settled at first hand and not attempted by mail.

Address all letters, giving full particulars, amounts, dates, etc., enclosing also your address label from the front cover of any issue to prove that you are a paid-up subscriber.

QUICK WORK

I wish to thank you for the favor you did me in helping to get the money due me from that New York company, I received your letter on the 19th stating that you were writing to them on that date, and on Dec. 25th I received the money which they owed me. Again I wish to thank you.—Mrs. Grant Howard, Osceola County, Michigan.

THANK YOU

I received an answer to the letter I wrote you to the Mercantile Credit Co. Many thanks to you—while I have not received the money, they gave me encouragement so will in return advance my subscription by sending you a dollar check. I am in favor of receiving the paper every two weeks as I think it is more eagerly looked forward to. It is the nicest and most interesting paper I have ever read.—Fred W. Schutt.

SETTLES ON STRENGTH OF GOVERNMENT REPORT

Beg to acknowledge receipt your your letter with reference to reliability of H. C. Gawn & Co., Cleveland, Ohio. For your information beg to advise you I settled with them in full on strength of Government Inspection report which was furnished me. I want to thank you for your suggestion and will sure be glad to call again should I need assistance.

WE'LL MEET YOU FARMERS' WEEK AT EAST LANSING

(Continued from page 3)

making the visit of the guests pleasant one.

Entertainment and education will be given in equal portion during the week. Music, moving pictures, pageants, and other entertainment features will be balanced off against the more serious side of the program, which will include educational material on all phases of farmers' problems.

One of the leading features of the week will be the big agricultural parade, to be held at one o'clock Thursday afternoon, February first. More than a mile of livestock and exhibits will pass in review during this pageant.

Special rates on all steam and electric railroads have been granted Farmers' Week visitors. These rates give round-trip tickets from any point in the state to East Lansing for one and one-half times the one way fare.

HISTORICAL BACKGROUND OF MICHIGAN AGRICULTURE

(Contiued from page 8)

igan. The Michigan Agricultural College set to work to find out if sugar beets could be grown in Michigan. Sugar beet seed was imported from Europe and was distributed to farmers for trial plantings, where the United States Weather Bureau determined that climatic conditions were favorable. A beet sugar factory was erected at Bay City in 1908 and still other factories were soon opened at Lansing, Owosso, and other points, and another great industry based on agriculture was established in the state, which, at last report, (1920) represents a capital investment of more than $22,000,000.

The growth of mint on the muck lands in the southwestern counties is quite as old as the state, and has not spread much from this region although it has been demonstrated that mint will grow and yield well of oil as far north as the Lake Superior country. The larger portion of the mint output of the United States is produced in the southwestern portion of Michigan and the northern region of Indian, and in order to stablize market conditions producers have not been keen for bringing new areas into mint production. The growing of celery and onions has also become important in southwestern Michigan and for the same reason, while a very excellent celery is produced on a small scale near Newberry, in the Upper Peninsula.

THE TRUTH ABOUT HENRY FORD

(Continued from page 6)

to Detroit, but Miss McMillan had returned to England. It was suggested that Mrs. Philip Snowdon, wife of a member of Parliment. and at that time lecturing in this country, be placed on the peace committee in place of Miss McMillan. Miss Shelley and Miss Morgan favored the idea of having many telegrams sent the president urging him to undertake the preliminaries of peace. They also wished to arrange a big peace parade in Detroit to attract the attention of the country. Mr. Pipp urged them to abandon all such plans.

"There is nothing to be gained by spectacular efforts," he said. you wished an audience with the president. It can be arranged. Publicity is altogether inadvisable and cannot help your cause."

SQUARE-DEAL

Read This Fence Book

Square Deal leads with its stiff, picket-like stay wires that make fewer posts necessary. Its well-crimped line wires spring back into place after every shock and strain. Famous Square Deal knot can never slip. Thoroughly well galvanized wires protect against rust. All these facts make Square Deal the fence that stands tight and trim, looks better, wears longer and therefore costs less.

2 Books FREE

Ropp's New Calculator tells you your grain and livestock profits; measures capacities of cribs, wagons, silos; figures interest, wages; contains commercial law, parcel post rates, etc. Sent with Square Deal catalog.

Both books FREE to Land Owners. Write; tell us when you expect to buy more fence.

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent, simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

FIFTEEN YEARS OF WOOD LIFE TRAGEDY

(Continued from page 6)

bed even the distant tundras of their life .

In the United States even more than in Canada are we today seeing and feeling the effects of an appalling devastation. My own state of Michigan is an example. The story of its outraged forests and wild life is a tragedy of desecration, of money-lust, of personal selfishness and political incompetence and stupidity. Michigan is a particularly good state to look at in these last days of forest and wild life simply because of the fact that God intended it to be the greatest water, forest and wild life paradise on the American continent. No other state was so completely endowed with all things or so richly stored with possibilities at the beginning. Its wild life and forest resources have been worth billions, and had these natural gifts been harvested instead of slaughtered they would be worth billions today. Yet, in this state, never have we had a man technically trained and educated in conservation matters at the head of our conservation affairs. The present Director of our Conservation Department is a man who has been thirty years in politics. Our Secretary of Conservation is a newspaper man. And only a few days ago the dean of American forestry, Professor Filbert Roth, Professor of Forestry in the University of Michigan, found it necessary to resign from our Conservation Commission because he could no longer fight against the environment which made his life-long experience and technical worth of no practical value at all.

This system is not the fault of an individual or individuals. It is perfectly legitimate for politicians, newspapermen, railroad engineers, lawyers, preachers or candle-stick makers to run the vast natural resources of any state if the people so will. They cannot be held accountable for the fact that they are not technically skilled forestry men or that they have not had the long and intensive training, education, and scientific application of study which every other great corporation on earth would demand of those in charge of its resources. The people themselves are at fault. They alone are to blame for not rising in the power of their vote and bringing about a condition where the very best men that money and science can produce are employed as the guardians and care-takers of our forests and wild life, our lakes and streams. Until that time comes, until every governor and every legislature in every state demand the very highest of skill, training, intelligence and technical ability at the heads of our conservation activities, we must miserably fail.

The tremedous loss which has occurred throughout the United States because of lack of these things is shown by conditions as they exist in my own state Michigan. Because of timber-slaughter and forest fires over one-third of Michigan is virtually bankrupt, paying no more in taxes than the cost of collecting the taxes, unable to build roads and schools, and even unable to provide police protection. Fourteen million acres, or over twenty thousand of our fifty-seven thousand square miles are idle, barren and fire-blasted. In 1890 Michigan was the greatest lumber state in the Union, and the annual value of her lumber products was $70,000,000. Today Michigan is consuming between two and three times the lumber she produces, and is now one of the thirty wood-importing states in America, and the freight rates and increased cost of her imported timber alone equal the total value of her lumber products in that year of 1890. The hickory for the wheels of her automobiles comes from Arkansas and Mississippi; the oak for her furniture is cut in Louisianna and Tennessee. Michigan does not even supply herself with enough telephone poles and railroad ties, but imports the poles from Idaho and the ties from Virginia.

In spite of the newspaper propaganda which is always sent out in great volumes from the center of political activities, our wild life has gone rapidly with our forests. Of our two thousand miles of inland waters at least fifty percent, or one thousand square miles, have been robbed and polluted until they are now what is technically known as "barren." Our grayling is utterly extinct. Our trout streams are going swiftly, and are not twenty percent of what they were a few years ago. While energy and money have been expended in importing and propagating the ring-necked pheasant, a semi-domestic fowl that will forever be impossible as a game-bird, our native partridge has been neglected until pot-hunters, if they were allowed to exist today, would starve to death. And while raindeer, an animal that has been domesticated for more than fifteen centuries, have been imported into our northwoods, where they are cared for and fenced and fed like cattle, one of the finest of all game animals, the black bear, is still killed in our state as "vermin."

During the two years of 1919 and 1920 there were 1,442 forest fires in Michigan, and these fires burned over 620,493 acres of forest land or one thousand square miles. At the ridiculously low rate of $50 an acre this means a total loss of over $30,000,000 in those two years, or $10 for every man, woman and child in the state. Whle our political regime estimates Michigan's forest-fire loss at only $2,000,000 a year, experts trained in their business have estimated the loss at $100,000,000 a year. I have split this in two, and estimate it at $50,000,000.

These figures for 1919 and 1920 are tragic enough, but in the year 1921 there were 1,028 forest fires in Michigan, or almost as many as in the proceeding two years combined.

I have always hunted, have always loved the woods, have lived in them a great deal of my time. The money which carried me through college I earned at trapping. But it is only when I view my experiences of the past few years that I see the tragedy of today in all its naked horror. With wild life not only going, but almost gone it seems to me little less than criminal that the people of great commonwealths will still allow politicians to run their conservation affairs. I feel and see the sickening effect of it. A great corporation that builds automobiles would consider it sucidal to place a plumber or a carpenter at its head. A big hotel would not place its management in the hands of a stone-cutter. Yet the people of a state, the mightiest of all corporations, will see a petty politician, or a butcher, or a mechanical engineer in control of all the forest and wild life resources which God has seen fit to give it. To me this is little less than sacrilege. It is a body blow at the Great Giver of Things Himself. It is as senseless as placing a trained forester in command of a ship at sea, or a railroad engineer in charge of an electric light plant. Before success comes to us politics must go. The people of every state must make their governors and their legislatures see that conservation of forests and wild life is not for the hunter and fisherman alone. Trained men, skilled and intelligent in their professions, must replace those who are utterly unable to cope with the tragedy as it exists today. Ten years from now, five years from now, will be too late. And only the people can save us from an utter devastation. Only the people, with their power of the ballot, can put their lakes, their streams, and what wild life and forests they have left into hands capable of caring for them, perpetuating them, and increasing them. Intelligence, skill and technical ability will do these things; politics, vote-getters' appointments, and the ignorance and selyfish ambitions that build up political machines will bring still greater ruin.

People must come to an understanding of what conservation means. They must be made to realize that human life is absolutely dependent upon wild life and forests. Without these things we would become extinct as a race. If all the vegetation, all wild life and all forests should disappear tomorrow the human race would become extinct upon the face of the earth within a year. Without wood we would have no agriculture, no manufacture, no commerce. Civilization, as

(Continued on page 26)

Plan NOW for Your 1923 Barn Equipment Needs

Don't put it off until you get into the rush of Spring work. Just check (√) the items in which you are interested, tear out this page, write your name and address in the margin and mail it back to us. We'll give you complete information and prices on everything you need to make your barn modern and convenient.

Cured Her Rheumatism

Knowing from terrible experience the suffering caused by rheumatism, Mrs. J. E. Hurst, who lives at 608 E. Douglas Street, C-489, Bloomington, Ill., is so thankful at having cured herself that out of pure gratitude she is anxious to tell all other sufferers just how to get rid of their torture by a simple way at home.

Mrs. Hurst has nothing to sell. Merely mail your own name and address, and she will gladly send you this valuable information entirely free. Write her at once before you forget.

DAIRY and LIVESTOCK

FARMERS LOSE MONEY THRU IMPROPER STOCK SHIPMENTS

LIVESTOCK shippers frequently lose money by shipping improper mixtures of animals to market, an investigation by the United States Department of Agriculture shows.

Many instances of losses due to this cause have come to the department's attention. For example, a cooperative association in Indiana recently shipped a car containing 66 sheep and 6 cattle. The sheep weighed 5,195 pounds and the cattle 5,800 pounds. The total freight charge on the shipment was $105.60, or at the rate of 95c per 100 pounds.

The actual rates quotable from the point of shipment to point of destination were—sheep 48c and cattle 38c per 100 pounds. The high rate actually charged was due largely to the fact that the 6 cattle included in the shipment made it necessary to apply the cattle minimum weight of 22,000 pounds which may be compared with the sheep minimum of 12,000 and with 10,995 pounds which was the actual of the shipment. Had the cattle been excluded this car could have been forwarded at a total charge of only $57.60 instead of 105.60 which was actually paid. The charge for shipping the 6 cattle therefore was $48 which was an increase of 83% over the charge which would have been levid on a straight carload of sheep. Stating it differently the freight charge on the cattle amounted to 83c per 100 pounds.

The important fact to be borne in mind, the department says, is that as a rule where two or more kinds of stock are shipped in the same car the freight for the entire load is based on the highest minimum weight combined with the highest rate. A mixture of cattle and sheep therefore usually takes the cattle minimum weight and the sheep rate.

As a rule take the highest minimum weights, with hogs next, calves next and sheep the lowest. In the case of rates the order is generally reversed. Sheep take the highest rate, hogs and calves the next highest, with cattle generally taking the lowst rate.

In all cases, it is pointed out, the local agent should be consulted regarding minimum weights, foreign rates, freight rates, shrinkage allowances and any other pertinent matters if the shipper desires to forward his stock in the most economical manner.

STEER FEEDING

THE rations for feeding steers should be in most cases be built around the roughage the feeder has on hand. Where steer feeding is carried on extensively, corn silage, clover hay and shock corn are the most popular roughages and form an excellent basis for a good ration. When the gains are made by the steers, cost per pound of gain, the amount of beef produced from a given area and the labor involved in storing and feeding are considered, corn silage, where grown successfully, is recommended as the best available roughage.

The amount of silage that may be fed depends upon the size of the steers and the amount of silage and other roughages available. With steers weighing from 800 to 1,000 pounds, as much as 45 to 50 pounds per day may be fed to advantage at the forepart of the feeding period unless a heavy grain ration is given, in which case the steers would refuse such a heavy feed of silage. From 3 to 6 pounds of clover hay per day is usually fed, as very few feeders favor silage as a sole roughage.

Shock corn is fed extensively in some sections, the claim being made that a better finish is produced than by feeding silage. This no doubt is true, as the steers are allowed to choose the proportions of ears and stalks consumed. As the feeding period advances and the steers become more highly finished, they naturally become particular in what they consume and select more ears and fewer stalks. This produces a good finish, but a heavy grain ration is being consumed, while only a small portion of the stalks are being utilized. When an abundance of roughage is available, this plan gives good results, but a large amount of the stalks are wasted. If a silo is used, a larger number of cattle could be finished on the same amount of feed.

The amount of concentrates that should be fed depends upon the quality of the roughage, age of the cattle and the finish desired. Although yearlings or short two-year-olds make more economical gains than do older cattle, they require more grain to produce an equal finish. Corn is the best fattening feed, but barley can be used to good advantage. If the steers are fed a heavy grain ration, a protein supplement such as cottonseed meal or linseed oil meal should be added, but if little grain is given and the roughage consists largely of clover or alfalfa hay, no supplement may be needed. With silage in the ration the cottonseed meal is preferred, as it supplies the protein more cheaply per unit. With the roughage, linseed oil meal acts as a conditioner and keeps the digestive system in good working order. Not more than 2.75 pounds of cottonseed meal per 1,000 pounds live weight is recommended. There is no danger from this amount or slightly more, but any great excess, if continued over a long feeding period, is liable to cause slow poisoning and put the steers in an unthrifty condition.

A ration of corn silage, clover hay and cottonseed or oilmeal without any concentrates produces good results and a fairly high finish. At the Michigan Experiment Station in trials conducted during the past winter, steers fed an average of corn silage, 3.93 pounds of clover hay and 1.96 pounds of oilmeal per day gainer 2.6 pounds daily per day for the first 59 days. However, if a good finish is desired, more concentrates must be fed during the latter part of the feeding period. Accordingly these steers were given an average of 9.5 pounds of shelled corn per day for the last 84 days, the amount of silage being gradually reduced and the oilmeal increased to 2.25 pounds per day. The average daily gain per steer during this period was 2.22 pounds and for the whole feeding period 2.39 pounds per day.

In all cases hogs should follow steers to utilize the corn voided especially when shelled corn or shock corn is fed.

In the experiments mentioned above, with silage at $4.00 per ton, clover hay at $12.00 per ton, corn at 56 cents per bushel and linseed meal at $50.00 per ton, the cost per hundred pounds gain, not crediting the gains made by the hogs following the steers, was $9.1[illegible]. Crediting the gains made by the hogs, the cost of grains in the steers was $7.88 per hundredweight.

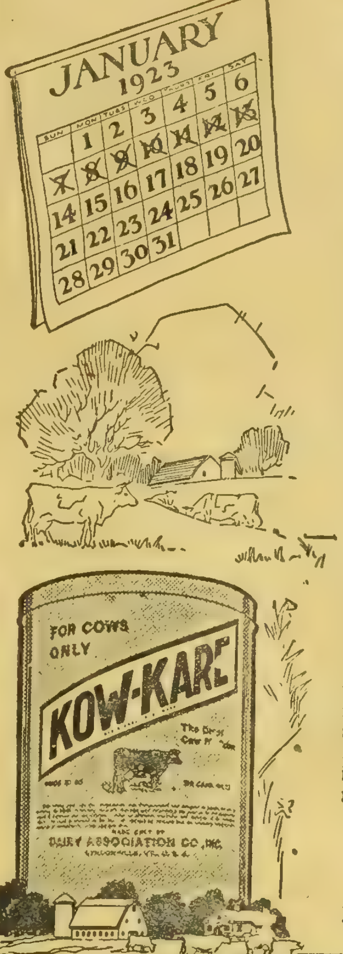
Many other factors must be considered if steer feeding is to prove successful. Clean, well ventilated quarters should be provided; clean water should be available at all times; all changes in feed, both in quantity and quality, should be made slowly; and the condition of the steers should be watched carefully and their appetite catered to, so that there is less danger of putting them off feed.—W. E. J. Edwards, Animal Husbandry Department, M. A. C.

EARLY MICHIGAN TRAINING PIAD

H. R. SMITH, who has judged the beef breeds for many years at the International and other shows, was this year assigned the more difficult task of judging Red polls and has just received from the management of the International Live Stock Exhibition a fine letter of commendation.

Howard was in Michigan last week attending a T. B. Conference at Lansing, and stated that much of his success in cattle judging he attributed to his early training in Michigan. Many of the older residents will remember his father, the late F. Hart Smith, when active with the State Fair had a considerable reputation in picking the right animals to head the line, in our local contests at that time.—G. B. S.

Prove it —this way



Don't take anyone's word for it that KOW KARE definitely increases the milk yield. Actual proof is too easy to secure.

Make a simple test — and make it now, so that you may benefit all winter and spring by what it proves. Select a part of your herd — even one cow — and place in her feed morning and evening, for just one week out of the month, a tablespoonful of KOW-KARE. If you keep accurate production records, you will be surprised at the increased yield, and at the surprisingly low cost of the treatment.

The reason is simple. The vigor of the cow's digestive and milk-making organs "runs down" during the winter months when green pasturage is not available. KOW KARE has the medicinal properties to keep these organs toned up and working at summer capacity.

It is just this building-up of the genital and digestive functions that makes KOW KARE so valuable in treating the diseases which originate in these very organs, such as *Abortion, Retained Afterbirth, Barrenness, Scours, Bunches, Milk Fever*, etc. No medicine shelf is complete without this nationally-used cow remedy.

KOW KARE is sold by feed dealers, druggists, general stores; large size $1.25; medium size 65c. If your dealer is not supplied we will send postpaid on receipt of price. Our valuable book, "*The Home Cow Doctor*" free.

VETERINARY DEPARTMENT

EMPLOY GOOD VETERINARIAN

We have a five year old cow. About four weeks after freshening her one teat became bloody, apparently there was no fever. It was like that for about a week and then we thought she was all right. About two days ago went bad again. Under these conditions could we beef her now if not cured.—V. H., Beulah, Mich.

—The cow in question is suffering a persistent corpus lateum in the ovary. If this is dislodged by a veterinarian who has had experience in the treatment of the reproductive organs of cattle it is quite probable that the cow will come in heat. —John P. Hutton, Associate Prof. of Surg. and Med., M. A. C.

COW HAS MASTITIS

I have a four year old heifer that freshened in April, 1921. She came in heat twice in the following August and was served by a bull but did not get with calf and has not come in heat since. Cow is fat and in good health and not giving milk. What can I do for her to bring her in heat?—J. D., Tyre, Mich.

—It is quite probable that there is from mastitis. It would be all right to beef her if she has not elevation of body temperature and there are no large abscesses in the udder. —John P. Hutton, Assoc. Prof. of Surg. and Med., M. A. C.

FIFTEEN YEARS OF WOOD LIFE TRAGEDY

(Continued from page 24)

we know it, would come to an end. In the United States today three billion dollars are invested in manufacturing plants where the raw material is wood. Fourteen million people, or one-eigtht of the total population of the country, are dependent upon these wood-working plants for their livelihoods. Yet within the last five years seven thousand sawmills have been junked in this country because of lack of material.

The hour for action is not ahead of us. It is here. Tomorrow will be too late. If every governor in every state realized this today there would be a wholesale resignation of incompetents throughout the land, and their replacement by men who are technically and professionally fitted. Conservation and propagation is a science. It is a life and death problem confronting a hundred and twenty million people in the United States. It is not a trivial matter to be juggled in the hands of politicians, or to be guided happen-chance by lucky appointees chosen from any and every walk of life. It is a problem for broad and intelligent minds technically and professionally prepared for the gigantic work in hand—the very men who are held back, kept out, and seldom employed. And there seems to me but one inference. Such men, the very biggest that can be secured for the work, will not prostitute their ability, their training and their profession by seeking political influence. They cannot swing counties or sections of states. Such men are employed in our colleges and our universities. Upon them we depend for the education of our children and the advancement of science. They have forgotten more about real conservation, than the conservation departments of all our states will ever know. Yet governors seldom appoint them, legislatures rarely employ them. Why?

BACK TO GOOD OLD MICHIGAN

As I am returning to Grand Haven, Michigan, (Good Old Michigan) you can send the next and following copies of M. B. F., to that address and oblige. I enjoy the paper and am disappointed if I miss a copy.

While I am not engaged in active farming my heart is in that work and as Gladstone said early in his political life that farming is one of the foremost foundations of any commonwealth I like to keep informed of its progress, for it is making progress now as at no other time in history. Thanking you, I remain, M. A. Connor, old address Salt Lake City, Utah, new address, Grand Haven, Michigan.

Poultry for Profit

BLACKHEAD OF POULTRY

INFECTIOUS entero-hepatitis is a communicable disease of turkeys and chickens characterized by an inflamation of the intestines, mainly the ceca (enteritis), and the liver (hepatitis). It is commonly called blackhead, due to the fact that a number of the affected birds show a bluish or purplish discoloration of the comb, wattles and skin of the head. This results from a lack of oxygenation of the blood and may accompany any disease which has a tendency to interfere with the circulation. A considerable number of fowls suffering from infectious entero-hepatitis fails to show this symptom. It should, therefore, be evident that the mere presence or absence of 'blackhead' does not mean so very much to the diagnostician.

Young turkeys from one month to one year of age are most susceptible to this disease. Older turkeys and chickens show a higher degree of resistance. Chickens or turkeys which have recovered from an attack of infectious entero-hepatitis may become carriers of the infection.

This disease is caused by a protozon microparasite called Histomonas meleagridis. Diseased flocks constitute the main source of infection. Droppings of sick birds or carriers contain the organism, it has also recently been shown that eggs of the intestinal worm of poultry called Heterakis papillosa may harbor the Histomonas meleagridis, a fact which will account for the persistence of the infection in contaminated soil. Infectious entero-hepatitis is most commonly spread by introducing diseased birds or carriers into healthy flocks. Persons, birds, rodents or other animals may also carry the infection from place to place mechanically.

Symptoms

Although the symptoms may vary in different outbreaks the following signs of disease are usually noticeable: Droppiness, ruffled feathers, slow movements, weakness, lack of appetite, yellow to yellowish green diarrhea, darkening of the comb, wattles and skin of the head, and in protracted cases emiciation. Death may occur as early as the third day after the first appearance of the symptoms. In chronic cases it may take three to four weeks before the disease results fatally. The mortality ranges from 10 to 90 per cent of the flock, depending upon the amount of exposure and to the age of the fowls.

The most common pathological changes consist of thickening and ulceration of the walls of the ceca (blind pouches) and spots on the liver. These spots vary in size and color at times present a sunken appearance. In general it may be said that they are gray and tinged with yellow, green or brown. In some cases no lesions appear in the liver. One case has been reported in which the primary lesion was found in the proventriculus. Secondary lesions appeared on the serous (outside) surfaces of adjacent organs while the ceca were normal.

A person familiar with entero-hepatitis will in most cases be able to diagnose the disease by its history, symptoms and lesions. However, it may at times be necessary to submit specimens for laboratory diagnosis. In such cases one should not make the mistake of sending the head of a diseased bird because it would in no way aid the diagnostician. If the laboratory is fairly close at hand the whole bird should be submitted, otherwise the ceca and liver may be sent in suitable containers.

Treatment

Ipecac, sulphur, triplesulpho-carbolates and catechu have been used as remedies against entero-hepatitis. The two former drugs have recently been proved worthless by carefully conducted experiments. Some people who have used triplesulpho-carbolates (1 tablet to each quart of drinking water) claim that affected fowls are greatly benefitted by this remedy. The main objection to this treatment seems to be the high price of the drug. Crude catechu given in the drinking water is inexpensive and convenient to apply. Those who have tried this remedy claim that excellent results can be obtained by giving one teaspoonful of powdered crude catechu to each gallon of drinking water, keeping this solution before the flock as long as the outbreak lasts. This dosage is for adult turkeys. In order to make the treatment more effective one should prepare the flock by feeding sparingly for one day. The following morning give 1 to 5 teaspoonfuls of epsom salts to each ten fowls (dose depending on age and size of birds) in wet mash. The amount of mash be such that it will be cleaned up at one meal The following afternoon put catechu in the drinking water. As catechu has a constipating effect it is advisable to give epsom salts from time to time to assure proper elimination. In this connection it may be well to warn against the use of drugs in order to "keep the flock well." A long continued use of medicines will invariably reduce the resistance of the fowls and will pave the way for diseases rather than prevent them. Perfect health is the result of good and sound parentage plus the regular application of the principles of hygiene and sanitation in feeding and housing.

Prevention

To rid soil of contamination with Histomonas meleagridis is exceedingly difficult especially if the fowls have been allowed to range on large fields. It is definitely known that the infection will remain in the soil for many years without losing its disease-producing power. On this account turkey raising has become unprofitable in certain parts of the United States. Successful prevention must therefore begin with clean premises and clean stock. Turkeys or chickens should never be introduced from infected flocks. If there is any doubt as to the absence of black-head infection in the flocks from which birds have been taken it is advisable to keep them confined in isolation quarters for at least one month before turning them loose. By doing this it is possible to detect any disaese which might be present and to avoid the infection of clean premises and healthy fowls. Eggs bought for hatching should be washed with 70 to 80 per cent alcohol as an additional safety measure. The Histamonas melegridis may be present on the shells. In view of the fact that infection may be introduced by means of mechanical carriers one should give this possibiiity due attention.

If the disease made its appearance on a farm all visibly affected should be preferably killed and burned. The houses should be cleaned, the litter burned and the walls, floors, roosts, feeding and drinking utensils should be disinfected by a liberal application of a 3 per cent solution of compound solution of cresol or a similar coal-tar product. This disinfection of the soil of run-ways and ranges is very difficult and the most radical efforts in this direction may result in disappointment. If turkey-raising is attempted on infected premises it is best to do so in enclosed yards in order to limit the source of infection and permit frequent disinfection. Under this system it is also possible to move the flock from one yard to another which will also aid in minimizing the amount of exposure, provided the evacuated yards are cleaned and disinfected every time the flock is moved. Stagnant pools of water must never be allowed on any poultry farm. If affected birds are to be held for treatment they should be kept apart from the ones which still appear to be well, and there may be some question as to the advisability of ever turning them loose among the flock again.—H. J. Stepseth, Bacteriological Section, M. A. C.

Get Winter Eggs!

See to it that there is song and cackle, scratch and action, going on in your poultry yard.

That's when the eggs come.

Feed

Dr. Hess Poultry

PAN-A-CE-A

See them get busy. It gives hens pep.

Nux Vomica is what does it—that greatest of all nerve tonics. A Pan-a-ce-a hen can't hold still. It's her good feeling that makes her hop around.

Pan-a-ce-a has Quassia in it to make hens hungry. Great combination! One makes them eat—the other helps them digest what they eat.

No dormant egg organs when that combination gets to work on a hen's system. You just get eggs—eggs.

A Pan-a-ce-a hen is always a hungry hen—an industrious hen. She gets off the roost winter mornings, ready to scratch for her breakfast.

Tell your dealer how many hens you have. There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

Make the First Cost the Only Cost

The value of a good silo reaches its greatest height in a Kalamazoo Glazed Tile Silo because the superior quality of Kalamazoo Tile means perfect ensilage. Stock raising and dairying are by far the most profitable types of farming, and silage is unquestionably the most economical feed for livestock and dairy cattle.

Kalamazoo Tile and Wood Silos

Our Glazed Tile silos are everlasting—decay-proof, storm-proof, vermin-proof; will not burn or blow down; save repair and paint bills. Three dead air spaces make perfect insulation against cold, heat, dampness. Kalamazoo Tile is made from selected quality clay in our own plant located in the center of the finest tile clay district. Our Wood Stave Silos have stood the test of 30 years. We are America's pioneer silo builders. All Kalamazoo Silos are fitted with continuous door frames of galvanized angle steel. Send for our free book of silo information.

BOWERS Colony Brooder

More Chicks---Less Cost

This brooder is a chick-saver and a money maker. It raises more and better chicks, at less cost than other brooders. Stove is best in the world to hold fire—air-tight and self-regulating. It burns soft coal—the cheapest brooder fuel—perfectly. Cuts fuel costs in half. Stove will also burn hard coal, wood, coke, etc. Regulator maintains even heat night and day. No trouble. Sizes for 500 or 1000 chicks.
Low priced Write TODAY.

Tippin, Box E, Findlay, Ohio. Member I. B. C. A.

ADVANTAGES IN BUYING CHICKS READY HATCHED

IT is estimated that last season (Spring of 1922) fully ten per cent of the chicks produced in the United States were hatched and sold right from the incubators by the mammoth hatcheries.

In northern Ohio are most plentiful and where they have been longest in operation the big majority of the farmers now buy their chicks from the hatcheries, having found this method is much more economical than trying to produce them at home by the old methods and has other advantages besides that of economy. Very few, if any, of these farmers have gone back to the old methods after once trying this way of supplying the needed chicks each spring.

To handle these chicks to the best advantage the only equipment needed is a suitable small house and a colony brooder stove. For 500 or less chicks a house 10x12 or 10x14 feet is required, This should be just high enough to allow the attendant to move about in it comfortably and should have a good tight floor. Many of these houses are mounted on runners, simply 2x4 or 2x6 timbers set up edgewise, and they may then readily be moved about from place to place as desired. The first cost of the 2 or 25 brood coops required to hen brood 400 or 500 chicks will more than cover the cost of such a house and the stove to go in it. Frequently there is a small building already at hand which may be converted into a very suitable brooder house.

When the attempt is made to produce the crop of chicks by the old method there is a great waste of time in setting and caring for a lot of hens, and later on a lot of small broods of chicks. Besides, the time of the hens throughout the hatching season is wasted, since they might just as well be producing eggs for the market during all this time. These eggs will go part way toward paying for the chicks. When the chicks are purchased they are all one age and one size throughout the growing season; also all one color if one variety is purchased and they will be nearly alike in feeding requirements. If the chicks are produced by the old methods they will be of many different ages and sizes, and frequently at the end of the hatching season the farmer's wife has not succeeded in getting nearly as many chicks as she had planned to have.

These chicks are shipped to the buyers as soon as they are nicely dried off in the incubators. They are mailed in boxes made especially for this purpose, and go safely 1,000 to 1,500 miles.

One of the greatest advantages, however, in buying chicks is the fact that such a purchase direct from a good hatchery enables the farmer to switch in one season and at practically no expense from a flock of mongrels, mixed breeds or an unsatisfactory flock of pure breds to a flock of good pure bred fowls or pullets, all one age, one size, one color and one in food requirements throughout the season. If a flock of 200 layers is desired, it is advisable to buy 500 chicks at one time. As a rule, one-half or more are mules, and, naturally, there may be some loss before maturity.

If these chicks are properly fed and cared for, there need be but little loss. We have known 500 chicks to be brought to maturity with a loss of only 20, and these were lost largely through accident.

As soon as the combs on the cockerals begin to show growth it is well to separate them from the pullets, and feed quite liberally. At ten or twelve weeks old these cockrels will be ready for the market and will bring in more actual cash than was paid for the entire bunch of chicks when purchased. Then also it will likely be advisable to dispose of all the old hen stock on the place to make room for the flock of pure bred pullets. This will mean putting the 200 old hens on the market, which will be another very considerable source of revenue.

We would sum up some of the advantages and money returns on the purchase of 500 chicks as follows:—

First, the saving of the time of the hens required to hatch and brood that number of chicks. Allowing 8 live chicks from each setting, it will require over 60 hens three weeks

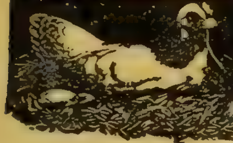
A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.



Working along entirely original lines Mr. Smith discovered why hens lay less in winter than in summer, and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certain to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large $1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only $1 on this introductory offer, otherwise, nothing.

Send no money—just your name and address to M. B. Smith, 1261 Coca Cola Building, Kansas City, Mo. The two $1 packages will be mailed immediately. When they arrive, pay the postman only $1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

WHEN WRITING TO ADVERTISERS MENTION THE M. B. F.

---

merely to hatch the chicks. Allowing 20 chicks to a brood it will require 25 hens for two months to brood them. This is equal to the loss of fully three months time on 25 hens. This, too, during the very best laying season. In these three months each hen would produce not less than 4 dozen eggs at the lowest estimate, meaning 100 dozen eggs, to say nothing at all about the value of the time saved by the attendant. It is very little more trouble or work to care for four or five hundred chicks in the proper brooder house than to take care of a couple of hens with broods. The next source of revenue would be say 200 cockerels at not less than 50 cents each. If properly finished and marketed they are more likely to bring 75 cents each. But we have shown a saving of at least $25 of eggs laid, and allowing $100 for 200 cockerels gives us a clear cash return of $125, and a flock of 200 pullets at 10 or 12 weeks old, the cost of the pullets being nothing whatever but the feed which they have consumed to that age. The 200 old hens which would be left and marketed in the fall, since the pullets would replace them would probably bring $150 more.

The brooder house and stove required should not cost over $60 to $70 but this is a permanent investment since they will last a lifetime.

A few words of caution. Beware of very cheap chicks. They may easily be too cheap to be good or prove satisfactory. Buy direct from a known hatchery. The men who, themselves, hatch the chicks and supervise the flocks from which the eggs come that produce the chicks. You will find the advertisements of such hatcheries in the leading farm publications. Usually the hatcheries are behind in filling orders during the rush season from the middle of March to the middle of May; hence, it is well to order quite early if the chicks are wanted on a certain date during this period. Provide also well in advance of the arrival of the chicks, a suitable house and brooder with which to raise them. As a rule, the hatchery men can advise you as to these brooder houses and stoves.

CHICK FEEDING

Great care in feeding young chicks should be exercised. A few don'ts should be observed.

1—Don't feed a chick till it is at least 48 hours out of the shell.
2—Don't feed too much at a time.
3—Don't feed sloppy foods.
4—Don't feed poor quality food.
5—Don't keep the chicks too warm or too cold.
6—Don't overcrowd your chicks.
7—Don't allow filth to accumulate in their quarters.
8—Don't keep chicks indoors too long.
9—Don't neglect keeping water and buttermilk or sour milk before them at all times.
10—Don't neglect the grit and fine oyster shells and charcoal.—M. A. C.

CO-OPERATIVE MARKETING OF EGGS

Co-operative egg selling associations have been organized by several farmers in several parts of the country. One of the most successful is in Orange township, Black Hawk County, Iowa.

"The object of the association is to produce better and more eggs. The eggs are guaranteed strictly fresh. Eggs must be gathered at least once a day in winter, twice a day in summer, and all male birds sold or shut up June 1. Each member is furnished a letter which is stamped on each egg sold by him and on each carton containing eggs. The producer must replace every egg that is not up to the guarantee. All eggs are sold at four cents a dozen above the market price. The association sells about 10,000 dozen eggs a year." (Iowa State College Bulletin No. 184.)

Dear Mr. Slocum—I am spreading the gospel of the M. B. F. among the ruralites. You surely are making a hit with them. Your December 9 issue was a hummer. Keep each number up to a high standard and you surely will win out so that in the near future you will be back to a weekly issue which will enable you to reach the one hundred thousand circulation mark. Respectfully yours, C. W. Eisenmann.

Keep the Business Farmer coming. See page 25.

MARKET FLASHES

MARKET SUMMARY

Wheat steady. Corn, oats and rye unchanged. Beans firm. Receipts of eggs large and prices easy to lower. Butter steady and supply small. Poultry market easy, owing to large supply and small demand. Dressed calves steady and hogs easy. Potatoes in active demand. Cattle dull and lower. Sheep firm.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET REVIEW

THE contrast between business in the United States and business conditions in European countries is very marked, and bringing about a restoration of pre-war conditions across the Atlantic is evidently going to be slow. One of the most important announcements made in this country is that of the railroads that record expenditures for new equipment and improvements are going to be made this year, and twenty-seven roads plan to spend more than $350,000,000. These systems have less than 40 per cent of the milage of the country, and their officers say that even greater expenditures will be made if conditions are favorable. "If it is to be assumed that an equal amount will be spent by railroads having the reminder of the mileage of the country," says the Railway Age, "the total expenditures for equipment and improvements will exceed $700,000,000." It is not generally believed, however that enough money will be spent this year to make good the deficiency caused by several years of stoppages of growth, and increases in expenditures are well safeguarded. Published statements just out show that the class 1 railroads earned much more money last year than in 1921, but they only earned 4.02 per cent on the investment in their property. It is learned that more traffic has been moving over the railroads recently than ever before this season. Our import trade looms up big for the past calendar year, and imports were around $400,000,000 greater than for 1921, but exports ran around $700,000,000 below those for 1921. The packers report that their export trade in meats is seriously injured by the European political situation, as well as economic conditions. On the other hand, the domestic trade in packing house products shows marked improvement, beef moving into trade channels more freely, while there has been a broad and strong demand for fresh pork. Money is loaned by the banks at unchanged rates, Chicago banks receiving from 5 to 5¼ per cent.

The Fall in Wheat Prices

The long upward movement in prices for wheat reflecting the large exports of wheat and flour from the United States and Canada, has been followed by big breaks in values, renewed warlike occurances in Germany and marked falling off in our exports of breadstuffs serving to bring a bearish sentiment among traders on the Chicago Board of Trade, and the former substantial premium over prices of a year ago has largely disappeared. Still some large foreign purchases of rye have been made within a short time, and it was reported that Germany bought in the first week of 1923 a total of 6,000,000 bushels of rye, the largest purchase of the season. Because of its relative cheapness, rye has all along been in large foreign demand, Germany leading in buying, and in all probability the surplus supply will all be needed. The visible rye supply in this country is placed at 10,865,000 bushels, comparing with 7,145,000 bushels a year ago; that of oats at 32,122,000 bushels, comparing with 67,182,000 bushels last year; and that of corn at 16,585,000 bushels, comparing with 24,787,000 bushels a year ago. Recent marketing of all grains reached the largest proportions seen in five years, and it is evident that farmers largely want to sell their surplus holdings or at least a fair share. The world's wheat crop is now placed at 2,932,000,000 bushels, comparing with 2,228,000,000 bushels for the year preceding the war's close. The flour trade is very dull, and large dealers are well supplied, while millers are buying only enough to keep the mills at work, because of the recent unsettled state of the wheat trade. Within a short period flour prices have declined from 50 to 75 cents a barrel. May wheat sells in Chicago at $1.19, compared with $1.12 a year ago; May corn around 72 cents, compared with 53 cents last year; May oats at 45 cents, compared with 38 cents a year ago;and May rye at 88½ cents, compared to 83¾ cents a year ago. Barley sells for cash at 57 to 60 cents.

The Cattle Industry

The markets of the country cannot use as many cattle to advantage as they could several weeks ago, and on days when supplies are much above the average prices are pretty sure to develope more or less weakness, as happened on last Monday, when a "run" of 24,740 head in the Chicago Stock Yards sent prices down from 15 to 25 cents for the principal part of the offerings. It should be stated, however that the country shippers are very apt to get in too many cattle at the beginning of the week, and later rallies are quite the usual occurance, as happened last Tuesday, when receipts of only 12,000 brought about a rally of 25 cents for the medium to pretty good grades. For several weeks the receipts have consisted of mainly short-fed and warmed up cattle, and the principal part of the offerings have sold far below prices paid for choice beef steers. Sales of the latter are made at a substantial premium, with the bulk of the beef steers bringing $8.25 to $10.50. The course of the cattle market last week was a surprise, prices being largely 50 cents higher, in spite of the heavy supplies, the Chicago receipts aggregating 60,800 head, comparing with 50,247 a week earlier and 66,968 a year ago. The best long fed steers sold at $10.50 to $11.85, and prime long yearlings sold at $11.75. Inferior steers sold at $6.50 to $7.50, not counting some on the canner order taken at $5 to $6.25. Stockers and feders sold mostly at $6 to $7.50, a few going at $8. Veal calves sold at $5 to $11.75 and butcher cows and heifers at $3.50 to $8.75. A year ago the best beef steers brought $10.

Large Marketing of Hogs

Owners of hogs as a class seem to be ready to get their hogs to market as soon as they are well finished, and for a week the Chicago market was liberally supplied, the receipts far exceeding those for a week earlier and those for the corresponding week last year. Naturally, some bad breaks in prices took place, notwithstanding an unusually large demand from eastern packing points, but most of the declines were really smaller than might have been expected with so many on sale, as many as 27,000 hogs being carried over unsold at night, largely held by the speculators. The bulk of the hogs offered sell within a range of 40 cents, with prime light hogs going highest and selling 25 cents above the best heavy butcher weights. Recent receipts averaged 239 pounds, comparing with 226 pounds a year ago and 219 pounds for the past ten-year average for corresponding weeks. Most of the time exports of lard and cured hog meats are much greater than a year ago, and the consumption of fresh pork in this country is on a big scale. Provisions are much higher than last year. Western markets are receiving this month far more hogs than a year ago, and Chicago's receipts for last week are around 275,500 head, the largest in four years, comparing with 227,677 a week earlier and 255,049 a year ago. Naturally prices went off, and on the closing day hogs sold at $6.70 to $8.55, comparing with $7.40 to $9 a week earlier and with $6 to $8.40 a year ago.

High Lamb Prices

Sheep and yearlings are marketed rather sparingly, most of the Chicago receipts consisting of lambs, prices for which rule far higher than in most past years. Of course, values rule lower at times, and this happens on such days as the big packers hold back after receiving supplies consigned to them direct from other western markets. Many of the lambs weigh 90 pounds or more, and killers discriminate against these, prefering the medium weights. Not many feeding lambs are offered, and they come high, the larger share going to Michigan. Feeders weighing around 60 pounds sell the highest. The shorn lambs sell $1.50 to $2.50 under prices quoted below for wooled lots. The sales were made on the Chicago market of lambs at $12.75 to $15, feeding lambs at $13.75 to $14.85 and yearlings at $10 to $13. A year ago the best lambs sold at $12.90.—Foote.

WHEAT

Last week was a period of light trading in the wheat market and changes in prices were small. Trading was light because of inability to figure out the trend of the market in the near future. Dealers were unable to understand how the reports from Europe are going to affect the future of the market. The movement of France to force the collection of a debt from a defeated nation has never been duplicated in history as far as grain dealers are able to see and they are at a loss to predict what the future may hold for the man who owns any wheat. Latest reports, however, indicate an early settlement between France and Germany and leaders are more optimistic and trading promises to be better before the close of the current week. It is a well known fact that Europe needs wheat and the American product will find a ready market if Europe can settle her internal troubles soon.

Prices

Detroit—Cash, No. 2 red, $1.35; No. 2 white and No. 2 mixed, $1.33.

Chicago—No. 2 hard, $1.19@1.21¼.

New York—No. 2 red, $1.34; No. 2 hard, $1,32½.

Prices one year ago—Detroit—No. 2 red, $1.19½; No. 2 white, $1.16½.

CORN

Corn ruled firm much of the time the past fortnight and the only thing that prevented substantial gains in prices was free selling whenever the market advanced. Shipments from the country showed a falling off and export demand improved. Although prices are higher than one year ago consumption of corn is heavy. The advance at Detroit during last week amounted to only 1 cent. Receipts at Chicago last week aggregated 4,358,000 bushels and shipments amounted to 2,623,000 bushels.

Prices

Detroit—Cash No. 2 yellow, 77c; No. 3, 76c; No. 4, 74c; No. 5, 72c.

Chicago—No. 2 mixed, 72@72¾c; No. 2 yellow, 72@73c.

New York—No. 2 yellow and No. 2 white, 90¼; No. 2 mixed, 89¾c.

Prices one year ago—Detroit—No. 2 yellow, 56c; No. 3 yellow, 51½c.

OATS

Trading in oats has been quiet the past fornight. Prices in this grain have followed the trend of those of other grains, while demand has ranged from nul to fair. Receipts are larger and Chicago reports domestic shipping demand has broadened out to a further extent.

Prices

Detroit—Cash No. 2 white, 50c; No. 3, 48½c; No. 4, 47c.

Chicago—No. 2 white, 44½@45½c.

New York—No. 2 white, 55½@56c.

Prices one year ago—Detroit—No. 2 white, 42c; No. 3, 39½c; No. 4, 36c.

RYE

Rye was easy the first half of the past fortnight and the price at Detroit declined 3 cents during the last week the tone changed to firm and there was a gain on this market of 1 cent.

Prices

Detroit—Cash No. 2, 91c.

Chicago—Cash No. 2, 87½c@87¾c.

Prices one year ago—Detroit—Cash No. 2, 83c.

BEANS

Bean prices are still climbing. The Detroit market advanced 60 cents during the past two weeks and the tone at present is firm and the market has a healthy look to it. The farmer who decided at threshing time last fall to hold his beans and still has them in good condition has made some money. And if present demand continues and the outlook for the future remains as bright he will make still more money by continuing to hold.

Prices

Detroit—C. H. P., $9 per cwt.

Prices one year ago—Detroit—C. H. P., $4.00.

Official U. S. Marketgram

U. S. Bureau of Agricultural Economics

Washington, D. C.,—For the week ending January 13, 1923.

FEED—Mill feed markets inactive with buyers and sellers far apart. Stocks mostly in second hands and firmly held because of improvement in grains. Wheat feeds slightly firmer on light offerings by mills. Oil meals easier and cottonseed meal quoted about $1 lower. Gluten feed prices advanced by the manufacturers $2 per ton. Hominy feed firm, price shade higher, demand and offerings light. Inferior and storage stocks good. Receipts and movement good. Quoted January 12, Bran $25.75; Middlings $24.50;Flour middlings $27.25; Rye middlings $23; Minneapolis gluten feed $44.35; Chicago; 34 per cent linseed meal $53.50 Minneapolis; $52.50 Buffalo; 36 per cent cottonseed meal $41 Memphis, $41.75 Atlanta; White Hominy feed $30 St. Louis, $31.50 Chicago; No. 1 Alfalfa meal $24.75 Kansas City.

DAIRY PRODUCTS—Butter markets which have been relatively steady throughout the week developed a sudden easy to weak feeling today where resulted in a sharp decline at New York. This was principally due to temporarily heavy receipts which included several thousand packages of imported butter from Denmark and Argentine. It is reported also that 3,000 packages from Australia and New Zealand arrived at San Francisco during the week. Closing prices, 92 score butter: New York 53c; Chicago 52c; Phila 54c; Boston 54½c. Advances in prices on Wisconsin cheese boards Monday have places trading on slightly higher basis than last week. Cheese prices at Wisconsin Primary markets January 12: Flats and Daisies 27c; Double Daisies 26¾c; Young Americas 26½c; Longhorns 26¾; Spuare Prints 27c.

POTATOES

The potato market was in fine condition last week and on Monday, January 15th the Detroit market advanced 10c. This commodity is active, demand very good and receipts are small at many points, New York being the only market complaining of large arrivals. There is a general feeling that the market is in a position for further advances in the near future.

Prices

Detroit—Michigan, $1.06@1.16.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of January 21

ROUGHLY speaking the average trend of the temperature in Michigan for the rest of January and the first few days of February will be upward. The rise will not be continuous during all this time as the "circuit" will be broken at the end of this or beginning of next week. This "break" will induce a change to much colder weather to affect the Central states. Conditions will gradually moderate then in Michigan until about the beginning of the second week in February at which time there will be another break with the result of more cold weather which will begin the next general downward trend of the temperature for this state.

Maximum temperatures between 40 and 50 degrees will effect Michigan about or before Wednesday of this week with rain, sleet or snow about the 23rd, 24th, and 25th. Winds are also expected to be strong at this time.

Following this storm center temperatures will fall to a minima of 10 to 15 degrees above zero in Michigan with the days during the latter part of the week remaining generally fair.

Week of January 28

The mild temperatures expected to be in full swing in Michigan about the beginning of this week should be taken as a warning that within two days the bottom will drop out of Medicine Hat and flood the state with cold, winter weather. Temperatures will then remain low until about Thursday but during the latter days of the week the mercury in the thermometer will again go higher reaching its maxima point about Friday or Saturday.

Rain or snow fall is not expected to be very heavy during first half of the week. There will be two general storm periods in Michigan this week—one at the beginning and the other near the end of the week. Both storm centers will bring high winds but during the latter part of week precipitation will be heavier.

The week ends with temperatures falling in this state and skies clearing but these conditions will not last long due to another storm that will be moving eastward from the Pacific coast states.

New York—No. 1 timothy, $24; No. 1 light clover mixed, $24 per ton.

Prices one year ago—Detroit—No. 1 timothy, $19@20; standard, $18@19; No. 1 clover mixed $15@16 per ton.

Alfalfa—Detroit—No. 1, $14@18 per ton; Chicago, No. 1, $22@24 per ton.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Tuesday, Jan. 16th

EGGS—Fresh, according to quality, 35@36½c; refrigerator, 26@29c per dozen.

BUTTER—Best creamery, in tubs, 48½@49c per lb.

APPLES—Greenings, $1.50@1.75; Baldwin, $1.25@1.50; Spy, $2.00@2.50; Jonathan, $1.75@2; other varieties, $1@1.50 per bu; western boxes, $2@3.

DRESSED HOGS—90 to 130 lbs, 11@12c; 130 to 160 lbs, 9@10c; heavy. 5@8c; per lb.

DRESSED CALVES—Best, 16@17c; medium, 14@15c per lb.

LIVE POULTRY—Best springs, 20@21c; leghorns, 17c; large fat hens, 23c; medium hens, 20@21c; small hens, 17c; old roosters, 15c; geese, 15@18c; large ducks 22@23c; small ducks, 18@20c; heavy turkeys, 32c; light turkeys and old toms, 25c per lb.

HIDES—No. 1 cured, 12c; No. 1 green, 11c; No. 1 cured bulls, 8c; No. 1 green bulls, 7c;No. 1 cured calf, 15c; No. 1 green calf, 14c; No. 1 cured kip, 12c; No. 1 green kip, 10c; No 1 horsehides $3; No. 2 horse hides, $2. Sheep pelts, 50@1.50. No. 2 hides, 1c under No. 1; calf and kip 1½c under No. 1.

WOOL

The steady to active tone prevailant in the wool market for some weeks past has translated itself into action and large quantities of wool are moving at steady to higher prices. All classes of wool are selling readily at top quotations and some grades are establishing new price levels.

LARGE PART OF ALFALFA MARKETED

More than half the marketable surplus of the 1922 alfalfa crop has already been marketed, a survey just completed by the United States Department of Agriculture indicates. A survey made Sept. 15th included a marketable surplus of about 15 per cent less than the amount marketed during 1921. It is now estimated that about 65 per cent of this surplus was marketed by December 15, compared with 45 per cent of the 1921 crop at the corresponding date last year.

The movement of timothy hay to market, however, has not been as heavy to date as for the corresponding period last year, the survey shows. It is estimated that 36 per cent of the marketable surplus had been marketed to December 15, compared with 38 per cent on December 15, 1921.

The increased demand for alfalfa has been reflected in the price trend. On September 15, No. 1 alfalfa was quoted at the principal markets at an average price of $21.50 per ton. On December 15, the average price of alfaalfa at the same markets was $23.75 per ton. This price was also $1 per ton higher than the average price of No. 1 alfalfa on December 15, 1921. Timothy prices, however, have had a downward trend and the average price of No. 1 timothy at the principal markets on December 15, 1922 was $21.50 per ton, compared with $22.50 on September 15.

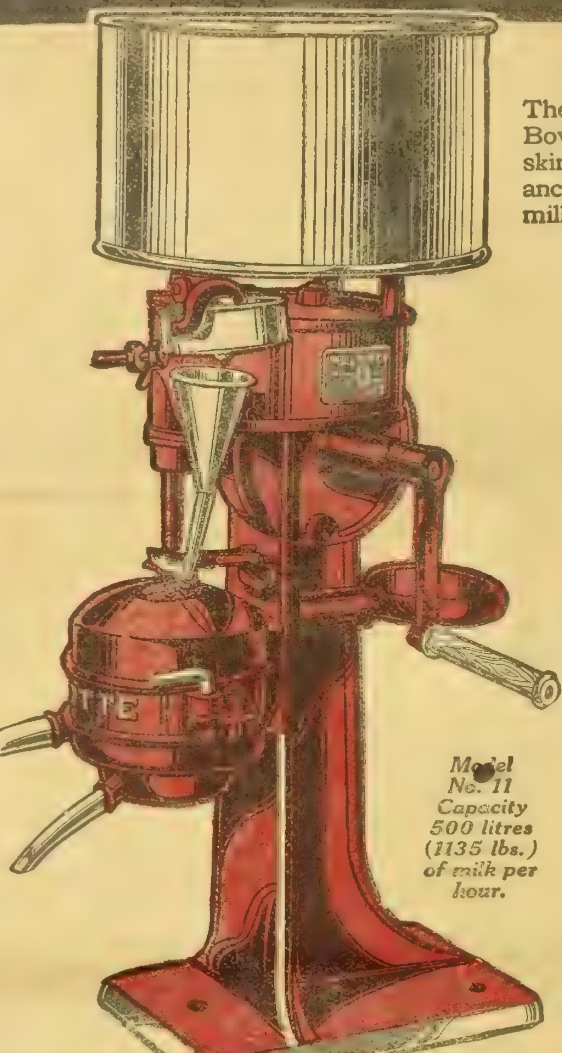
Belgium Melotte
Imported Separator

Self-Balancing Bowl

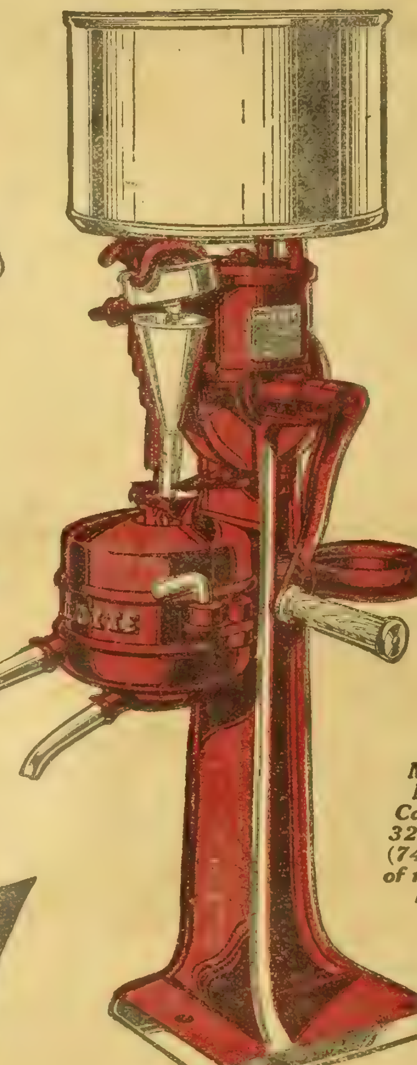
The Belgium Melotte is the only single-bearing-bowl separator ever made. This patent Bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing.* It skims as perfectly after 15 years of use as when new. Positively cannot ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by remixing with milk. Send coupon below today. Get the Free Book that tells about this great Melotte.



Model No. 11 Capacity 500 litres (1135 lbs.) of milk per hour.

$7.50 After Trial

We will send an imported Belgium Melotte Cream Separator direct to your farm on 30 days' absolutely Free Trial. Use it just as if it were your own machine. Put it to every possible test. Compare it with any or all others. The Melotte is easy to keep clean and sanitary because it has only one-half the tinware of other separators. Turns so easily that bowl spins 25 minutes after you stop cranking unless brake is applied. No other separator has or needs a brake. After you have tried it for 30 days and you know it is the separator you want to buy, pay $7.50 down and balance in small monthly payments.



Model No. 7 Capacity 325 litres (740 lbs.) of milk per hour

Free Trial

Your choice of any of these three models. NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE. This wonderful Belgium Melotte Separator has been picked by a jury of thousands of farmers—picked by dairy experts throughout the world to be the "king" of all separators ever manufactured. It has broken all records for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability. Send coupon below for Big Free Book.

The Melotte Separator, *H. B. Babson, U. S. Mgr.*
2843 West 19th Street, Dept. 9301, Chicago, Ill.
2445 Prince Street, Berkeley, Calif.

Without cost to me or obligation in any way, please send me the Melotte catalog which tells the full story of this wonderful separator and M. Jules Melotte, its inventor and hundreds of letters from American farmers.

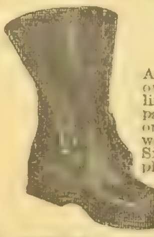
Overshoe Bargains

SEND NO MONEY Examine goods and if you are not convinced that you have more than your money's worth we will gladly return your money. Don't delay. Order now before article you want is sold out. PAY ON ARRIVAL

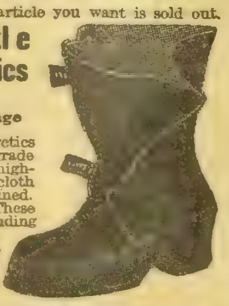
15 Inch 8 Eyelet Hi-Cut Arctic



$2.75 Plus Postage

Al rubber eight-eyelet laced overshoe 15 inches high; wool lined; laces like a shoe. It will pay you to make this saving on a pair of overshoes which would ordinarily cost six dollars. Sizes 7 to 11. Special $2.75 plus postage.

Heavy 2 Buckle Cloth Top Arctics



$2.39 Plus Postage

Two-buckle heavy arctics made from high-grade rubber bottoms with high-grade snow-proof cloth tops. Full fleeced lined. Sizes 6 to 11. These durable, snow excluding rubbers are a most unusual bargain at our special price of $2.39, plus postage.

4 BUCKLE ALL RUBBER ARCTICS

$2.29 Plus Postage

The lowest price on overshoes of this quality in America. Men's four-buckle all rubber arctics, heavy friction cloth lining. Pure gum rubber uppers, double corrugated rubber soles. Seams reinforced. These overshoes would cost at least $4.50 in any retail store. Sizes 9 to 13. Only $2.29 plus postage.

Genuine Goatshair SOCKS

3 pairs for $1.00 Plus
Dozen pairs $3.75 Postage

Here is the best sock buy in the country today. A genuine army regulation pure wool worsted sock, with knitted top and reinforced toe and heel. There is nothing that can beat them for warmth and wear combined. They are of a medium heavy weight and are easily worth $1 per pair. Special price 3 pairs for only $1. Dozen pairs, $3.75.

Current Agricultural News

1922 CROP OUTPUT IN MICHIGAN SHOWS INCREASE

THE crop output for the farms of Michigan in 1922 aggregated $215,000,000, an increase of 17 per cent over 1921 when the valuation dropped to 184,004,000. The complete annual report of the Michigan Cooperative Crop Reporting Service is now in the hands of the printer and will be ready for mailing within a short time, according to Verne H. Church, Agricultural Statistician. The report further states that each of the grain crops, together with beans,, clover seed and sugar beets were bringing better prices on December 1, 1922 than on the corresponding date of the previous year, and that a large monetary return per acre was derived from all crops except wheat, buckwheat, potatoes and wild hay. The fruit crops, potatoes and hay were less in price than one year ago.

It is asserted that the figures indicate that the low point has been passed and farm financial conditions are beginning to improve with favorable prospects for the future. Michigan's important position as a dairy state and the diversified nature of her crops have lessened the severity of the depression and are aiding in the recovery from it, in comparison with other states that suffered the greater distress caused by inflated land values.

The combined yields of all crops in the State were 7.4 per cent better than the average of recent past years. This is an exceptional showing as only four other important crop states made as good a record. While the State generally leads in the yields of one or more crops, it is unusual to attain this high average for all crops.

The best crop of the year was hay, although corn, potatoes, clover seed and most of the fruits yielded above the average. The poorest crops were winter wheat and rye although these were fair in both yield and quality for the State as a whole. All main crops were larger in volume than last year except corn, rye and sugar beets, and all had a greater total value except potatoes, sugar beets and clover seed.

FARM BUREAU REPORTS SURPLUS OF $200,000

FROM a $15,000 deficit to a net worth of more than $200,000 in two years' time is the record of the Michigan State Farm Bureau, according to a report from Lansing, and if unpaid memberships were included, the net worth of the bureau would be $642,000.

The annual report of the Farm bureau is now being prepared for the annual meeting at the Michigan agricultural college during Farmers' week and the above figures will appear in it.

This report will also show that the Michigan State Elevator exchange has made up its deficit of $11,000 shown on the books 18 months ago and has accumulated a surplus of $30,000 besides.

Every department of the bureau, except the Detroit Produce exchange organized last spring, now is on a paying basis and the outlook for the organization is said to have never looked better.

While the membership is not as large as two years ago, the bureau from a financial standpoint is in a much stronger position.

MICHIGAN CONDITIONS IMPROVE

TEMPERATURES have averaged above normal over the entire area, with percipitations slight, as a rule.

Wheat and rye continue in good condition. Alternative thawing and freezing has caused slight damage and chinch bugs are reported in some localities.

The car shortage is interfering with the free movement of corn to some extent, but the demand is good on account of the heavy feeding operations.

Pastures and meadows were benefited by light rains, snow and mild weather, and are furnishing some winter feed.

Michigan beans are in good demand and prices generally are satisfactory. Farmers are feeding their surplus potatoes to dairy cattle with good results.

Livestock is in good condition generally, except for a few scattered cases of hog cholera.

INTERNATIONAL EGG LAYING CONTEST AT M. A. C.

THE production at the contest for the week ending January 23, shows another big increase.

Evergreen Poultry Farm continues with their excellent work when they established a new record for weekly production with a weeks total of 52 eggs and a total to date of 488.

The Barred Rock section show 4.6 per cent increase. Kent's pen from New York continues to lead this section with a production of 439 eggs. Dennison's pen with 419 eggs retain their position in second place. Brummer's Poultry Farm with a production for the week of 41 eggs get into third place and Christophel drops to fourth place with 37 eggs for the week and 409 eggs to date.

The Wyandotte section remains the same for weekly production, showing a very slight increase. The pen from Evergreen Poultry Farm gradually increase their lead. Sink's pen from Farmington remains in second place with 395 eggs. Caterola farm is third with 371 eggs and Keister's pen from Bangor, retains fourth place with a production of 318 eggs.

Smith's pen of Buff Wyandottes are showing excellent production finishing with 45 eggs for the week and 313 to date. Decker's Wyandottes which were late arrivals are getting in their stride.

Van Raalte again leads the Ancona section with 10 birds in action. DeGroot and Manning are again in second and third place respectively.

In the Rhode Island Red section the same three places recieve mention. Mrs. Travis is standing first, Dunning second and the College Reds third. Mrs. Goss' pen from South Haven threatened to be a serious opponent when their production for the week increased to 50 eggs

In the White Leghorn class we find Shaw's pen from South Haven once more in the lead with a weekly production of 45 eggs and a total to date of 447. Hanson drops to second place only three eggs behind Shaw's pen.

GIRL BEST FARM ACCOUNTANT IN WEXFORD COUNTY SCHOOLS

A COMMITTEE composed of T. T. Riddell, Farm Management Demonstrator, M. A. C., Roy Noteware, Commissioner of Schools and Fay Horton, Banker of Manton, January 22nd, examined the books and stories of the Farm Accountants in the Consolidated Schools of Wexford County awarding the prize to Dorothy M. Smith of Manton, who kept the accounts on the farm of Edgar Derbychire.

This closes the first year's work in the consolidated schools of Wexford County on the project of farm accounting, the students keeping the actual accounts on the farms upon which they live.

Of the forty-eight starting last January, twelve graduated or left school; five moved from the County; two died and twelve quit the work and eighteen finished the books in one or more departments. This is above the percentage in the United States by several per cent.

The winning of this honor entitles Miss Smith to a trip to Farmers Week which is furnished by the Cadillac State Bank and the Peoples Saving Bank of Cadillac, the Manton State Bank of Manton, and the Farmers State Bank of Mesick.

The competition was keen between individuals from all the schools and it gave the committee considerable work to properly award the honors. Among the higher standing contestants stood Dorothy M. Smith of Manton; Edwin Ransom, Pearl Srackengust of Buckley; Ethel Bump and Earl Teal of Mesick; Clara Phillips of Hoxeyville and Gertrude Stiver of Harlan.

Entered as second-class matter, August 22, 1917, at the post-office at Mt. Clemens, Mich., under act of March 3rd, 1879.

Dr. Friday Begins Milk Quiz in Detroit Area

With Gov. Groesbeck, Legislature and Daily Press Backing Him, He Promises to Uncover Facts Long Demanded by Producers—Mauy Want Milk Investigation Made State-wide

WHAT the milk producers have long demanded about, but with little encouragement is apparently about to become a reality through the good offices of Dr. David Friday, president of the Michigan Agricultural College.

About two months ago, Dr. Friday was called in to act as an arbitrator for the producers and distributors in the Detroit area, who could not reach a mutual understanding in the price of milk for the month of December. He set the price at $3 per hundred to the producer and 14 cents per quart to the consumer in Detroit. But at the same time, Dr. Friday announced that he could not be sure of this price being fair to the three parties: producer, distributor and consumer, until he had made a thorough investigation of the situation and promised to start work on such a probe, for the benefit of all concerned, at once.

In the meanwhile the daily press in Detroit took up the cry and thus, Governor Groesbeck became interested and is reported to have instructed Representative Vincent P. Dacey, of Detroit, to conduct a personal investigation, for the specific purpose of helping Dr. Friday, if it became necessary to use the powers of the state to do so.

Same Prices for January

The first meeting of the investigation being conducted by Dr. Friday was held at the Hotel Cadillac, Detroit, and representatives of the press, which means the public, were barred, so in effect the meeting was secret. At its conclusion Dr. Friday said: "My purpose in conducting this inquiry," "is primarily to learn whether or not the present price of milk in Detroit is a just one. To find this out I shall have to probe the costs and methods of distribution here as well as the cost of production on the dairy farms and the manner in which the farmers get their milk.

"I know already that many farmers maintain 'inefficient' cows. By that I mean cows don't produce according to the demands of the market. The consumption of milk is about 20 per cent less in winter than in summer. But almost always there is a surplus of milk in winter and a shortage in summer. The farmers should 'freshen' their cows so a greater yield would come in the summer. That automatically would revise the price.

"This afternoon the dealers and producers got together pretty well on this angle. They agreed to a tentative arrangement whereby the farmer will be penalized for over-production in the wrong season."

He announced also, that the price of milk to the producer and consumer in the Detroit area would remain the same for the month of January, that it had been set by him, a month earlier, for the December.

While Dr. David Friday's milk inquiry settled itself down to an examination of books, evidences continued today to accumulate to show that producers are not receiving the $3 rate for each 100 pounds of milk.

It is the payment of this rate that makes the cost of milk high to the consumer, the distributors have been claiming.

The practice of underpaying the farmer, and at the same time loading on him the charges of hauling from the stations to the creameries in Detroit, is classified as good business by the management of the big distributing companies.

It is good business also to undersell rivals who set up in business along routes formerly owned by the big creameries. Evidence of this type of cutting was obtained by a daily paper and submitted to W. J. Kennedy of the Detroit Creamery.

Mr. Kennedy readily admitted his company was cutting the price in one section. He declared that former employes of his concern had had the termerity to set themselves up in business. He was going to sell milk 2 cents cheaper than the new distributors did in order to drive them out of business, he said.

Want Inquiry Made State-Wide

Several Michigan legislators have now come forward with the demand that the milk investigation be made state-wide and such important areas as Grand Rapids, Flint, Saginaw, Kalamazoo and Jackson, be taken into consideration. They seem to feel that the conditions are only slightly worse in the Detroit area. Lansing has, of course, in operation a farmers' owned company which is making the experiment, with apparent success of distributing its own milk to the consumer and yet both consumer and distributor have reaped a great benefit.

"I am inclined to agree with my colleague, Representative Joseph Warner, of Ypsilanti," said Representative Howell, of Saginaw. "He says the distributors in Detroit give a rotten deal to both the farmer and the consumer. "He has been both producer and distributor and he ought to know."

Next Meeting February Tenth

Prof. J. T. Horner, of the Dairy Division, M. A. C., has been delegated by Dr. Friday to carry on an actual investigation of the creamery companies books and the next meeting is scheduled for February tenth and it has not yet been announced as to whether this meeting will be conducted publicly or not, altho there is considerable pressure being brought to bear on Dr. Friday, to hold these meetings in the open, where all the facts can be secured and presented to the judgement of the vast masses of people interested in milk, from both sides of the question.

AN INTERVIEW WITH DR. FRIDAY

TO secure a statement from Mr. David Friday on the Detroit Milk situation, I interviewed him Thursday, January 25, upon his return from the Detroit conference, which was held on Wednesday.

The situation at present seems to be somewhat indefinite and unsettled. Friday is starting a careful investigation of all phases of the Detroit situation which bear upon the distributing of milk.

He will probably be some weeks upon this work, as there are a number of difficult angles to be considered. The fluctuation of supply and demand at different seasons, unorganized distributers, labor costs in the distributing plants—these are among the things which Friday mentioned yesterday as calling for a careful and complete study.

Prof. J. T. Horner, of the M. A. C., economics department, is working with Friday in the detailed investigation.

For the present, as I understand the situation, the contract price agreed upon for December between the producers and distributors (with Mr. Friday serving as "arbitrator") is to continue in effect. This calls for $3.00 a hundred pounds to the farmer and retail sales from the wagon at 14 cents a quart.

The only definite bit of information Mr. Friday gave out on the present situation in Detroit is that they are receiving in Detroit now 15 to 20 per cent more milk than the people of Detroit are consuming as whole milk. This, of course, means that the surplus must be used in manufactures, and bought at a lower price. This, according to Friday, is one of the chief problems connected with the entire issue. Consumption of milk in Detroit has declined two and one-half to three per cent—the normal lowered consumption at this season of the year, apparently.

President Friday seemed unwilling to give out any definite statement at this time, beyond the fact that he is to make a careful study of all angles of the difficult situation during the next few weeks.—J B. Hasselman.

Car Shortage Causes Thousands of Dollars of Loss to Potato Growers

WHETHER thousands and thousands of dollars in unpaid taxes on some of the finest potato farms in the second tuber producing county in Michigan will be returned to the state this year depends upon the relief which the Pere Marquette and Pennsylvania railroads are able to give shippers in Mecosta county in the next few weeks.

People in southern Michigan have no idea of how badly the car shortage has paralyzed the agricultural interests in this county. During the past three days while the writer was attending and speaking at eight agricultural meetings in Mecosta county he interviewed scores of farmers who have not been able to sell one pound of their 1922 potato crop. Many of them said they had borrowed to the limit of their credit during the past three years and now they must let their taxes go back to the state because of their inability to pay.

Decline in prices is not entirely the cause of this situation. A survey of the area indicates that the lack of transportation facilities making it impossible for growers even to get production costs out of their crops, has percipitated this crisis in the lives of the nation's food producers in Mecosta county.

Last fall, when farmers could have sold their potatoes at 60 to 65 cents a hundred-weight, they were unable to get even common box cars for movement of their crop during the season when it was not necessary to go to the expense of relining the car But, under the belief that the railroad would fulfill its obligations as a common carrier and would furnish cars, farmers stated that they left their potatoes in pits or hauled them into temporary basements until cars could be supplied. Those tubers still are in the pits and cellars but farmers say they are now worthless. Many of them froze early in December and others have frosted since.

400 Carloads Perish

Marketing representatives at the shipping points in the county estimate that approximately 400 carloads of potatoes valued at $96,000 have perished through frost or have been consumed by cattle simply because the railroads were unable to furnish the necessary cars. A question has been raised by some of the growers as to whether the farmers can hold the railroads liable for these damages alleged to be the direct result of the railroads failing to supply cars upon numerous and repeated requests.

The car shortage seems to be most acute on the Pere Marquette line. Seven months ago when the writer was investigating claims of this railroad for its request to abandon the branch lines from Mecosta to Barryton and Remus to Weidman he was told that the tonnage was not sufficient to warrant maintaining the lines. This week he found that there is more business on these two branch lines than the railroad can begin to handle.

Since last September the Barryton potato growers' association has had a request on file with the Pere Marquette for one car a day to load out potatoes, but the railroad has been unable to supply only a part of the orders.

This is not the first year, farmers stated, that this region has been gripped with a car shortage. While other lines, particularly the Michigan Central, have been supplying its shippers with nearly all the cars they needed, the Pere Marquette for some reason, either lack of cars or indifference, has been slow in filling orders, but not as tardy as during the last four months.

Question of Leasing

The situation now has resolved itself, according to growers and market men, into the question of whether the state should not lease or buy enough cars to insure its farmers adequate transportation facilities to market their crops. The farmers believe, however, that the railroads should be charged with their transportation responsibilities. They point out that factories in the cities do not have to buy or lease cars, and they can see no reason why they should do so although there is some talk among the local associations of advising the Michigan Potato Growers' exchange at Cadillac to lease cars next season the same as the old line companies do.

In order to be economical in the marketing of potatoes, C. C. Wells, manager of the Michigan Potato Growers' exchange and one of the speakers at this series of meetings, half of the Michigan crop should go to market before Nov. 1,. The balance, if the railroads supply the cars, can be marketed in an orderly manner during the winter and early

(Continued on Page 18.)

Pruning Fruit Trees

Now is the Time to Do this Valuable Work

By ROY E. MARSHALL
Professor of Horticulture, M. A. C.

Proper training of this tree during the first two or three years of its life would have prevented this.

MOST fruit growers will agree that tree growth and fruit production are regulated to a considerable extent by pruning practices, but there is much confusion as to the amount and kind of pruning that should be employed to give the desired results. Experiment Station investigators are gradually working out various phases of the pruning problem, but it will probably be many years before definite rules can be formulated relative to the training and pruning of all kinds and types of fruit trees.

Yet, while these problems are being solved, trees must be pruned. It is the main purpose of this article to present some of the underlying principles which the fruit grower should constantly keep in mind, and to show how these principles may be applied to such trees as are commonly found in Michigan.

Throughout the discussion of pruning practices certain terms are used more or less frequently, and it is well that an understanding be had of these, together with the general principles involved. Again, certain practices are applicable, in a general way, to all kinds of deciduous fruit trees, and these may be briefly discussed before taking up more detailed consideration of the handling of specific kinds of fruit trees.

The removal of an entire branch, limb, twig or spur is referred to as thinning or "thinning out." Thinning results in a less crowded condition throughout the tree, and it usually permits a greater amount of light and a freer circulation of air in the interior portions. This kind of pruning generally encourages the formation of fruit spurs and discourages the formation of lengthy side branches or laterals. It favors the development of an extensive fruiting system, but continued thinning with some kinds and varieties of fruits eventually leads to the formation of wide-spreading or rangy trees that are expensive to handle and that are unable to carry their crops without artificial supports.

When the tip or any larger portion of a branch is removed, the process is known as heading or "heading back." This type of pruning is practiced when branches are growing out of bounds; when one part of the tree is growing more rapidly in proportion to the tree as a whole that is desired; to encourage the development of the framework branches of the tree at such points as they are desired, and to avoid a rangy type of growth. The heading back of a vigorous shoot usually results in the formation of several strong-growing lateral shoots and few spurs the succeeding year. Hence, it promotes the formation of a compact head. In other words, heading back has more to do with the development of form of tree than with the development of a fruiting system, and is practiced to a greateh extent with young trees than with those in bearing. Heavily headed back young trees should not be expected to attain greater size than those headed lightly or not at all—in fact, if continued for several years, the gross effect is an undersized tree, as well as one late in coming into fruit production.

This division between thinning and heading is somewhat artificial. In other words, a single pruning cut may result in a thinning out as well as a cutting back. This is frequently the case when three- or four-year-old wood is being removed from peach trees and the cuts are made close to a lateral of the former parent branch.

Two branches that have made practically the same amount of growth are often found growing from a common point. If left unpruned or if headed back to the same length, the amount of growth from each of the following year will be approximately equal. If one branch is cut several inches shorter than the other, the longer one will give rise to more growth the following years, and eventually the shorter one will become a side branch of the longer, as naturally occurs if one branch is longer than the other and no pruning takes place. Thus equal cutting back of branches arising from a common point results in equal growth, and unequal cutting back results in unequal growth. Furthermore, when two branches of equal size emerge from a common place in such a way as to form a sharp "Y", a weak crotch results unless steps are taken to strengthen it. Equal cutting back of these two branches will not better the condition, but unequal cutting back, leaving one considerably longer than the other, will encourage the longer one to become a leader or main branch, and the other will eventually become a lateral or side branch. The crotch is strengthened and splitting in later years avoided.

Long Pruning

Recently the attention of some fruit growers has been directed to a kind of pruning, very popular in California, known as "long pruning," and it may be well to state briefly the meaning of this term. Pruning as commonly practiced on the Pacific Coast, until recently, consisted of some thinning-out and a very heavy heading back (removal of 50 to 75 per cent of each new branch) of the new growth each year. This resulted in devotion by the trees of too large a part of their energies to the growth of long shoots and not enough to fruit production, and the fruiting wood on the interior portions of the trees was often shaded out by the dense top. Fruit growers have found that they can reduce this excessive wood growth and increase the fruitfulness of their trees by practicing a "thinning-out" and they thus discontinue the former severe "heading." Since the new growth is left without heading, the result is a tree very different in appearance from the former heavily cut-back one, and hence the term "long-pruning."

Generally, the greatest growth response takes place in the immediate vicinity of a pruning cut. This is noticeable where a large branch has been removed, resulting in the formation of numerous watersprouts near the point of removal. In like manner, if a branch or shoot is cut back, a few laterals (side branches) will usually devolop near the end of the headed-back branch, although some response may be noted some distance away. The removal of a branch has comparatively little direct effect on the tree as a whole. If, then, it is desirable to renew vegetative growth throughout the tree, the cutting must be distributed throughout the entire tree. Work confined to the outer parts of the tree will give direct response in thase parts, but will generally indirectly affect the central parts by admitting more light and permitting a freer circulation of air. The careful pruner should keep these facts in mind in all pruning practices.

There is a strong tendency among pruners to remove all the fruit spurs and short shoots from the young trees, especially from the scaffold branches, as they are thought to be of no use. However, experience shows that, if allowed to remain, these are productive of the first fruit of the tree. If they are removed, the tree will not come into early bearing. Some pruners think that these small twigs will only be in the way in later years. These fruiting branches seldom reach a length of more than a few inches, and if they do they may be shortened. Even if some are broken off from time to time, it will certainly pay well to leave and preserve a liberal supplyof them as long as possible.

How to Remove a Branch

So much emphasis has been placed by many writers upon right and wrong methods of removing branches that it would seem unnecessary to mention these again, but some growers are still very careless in this operation. The wound resulting from the removal of a branch will heal much more rapidly if the cut is made close to and almost parallel with the main stem. If removed even a slight distance beyond the parent branch, the result is a slow healing wound. If a stub is left, it usually dies and heart rot eventually develops in the parent branch. It is often advisable first to saw in for a short distance on the under side of large branches so as to prevent the splitting and peeling of bark from th parent branch when the branch is nearly sawed through.

Pruning is ordinarily done during the dormant season. Slight preference should be given to that done in late winter or early spring because the wounds heal more rapidly; but if all pruning is left until such a time, the work may not be completed because of the rush of other farm practices in early spring. Consequently, any favorable weather, after the dropping of the foliage in the fall and before the opening of the buds in the spring, may be utilized for pruning. If one has a large acreage, he should start work in the older apple and pear trees during the early winter, and reserve the stone fruit and younger trees for late winter and spring pruning. It is believed that pruning done during any weather that is suitable for the pruner will result in no ill effects. However, it is possible that heart rot, die-back, bruising, splitting, etc., may result from pruning frozen wood.

Pruning Tools

Two tools are essential for pruning work: a pair of small hand shears and a saw. With these two tools a pruner can do practically all of the work that will be required in bearing trees and most of the work in young trees.

The shears should be made of the best material obtainable, as cheap shears are easily sprung. A good pair of steel shears will withstand heavy work for several years. The shears should be seven to ten inches in length, nine being the size usually preferred.

The saw should be so constructed as to cut rapidly, leave a smooth cut, be as light as is consistent with rigidity and good lasting qualities; and it should have a hand grip that will not tire or cramp the hand or wrist. A saw on which the teeth are set to cut on the "pull" is less tiring to the pruner. Saws with teeth on both edges are objectionable, as they are usually poor in cutting quality and frequently injure bark on the permanent branch.

A pair of lopping or wooden handled shears often facilitate the work about young trees and about the lower parts of old trees. It is a somewhat awkward tool to use in the upper parts of bearing trees.. Such shears should be about 20 to 26 inches in length and of double leverage.

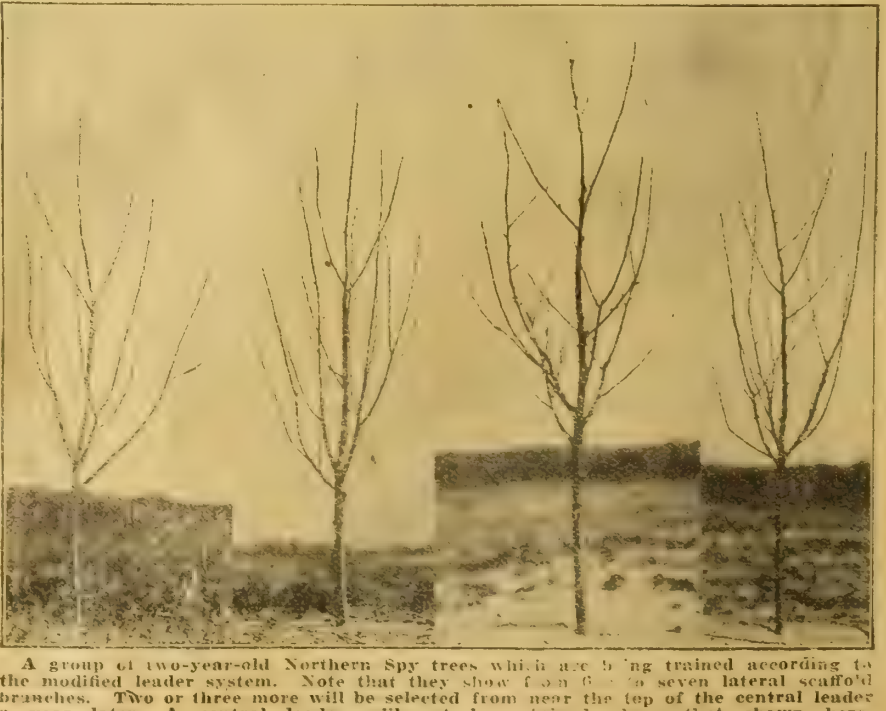
Pole pruners, six to ten feet in length, enable the pruner to work the tops of trees five to ten years old to better advantage. They should not be used where it is possible to employ the other tools, because work with the pole pruner is, at best very slow, and the cutting cannot be done as precisely as with other tools.

It is considered good practise to paint wounds larger than one and one-half to two inches in diameter with a good white lead to which some kind of antiseptic has been added. An ounce of cyanide of mercury or bichloride of mercury may be dissolved in a little turpentine and thoroughly mixed with a gallon of the paint. A charcoal, brush, grafting wax, such as is used in bridge grafting, makes an excellent covering. See Michigan Experiment Station Circular No. 14, Revised.

Types of Training

Fruit trees may be developed according to any one of several different styles of training during the non-bearing, vegetative, or formative

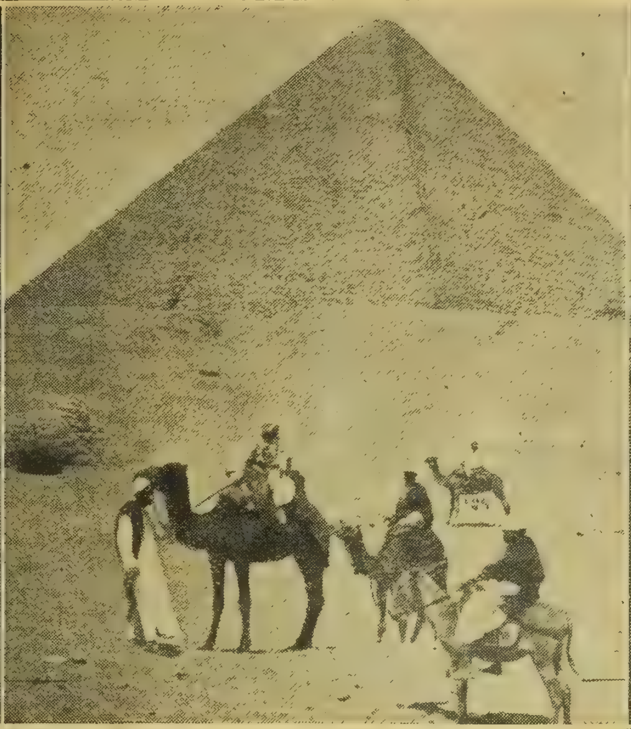
(Continued on page 17.)



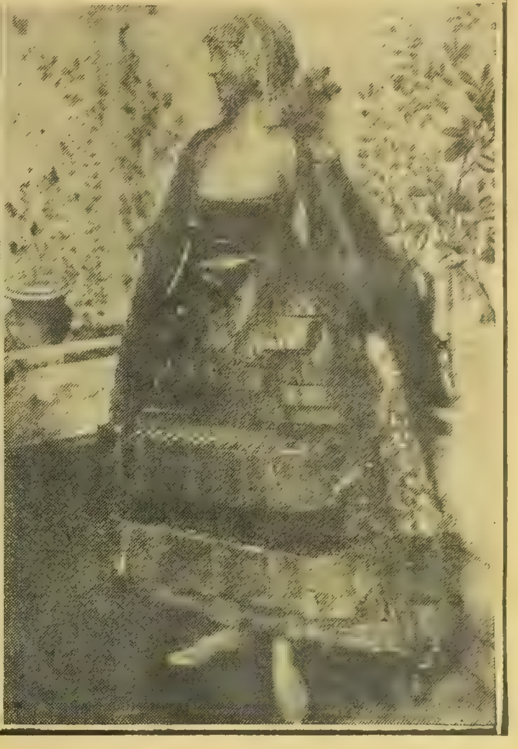
A group of two-year-old Northern Spy trees which are being trained according to the modified leader system. Note that they show from 6 to seven lateral scaffold branches. Two or three more will be selected from near the top of the central leader a year later. A central leader will not be retained above that shown here. These trees have had a very light thinning out and sufficient tipping back to maintain the proper relationship between branches

PICTURES FROM FAR AND NEAR

Four feet—count 'em yourself!—This chicken, a Rhode Island Red, was hatched on an Indiana farm, and 'tis said, that by virtue of its two useless appendages it rules the barnyard. The chicken is perfectly normal otherwise.



Great pyramid is work of scientist—The pyramid of Kunuf, at Gizih, Egypt, which according to English engineers, was designed by a scientist who must have known the shape of the earth. They give the date of the commencement of the pyramid as 2170 B. C.



A novelty for the bride—A unique chest of drawers which is being imported into Germany. The chest is made of marble and is in the form of a bride in bridal gown of the 18th Century. In the body are several small and large drawers.

Michigan Leading Fight to End T. B. in Cattle

Cost State over $300,000 in 1922 to Idemiify Owners and it will cost nearly Two Million More

IT is possible to free Michigan of tuberculous cattle within five years, but the cost will be around two million dollars if we are to accept the figures just issued by the State Department of Agriculture, in their first annual report.

Dr. T. S. Rich, federal inspector in charge of the tuberculosis eradication in cooperation with the state officials, agrees with this statement and says he bases his judgement on the phenomenal achievements in Michigan during the last 12 months.

The State first undertook to encourage bovine tuberculosis eradication by payment of indemnity for animals slaughtered on account of this disease in 1909. The testing was done by veterinarians over the State without any definite plan until July 1, 1917, when a cooperative agreement was entered into with the Federal Government under the Federal and State accredited plan, by which owners of purebred herds voluntarily submitted their cattle for the tuberculin test by State or Federal veterinarians and agreed to follow instructions in regard to methods of handling their herds in order to prevent exposure to the disease from outside sources. Herds were signed up and taken under supervision in many counties of the State and were regularly tested without expense to the owner, and both State and Federal Governments paid indemnities when animals reacted and were slaughtered. These herds were widely scattered in many counties over the State and greatly stimulated interest in tuberculin testing by educating the general public and the herd owners in particular as to the importance and significance of the work. As the work increased, however the expense became too great in proportion to the results secured because of the time wasted and expense incurred in traveling from place to place to test herds. This led to the adoption of the area plan, by which the tuberculin test is applied to all cattle in a given area. The work is conducted with much greater economy and efficiency and infected herds are located rapidly and diseased animals removed.

Under the area plan, as is it now being handled in this State, the County Board of Supervisors is asked to make an appropriation sufficient to cover the salary of one veterinarian employed by the county and the cost of carrying on the work in the county, including transportation of veterinarians, ear tags for cattle, etc., and the Board of Supervisors signs the cooperative agreement with the Bureau of Animal Industry and the United States Department of Agriculture.

In October of last year the first big victory over bovine tuberculosis was won when the herds of Hillsdale county, in a whirlwind campaign of 12 days through the work of 33 testers, were freed of the scourge.

One of the men who was instrumental in obtaining funds for the work was Prof. H. R. Smith, formerly a resident, but now live stock commissioner of the National Live Stock Exchange. Among state authorities, cooperating with the department, are H. W. Norton, Jr., director of the bureau of animal industry of department of agriculture and State Veterinarian B. J. Killam.

The results of the drive fired the state with enthusiasm for tuberculosis eradication.

At the beginning the applications from herd-owners were purely voluntary. But the county authorities here and there caught the spirit of the movement. Boards of supervisors began to invite the department of agriculture to send representatives to explain to them the needs and cost of the campaign, and county after county made the necessary appropriations to undertake the work.

These invitations had the approval of about 95 per cent of the herd-owners, and yet it was felt that to leave even 5 per cent of the herds in any area untested might largely nullify the effort.

Prompted by overwhelming public opinion, a search was made for means to compel objectors to comply with the will of the great majority and the existing law was found to be ample on the subject. The commissioner of agriculture is empowered to quarantine any herd deemed a menace to the public health.

Armed with this authority, the inspectors have been able to make the eradication absolute in every county to which they have been invited by the county authorities. No effort has been made to bring pressure on any county and no county has been solicited to undertake the campaign.

Over 160,000 Cattle Tested

The total amount accomplished during the past year has surprised even the authorities themselves. More than 23,000 herds containing about 160,000 cattle have been put under supervision.

All the cattle have been tested at least once in eight counties. Hillsdale, Jackson, Livingston, Grand Traverse, Charlevoix, Antrim, Emmet and Gogebic.

In addition to the test is now in progress in Wayne, Washtenaw, Ingham, Eaton, Kent and Shiawassee, while Monroe, St. Joseph, Calhoun, Huron, Muskegon, Oceana, Leelanau, Otsego, Presque Isle, Cheboygan, Schoolcraft and Ontonagon are on the waiting list.

The counties have appropriated out of their own funds from $2,500 to $15,000, depending on their area and number of herds. The appropriation usually is based on 25 cents per animal. The total money raised by the counties reached $125,000.

Indicative of the rapid spread of the idea is the fact that 17 other counties have, through their boards of supervisors, requested representatives of the state department to come and explain the work and advise with them as to plans. All this has been accomplished during the last 12 months.

$300,000 for Five Years

The experience gained has enabled a pretty accurate estimate of costs. Fortunately, Michigan was aroused to the need before conditions became bad. The percentage of animals reacting to test is only about 3½.

Out of the 23,000 herds under supervision, 19,000 have no tuberculosis. This fact greatly simplifies the problem, and at the same time argues forcefully for the adoption at once of a thorough state-wide program.

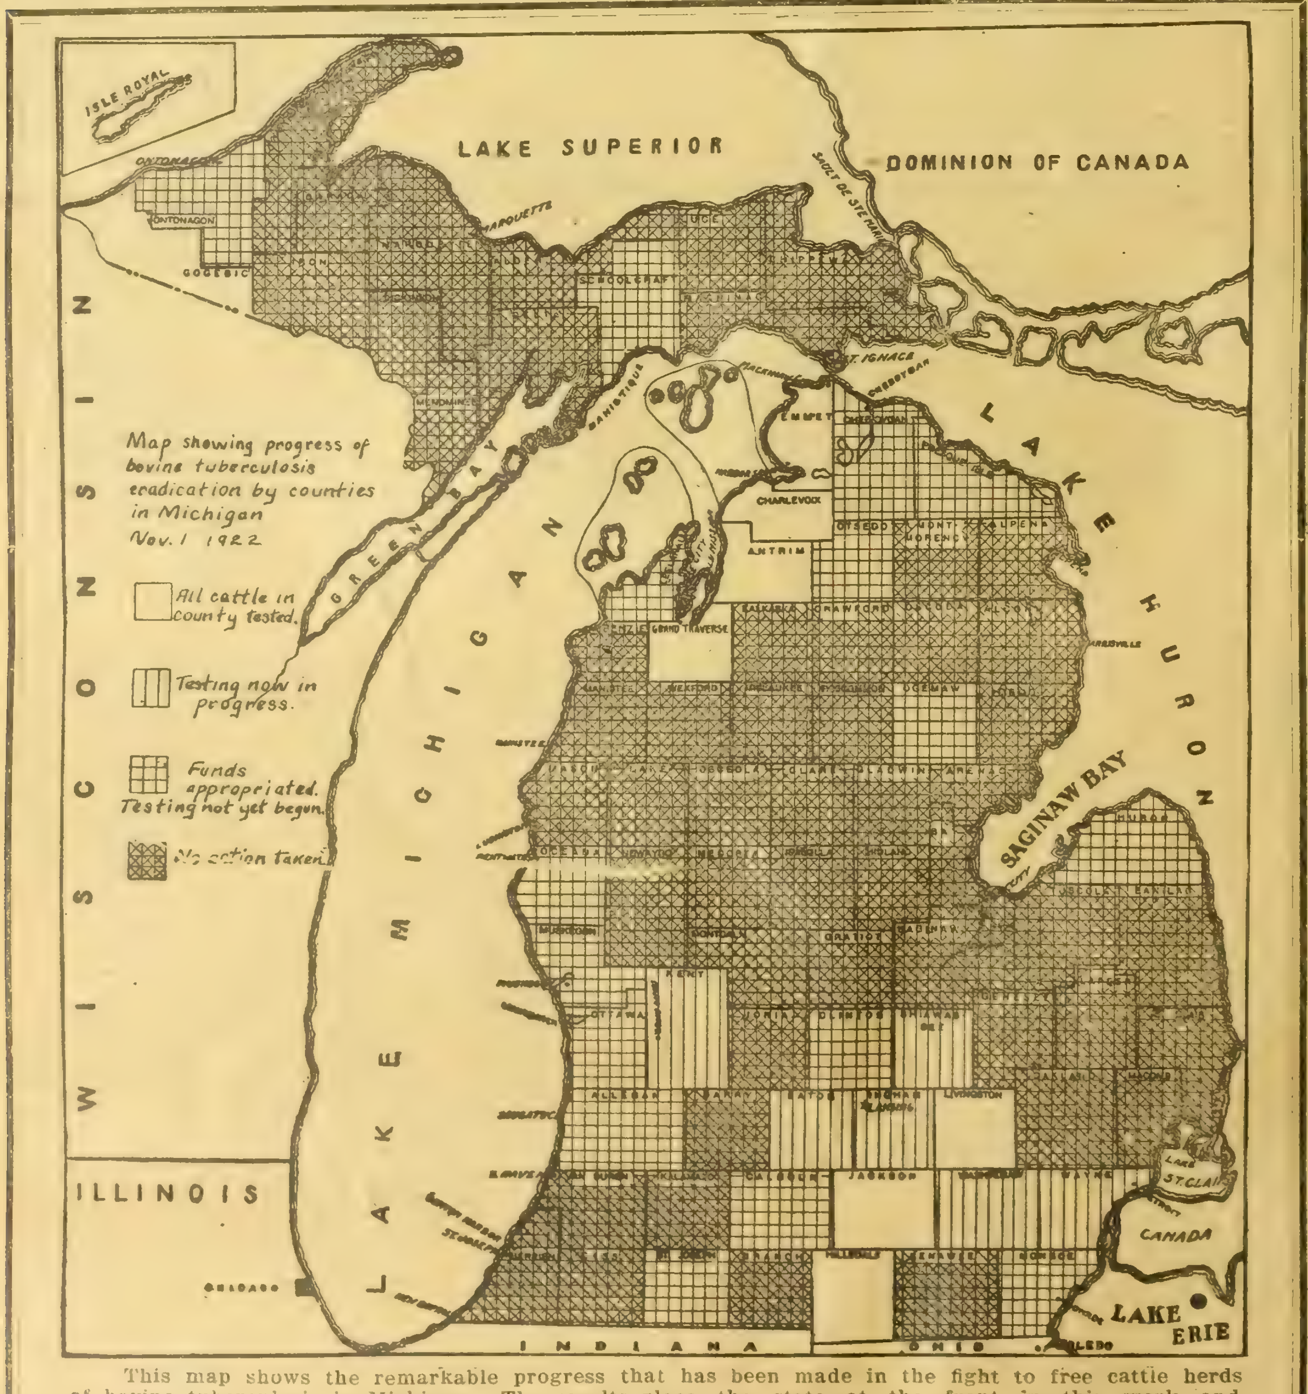
As an illustration of the cost of neglect, the experience of New York State is cited. During the last year the authorities in that state have expended for tuberculosis eradication

For less that $300,000 the Michigan authorities estimate that they could finance a five-year campaign which would completely eradicate tuberculosis from the cattle of Michigan.

MONEY APPROPRIATED TO FIGHT BOVINE TUBERCULOSIS IN MICHIGAN

THE total funds appropriated by counties during the past year for cooperative bovine tuberculosis eradication on the area basis amounted to $107,700.00. The counties and amounts given are as follows:

Hillsdale	$7,000.00	Washtenaw	$10,000.00
Jackson	8,000.00	Eaton	8,000.00
Livingston	4,500.00	Ingham	5,000.00
Grand Traverse	2,500.00	Calhoun	9,000.00
Antrim	2,500.00	Clinton	8,000.00
Charlevoix	2,500.00	Monroe	5,000.00
Emmet	2,500.00	Lelanau	1,500.00
Gogebic	2,500.00	Oceana	4,000.00
Wayne	5,000.00	Muskegon	5,000.00
Kent	5,000.00	Ogemaw	5,000.00
Shiawassee	5,000.00		
		Total	$107,700.00



This map shows the remarkable progress that has been made in the fight to free cattle herds of bovine tuberculosis in Michigan. The results place the state at the front in this work and strengthen confidence in the belief that the disease can be driven to the last ditch in Michigan and all other states before many years. At the left is a key to markings.

Historical Background of Michigan Agriculture

Third and Concluding Installment of Historical Outline of Rural Life in Michigan, by Prof. L. A. Chase

For many years the farmers of Michigan seemed not to have been greatly concerned regarding the quality of the seed grown. It is said to have been as late as 1909 that the Michigan Agricultural College began the distribution of pedigreed grain seed. It was not long thereafter that a group of farmers organized an association for the promotion of the use of superior and purebred seeds. This organization is now known as the Michigan Crop Improvement Association. In this way there has come into use such new improved varieties of grain as "Rosen Rye" (introduced from Russian by a student at the College by the name of Rosen) "Red Rock Wheat," "Worthy," and other varieties of oats, "Black Barbless Barley," etc. These have demonstrated their worth and added greatly to the productiveness of Michigan agriculture. Similarly there has been organized "The Michigan Potato Producers Association" for the purpose of improving the quality and yield of the Michigan potato crop. Both associations have a system of inspection and certification for purebred seed. The Michigan State Farm Bureau, since its organization in 1919 has undertaken the distribution of purebred seed to its members. When one contrasts the fifty-five varieties of potatoes listed by the State Board of Agriculture in the state in the year 1868 with the much smaller number of standard varieties found here today, one sees something of the revolution that has taken place in agricultural practice in the last few years.

It is no doubt true that certain other factors have reduced agricultural production in Michigan. The fertility of the soil has generally speaking not been maintained up to the standard found by the pioneers. Our farmers in this respect have not taken anything; like the pains which belong to the patient, industrious and wise farmers of China. History must record that the fertile surface soils were allowed to be washed away by rains and floods, and to have its essential humus destroyed by frequent burnings by forest and brush fires. Hilltops were deforested and this encouraged their denudation and ruin for agricultural purposes. In some sections, continued cropping in the same tracts, with the removal and sale of forage grasses without anything being done to replace the elements they have taken from the soil, has had its inevitable result in bankrupting the productive power of the land. It is requiring all the improvements in agricultural practices and marketing methods to overcome this self-imposed handicap.

Native Wild Fruits

The native wild fruits of Michigan—the wild crabapple, wild plum, wild cherry and numerous wild berries (raspberries, black, red and white, salmon-berry, cranberry huckleberry, wintergreen berry) were added to by certain tame species, such as the pear and the apple which, originally introduced into the territory by early French settlers or coureurs de bois, were found growing in a wild state by the first American travelers and settlers. The wild grapes had a wonderful luxuriance in the southeastern section of the state where soil conditions were more favorable than the elimate, giving rise to the name "River Raisin" along whose banks, as well as the Detroit River, the vine grew of enormous size and in great profusion. To find bearing apple-trees in remote places in the Michigan wilderness struck the first American comers as curious, and they wondered much as to the cause. It is still more a matter of conjecture than of clear record.

With the settlement came imported varieties of domesticated fruits and fruit culture, first among the early French and then among the Americans. Familiar types of apple, like the "Rambo," the "Greening," the "Snow," the "Spitzenberg," the "Twenty Ounce," and various pippins seem to have arrived early. Very early, too, apparently as early as the attainment of statehood—the great fruit industry of the Lake Michigan shore had gained its start, and peaches were going to market from the mouth of the St. Joseph River, and tame grapes were growing close to Grand Haven. There is testimony that the removal of the protecting forest from the interior of the state had its part in driving fruit culture, particularly of the peach and grape, to the lake shore where the winter blasts and summer breezes were tempered by the influence of the vast body of water over which they passed. The hardier plums, apples, cherries made good their position in the interior counties and even as far north as the shore of Lake Superior. At Ypsilanti and other southern points tree nurseries appeared very early and supplied fruit-growers with native stock. Thus before the time of the Civil War the Michigan fruit industry was thoroughly established. The State Horticultural Society was established in 1870 and in the intervening half century there has been a steady improvement in horticultural methods and results. The nut-bearing trees—the hickory, the beech, the butternut, the walnut, the chestnut and the hazelbush—have also contributed largely to the food supply of the people, but not much in commercial quantities. Of late there has been formed "The Northern Nut-growers' Association" to promote the growing of edible nuts in the northern states.

Horses are reported to have been introduced into Michigan by the early French, described as hardy, strong, of a quiet disposition and some of them quite speedy. An amalgamation of this type with early American breeds is said to have occurred. These early American horses were of moderate size, (fifteen to sixteen hands high and weighing 1,000 to 1,200 pounds). English thoroughbred stallions crossed with native mares improved the strain and provided the carriage and driving horses of later days. About 1854 the Morgan and Black Hawk horses are said to have been introduced from New England along with Hamiltonian and other trotting blood. During this period draught horse breeds, mainly of English stock, are reported to have entered the state. Then came Percherons from France, English Clydes and other types. By 1892 Belgians were also in evidence. Cleveland Bays and French coach-horses had then arrived. In 1892 Michigan had 530,000 horses which had risen to 640,000 in 1920.

In the pioneer era cattle, sheep and swine were of various non-descript types and it is only recently that there has arisen a demand for pure-bred stock.

In 1890 the Michigan Improved Livestock Breeders' and Feeders' Association was formed, and, as interest grew, there were formed special associations for particular breeds, such as the Aberdeen-Angus, the Holstein-Friesian, Short-horns and other varieties of cattle, and for particular breeds of sheep and swine. It is now much more common than it once was to find Michigan farmers with pure bred registered livestock.

Manufacturing Butter and Cheese

The manufacture of butter and cheese in factories dates from the time shortly after the Civil War and has been closely associated with the cattle business. It did not destroy the domestic manufacture of these products, but it has become relatively of much greater importance as the census figures show. It has always been of greatest importance in the southern and central counties. The milk producers of the state have oragnized and Michigan Allied Dairy Association comprises a number of industries related to the production and distribution of milk and milk products. Laws have been enacted for the protection of the purity of milk supply and to prevent short measures in its sale. Some cities have established commissions to certify to the purity of the milk sold to the public and to prevent the sale of impure milk.

Sheep are grown both for their fleece and for mutton. The pioneers made their own cloth from home-grown wool and even yet there are people in Michigan who continue this practice in spite of the greater cheapness of factory-made goods. The spinning wheel still hums in a few farm homes, and turns out a product that has no shoddy in it. There are also several factories in Michigan in both peninsulas, for the manufacture of woolen goods—not all from Michigan wool however, although they have utilized a portion of the wool gathered in by the Michigan State Farm Bureau. There has been a great improvement in the grades of Michigan sheep and Michigan wool is regarded as of excellent uqality. In the early period of Michigan history, however, sheep-raising was common especially in the southern counties.

In the earlier period of the state's history, meat, like almost everything else, was produced at home or in local slaughter-houses. While at present, much Michigan livestock is shipped to packing-plants outside the state—to Chicago, Toledo and Buffalo—Detroit stockyards and packing plants have also received large shipments and are doing an increasingly important business. Indeed, as Detroit contains more than a quarter of the population of Michigan it affords an important market for many Michigan farm products.

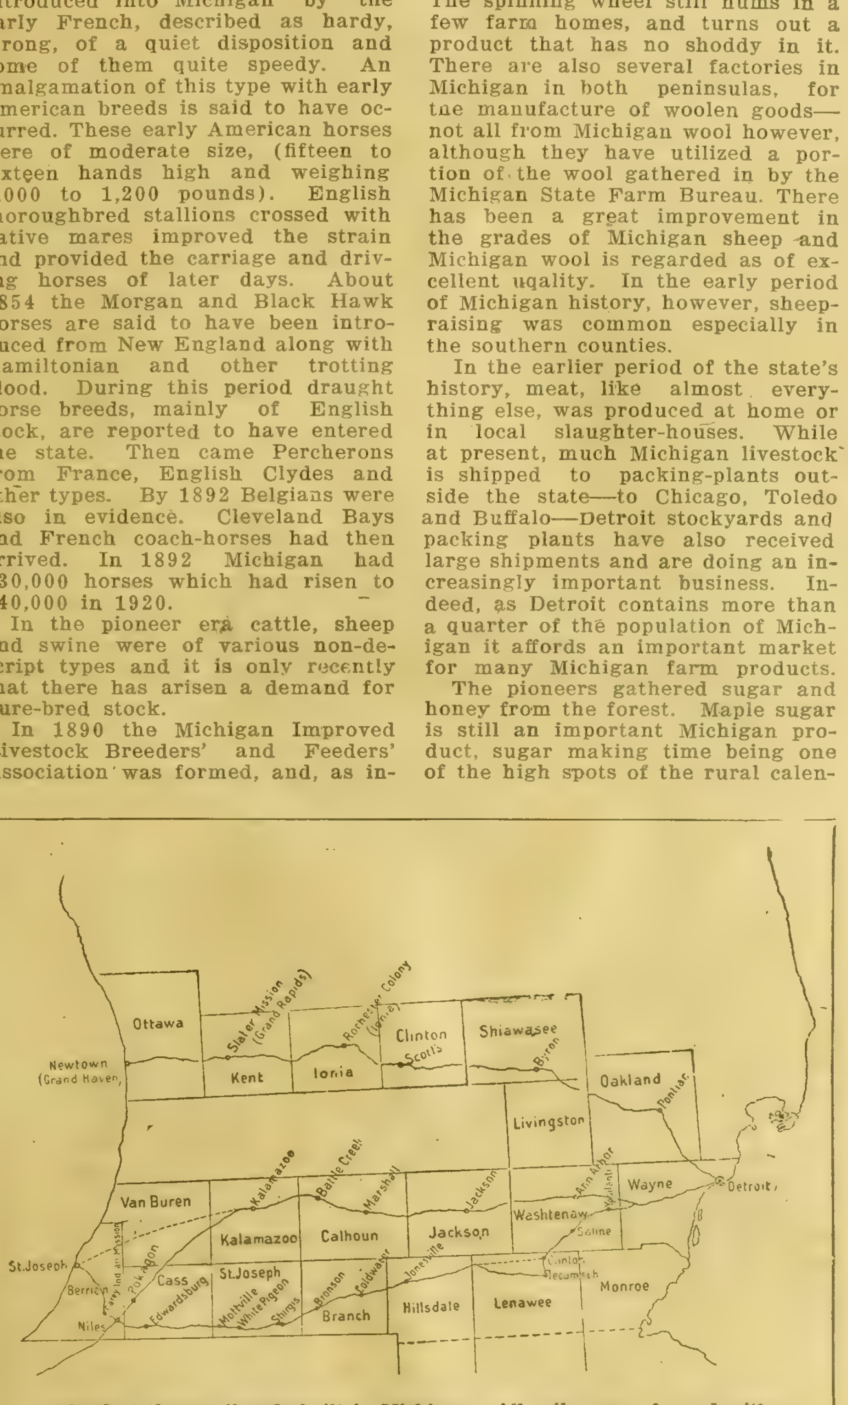
The pioneers gathered sugar and honey from the forest. Maple sugar is still an important Michigan product, sugar making time being one of the high spots of the rural calendar. The sugar-maple grows throughout most of the two peninsulas and sugar making on the farm is equally distributed. The maple sugar producers recently formed a state association to further their interests, and they are now distributing a portion of their syrup and sugar through the Michigan State Farm Bureau. Very much the same remarks apply to the production of honey. The unimproved cutover lands of the northern section of the state, through the abundance of the nectar-yielding vegetation which their carry, are becoming recognized as very favorable to honey-production and a beginning has been made in this territory.

The abundance of the right kinds of timber and iron, favored the early growth of factories of the manufacture of farm machinery, at first, fanning mills, corn planters, plows, etc., and more recently were added vehicles, threshing-machines, hand-mills, wire-fence, many kinds of implements and tractors, while the upper Peninsula contributes butter-bowls, clothes-pins, handles, and stump-pullers.

Marketing

For many years Michigan farmers marketed their products, each for himself, as best he could. The results were not always profitable. The Grange was established in Michigan in the early '70's and still later the Ancient Order of Gleaners, both of which have sought to improve market conditions for the farmers. Later still associations of farmers for the purpose of marketing some particular crop—such as potatoes, milk, honey, livestock, sugar-beets, etc., —were formed, and some of these have done a very large business—that of the Michigan Potato Growers Exchange amounting to several millions of dollars in a year. The fruitgrowers have a considerable number of these selling organizations. This organizing movement culminated in 1919 with the establishment of the Michigan State Farm Bureau which grew very rapidly and now (1921) has nearly 100,000 members. With and through its county and local farm bureaus, it handles seed, wool, grain, fertilizers, forest products and other things bought or sold by members; and it serves as a sort of business clearing house for the other farmers' selling organizations. There is a similar national organization—the American Farm Bureau Federation—with which the State Farm Bureau is affiliated. Local groups of farmers have also established co-operative stores, elevators, creameries and cheese factories, bull associations, telephone and lighting companies, and purchasing organizations for their mutual advantage. There are state laws which permit and favor such organizations. All this is quite unlike the individualism of the early period of Michigan rural life.

Through the telephone, rural mail service, automobile, and the inter-urban, rural life has ceased to be isolated. This easier contact with the common life of the state and the nation has stimulated rural thought and made it more responsive to new ideas. This may well prove one of the most noteworthy aspects of the agricultural revolution that the past generations seems to have witnessed. Though laborious the farmers' life appears to be, it is undoubtedly much less laborious than it was before the invention of labor-saving machinery relieved the husbandman of much of the severest drudgery of his existence and elevated him to the position of a business manager requiring executive ability rather than sheer brute force to gain results. This, too, has liberalized thought and done much to relive the farmer from the stigma of narrow conservatism that has sometimes attached to him. The stock has always been sturdy and capable of growth but it has required greater breadth and flexibility of mind. This the development of the later-years has seemed to be bringing about.



The first three railroads built in Michigan. All rails were of wood with a metal metal strip covering the running surface, and some of these roads used horse-drawn vehicles at first.

The Hunted Woman

SYNOPSIS

JOANNE GRAY is one of the passengers on the train bound for Tete Jaune Cache the home of "The Horde," where she has no friends and all will be strange to her. The train stops at a town composed of several tents, she goes in search of food and a bath. She is directed to "Bill's Shack" and here she meets Bill Quade who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass out of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which they have passed. In but a moment the girl steps out, face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl money but before he can do so Aldous steps to the girl's side and floors Quade with a terrific blow. Aldous hurries the girl away from the scene to the home of friends. Joanne tells Aldous she is going to Tete Jaune to find her husband, Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner Culver Rann. Aldous believes FitzHugh is dead and locates a friend who declares he has seen the grave. Upon their arrival at Tete Jaune they are met by friends of Aldous, the Blacktons, at whose place they are to stay during their stop. Aldous visits an old friend, Donald MacDonald and then strolls about town. He is on the lookout for Quade and Rann and finds them at Rann's home. He spys upon them.

(Continued from Jan. 20 issue)

NO sooner had the idea of escape come to him than he had acted. A flood of light filled the room as his body crashed through the glass. He heard a cry—a single shot—as he struck the ground. He gathered himself up and ran swiftly. Fifty yards away he stopped, and looked back. Quade and Rann were in the window. Then they disappeared, and a moment later the room was again in gloom.

For the second time Aldous hurried in the direction of MacDonald's camp. He knew that in spite of the protecting curtain, the glass had cut him. He felt the warm blood dripping over his face; both hands were wet with it. The arm on which he received the blow from the unseen object in the room gave him considerable pain, and he had slightly sprained an ankle in his leap through the window, so that he limped a little. But his mind was clear—so clear that in the face of his physical discomfort he caught himself laughing once or twice as he made his way along the trail.

Aldous was not of an ordinary type. To a curious and superlative degree he could appreciate a defeat as well as a triumph. His adventures had been a part of a life in which he had not expected to win, and in to-night's game he admitted that he had been hopelessly and ridiculously beaten. Tragedy, to him, was a first cousin to comedy; to-night he had set out to kill, and, instead of killing, he had run like a jack-rabbit for cover. Also, in that same half-hour Rann and Quade had been sure of him, and he had given them the surprise of their lives by his catapultic disappearance through the window. There was something ludicrous about it all—something that, to him, at least, had turned a possible tragedy into a very good comedy-drama.

Nor was Aldous blind to the fact that he had made an utter fool of himself, and that the consequences of his indiscretion might prove extremely serious. Had he listened to the conspirators without betraying himself he would have possessed an important advantage over them. The knowledge he had gained from overhearing their conversation would have made it comparatively easy for MacDonald and him to strike them perhaps a fatal blow through the half-breed DeBar. As the situation stood now, he figured that Quade and Culver Rann held the advantage. Whatever they had planned to do they would put into quick execution. They would not lose a minute.

It was not for himself that Aldous feared. Neither did he fear for Joanne. Every drop of red fighting blood in him was ready for further action, and he was determined that Quade should find no opportunity of accomplising any scheme he might have against Joanne's person. On the other hand, unless they could head off DeBar, he believed that Culver Rann's chances of reaching the gold ahead of them would grow better with the passing of each hour. To protect Joanne from Quade he must lose no time. MacDonald would be in the same predicament, while Rann, assisted by as many rascals of his own colour as he chose to take with him, would be free to carry out the other part of the conspirators' plans.

The longer he thought of the mess he had stirred up the more roundly Aldous cursed his imprudence. And this mess, as he viewed it in these cooler moments, was even less disturbing than the thought of what might have happened had he succeeded in his intention of killing both Quade and Rann. Twenty times as he made his way through the darkness toward MacDonald's camp he told himself that he must have been mad. To have killed Rann or Quade in self-defence, or in open fight, would have been playing the game with a shadow of mountain law behind it. But he had invaded Rann's home. Had he killed them he would have had but little more excuse than a house-breaker or a suspicious husband might have had. Tete Jaune would not countenance cold-blooded shooting, even of criminals. He should have taken old Donald's advice and waited until they were in the mountains. An unpleasant chill ran through him as he thought of the narrowness of his double escape.

To the surprise, John Aldous found MacDonald awake when he arrived at the camp in the thickly timbered coulee. He was preparing a midnight cup of coffee over a fire that was burning cheerfully between two big rocks. Purposely Aldous stepped out into the full illumination of it. The old hunter looked up. For a moment he stared into the blood-smeared face of his friend; then he sprang to his feet, and caught him by the arm.

"Yes, I got it," nodded Aldous cheerfully. "I went out for it, Mac, and I got it! Get your emergency kit, will you? I rather fancy I need a little patching up."

MacDonald uttered not a word. From the balsam lean-to he brought out a small rubber bag and a towel. Into a canvas wash-basin he then turned a half pail of cold water, and Alodus got on his knees beside this. Not once did the old mountaineer speak while he was washing the blood from Aldous' face and hands. There was a shallow two-inch cut in his forehead, two deeper ones in his right cheek, and a gouge in his chin. There were a dozen cuts on his hands, none of them serious. Before he had finished MacDonald had used two thirds of a roll of court-plaster.

Then he spoke.

"You can soak them off in the morning," he said. "If you don't, the lady'll think yo're a red Indian on the warpath. Now, yo' fool what have yo' gone and done?"

Aldous told him what had happened, and before MacDonald could utter an excusable idiot and that nothing MacDonald might say could drive the fact deeper home.

"If I'd come out after hearing what they had to say, we could have got DeBar at the end of a gun and settled the whole business," he finished. "As it is, we're in a mess."

MacDonald stretched his gaunt frame before the fire. He picked up his long rifle, and fingered the lock.

"You figger they'll get away with DeBar?"

"Yes, to-night."

MacDonald threw open the breech of his single-loader and drew out a cartridge as long as his finger. Replacing it, he snapped the breech shut.

"Don't know as I'm pertic'lar sad over what's happened," he said, with a curious look at Aldous. "We might have got out of this without what you call strenu'us trouble. Now—it's fight! It's goin' to be a matter of guns an' bullets, Johnny—back in the mountains an' the snake of a half-breed'll get the start of us. Let 'em have a start! They've got two hundred miles to go, an' two hundred miles to come back. Only—they won't come back!"

Under his shaggy brows the old hunter's eyes gleamed as he looked at Aldous.

"To-morrow we'll go to the grave," he added. "Yo're cur'ous to know what's goin to happen when we find that grave, Johnny. So am I. I hope——"

"What do you hope?"

MacDonald shook his great gray head in the dying firelight.

"Let's go to bed, Johnny," he rumbled. "It s gettin' late."

CHAPTER XIV

To sleep after the excitement through which he had passed, and with to-morrow's uncertainties ahead of him, seemed to Aldous a physical impossibility. Yet he slept, and soundly. It was MacDonald who roused him three hours later. They prepared a quick breakfast over a small fire, and Aldous heated water in which he soaked his face until the strips of court-plaster peeled off. The scratches were lividly evident, but inasmuch as he had a choice of but two evils, he preferred that Joanne should see these instead of the abominable disfigurement of the court-plaster strips.

Old Donald took one look at him through half-closed eyes.

"You look as though you'd come out of a tussle with a grizzily," he grinned. "Want some fresh court-plaster?"

"And look as though I'd come out of a circus—no!" retorted Aldous. "I'm invited to breakfast at the Blackton's, Mac. How the devil am I going to get out of it?"

"Tell 'em you're sick," chuckled the old hunter, who saw something funny in the appearance of Aldous' face. "Good Lord, how I'd like to have seen you come through that window—in daylight!"

Aldous led off in the direction of the trail. MacDonald followed close behind him. It was dark—that almost ebon-black hour that precedes summer dawn in the northern mountains. The moon had long ago disappeared in the west. When a few minutes later they paused in the little opening on the trail Aldous could just make out the shadowy form of the old mountaineer.

"I lost my gun when I jumped through the window, Mac," he explained. "There's another thirty-eight automatic in my kit at the corral. Bring that, and the .303 with the gold bead sight—and plenty of ammunition. You'd better take that forty-four hip-cannon of yours, along, as well as your rifle. Wish I could civilize you, Mac, so you'd carry one of the Savage automatics instead of that old brain-storm of fifty years ago!"

MacDonald gave a grunt of disgust that was like the whoof of a bear.

"It's done business all that time," he growled good humouredly. "An' it ain't ever made me jump through any window as I remember of, Johnny!"

"Enough," said Aldous, and in the gloom he gripped the other's hand. "You'll be there, Mac—in front of the Blacktons'—just as it's growing light?"

"That means in three quarters of an hour, Johnny. I'll be there. Three saddle-horses and a pack."

Where the trail divided they separated. Aldous went directly to the Blacktons'. In the kitchen he saw Tom, the Oriental cook, busy preparing breakfast. Blackton himself, comfortably dressed in duck trousers and a smoking-jacket, and puffing on a pipe, opened the door for him. The pipe almost fell from his mouth when he saw his friend's excoriated face.

"What in the name of Heaven! he gasped.

"An accident," explained Aldous, with a suggestive shrug of his shoulders. "Blackton, I want you to do me another good turn. Tell the ladies anything you can think of—something reasonable. The truth is, I went through a window—a window with plenty of glass in it. Now how the deuce can I explain going through a window like a gentleman?"

With folded arms, Blackton inspected him thoughtfully for a moment.

"You can't," he said. "But I don't thing you went through a window. I believe you fell over a cliff and were caught in an armful of wait-a-bit bushes. They're devilish those wait-a-bits!"

They shook hands.

"I'm ready to blow up with curiosity again," said Blackton. "But I'll play your game, Aldous."

A few minutes later Joanne and Peggy Blackton joined them. He saw again the quick flush of pleasure in Joanne's lovely face when she entered the room. It changed instantly when she saw the livid cuts in his skin. She came to him quickly, and gave him her hand. Her lips trembled, but she did not speak. Blackton accepted this as the psychological moment.

"What do you think of a man who will wander off a trail, tumble over a ledge, and get mixed up in a bunch of wait-a-bit like that? " he demanded, laughing as though he thought it a mighty good joke on Aldous. "Wait-a-bit thorns are worse than razors, Miss Gray," he elucidated further. "They're perfectly devilish, you know!"

"Indeed they are," emphasized Peggy Blackton, whom her husband had given a quick look and a quicker nudge. "They're dreadful!"

Looking straight into Joanne's eyes, Aldous guessed that she did not believe, and scarcely heard, the Blacktons.

"I had a presentment something was going to happen," she said, smiling at him. "I'm glad it was no worse than that."

She withdrew her hand, and turned to Peggy Blackton. To John's delight she had arranged her wonderful shining hair in a braid that rippled in a thick, sinuous rope of brown and gold below her hips. Peggy Blacton had in some way found a riding outfit for her slender figure, a typical mountain outfit, with short divided skirt, loose blouse, and leggings. She had never looked more beautiful to him. Her night's rest had restored the color to her soft cheeks and curved lips; and in her eyes when she looked at him again, there was a strange, glowing light that thrilled him. During the next half-hour he almost forgot his telltale disfigurements. At breakfast Paul and Peggy Blackton were beautifully oblivious of them. Once or twice he saw in Joanne's clear eyes a look which made him suspect that she had guessed very near to the truth.

MacDonald was prompt to the minute. Gray day, with its bars of golden tint, was just creeping over the shoulders of the eastern mountains when he rode up to the Blacktons'. The old hunter was standing close to the horse which Joanne was to ride when Aldous brought her out. Joanne gave him her hand, and for a moment MacDonald bowed his shaggy head over it. Five minutes later they were trailing up the rough wagon-road, MacDonald in the lead, and Joanne and Aldous behind, with the single pack-horse between.

For several miles this wagon-trail reached back through the thick timber that filled the bottom between the two ranges of mountains. They had travelled but a short distance when Joanne drew her horse close in beside Aldous.

"I want to know what happened last night," she said. "Will you tell me?"

Aldous met her eyes frankly. He had made up his mind that she would believe only the truth, and he had decided to tell her at least a part of that. He would lay his whole misadventure to the gold. Leaning over the pommel of his saddle he recounted the occurences of the night before, beginning with his search for Quade and the half-breed. He left out nothing—except all men-

WEEDS AND BRUSH ALONG HIGHWAY

I own a farm in Saginaw Township and my land runs up to the township line between Kotchville and Saginaw townships. There is brush along the road that has been there for years and the Kotchville road commissioner has ordered me to cut all the brush from my fence to the center of the road. It is Kotchville's end of the road to keep up. I just took possession of the farm last March and it doesn't seem fair to make one man cut it with several of the neighbors just as bad as mine if not worse. Will you please let me know if I must cut all the brush without any pay or print the law about cutting brush along the highway.

I like the M. B. F., very much and think the service and market pages are worth the price of the paper alone.—H. C. H., Saginaw, Mich.

—Section 2, of Chapter 24 of the General Highway Law imposes the duty of cutting all brush and weeds within the limits of the highway upon the Overseer and Commissioner of Highways of the various townships.

Section 10 of the same chapter imposes the duty on the Prosecuting attorney of the county to prosecute all violations of the provisions of the above section of the statute.—State Highway Department.

FORECLOSING

We purchased a farm Nov. 8, 1919, and it called for $200 and interest a year. We have only paid the interest in the last two falls. We are letting them foreclose and last year we didn't pay the taxes either nor this year. Now what I want to know is this: Can we hold possession? That is put in crops and take them off, and not live there. I know they can't put us off for 15 months after default of payment of interest. We bought on a mortgage. But we want to know if we can hold possession and not live there and can they make us pay last year's taxes?—L. W. H., Vassar, Mich.

—The mortgagor has the right of possession whether he lives on the property or not until the expiration of the equity of redemption, which is one year from date of sale. He does not need to live on the premises to make one who interferes with his possession a trespasser. He might think today that he would quit but change his mind before the time is up and arrange to keep the place. He may suddenly find the land to be valuable. If the taxes were assessed to the mortgagor, personally, and he has any personal property from which the town treasurer could collect the tax he must lose or make himself personally liable to the mortgagee who might have to pay the tax if the property was returned on the land.—Legal Editor.

CONDEMN RELIGION IN SCHOOL

Is it lawful for a district school teacher to condemn or molest, in any way a faith, or religion or any part thereof during school hours?—A Reader, Durand, Michigan.

—A district school teacher does not have the right to condemn or molest in any way any religion or any religious faith during school hours.—G. N. Otwell, Department of Public Instruction.

KU KLUX KLAN

Will you kindly inform me thru your valuable paper what the Ku Klux Klan is? What their laws, if any, are, or what their society stands for? This will be very much appreciated. Are there any Klansmen in Michigan?—Mrs. A. S., Curtisville, Michigan.

—The Ku Klux Klan, a secret organization, was founded at Paluski, Tennessee in 1866. It was formed originally for purposes of amusement only but soon after developed into an association of "regulators," and became notorious for deeds of violence. The proceedings of the Ku Klux Klan in the southern states were a feature of the determined struggle to withold from the emancipated slaves the right of voting. At a convention held in 1867 in Nashville, a positive declaration of principles was made. It was in the following terms, in effect:

"We recognize our relations to the United States Government; the supremacy of the Constitution; the union of the states thereunder." They defined the objects of the order as follows:

1. To protect the weak, the innocent and the defenseless from the indignities, wrongs and outrages of the lawless; to succor the suffering and especially the widows and orphans of the Confederate soldiers. To protect and defend the constitution of the United States and all laws passed in conformity thereto, and to protect the States and people form invasion from any source whatsoever. To aid and assist in the execution of all constitutional laws. The Klan was disbanded in 1869 but has since been re-organized, and is claimed to have members in every state in the Union, from Maine to California.

LET LOCAL PERSON JUDGE

What division is customary when one rents a farm, and furnishes everything, that is, seed, tools and horses. The renter thinks he would be a fool to husk my share of the corn.—E. M. L., Mt. Pleasant, Mich.

—If there was nothing said in the lease about what work was to be done I would be of the opinion that the taking of land on shares or percentage contemplates that the renter should do all the work usuel in farming and deliver the proceeds in proper shape. The amount given the renter under the circumstances related by would depend upon the locality in which the property is situated. Some land might be worth $500 per acre and other only $50 and it would hardly be fair to class the high priced land with that of less value. It would be fairer to take the opinion of those acquainted with the premises in the locality.—Legal Editor.

DUTIES OF COUNTY SCHOOL COMMISSIONER

What are the duties of a County School Commissioner, and are there any State, County or District School inspectors?—J. S., Toivola, Mich.

The county school commissioner is the chief eduational officer in the county. The following are some of his legal duties:

(a) To conduct all teachers examinations and 8th grade examinations.

(b) To visit each school in his county at least once a year.

(c) To inspect, and require correction if necessary of the annual reports of the several school boards.

(d) To advise with boards of education concerning buildings, equipment, sanitation, etc.

(e) To advise with teachers concerning methods of instruction, control, community ativities, etc.

(f) To co-operate with village and state superintendent of schools concerning the conduct and development of grade schools.

(g) To act as assistant conductor of all teachers' institutes held in the county.

(h) To do all things possible that will improve educational conditions and methods within his county, and to co-operate with all forces directly or indirectly related to education.

There are no state or county school inspectors in Michigan. That term is not used in Michigan law.—W. H. French, Director Vocational training, M. A. C.

MUST PAY ASSESSMENT

I wish to know if a land owner who does not sign a petition for a trunk line road which is to be built where his farm is situated, can be compelled to pay the special tax that will be levied against his land. Any information you can give us on this will be much appreciated.—A. H., Crosswell, Michigan.

—When a portion of the trunk line highway is constructed under the

assessment district plan all property lying within the limits of the assessment district as established by the Highway Commissioner is assessable according to benefits received and a property owner having property within the district would be obliged to pay his assessment whether he had signed the petition or not.

Under the assessment district plan only 61 per cent of those having property abutting upon the highway are required to sign the petition in order to give the Commissioner authority to proceed under the petition in establishing an assessment district and building the road as described in the petition. In case the road is built under the trunk line act and not under the assessment district plan then there would be no special assessment for any abutting property owners.—H. H. Partlaw, Legal Adviser, State Highway Dept.

TAX EMPTION OF SPANISH-AMERICAN WAR VETERAN

I understand that all ex-soldiers of the Spanish-American War are exempted from taxes and am informed that you can give me instructions so I can obtain this exemption.—O. W. R., Detroit, Mich.

—All real estate to the value of $1,000 used and owned by any soldier or sailor who served three months or more during the Spanish-American War is exempt from taxation. Should such homestead exceed in value the sum of $1,000, it is exempt only to the amount of such sum.—Charles J. Deland, Secretary of State.

TANNING FUR PELTS

Through the M. B. F. please advise me how I can tan raw muskrat and weasel hides?—H. R., Bad Axe, Mich.

—Fleash the skin or skins carefully. Weasel pelts if properly skinned will need but little, if any fleshing. Soak them two to six hours in the following liquor: Four gallons of cold, soft water; one-half ounce borax; one-half pint salt; one ounce of sulphuric acid. This will prepare the skins for the tanning liquor. Now take two gallons of cold, soft water, (rain water is good) one-fourth pound of pulverized oxalic acid, and one quart of salt. Put the skins in this and leave them until there are no dense spots to be seen. It will take about 36 to 48 hours for muskrat and other fur pelts of the same thickness, but somewhat less perhaps for weasel. When tanned, remove the skins and wring them dry, then pull and work them while drying, so they dry soft. Do this work in the shade, remembering that the more they are worked while drying the softer the tanned pelts will be. In fact "elbow grease" is one of the essentials in sucessful tanning.

MICHIGAN CROPS

SEEDING FOR HAY

I have five acres of land that I wish to seed for hay. The land is high, dry and is weak light sand. Please tell me what kind of grass seed is best fit for it? The reasons for seeding is because the land has been cropped so long it needs to be built up. The seed I wish to plant is for to build up the ground and produce hay as well. I shall have five acres I wish to seed also, which is low and wet. Hope you can suggest to me the proper kind of seed to sow, when and what to sow with it. —R. S., Star Route.

—If you desire a crop that may be made into hay this coming summer we believe you will find soybeans better adopted to the light soil than any other crop. The Manchu, Ito San and Black Eyebrow are the leading varieties for Michigan conditions. They should be sown on well prepared seed bed at the rate of from thirty to thirty-five pounds of seed per acre, when sown in twenty-eight to thirty-two inch rows, and from eighty to ninety pounds of seed per acre when drilled solid. Soybeans may be sown from May 15th to June 10th.

Soybeans are more resistent to soil acidity than any other leguminous crop adapted to Michigan conditions.

If a premanent crop is desired, it would be advisable to lime the soil and either seed sweet clover or a mixture of Mammoth clover, June clover, orchard grass and Kentucky blue grass.

On the low, wet land would recommend seeding a mixture of red top, timothy, alsike clover with a small amount of June clover.—C. R. Megee, Farm Crops Dept., M. A. C.

SUDAN GRASS

I would like some information regarding Sudan grass. Where can I get the seed? What is the price of it? How much per acre should be sown? Would it do well on light gravelly soil? Can it be cut for hay? Or is it for pasture? What time in the spring should it be sown? Is it anything like quack grass, or can it be exterminated like other grass?

Sudan grass may be used quite successfully for either hay or pasture. It is practically the only crop that can be sown the latter part of May and produce pasture for horses and cattle the same season as sown. As a hay crop it has about the same feeding value as timothy. The yield usually runs from two to four tons of hay per acre.

Sudan grass should be sown about the middle of May at the rate of from twenty to twenty-five pounds of seed per acre. An ordinary grain drill set to sow two pecks of wheat will sow approximately twenty-five pounds of Sudan grass seed. It does not have an under-ground root system like quack grass and will not live over the first winter.

The price of Sudan grass seed is quite low, ranging from $6 to $7 per hundred pounds. Seed may be secured from the Farm Bureau Seed Department, 221 N. Cedar St., Lansing, Mich., the S. M. Isabell Company of Jackson, Mich., or quite frequently from local seed dealers.—C. R. Megee, Associate in Farm Crops, M. A. C.

RENEWING STAND OF ALFALFA

I sowed Alfalfa with oats last spring. There is only about a half stand of alfalfa. I wish to leave it and want to know how I can sow more alfalfa seed to secure a good stand this spring. When should it be sowed?—N. S. A., Fairgrove, Mich.

—It is only occasionaly that old stands of alfalfa are successfully thickened by seeding new seed on the old stand. Many more failures occur than successes. Much depends upon the cause of the old stand thinning out. It it was due to the original seed not being winter hardy, then some good might be accomplished by seeding six pounds of either Grimm or northern grown common during the early spring. The old plants however, will shade and rob the young ones of moisture so that the new seeding will not have the same chance as when seeded by itself. If the lack of lime is the cause of thinning then it would be more economical to turn under the old stand, lime and reseed. The lack of drainage and inoculation also cause failures. In seeding alfalfa a firm, well prepared seed bed is also of great importance.—C. R. Megee, Farm Crops Dept., M. A. C.

ADD ACID PHOSPHATE TO MANURE

TESTS which have been running the Ohio Experiment Station for 20 years show that substantial profits follow the reinforcement of stable manure with acid phosphate before application to the field. According to Director C. G. Williams, 320 pounds of acid phosphate added to eight tons of manure, and applied to corn in a corn-wheat-clover rotation has produced increases, over the yield from manure alone, at the rate of $109 per ton of acid phosphate. While all land cannot reasonably be expected to yield the same rate of return, there is no question according to Director Williams, but that the practice is a very profitable one. He suggests scattering a pound and a half per animal daily in the stall or manure gutter.

The Truth About Henry Ford

The Inside Story of the Peace Ship Told for the First Time

By Sarah T. Bushnell

(Copyright by Reilly & Lee Co.)

WHEN Madame Schwimmer reached Detroit she learned that Miss Morgan and Miss Shelley had exhausted their funds. She immediately sold her jewelry to meet the obligations incurred and took a small room on the top floor of the Tuller Hotel. The writer was told by a woman who knew her that Madame Schwimmer was not the charming dazzling creature that report had made her. She is described as a woman of culture and education, sincerely eager to end the war. She was fairly good looking, pale, with dark hair and snappy eyes. She seemed just a plain motherly person, with no great amount of personal magnetism.

Like every newcomer in Detroit Madame Schwimmer was anxious to meet Henry Ford. She was an admirer of the Ford industrial system and desired moreover to show the motor king letters and documents from Earl Grey, the King of Sweden, von Bethman-Hollweg and others. These documents she carried with her always, enclosing them in a flat green leather bag secured to her wrist. It has been said that these papers were forged, but the charge has never been proved. She appealed to Mr. Pipp to secure for her an interview with Mr. Ford. "I think I can arrange for you to meet him," Mr. Pipp told her, "but I shall make the appointment on one condition: You must promise not to ask him for financial aid or try, directly or indirectly, to secure money from him."

Madame Schwimmer's snappy black eyes looked straight into Mr. Pipp's steady blue eyes as she answered: "I give you my word of honor that I shall not ask Mr. Ford for money for any project whatever. I want to secure his aid in presenting my documents to President Wilson." Mr. Pipp then arranged the meeting. At his suggestion Alfred Lucking, Mr. Ford's senior counsel and a former member of Congress, was present when Madame Schwimmer met the motor king in his great office at the Highland Park plant. She presented her credentials and other documents and was questioned searchingly by Mr. Lucking. No witness in court ever underwent a more gruelling cross-examination than did this Austrian woman that morning.

* * * *

In this connection it must be remembered that there was no stronger advocate of peace in the country than Henry Ford. He had been born in the years of the Civil War and had spent his childhood in the shadow of the old arsenal at Dearborn. His boyhood had been filled with stories of the horrors of war, and one day, years afterward, when driving away from this plant with a friend, he remarked: "There is the factory into which I have put my life. I have given it the best that is in me, but I would rather tear it down brick by brick with my own hands than have it used for making munitions of war."

The writer can state on the best authority that Mr. Ford did not agree to go to Washington with the peace committee. He was in Washington shortly after his meeting with Madame Schwimmer, and it was there that he was persuaded to go abroad with the peace delegates. It was at this time that the Peace Ship was suggested to him. Shortly after ward he telephoned Mrs. Ford at their home:

"We are going to Europe," he told her.

"Going where?" asked his astonished wife.

"You and I—We're going to Europe. And we are going to take some people with us."

"Indeed we are not," was Mrs. Ford's emphatic reply. "Don't let anyone talk you into any such notions."

It may be suspected that the motor king was unwilling to risk further discussion with his wife, for next day he called up Mr. Pipp from New York. "There is a rumor here that I am dead," he told the newspaperman. "I don't want Mrs. Ford to worry. Will you telephone her that I am all right. You can get her quicker from your office than I can from here. Tell her my cold is better and that I'll be home soon."

"What about the interview with President Wilson?" Mr. Pipp asked.

"There is nothing that he can do." came the answer in weary tones. "I'll tell you about it when I return. By the way, do you mind if I bring Miller back with me? I do not like to make the trip alone." Miller was the Washington correspondent of the News, and Mr. Ford was particularly fond of him.

The next thing Mr. Pipp and Mrs. Ford heard was that the newspaper announcement that Mr. Ford had agreed to finance a peace expedition to Europe; that a considerable party of peace enthusiasts would accompany him, and that he had chartered a ship for the voyage.

Mr. Ford returned to Detroit fired with the zeal of a crusader. To every advisor who urged him to abandon the project he replied: "In Washington they have experts studying every hill, valley, river and road in Europe. They have men studying every phase of war, but no one studying the possibilities of peace. If America is dragged into the war there will be a terrible loss of life among our young men. Thousands will be slaughtered like cattle and other thousands will die from exposure and disease. The reconstruction period through which we shall have to pass will be terrible. If I can be of any service whatever in helping end this war and keeping America out of it I shall do it if it costs me every dollar and every friend I have."

The Peace Ship sailed on December 4, 1915. It was necessary to take in gold the money needed to defray all expenses. Mr. Ford's farm manager, Ray Dalinger, who had served him since the days of the Piquette street plant, had charge of guarding and handling the great bags of coin that were carried in the ship's hold. Hardly was the Statue of Liberty out of sight before the peace delegates began to be less peaceful among themselves. In a short time the disagreements and friction became more marked. Madame Schwimmer herself became unpopular. She was temperamental and wrapped herself in a mantel of reserve. It has since been said that perhaps Madame Schwimmer was "a conspirator seeking to focus the attention of the world on peace at a time when her country and its allies held the whip hand."

If this be true, she was sadly lacking funds for the undertaking. Her interviews were in full glare of the searching light that beats upon publicity. If she was an arch-spy, what could she accomplish by announcing her presence in a neutral country where the secret service is swift, active and effective? What could she gain by approaching a man whose father was an Englishman; whose wife was the daughter of an English mother, both of whom keep in close touch with England? If she were an adventuress, she was bound to know that it is utterly impossible to reach a man of Henry Ford's prominence without being carefully scrutinized and investigated. If she were sincere in her motives, she has been terribly maligned and her disappointment in the failure of the expedition must have been overwhelming.

Henry Ford was ill when the party reached Christiana. A cold had become worse and he was in no condition to go farther with his already hopeless task. He remained aboard long enough, however, to gather first-hand information of the European situation, especially astunding information regarding Russia. He learned, too that Germany had no intention of ending the war without a victory that would subjugate the entire English speaking world. He found that what the Allies needed was a submarine detector.

Mr. Ford returned home on New Year's Day, 1916. The experience had aged him. It had opened his eyes to many things he would rather not have known and which he probably never would heve believed had he not made the voyage in the Peace Ship. That the war would continue he was convinced. The struggle would be a terrific one and the day was rapidly approaching when America would be drawn into it. Germany knew this country was unprepared and believed that we could not whip an army into shape in time to count in the conflict.

Forthwith Mr. Ford began to do some planning of his own. He ordered his yacht overhauled and made ready for instant service if the government should need it. His River Rouge plant, as has been said, is located at the point where the stream from which it takes its name flows into the Detroit river. The plant was rapidly equipped for the making of eagle boats and submarine chasers. The situation is an ideal one for a naval station, and it was used for this purpose throughout the war after the entry of the United States. Finally, Mr. Ford issued orders that work be rushed on his three million dollar hospital.

With all these preparations he never discussed with any one what he had learned abroad or the work he now had to do. If he read the bitter criticisms he gave them no heed. People close to him realized, however, that the current of his life had changd. He was busy day and night now; the twinkle came to his eyes but seldom, and the iron gray of his hair whitened.

A year later America entered the war and Henry Ford was summoned to Washington.

"How quickly can you supply us with cars and munitions?" he was asked by a congressional committee.

"I must have a little time," he parried.

"Exactly how long will it be before you can make your first delivery of cars, trucks, caissons and the like?" came the insistent question.

Henry Ford looked at his watch; it was 11:30. "By 3 o'clock tomorrow afternoon my first delivery will be complete," he replied. "I can telegraph to the plant and start work immediately. They should receive the order in five minutes."

The Congressmen laughed. They did not know that he had spent many sleepless nights planning every detail of the work that he knew he would be called upon to do. They did not know that he had been waiting the day when he must place all the resources of his great industry at the service of the government. The great factory—the largest motor plant in the world and the only one that hitherto had refused war orders—was equipped to the last detail so that at the signal from its owner every department could take up the work for war.

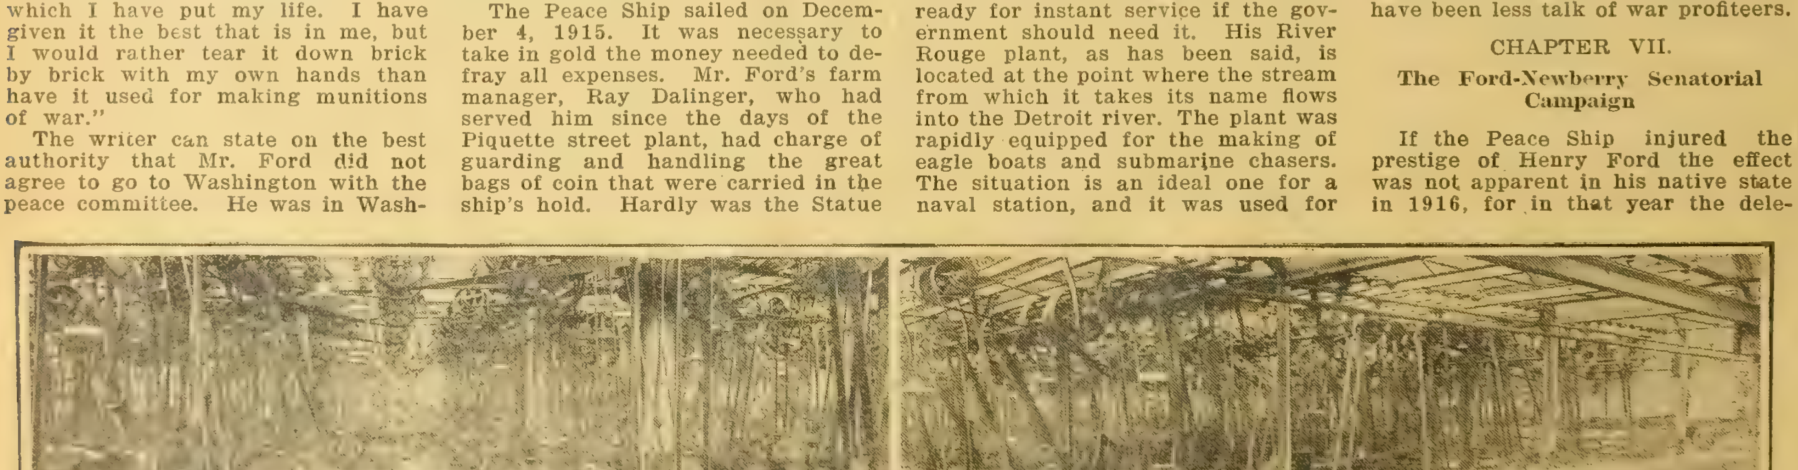
That is why the Ford plant played the wonderful part it did in supplying the necessities of war. That is why it was able to turn out finished materials for the armies faster than the ships could carry them across the Atlantic. What Henry Ford had learned on his unsuccessful peace voyage had caused him to prepare for the day that now had arrived. He knew that every day the struggle was prolonged more brave young soldiers would fall and he employed all his vast resources to hasten the coming of peace by a speedy victory.

Henry Ford gave all his war profits—twenty-nine millions—to the government, with no hampering conditions. This vast amount was turned back to the Treasury to be used as the government saw fit. This was the act of a pacifist. If all the war advocates had done the same the country's war debt would not be so staggering to-day and there would have been less talk of war profiteers.

CHAPTER VII.

The Ford-Newberry Senatorial Campaign

If the Peace Ship injured the prestige of Henry Ford the effect was not apparent in his native state in 1916, for in that year the dele-



Two views of the Ford plant at Highland Park, showing the maze of belting and machinery which make it possible to turn out four thousand complete automobiles in a single day. These machines are kept busy by three shifts of men who fill in twenty-four hours every day. Even with Mr. Fords earnest endeavor, it is hardly possible to keep the thousands of humans who toil here from becoming machines themselves. Thousands of visitors are conducted through this plant every year. Many foreign notables visiting America ask to be shown only two world-famous sights, "Niagara Falls and the Ford factory." This now is only one of the industries owned by Henry Ford who once, as this story has told, was a Michigan farmer boy.

gation sent to the Republican National Convention at Chicago was instructed to give him its complimenary "favorite son" vote. Mr. Ford had none of the characteristics of a statesman, or even politician, and does not yearn for public office, but he has more men working for him than there are people living in Nevada and Wyoming; he has been marvelously successful in his conduct of immense business underakings, and it would seem that he must be capable of filling a place in the Senate of the United States—not as a statesman or politician, not as a hard-working, successful man who always has had the interests of many people at heart.

In Michigan, where he is best known and most esteemed, many citizens were eager for him to be their senator, as William Alden Smith had announced that he would not be a candidate to succeed himself. Mr. Ford was urged to make the race on the Republican ticket and although the nomination would have been equivalent to election he refused, partly because he did not want the office and partly because he did not want to take the time away from his business. Then the Democrats appealed to him to become their standard bearer. "Michigan," they told him, "is overwhelmingly Republican. You are the only man who can make the race as a Democrat with any hope of sucess. At this critical period the President needs the support in Washington of every friend he has."

About this time the President sent for Mr. Ford to come to Washington for a conference. They discussed the submarine detector on which Mr. Ford himself had been working. From that the conversation turned to the coming senatorial campaign. Partisanship did not enter into the conversation, but the President said that he needed Mr. Ford in the Senate and gave as his reason that he "was fair-minded and had no party prejudices,' 'and he added: 'No one knows as I do the work that you and your son are doing to help win the war. No one knows better than I know the heartache and the sacrifice that you are putting into it. But I hope you will put aside your personal feelings, make this additional sacrifice and be a candidate.

Mr. Ford was touched by the appeal, but his reply was characteristic of the man. "I cannot leave Detroit," he told the President. "I cannot take my eyes off the plant. No matter how many officials I may have, I must be there myself. If I am around my factory all day and every day; I am there very often at night. I've gotten out of bed many a time to drop in on the night shift and see how things were moving. I've worked right along with the men on the submarine detector and we have just completed it. I cannot take time to make the race. Moreover, I have so much to do at Detroit that I could not spend enough time in Washington if I were Senator. Besides, I can't make speeches and I have not the patience to sit around and listen to folks who like to talk."

Mr. Wilson put his hand on Mr. Ford's shoulder. "The country needs you," he said. "We are being swamped with waste; we are being hamperd by various combinations. I need your aid in this time of stress. I know your obligation and I realize that I am asking more than you feel you can give; but I need you—need you more than you know."

And when Henry Ford returned to Detroit the same argument was advanced from every side: "The President needs you. You are the only man in Michigan that can be elected on the Democratic ticket."

Meanwhile the Republican, alarmed by the general talk of Mr. Ford as the Democratic candidate, cast about for the strongest man they could find to oppose him. They selected Cammander Truman H. Newberry, prevailed upon him to enter the primaries and he was selected as the Republican nominee. Mr. Newberry was a man of great wealth—several times a millionaire—and was connected with the most influential families of the state. His home was in the fashionable suburb of Grosse Pointe, ten miles from Detroit. In 1905 he had been appointed Assistant Secretary of the Navy and when America entered the world war President Wilson made him a Lientenant Commander in the navy, the highest rank ever conferred upon a civilian. Later he became aide to Rear Admiral N. E. Usher, commandant of the third naval district, which includes New York and Brooklyn. At that time no one had any idea of the bitternes and legal prosecutions that would follow the campaign; no one had any idea that Commander Newberry, one of Michigan's leading citizens, would be convicted and sentenced by a Republican jury and judge for violation of the federal election law, and that many other party leaders would be involved with him. If either Mr. Ford or Commander Newberry had known what was in store it is more than likely that neither would have taken part in the campaign, even if they had forseen that after the long and bittter fight Mr. Newberry would be cleared in the United State Supreme Court and the law under which he was prosecuted declared unconstitutional.

Finally Mr. Ford agreed to run. Soon the battle was on. His admirers took off their coats, rolled up their sleeves and went to work. Party lines were swept aside and Detroit never has known such a campaign as that which followed. Soon the excitement swept over the entire state—both men were known in every township and village and both were regarded as the strongest their respective parties could have selected. As time passed the campaign grew hotter and hotter. Straw votes were taken everywhere and it was confidently predicted that Henry Ford would be elected by an overwhelming majority, although he had almost no newspaper support—Michigan having few Democratic papers.

But the race was not over. Two developments were to upset the hopes of Mr. Ford's followers. One was the letter written by President Wilson asking for a Democratic congress. This did his candidacy much harm. The other was the statement attributed to Charles Evans Hughes, which appeared in the newspapers on November 3, 1918, just two days before the election. The statement itself hurt Mr. Ford's chances, and Mr. Ford's subsequent action did his cause still more harm. It should be kept in mind that the Ford Motor company did vast amount of war work. Armistice rumors were already being heard, but the necessity of guarding the country's war secrets was as great as ever.

In its issue of Sunday morning, November 3, the Detroit Free Press carried a full-page advertisement, which also appeared in other newspapers, parts of which are given below. The "ad" was published by the Republican State Central Committee, over the signature of John D. Mangum, chairman. At the top in heavy type, at least two inches high, were the words:

"HENRY FORD AND HIS HUNS."

Below this was the following statement:

"Carl Emde, a German alien and a German sympathizer, is boss of the drafting work on the Liberty motor at the Ford plant. Henry Ford knows he is a German alien and a German sympathizer, but he refuses to take him off this work.

"This is not hearsay. It is absolute fact, vouched for by Charles Evans Hughes, whom President Wilson appointed to find out why the production of American aeroplanes has been so much delayed, when the American soldiers in France needs them so much. President Wilson's confidence in Mr. Hughes is emphasized by the fact that Mr. Hughes is a former justice of the Supreme Court of the United States. His reputation and respect for the truth and for fairness in judgment have never been questioned, even by his bitterest adversaries. Concerning Emde's job, Mr. Hughes says in his report to the President:

" 'IT IS POSSIBLE FOR ONE IN THAT DEPARTMENT TO BRING ABOUT DELAYS THE CAUSES FOR WHICH, IN VIEW OF THE MULTIPLICITY OF DRAWINGS, IT WOULD BE HARD TO TRACE.' "

(Continued on page 18.)

It's Cheaper this Year

IT costs less this year to remove stumps from your land—the new du Pont explosive, Dumorite, will blast them out for much less than it used to cost.

Dumorite has approximately the same strength as 40% dynamite, stick for stick, with the slow, heaving action of "20%"—and you get 1/3 more sticks for each dollar. It is non-freezing and non-headache. Get it at your local dealer's and clear more land at less cost.

Write for free, 110-page "Farmers' Handbook of Explosives." It gives full information on the use of explosives for land clearing, ditching and tree-planting.

"The Farm Paper of Service"

1923 SHOUULD BE READJUSTMENT MIDDAY

EXTRACTS from article under above caption, by financial editor of the Chicago Tribune, under date of January 1, 1923:

"The year 1922 will go down in American economics as the beginning or recovery from the drastic deflation of wartime and its aftermath, one of the most severe periods of depression in the country's history.

"American business industry throughout the year manifested a steadily improving pace. From a general depression in the winter of 1921, which revealed itself in unemployment of several million workers, the situation in one year reversed itself, and in recent months there have been complaints from some of the larger industries of shortage of labor, in spite of an advancing trend in wages.

"One of the best indices of the year's progress lies in a comparison of the country's financial situation now and at the end of 1921, as disclosed by the reports of the federal reserve system. Loans and rediscounts now aggregate about $565,000,000, or as much as at the close of 1921.

"Improvement in both agriculture and industry undoubtedly would have been more marked out but for the troubled European situation. Nevertheless, the record of our international commerce is not such as to cause discouragement.

"The United States last year sold about $1,000,000,000 more commodities than it bought, which is a comfortable margin.

"Generally, all classes enter the new year with better sentiment, encouraged by obstacles overcome and the more cheerful prospects. There is no reason why the work of the country should not go forward in orderly and sustained progress."

DR. FRIDAY'S MILK QUIZ

TRUE to his promise, David Friday, busy president of the Michigan State Agricultural College, opened his investigation of the milk situation in Detroit area last week and incidently raised the wrath of the daily press by refusing admittance to the session, not only to the public, but to the reporters.

The fact that the prices for the month of January, will remain unchanged from his prices set for the previous month, also caused some complaint, but it was hardly to be expected that in so short a space of time, Dr. Friday could determine whether or not the producer was getting a fair price or the public being robbed.

Obviously all are agreed that the spread in price between what the producer gets and what the public pays, is eaten up in the costs and profits of distribution and it is at this heart of the question that Dr. Friday's investigation aims. The average consumption of milk, per captia, in large cities is not one half what it should be, when measured in the food value of milk and its by-products. There are periods of the year when milk is actually wasted in Michigan and yet the price remains so high in cities that it is used only sparingly in homes which should have it in abundance.

The producer must have his cost of production plus a fair profit—and by the way, the producers have never shown an inclination to even hope to "profiteer' 'on their product. The consumer on the other hand must be able to buy milk at a lower price than he now pays and be educated to use twice as much milk for his family as he now uses. These things are possible, practical and eventual.

We have great confidence in Dr. Friday's ability to conduct the first step in this plan and every farmer in Michigan is intensely interested in what will be the outcome. We do agree with the daily press that these meetings should be open at last to representatives of newspapers and farm papers. "Open convenants, openly arrived at!"—seems to be a beautiful theory, hard to put in actual practice. Secrecy never breeds confidence and seldom broods good. We do not believe that Dr. Friday was responsible for the fact that the first meeting was held secretly and we hope that he will insist upon the next being thrown open to the white light of publicity.

MILO CAMPBELL ON RESERVE BOARD

THAT a Michigan man should have been appointed to a place on the Federal Reserve Board by President Harding were honor for our state, but that the man appointed should be none other than Milo Campbell, of Coldwater, should be a real source of satisfaction to the farmers of Michigan.

Washington newspaper dispatches say that Mr. Campbell was appointed as a "dirt farmer" to represent agriculture on the board. There is some discussion in the same periodicals as to whether a man who has been insurance commissioner, Mayor, United States Marshall and a member of the state legislature, can in reality be called a "dirt farmer."

We, in Michigan, would prefer to call Milo Campbell a business farmer, and in that phrase we would consolidate the virtues of a man who knows farming, its problems, its discouragements and its present-day needs. A man who will see clearly, deal squarely, have the respect of his associates and fight to the last ditch for what he believes to be right.

Mr. Campbell has the biggest job of any man on the board, beause he must represent the class who can be helped or hindered most by its immediate future acts. He goes to take up his work with all the well wishes of every good citizen in his home state and The Business Farmer joins with only one admonition—that he get back and rub shoulders with us often enough so that he can know what is actually happening on the farms and in the farmers minds.

CAN MORE CREDIT HURT THE FARMER?

MOST critics of the general principle of an extension of credit to farmers point out that a man cannot be helped out of debt, by being able to borrow more and on easier terms. Obviously they would be right, but they do not, or apparently do not care, to know that what the farmer wants is not a means for getting further into debt, but a means of borrowing at such times in such amounts and for such periods which will allow him to conduct his business of planting, producing and selling in an orderly manner, as every other division of manufacture ing is conducted.

How many times must it be pointed out that the farm—each and every farm—is a factory, complete in itself? The farmer must, not only be, designer, mechanic and finisher of his product, but salesman as well. If you would force the manufacture of any line to all dump their produts on a market at one time what would happen? Glutted market, no buyers, panic!

And yet that is just what has been going on and just what will continue to go on, unless some orderly manner of marketing farm products can be, designer, mechanic and finisher of his proplan of relief credit will accomplish the millenium, but we do sincerely believe that it is a far step in the right direction.

CANADA GETS OUR HARD COAL

IT will doubtless make you feel warm, at least under the collar, to learn that one of the reasons why you cannot buy any hard coal for your base-burner right now is because a very large quantity of anthracite is being exported each week to Canada.

The average small town in Michigan has been without hard coal all of this winter, some fortunate ones have been doling out a car at a time in half-ton lots at prices which make us think all coal-dealers are highwaymen whether their alibis are founded on fact, or not.

We believe in charity and were our Canadian cousins going without fuel we would be the first to say give them all of the nice, soft coal they need to keep them warm, but when it comes to supplying their rich with the cream and leaving us only the skim-milk, we think it is high time to tell our mine-owning coal barons that we, as humble citizens and taxpayers of these United States, have some interest in where our anthracite goes.

BEWARE OF THE LAND SHARKS!

NEVER was a time when the land shark could gather in the sheckels as he can today! There are a great many farms for sale in every state in the Union. These "mail-order" real-estate men, advertise usually in the want columns of farm paper and country weeklies, something like this:

> Farm Wanted—Want to hear from owner of a farm for sale. No dealers or brokers. Must deal with the owner direct. John I. Gettum, Suckers Shoals, Anystate.

Naturally, when the owner of a farm for sale writes, he pictures Mr. Gettum as a substantial, serious farm buyer. Sometimes, the owner is so sure he has exactly the farm that Mr. Gettum wants, that no sooner has his letter gone in the mails, than he begins to look for the place in town or hurry mother off packing up the dishes and furniture.

What Mr. Farm Owner gets back is a nicely worded letter, with a circular explaining that Mr. Gettum, is really asking for a large number of prospective farm buyers and he asks only a small fee, a trifling ten dollar bill, most likely, for which he promises—well, he doesn't exactly promise, but he does not say that, in all probabilty he will be able to sell the farm, by listing it and doing his best to sell it!

Nowadays, every mail that comes to my desk contains one or more letters from readers of The Business Farmer asking about this grafter in Ohio, or that faker in Wisconsin. Some of these folks have read my repeated warnings NOT to bite on indefinite promises by mail. Read between the lines of every letter of this kind that comes to your mail-box. The postoffice department is very strict. Leavenworth is not so far away and it is the final resting place of all mail-order grafters. A sane man will not promise by mail what he cannot deliver. So read every promise, accept no "perhaps" or "maybe" or "we hope to"—if you do not understand thoroughly exactly what they promise to do for your money. Write them to put their promise in plain words. Then do not be surprised if you fail to get an answer. Plain words? Well, that's something else again!

I. C. C. TO INVETIGATE EXPENDITURES OF RAILROADS

FOLLOWING a petition to the Interstate Commerce Commission by President Johnston of the International Association of Machinists, for investigation by that body into the expenditures of the railroad companies of the country for maintenance and equipment, which was seconded by the Farmers' National Council, the Interstate Commerce Commission has ordered such an investigation to cover:

> (a) whether expenditures by such carriers for the maintenance of equipment have been reasonable;
>
> (b) the manner and method in which the business of such carriers is conducted, with especial reference to the furnishing of of car service, and,
>
> (c) whether the courses adopted by such carriers in the maintenance of equipment and in providing "car service" have been efficient and economical, and whether the service provided has been reasonably adequate.

This investigation will be of the greatest importance and throw light upon the conduct of the railroads in reducing equipment, upon their inter-locking directors, and the reasons for maintaining enormously high freight rates.

As the result of a recent successful radio test, it is predicted that radio-telephonic conversation across the Atlantic Ocean will be the usual thing before very long. Every word of a speech by H. B. Thayer, delivered in New York City, was distinctly heard in New Southgate, England.

The modern racing airplane of today moves faster than did the cannon ball used in the Civil War. The cannon ball of that time averaged but 200 feet a second and the airplane does 360 feet a second.

We smiled when we read the first article on increasing egg production by keeping electric lights burning, early and late. Now, whereever there is electricity one sees the poultry houses lit up.

What the Neighbors Say

EXPENDING PUBLIC FUNDS

THERE are strong indications which leads one to believe that public funds are not economically and wisely expended. In 1915 the Tawas City built a small iron bridge, lenght 40 feet, height 6 feet. The state trunk line crosses this bridge now. In 1921 the State Highway department sent 7 or 8 men to paint said bridge, said improvement cost $784.00. Near the village of Whittemore a bridge about the same size a professional painter offered to furnish paint and good workmanship for $240.00. His bid was rejected and said painting, cost nearly $800.00

In the village of Whittemore 160 rods of concrete road was built, said 160 rods cost $40,000.00. A citizen from Genesee County stated that in his neighborhood, 8 miles of stone road was built, and when completed a man was hired to take care of said 8 miles for $1,100 per year. At the end of the year a bill was presented for extra material in the amount of $11,000.00. Does that not warrant an investigation on the part of the people to know how their funds are expended? We must unload the army of useless officials, which have feathered their nest under the high cost of living. They have the same effect on the tax payers, like lice on a fine blooded sheep, it must die.

The people must demand to oust the State Police. They are neither ornamental or useful. They must demand to abolish the State Tax Commissioners. They have done more harm than good. Unload the Utility Commissioners. They are only a bill of expense. Stop supporting the Northwestern Development Bureau that serves to advertise land corporation, their cut-over lands, and the people pays the bill. Repeal the Covert Act which sends the farmer to the Poor House. Abolish the power to fill offices by appointments. That will close the door on Easy Street. Let State Officials buy their own car, and all unreasonable salaries must be reduced. The people should select and elect three competent men, who's honesty can not be questioned to lift the lid, and report what they find. It's up to the people to demand what must be done. A public official is a public servant, and not a public master. The mastership belongs to the people. The November election proved the fact that Mr. Newberry made a swift jump for an old man. This wonderland must be closed, and the people must refuse to maintain a fools paradise for the oily tongued politician to live on the fat of the land. Farms after farms are needed under normal conditions. The farmers paid from $20 to $25 tax, now under this wild movement they pay two or three hundred or leave the farm.

If said reforms are carried out, it will remove a mountain of taxes, and we can build good roads just the same. What is good for the state, can be applied to the county also. Remove the drone. Let every citizen be useful and a producing member on the Public Body. This is like parking into a hornets nest.—C. H. A., Iasco County, Michigan.

HOW ABOUT IT, HENRY?

AS I have been reading Henry Ford's talk in the Detroit News it makes me think that Mr. Ford knows very little about the average farmer and the men that buy his cars and are making the roads. Men that kept a hired man before the war are now glad to work on the road to pay their taxes as they are as high as rent for some farmers, as high as $3.00 per acre.

Mr. Ford says that if it doesn't pay to run the business to let someone else run it and work for the other fellow. That is just what the farmers are doing as fast as they can have sales and move into the city.

Young men say they are getting as high as $12.00 a day by working a few hours overtime. Now who pays that? The men that buys the cars and mortgages their homes to pay for them.

I say if we don't get some help from the gasoline tax we farmers will buy less cars and Henry Ford will not have to go over "the pond" to get help because the farm boys are going to the city sure. There was not enough produce raised in my township this year to pay this year's taxes.—J. S. F., North Branch, Michigan.

HALF TAXED AND HALF UNTAXED

WE HEAR a lot these days about the U. of M. and M. A. C., wanting large appropriations and a great many are opposed to it, but I am not. I say, let Michigan have the best schools in the good old U. S., but this is what I am supposed to.

Let us consider our doctor for a few moments. Real estate pays 79% of the money at present, given by the state to the U. of M., now if it was not for the generous old farmers, many a young man would go without a college education, but, by the farmers furnishing a good share of the money to run these institutions, it enables them to get an education very reasonably.

Now, we must have doctors and we welcome them. We build stone roads, the cost of which real estate pays about 85%. Now what do they do? They buy a house and a lot in town, an automobile, and as much tax exempt, or nearly so, property as they can buy. This little problem not only applies to doctors, but lawyers, dentists, professors, salesmen, tec., or anybody who gets his education at an institution where real estate pays the largest portion of the running expenses, and when his education is completed, invests his earnings in property that pays at least to support such institutions. Why is it not fair to expect a man to pay his just share toward the running of the institution where he got his education, or in other words, I don't think an education should be for the purpose of enabling a man to make an easier living and getting out of paying his just share of taxes.

Let us consider two men, one with $100,000 of non-taxable bonds, the other with $100,000 worth of real estate, their valuation is the same. The man with real estate pays a tax, whether he makes a profit or not, and if a large profit is made, he pays a Federal income tax, while the man with the bonds pays the Federal income tax only, providing his profit is large enough. What is right about it?

I think we should have a gasoline tax until the wealth of Michigan outside the real estate pays its just share of taxes, and a state income tax, as long as we have non-taxable property that produce incomes.

Get these figures: real estate represents 35% of the wealth of Michigan and pays 79% of the taxes. If the other 65% of the wealth paid in proportion to real estate, we would receive over two times as much taxes and real estate would not have to pay a cent more than at present. What the farmer wants is equalization of tax burdens.

Abraham Lincoln said; "A nation cannot exist, half free and half slave." Do you think a state can exist half taxed, and half untaxed?—H. D. P., Riga, Michigan.

PROTECT THE QUAIL

EDITOR M. B. F.—The farmers are almost unanimous in wanting the quail protected. Will you kindly give it a writeup in your editorial columns.—P. M. Baucher, Stanton, Michigan.

(Editor's Note)—If there is any good reason why the few remaining quail in Michigan should not be protected, we do not know what it is and we would be glad to have someone enlighted us. The good sportsmen of this and other states, want to see the quail protected. The poor sportsmen don't want the quail or wild fowl or fish protected. Luckily the good sportsmen make the laws and see that they are enforced.

HELPS SOLVE HIS PROBLEMS

I appreciate reading your paper very much and find it a great help in solving many problems on my farm.—Emil H. Roberts, Chicago, Illinois.

ENJOYS UNCLE RUBE

I like your paper real well. And I especially enjoy reading Uncle Rube.—Mr. Peter Stanek, Charlevoix County, Mich.

Invest in a McCormick-Deering Manure Spreader for More Profitable Farming

The basis of profitable farming is a fertile soil. In farming, as in other businesses, there are poor years and good ones, but the farmer who keeps up the productivity of his soil will forge ahead.

No method of maintaining soil fertility has proved so efficient as the proper application of barnyard manure. It is a foresighted policy to build up crop yields with a McCormick-Deering Manure Spreader. Put manure on your fields finely, evenly, uniformly, and economically; the extra fertility will in a short time pay for the McCormick-Deering spreader.

Note again these features in McCormick-Deering construction: 1. Power delivered from both wheels. 2. Double ratchet drive with six feed speeds. 3. Short-turn front axle—no pole whipping. 4. Rear wheels track with front wheels. 5. Tight bottom. 6. Two beaters and wide-spread spiral. 7. All-steel main frame.

INTERNATIONAL HARVESTER COMPANY

More Acres of Good Plowing

It's an unusually long-lived plow—there are more acres of good plowing in it—that's the reputation the John Deere Stag has earned in many years of wide use. And note these other qualities:

The Stag is Light Draft

—all weight carried on smooth running wheel bearings — no dragging friction. Genuine John Deere bottom scours, resists wear and does thorough work. Quick detachable share. Greater clearance than usual between beam and share-point, and between moldboard and front furrow wheels. Landing lever enables operator to maintain full width cut around curves and hold plow to work on hillsides. See the Stag at your John Deere dealer's.

SEND TODAY for free Stag folder. Also tell us of other implements on which you want information and we will send you free, "Bookkeeping on the Farm,"—useful for your farm accounts. Address John Deere, Moline, Illinois, and ask for Package SXG33.

JOHN DEERE

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

No Other Mixer Like It

a Batch a Minute As pioneer mixer manufacturers we have developed two features that put the Gilson Mixer in a class of its own. It is the only mixer with Patented Reverse Unloading Gear and Curved Mixing Blades, insuring thorough mixing in shortest time. Loads on one side, dumps on the other side.

Gilson Concrete Mixer 30 Days FREE Easy Terms

Due to the special Curved Mixing Blades the Gilson thoroughly mixes in ½ the time required by the ordinary type of mixer. Handles 2½ to 3 cubic feet of concrete at one time at the rate of one batch per minute. Turns out 34 cubic yards in ten hours. Mixes perfectly concrete, mortar or plaster. Any 1 H. P. Engine turns it easily.

Only $43.50 DIRECT TO YOU

The lowest priced, practical, improved mixer made. Built of iron and steel—lasts a lifetime. Ideal for farmer or contractor. Mixes concrete that requires no replacements, no repairs. Use this mixer 30 days at our risk. We guarantee it exactly as represented. Send your name today and get full description of this, the only Reverse Unloading Gear Mixer, and easy payment plan.

FARM MECHANICS

HANDLING DYNAMITE ON THE FARM

WHILE the word "dynamite" has a rather dreadful sound, it is not nearly as wicked as is generously supposed. The stories about dynamite exploding when dropped are either figments of the imaginative story writer or refer to an entirely obsolete product made some thirty or forty years ago. Explosives manufacturers have spent a great deal of time and vast sums of money in perfecting their product, and today dynamite is safer to handle than ever before. Considering that in normal years 300,000,000 pounds of dynamite are made and sold, the proportion of accidents is very small indeed. Even in the manufacture (an admittedly hazardous operation) there is only a fraction of the number of fatalities that occur in a big machine employing the same number of men.

Dynamite is nowadays generally packed in cylinders of heavy parafine paper to form cartridges or "sticks" usually 1 1-4 inches in diameter and 8 inches long. These cartridges are dipped in paraffin to make the paper still more water-proof, and this gives them a greasy feeling which is sometimes mistakenly supposed to be caused by the nitroglycerin which is the essential ingredient in all modern high explosives. Besides nitroglycerin, dynamite ordinarily contains nitrate of soda, sometimes called Chile saltpetre, and some substance to supply necessary carbon, such as wood meal. In addition about one per cent of alkaline material called antacid is put in as a corrective for any tendency of the nitroglycerin to decompose on account of insufficient purification. When you open the wrapper of a dynamite stick the contents look like slightly moist brown sugar.

For all around purposes on the average farm only two types of dynamite out of a great many are manufactured need be considered. One of these types is of relatively low strength and slow action and is adapted for practically every kind of work around the farm such as blowing out stumps and boulders; loosening up hard packed soil for tree planting; rejuvenating old orchard trees by shaking up the soil around their roots; breaking through impervious strat like hard pan or cemented gravel, which prevent free drainage into the sub-soil from the surface; and for sub-soiling to prevent erosin and washing away of the surface soil in rolling land. The other type of explosive is low freezing straight dynamite, the 50% strength being generally best for farm work. This is an exceedingly powerful, quick acting and shattering dynamite, which is used for blasting ditches through swampy ground where no other method of procedure would be possible. This ditching by the propagation method is a very facinating subject and will be taken up in detail later.

Dynamite is a detonating explosive; that is, it cannot be fired by a spark alone but requires a device known as a blasting cap in order to detonate it. These blasting caps are small copper cylinders about half filled with a very powerful and sensitive composition, usually fulminate of mercury, which is fired by fuse. This fuse consists of a small and very uniform train of a special black powder tightly wound around with threads of jute or cotton more or less water-proofed. Most fuse burns at the rate of about ninety seconds per yard, and is very uniform in its burning sped, very seldom varying more than five percent either way.

Another kind of blasting cap made is called an electric blasting cap. This is similar to the one first described except that it has two copper wires running into it which are connected together in the explosive composition by another very fine wire which becomes heated to white heat by the passage of an electric current and thus fires the cap. Electric blasting caps are sealed up with water proof compound so that they can be used under water even when submerged for a considerable length of time. Electric blasting caps with wires attached do not cost much more than the blasting cap with fuse of the same length as the wires of the electric blasting cap, and are much safer to have around on account of their being sealed up. They should be fired by means of a blasting machine, which is a simple dynamo conveniently built for transforming muscular energy into electric energy. The blasting machine is much safer to use than any kind of dry cell battery, or storage battery, for the reason that the contact points or binding posts are dead; that is, no current will flow through them except when the machine is operated purposely, whereas with the dry cell or storage battery, the connecting posts are always alive and there is considerable danger of their being inadvertently connected or even touched by the leading wires before it is safe to fire the blast. With cap and fuse, sufficient length of fuse must be used so that after lighting the free end the operator has time to run to a place of safety. With the electrical method the operator connects the two wires of the electric blasting cap with about two hundred-fifty feet of leading wire, which generally allows him to get to a place of safety, and connects the battery at the far end of the leading wire for firing the blast. One of the great advantages of electrical firing is the fact that it is instantaneous and that the time of the blast is therefore under control of the blaster. In shooting stumps along the roadway with cap and fuse, if some vehicle approaches after the fuse has been lighted at about the time the blast is due to fire there is no way of holding off the blast, whereas with the electrical method if anything happens which renders it desirable to delay the shot for a few minutes, the blaster simply waits until all is clear before firing.

All the above may sound a little complicated. However, it is nothing like as complicated as making a loaf of bread, for instance. Let us illustrate this by going through the process of blowing out a stump. With a crowbar we punch around under the stump until we find a place between the roots where we can get the bar down in the soil a couple of feet under the stumps and then we wiggle the crowbar around with a rotary motion in order to enlarge the hole. If the soil is very hard it may be necessary to drive the crowbar in with a sledge hammer or to use a dirt auger or a punch bar. Let us say this stump is about two feet in diametor and is four or five year old and is ordinarily stiff loam. Four cartridges of low strength and slow action dynamite is about the right charge. With a sharp knife we slit the paper shell of the first three cartridges down the length of the cartridge, drop one into the hole, and with a sawed-off broom stick press it firmly down so as to cause it to spread out and fill the bottom of the hole without leaving any air space there. We drop the second and the third cartridge in and press them in to position in the same way. Now we take a blasting cap out of its box, cut off about three feet of fuse and the oil, slip the blasting cap on the freshly cut end of the fuse in such a way that the fuse just touches the cap composition. Holding it in this position, we crimp the cap firmly on the fuse by means of a ap crimper. We then take the fourth cartridge, punch a hole about an inch from one end in a slanting direction with the pointed leg of the ap crimper, insert the cap in this hole, and tie a piece of string about ten inches long first around the fuse about half an inch above the cap and then around the cartridge so that the cap cannot be pulled out of the dynamite. This cartridge with the cap in it is called the primer. It is not generally slit or, if it is slit, only about half its length, beginning at the end opposite the cap. After placing the primer in the hole we fill the remaining space with clay, loam or sand, paking it down carefully with the broom stick, which is know as a tamping stick. Then with a sharp knife, we slit the exposed end of the fuse half way through to a length of one inch, take a match (a box of safety matches is the best kind to use) and, holding the box lose to the fuse, strike the match and, while its head is still flaming put it quickly into the powder exposed in the fuse. We now retire to a safe place and in about ninety seconds the charge explodes. If the amount of dynamite has been gauged correctly, the stump is blown clear and clean out of the ground leaving very few, if any, roots in the earth.—Arthur La Motte, Manager Technical Section, Explosives Department, E. I. duPont de Nemours & Company.

RUNNING ELECTRIC LIGHT PLANT

I would like to know if it is possible to run an electric plant with water without storage batteries by running the wheel when I am using lights, and what would be required for such a system? Also how much power would it require to run twenty lights? Would a man have to get lights?—W. W., Glennie, Michigan.

—Whether or not it is possible to run an electric light plant from water without storage batteries would depend entirely upon the power available in the stream, and whether this stream flow is great enough to furnish this amount of power whenever it is needed. If the stream is large enough this would be thoroughly practical.

You have in mind one water power installation where about 35 horse power is available in the stream and where a one-half horse power generator is connected by means of a friction pulley to the rim of a 15 horse power turbin. The excess power going through this turbin is, of course, simply wasted.

Assuming that 20 50 watt lamps are to be used, they will require 20x50 or 1000 watts which is equal to 1 kilowatt and which is equal to about 1 1-3 horse power. Since some power is lost in all the transmission equipment it will be necessary to have 2 2-3 horse power in the stream to supply this amount, of course if this amount of light is the minimum or the least that can be used then it can easily be seen that it will be necessary to have this amount of power when the stream is at its lowest, to supply power.

For an ordinary small stream a turbin or water wheel is necessary, where the fall is very little then probably the turbin would be found most satisfactory. The turbin is a wheel through which the water passes to produce power. The governor which controls the speed of this wheel is an important part of the equipment and involves some expense in addition to the turbin. It is very likely, however, if no storage batteries are to be used that a governor would be especially important. H. H. Musselman, Professor of Farm Mechanics, M. A. C.

IMPROVED WHEAT VARIETIES AMONG YEAR'S ACHIEVEMENTS

THE Office of Cereal Investigations in the Bureau of Plant Industry, U. S. Department of Agriculture, is working steadily to improve the varieties of wheat and other cereals grown in this country.

In the annual report of the bureau recently made public are listed among the significant accomplishments of the past fiscal year, two new wheats named Forward and Honor that have been developed in the breeding experiments in cooperation with the agricultural experiment station of Cornell University. These are now being grown commercially, and seed is offered for sale by seedsmen and farmers in New York State.

Kota, a bearded, hard red spring variety, discovered in 1918 to be especially resistant to stem rust, was grown in 1921 at 30 experiment stations to determine its value in comparison with adapted commercial varieties of both common and durum wheats. During the past three years its resistance to stem rust has proved nearly equal to that of the most resistant durum varieties. The commercial stocks of Kota seed were increased to about 6,000 bushels in 1921, and nearly all of this was sown in 1922.

A number of other varieties developed by the department have continued to give good satisfaction with the result that their commercial production has been increased considerably.

PRUNING FRUIT TREES

(Continued from page 4)

period but we are chiefly concerned with the three more commonly accepted systems.

The Central Leader of Pramidal Tree system has long been in use, and since it is the easiest to develop, it will receive first consideration The central branch is allowed to ascend year—after year with little or no cutting back, while the lateral scaffold or main branches are kept somewhat shorter by greater or less heading. As a result, the lateral branches are considerably smaller than the central axis, and crotches are formed which seldom split. Strong trees result, but it is very difficult to keep them opened sufficiently to permit light to penetrate to the inner parts, and the tops usually become too high to permit orchard operations to be conducted economically. This system is not favored by many present-day fruit growers.

The Open Center Type of tree usually has three to five scaffold branches well distributed around the trunk and extending outward and upward from it to form the framework. The leader or upright branch is removed, usually the first year. These three to five branches are cut back to approximately the same height after the first season's growth, and this equal heading of all branches is continued until the framework is completed. In other words, each of the scaffold branches is given equal prominence, and any tendency of one to outgrow the others is surpressed. The center is kept sufficiently open to permit the penetration of light throughout the tree. The result is a spreading tree, sufficiently open to permit good coloring of the fruit, and low enough to allow economical handling. This type of tree is easily maintained after it is once started.

The open center tree is structually weak, due to the fact that, in general, the scaffold branches issue from practically the same point, thus forming weak crotches. Frequently one of the scaffold branches splits off and the tree is practically ruined. Many trees trained in accordance with this system, have met this fate. Artificial supports must be resorted to in many orchards with trees trained in such a manner. In spite of these defects, however, this system of training is recommended and very generally adopted for some kinds of fruits.

The Modified Leader or Delayed Open Center is the third type of tree. As the terms indicate, it is a modification of the leader tree or is intermediate between the open center and leader types. It combines the more important advantages and climinates some of the disadvantages of each. The resulting tree is low headed, spreading, and has from six to ten scaffold branches distributed along and about a central axis, thus forming a strong framework with well-formed crotches. It is not possible to secure the several scaffold branches from one season's growth of the main axis and have them properly distributed; so the selection must extend over some three or four years, starting two or three new scaffold branches each year. After the desired number of well-distributed scaffold branches has been obtainned, the tree should be opened by discontinuing (removing) the leader.

At this point, attention should be called to the fact that the system of training employed during the first four or five years of the tree's life definitely determines its form, and later attempts to change the form are very frequently accompanied by disastrous results. An established leader should not be removed, after the second or third year, with the idea of developing a strictly open center tree, and, in like manner, attempts should not be made to change an open center tree to a modified leader or leader type. Well trained trees may be devloped along any of the above lines and no one system is best for all species, varieties and conditions.

Since many fruit growers are not familiar with the modified leader type of tree, and since it is recommended for most varieties of apples, pears, cherries and European plums, a more detailed description and development of a theoretically ideal tree may be in order.

Assuming that a one-year-old tree has been planted and headed at the desired height, the growth the season after planting will usually consist of an almost upright branch produced from the uppermost bud, and of four or five shorter ones arising from lower buds. If so, two or three of them, well distributed about the trunk, should be selected in addition to the uppermost one, and the others removed. In cutting or heading back these branches, it should be borne in mind that the longest branch of a group has the advantage and will make correspondingly more growth the following season. Since it is desirable to develop the uppermost branch into a leader for several years, it must be left a little longer than the scaffold branches. The amount of cutting back depends upon the amounts of growth produced. Usually in Michigan it will simply consist in cutting back sufficiently to give the leader some advantage in length. If a good, vigorous growth has been produced the first year, one should leave the lateral scaffold branches 15 to 24 inches long, and the central upright one 20 to 30 per cent longer.

The following winter the leader should be treated in much the same manner as just described for one year previous. The scaffold branches will probably have produced several laterals. Two or three of these should be selected and headed back, if necessary, sufficient to avoid "legginess." Care should be taken, as previously described, to prevent the formation of weak "Y" shaped crotches.

This system should be continued throughout a third and possibly to the fourth year, after which the leader should be suppressed or discontinued. This system of training results in a tree with a central axis or leader about five to six feet in height, with from six to ten scaffold branches extending outward and upward in all directions and spaced along the main axis for three to five feet.

The pruner should develop the several scaffold branches carefully. The heading back should not only be done from the standpoint of the tree as a whole, but also with regard to the relation of the main branches to each other. If certain ones are outgrowing others, the stronger should be headed back more than the weaker ones. If the lower scaffold branches are not developing sufficiently, the upper ones must be cut back more heavily, or the lower ones may be entirely suppressed as real scaffolds and the tree actually becomes high headed. Thus all main branches of the tree must be properly dominant.

(Editor's Note—This article is taken from Special Bulletin No. 118 issued by the Experiment Station, Michigan Agricultural College. If you are interested and desire further information regarding the work you can secure a free copy of this bulletin by writing to the Business Farmer. KELLOGG'S GREAT CROPS OF STRAWBERRIES

FREE Strawberry Book

Just Out

The finest Book on Strawberry growing ever published. Written by America's foremost grower. Gives his secrets of growing the big crops. Beautifully illustrated in colors and describes the world-famed

Kellogg Thorobred Plants

This Free Book shows how families everywhere are getting big crops and big profits from early summer until snow flies from Kellogg Everbearing Gardens. It also tells about Kellogg's new Strawberry Sensation, the

NEW $50,000 EVERBEARER

America's greatest Everbearing Strawberry. Find out Where it came from—Who brought it—and Why it cost $50,000. Free Book tells all. Also offers **Six Special Strawberry Gardens at Bargain Prices**—a garden to fit every need and every pocket book. Here's one of them. You can order direct from this ad if you wish.

Kellogg's Sure-Crop Garden

This is a wonderful garden for farmers and other busy folks. Plants will root deep and bear well in spite of neglect, weeds, or adverse conditions. Covers space about 25 ft. x 30 ft. Consists of 250 plants from our hardiest and strongest standard varieties.

50 Senator Dunlap	$ .60
50 Warfield	.60
50 Gibson	.60
50 Big Wonder	1.05
50 Marvel	1.25

Regular Price $4.10. Our Special Reduced Price, only **$3.75**, delivered all charges paid. Order direct from this ad. Send check, draft or money order and this Sure-Crop Garden will be delivered to you at planting time.

Only $3.75 Delivered

Send for FREE Book

But whether you order this garden or not, don't fail to write for our **Free Book**, which tells all about Kellogg's great crops of Strawberries and how to grow them.

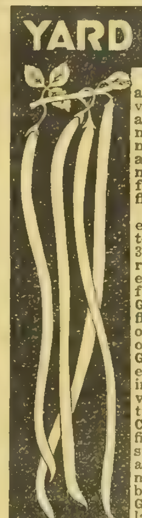
YARD LONG BEANS



This is an excellent variety, as well as being an interesting curiosity. The vines are rampant growers and produce an enormous crop of long, slender pods, many of which grow to three feet or more in length, having the thickness of a lead pencil. Produce late in the summer, very productive, excellent quality for snap beans, tender and of fine flavor. Packet of seed, 10c; 3 for 25c.

Japanese Giant Radish, 10 to 30 lbs. each; **Mammoth Prize Watermelon**, 50 to 150 lbs. each; **Jumbo Pumpkin**, 100 to 300 lbs.; **Vine Peach**, fine for canning, ripe fruit in 80 days after seed is planted; **Garden Huckleberry**, a big crop of fruit the same season seed is planted; **Groun dAlmonds**, delicious cocoanut flavor, grow anywhere, plant in spring or early summer and harvest a big crop of nuts the following September; **Early Giant Rhubarb**, produces large, marketable size stalks next year after planting; **Japanese Climbing Cucumber**, fine variety that can be trained to fence, trellis or poles and save garden space; **Chinese Celery Cabbage**, celery flavored, fine for salads; **String Peas**, cook like string or snap beans; **Burgess' Earliest and Best Tomato**, earliest and best tomato on earth, large, smooth, free from blight and the equal of any late variety; **Giant Ostrich Feather Aster**, handsome, large, fluffy flowers; **Giant Ruffled Spencer Sweet Peas**, finest sweet peas grown; **Red Sunflower**, very attractive. Take your choice of these varieties at 10c per packet; 3 for 25c; 7 for 50c; or 15 for $1.00, postpaid.

FREE With each order we will give a free trial package of our wonderful Lima Peas (similar in shape and as large as Lima Beans) and a copy of our new book, which tells all about other rare, scarce, curious and valuable fruits, vegetables and flowers and medicinal plant crops that yield from $8,000.00 to $20,000.00 per acre.

CAR SHORTAGE CAUSES LOSS TO POTATO GROWERS

(Continued from page 3.)

spring months. Only about half of the 1922 crop has been shipped to date, which means that the railroads must supply practically every loading point in the state with about one car a day in order to get the tubers into consumers hands.

An illustration of how serious the car situation is is available at Remus. Shippers at that point are about the hardest hit of any point along the Big Rapids-Grand Ledge division of the Pere Marquette. On Jan. 1, 1923 Remus had loaded out 57 cars of potatoes as compared with 159 cars on the same date a year ago.

Many Speak at Meetings

Speakers at the series of meetings which have been in progress for the last three days included Clark L. Brody, general manager of the Michigan State Farm Bureau; C. C. Wells, of Cadillac, general manager of the Michigan Potato Growers' exchange; Gifford Patch, marketing specialist of the Michigan Agricultural college; Dr. Eben Mumford of M. A. C., and Attorney W. B. Fast of Big Rapids, County Agent M. F. Jackson and O. S. Wood, Barryton banker and director of the Michigan Potato Growers' exchange, arranged the meeting.

Meetings were held at Remus, Weidman, three in Barryton territory, Rodney, Mecosta and Stanwood.—D. L. Runnells.

THE TRUTH ABOUT HENRY FORD

(Continued from page 13.)

There are three more paragraphs attacking Mr. Ford on this score, which I shall omit—not wishing to weary the reader. The advertisement continued:

"Sacrifice? What about the sacrifice of American soldiers if this German pet of Henry Ford's sees fit to delay the production of Liberty motors and the making of aeroplanes, as he is in a position to do? How many American lives have already been sacrified in aeroplanes tampered with by German agents? If Henry Ford puts so much faith in the German Emde after all he knows about him, is there any reason why he should not put the same faith in the German Hohenzollern? Since Henry Ford is so fond of this German pet of his, is there no place in his large establishment where he can give Emde work to keep him out of the way of temptation to serve his fatherland, as many other Germans have already served in this country? As Mr. Hughes says:

" 'THERE HAS BEEN A LAXITY AT THE FORD PLANT WITH RESPECT TO THOSE OF GERMAN SYMPATHIES WHICH IS NOT AT ALL COMPATIBLE WITH THE INTERRESTS OF THE GOVERNMENT.' "

The advertisement went on at much length along these lines, emphasizing various paragraphs with heavy type. Then it said:

"It is now plain to every voter in Michigan that Henry Ford is no more wary of Hun agents than he was when he followed Rosika Schwimmer to Europe on the peace ship three years ago. He is as innocent as ever.

"If Carl Emde wishes to make plans and photographs of the Ford plant or the Liberty motor for use by the enemies of the United States, Henry Ford is willing to give him a chance to do it, just as he fell for Madame Schwimmer's pro-German peace plans.

"Henry Ford loves the Huns too much to be trusted with a seat in the Senate of the United States and help make peace with them. Commander Newberry knows them for what they are and is helping to fight them at every stage of the game.

"There can be but one choice for wide-awake American in this election."

The Ford campaign managers were taken completely by surprise. The Liberty motor work, the particular department attacked, was the best piece of work that Henry Ford had accomplished, and the Republican letter was a staggering blow. The only hope of offseting the damage done lay in an immediate reply through the Monday papers so that as many as possible of the voters, especially in the rural districts, could be reached before they went to the polls Tuesday morning. Mr. Pipp, who had resigned as editor-in-chief of the Detroit News and who had been government inspector in seven Detroit factories engaged in war work, was in charge of all the Ford campaign statements given to the press.

(Continued in Feb 17th issue.)

"THE HUNTED WOMAN"

(Continued from page 8)

tion of herself. He described the events lightly, not omitting those parts which appealed to him as being very near to comedy.

In spite of his effort to rob the affair of its serious aspect his recital had a recided effect upon Joanne. For some time after he had finished one of her small gloved hands clutched tightly at the pommel of her saddle; her breath came more quickly; the color had ebbed from her cheeks, and she looked straight ahead, keeping her eyes from meeting his. He began to believe that in some way she was convinced he had not told her the whole truth, and was possibly displeased, when she again turned her face to him. It was tense and white. In it was the fear which, for a few minutes, she had tried to keep from him.

"They would have killed you?" she breathed.

"Perhaps they would only have given me a good scare," said Aldous. "But I didn't have time to wait and find out. I was very anxious to see MacDonald again. So I went through the window!"

"No, they would have killed you," said Joanne. "Perhaps I did wrong, Mr. Aldous, but I confided—a little—in Peggy Blacton last night. She seemed like a sister. I love her. And I wanted to confide in some one—a woman, like her. It wasn't much, but I told her what happened at Miette: about you, and Quade, and how I saw him at the station, and again—later, following us. And then—she told me! Perhaps she didn't know how it was frightening me, but she told me all about these men—Quade and Culver Rann. And now I'm more afraid of Culver Rann than Quade, and I've never seen him. They can't hurt me. But I'm afraid for you!"

At her words a joy that was like the heat of fire leaped into his brain.

"For me?" he said. "Afraid—for me?"

"Yes. Why shouldn't I be, if I know that you are in danger?" she asked quietly. "And now, since last night, and the discovery of your secret by these men, I am terrified. Quade has followed you here. Mrs. Blackton told me that Culver Rann was many more times dangerous than Quade. Only a little while ago you told me you did not care for riches. Then why do you go for this gold? Why do you run the risk? Why—"

He waited. The color was flooding back into her face in an excited, feverish flush. Her blue eyes were dark as thunder-clouds in their earnestness.

"Don't you understand?" she went on. "It was because of me that you incurred this deadly enmity of Quade's. If anything happens to you, I shall hold myself responsible!"

"No, you will not be responsible," replied Aldous, steading the tremble in his voice. "Besides, nothing is going to happen. But you don't know how happy you have made me by taking this sort of an interest in me. It—it feels good," he laughed.

For a few paces he dropped behind her, where the overhead spruce boughs left but the space of a single rider between. Then, again, he drew up close beside her.

"I was going to tell you about this gold," he said. "It isn't the gold we're going after."

He leaned over until his hand rested on her saddle-bow.

"Look ahead," he went on, a curious softness in his voice. "Look at MacDonald!"

The first shattered rays of the sun were breaking over the mountains and reflecting their glow in the valley. Donald MacDonald had lifted his face to the sunrise; out from under his battered hat the morning breeze sweeping through the valley of the Frazer tossed his shaggy hair; his great owl-gray beard swept his breast; his broad, gaunt shoulders were hunched a little forward as he looked into the east. Again Aldous looked into Joanne's eyes.

"It's not the gold, but MacDonald, that's taking me north, Ladygray. And it's not the gold that is taking MacDonald. It is strange, almost unbelievedly strange—what I am going to tell you. Today we are seeking a grave—for you. And up there, two hundred miles in the north, another grave is calling MacDonald. I am going with him. It just happens that the gold is there. You wouldn't guess that for more than forty years that blessed old wanderer ahead of us has loved a dead woman, would you? You wouldn't think that for nearly half a century, year in and year out, winter and summer alike, he has tramped the northern mountains—a lost spirit with but one desire in life—to find at last her resting place? And yet it is so, Ladygray. I guess I am the only living creature to whom he has opened his heart in many a long year. A hundred times beside our campfire I have listened to him, until at last his story seems almost to be a part of my own. He may be a little mad, but it is a beautiful madness."

He paused.

"Yes," whispered Joanne. "Go on—John Aldous."

"It's—hard to tell," he continued. "I can't put the feeling of it in words, the spirit of it, the wonder of it. I've tried to write it, and I couldn't. Her name was Jane. He has never spoken of her by any other name than that, and I've never asked for the rest of it. They were kids when their two families started West over the big prairies in Conestoga wagons. They grew up sweethearts. Both of her parents, and his mother, died before they were married. Then, a little later, his father died, and they were alone. I can imagine what their love must have been. I have seen it still living in his eyes, and I have seen it in his strange hour-long dreams after he has talked of her. They were always together. He has told me how they roamed the mountains hand in hand in their hunts; how she was comrade and chum when he went prospecting. He has opened his lonely old heart to me—a great deal. He's told me how they used to be alone for months at a time in the mountains, the things they used to do, and how she would sing for him beside their camp-fire at night. 'She had a voice sweet as an angel,' I remember he told me once. Then, more than forty years ago, came the gold-rush away up in the Stikine River country. They went. They joined a little party of twelve—ten men and two women. This party wandered far out of the beaten paths of the other gold-seekers. And at last they found gold."

Ahead of them Donald MacDonald had turned in his saddle and was looking back. For a moment Aldous ceased speaking.

"Please—go on!" said Joanne.

(Continued in Feb. 17th issue.)

LIKES IT FROM COVER TO COVER

Enclosed find renewal. You have made no mistakes, my paper has been regular and I have on many occasions received more than my money's worth by one article published in each issue. Your paper is instructive and educational from cover to cover. Wishing you success, Edwin Cordery, Kent County.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

EDITED BY J. HERBERT FERRIS

FOR YOUR PROTECTION!

THE following Fire Insurance Underwriters rules should be preserved and studied. The proper installation of a radio set is not a fire hazard—but if the rules are not followed, you may lose your insurance, no matter what the cause of fire may be!—Radio Editor.

Radio Rules—National Electric Code

The following requirements governing the installation of radio receiving and transmitting apparatus were placed in effect on April 29, 1922.

For Receiving Stations Only

Antenna:—

a. Antennas outside of buildings shall not cross over or under electric light or power wires of any circuit of more than six hundred (600) volts or railway or trolley or feeder wires nor shall it be so located that a failure of either antenna or of the above mentioned electric light or power wires can result in a contact between the antenna and such electric light or power wires.

Antennas shall be constructed and installed in a strong and durable manner and shall be so located as to prevent contact with light or power wires by sagging or swinging.

Splices and joints in the antenna span, unless made with approved clamps or splicing devices, shall be soldered.

Antennas installed outside of buildings are not covered by the above specifications.

Lead-in Wires:—

b. Lead-in wires shall be of copper, approved copper-clad steel or other approved metal which will not corrode excessively and in no case shall they be smaller than No. 14 B. & S. gage except that approved copper-clad steel not less that No. 17 B. & S. gage may be used.

Lead-in wires on the outside of buildings shall not come nearer than four (4) inches to electric light and power wires unless separated therefrom by a continuous and firmly fixed non-conductor that will maintain permanent separation. The non-conductor shall be in addition to any insulation on the wire.

Lead-in wires shall enter buildings through a non-combustible, non-absorptive insulating bushing.

Protective Devices:—

c. Each lead-in wire shall be provided with an approved protective device properly connected and located (inside or outside the building) as near as practicable to the point where the wire enters the building. The prcector shall not be placed in the immediate vicinity of easily ignitable stuff, or where exposed to inflammable gases or dust or flyings of combustible materials.

The protective device shall be an approved lightning arrester which will operate at a potential of five hundred (500) volts or less.

The use of an antenna grounding switch is desirable, but does not obviate the necessity for the approved protective device required in this section. The antenna grounding switch if installed shall, in its closed position, form a shunt around the protective device.

Protective Ground Wires:—

d. The ground wire may be bare or insulated and shall be of copper or approved copper-clad steel. If of copper the ground wire shall not be smaller than No. 14 B. & S. gage, and if approved copper-clad steel, it shall not be smaller than No. 17 B. & S. gage. The ground wire shall be run in as straight a line as possible to a good permanent ground. Preference shall be given to water piping. Gas piping shall not be used for grounding protective devices. Other permissable grounds are grounded steel frames of buildings or other grounded metallic work in the building and artificial grounds such as driven pipes, plates, cones, etc.

The ground wire shall be protected against mechanical injury. An Approved ground clamp shall be used whenever the ground wire is connected to pipes or piping.

Wires Inside Buildings:—

e. Wires inside buildings shall be securely fastened in a workmanlike manner and shall not come nearer than two (2) inches to any electric light or power wire unless separated therefrom by some continuous and fimly fixed non-conductor making a permanent separation. This non-conductor shall be in addition to any regular insulation on the wire. Porcelian tubing or approved flexible tubing may be used for encasing wires to comply with this rule.

Receiving Equipment Ground Wire:

f. The ground conductor may be bare or insulated and shall be of copper, approved copper-clad steel or other approved metal which will not corrode excessively under existing conditions and in no case shall the ground wire be less than No. 14 B. & S. gage except that approved copper-clad steel not less than No. 17 B. & S. gage may be used.

The ground wire may be run inside or outside of building. When receiving equipment ground wire is run in full compliance with rules for Protective Ground Wire, in Section d. it may be used as the ground conductor for the protective device.

RADIO PHONE AID TO CROPS

DEVELOPMENT of the radio telephone broadcasting service will save the country millions of dollars in the saving of crops that might be lost through lack of knowledge of unfavorable weather conditions approaching.

Heretofore the farmer has gone ahead more or less blindly in the harvesting of the crops, only to have them destroyed in the fields by rain snows, etc. Many of these farmers, more or less isolated from the centers, were unable to get the information in any time to be of use.

Farmers, however, like many others, are getting radio sets in their homes, and listen intently to the broadcasting stations. With the cooperation of the weather bureau, both government and private broadcasting stations are sending out the weather reports twice daily, so that the farmer by his fireside and many miles from the cities can sit in his home at night with some degree of certainity as to what kind of weather he will meet with.

Radio telephony as a medium for the dissemination of weather forecasts warnings and information to agricultural interests became a reality during the past year. With the introduction of radio telephony the the interior has increased enormously. On July 7 of this year there were 98 station in 35 states broadcasting weather forecasts and warnings daily by radio telephone.

It has come to the attention of the government that thousands of farmers, realizing the importance of these forecasts, have installed radio sets to catch this information, because they realized that knowledge of what to expect in the way of weather would save them many times hundreds of thousands of dollars.

The weather bureau does not own or operate any wireless equipment. The radio distribution work is accomplished through plants operated by other government agencies, by corporations and by private individuals, and without expense to the weather bureau.

Be careful that you trace every connection through carefully, and that your connections are correct before you turn on your current. A burned out vacuum tube is no good, and a new one will cost you $5 to $6.50 each. With care a tube will give from 500 to 1000 or more hours of service.

There are bed-time stories from some broadcasting station every night for the childrern. Are you enjoying them?

WELL PLEASED WITH M. B. F.

I am sending you my check for $1 for two years subsoription. I have taken your paper one year and am well pleased with it.—Robt. B. Nicholas, Lapeer County, Michigan.

LIKES M. B. F. BEST OF ALL

We take four farm papers, but we like the M. B. F., better than all the rest of them.—Dail Sleeper, Calhoun County, Michigan.

Prepare
YOUR HORSES
for Spring Work

Time will mean money to you, Mr. Farmer, one of these days —when spring comes on, when the sun begins to shine.

The acres you plow, or harrow, or sow, each day will depend entirely upon the good condition of your team.

Condition them now with a course of

DR. HESS STOCK TONIC

You can feel it on the lines

It helps them shed their winter's coat, whets their appetite, tones up their digestion, cleans out the bowels and kidneys, drives out the worms.

Feed your workers Dr. Hess Stock Tonic and you will soon discover that you have a team before you that can do an honest day's work, without a pant or a tremble of the muscle. They will be there for business—and willing.

Excellent for mares in foal—and colts of any age. GUARANTEED.

Tell your dealer how many horses or mules you have; he has a package to suit.

25 lb. Pail, $2.25 100 lb. Drum, $8.00

Except in the far West, South and Canada.

Honest goods—honest price—why pay more?

DR. HESS & CLARK Ashland, O.

I spent 30 years in perfect ing this Tonic

BUILD YOUR OWN
LONG RANGE RADIO!

Pay Advertised Price and Postage on arriva

WE HAVE A SURPLUS OF FINE PARTS ON HAND AND IN ORDER TO RAISE MONEY QUICKLY WE ARE GOING TO SLASH PRICES

PICK OUT YOUR REQUIREMENTS FROM THE LIST BELOW AND ORDER BY MAIL AT ONCE AS WHEN THE AMOUNT OF CASH WE MUST HAVE IS REALIZED THE PRICES GO UP WHERE THEY BELONG!

Study the list carefully. It contains every thing reeded to make a radio outfit that will reach out and bring in concerts from all over the country, from Van Couver, B. C. to Havana, Cuba, and from Los Angeles, Cal. to Portland, Maine. If you cannot afford so powerful a set, you can obtain the material for a very few dollars that will reach 1,000 to 1,400 miles bringing in some hundreds of different broadcasting stations.

REMEMBER WE MANUFACTURE MUCH OF THIS MATERIAL OURSELVES, SO YOU ARE NOT PAYING JOBBERS, WHOLESALERS NOR RETAILERS PROFITS ON THAT MATERIAL

	Price
1—Handsome Rabbated Cabinet for 6X21 in. panel, finished in light, golden, dark or flemish oak, mahoganized maple (red) or black walnut stained gray elm—securely packed. .	$ 3.10
2—Same as above for 9X21 in. panel	4.20
3—Same as No 1, knocked down so you can put together and stain in just 15 minutes. Solid oak only. . . . (This comes so much cheaper because of the saving in packing expense.)	2.00
4—Same as No 2, knocked down. .	3.00
5—Large size Perfection Variometer	2.50
6—Parts complete to make same (except wire)	.80
7—Large, sure contact, long range variocoupler—12 taps	2.50
8—Variometer balls—3 ¾ in.—genuine wild cherry	.20
9—Variocoupler balls—3 ¾ in., genuine wild cherry	.20
10—Variometer stators—mates to above balls, per set of 2	.30
11—Variometer hardware complete. .	.30
12—Audio Frequency Transformer. . .	3.10
13—Radio Frequency Transformer. . .	4.00
14—Rheostat	.75
15— V. T. Socket	.50
16—43 Plate Variable Condenser. . . .	3.00
17—23 Plate Variable Condenser. . . .	2.00
18—Grid Leak Condenser	.25
19—Phone Condenser	.20
20—Large Gold Bronze Power Horn 11 in. Bell	22.50
21—Western Electric Head Phones. .	10.00
22—Good 3000 Ohm Headphones. . .	5.10
23—Seal Finish Panels—genuine horn fibre—absolutely dielectric—built in section to prevent warping—3-16 in. thick—handsome, unbreakable, won't show finger marks: 5 ⅞ X9 ⅛ in.—1 piece	.55
5 ⅞ X21 in.—Built in 3 sections. .	2.00
9 ⅛ X21 in.—Built in 4 sections. .	3.00
24—Handsome 3 in. dials—3-16 in. or 1-4 in. shaft hole	.40
25—Handsome 15 cent Black binding posts	.05
26—Handsome 10 cent black binding posts	.03
27—Handsome black 1 in. knobs—worth 20 cents	.08
28—Handsome black 13-16 in. knobs—worth 15 cents	.06
29—Perfection panel switch	.35
30—Phone jacks—double circuit—$1 value	.75
31—Phone jacks—single circuit—85c value	.50

We also have about 2,000 handsome, glass enclosed crystal detectors that we will close out cheap, as we are going out of the crystal set business. . Price .50

DON'T SAY DON'T

A MOTHER writes and asks me how it is possible to keep from saying, "don't" to children. We agree that it is annoying to have some one, any one continually saying it just naturally sets up a feeling of irritability and a desire to do the very thing we are told not to do. It is a perfectly natural trait of character and that is why educators say, "Don't say don't." We are dealing with human nature and must take it as it is. If we can say, do this, instead of don't do that, we are taking a step in the right direction, do not seek to take away without filling the gap. Nature abhors a vacuum and children abhore to be idle and idleness is not safe either for children or adults. You have heard how Satan seeks idle hands to carry out his purposes.

Management is always better than discipline, managing is preventing the wrong, discipline is managing after the wrong is done. Children must have many things to interest them, and we must in some way get the best of the situation by planning things out for them and keeping just a step ahead. Make their occupation legitimate but let them play in their own way, we may give them the opportunity but can not and should not supervise their play, they know how much better than we do.

When my children were very young I tried to teach them respect for all material for all their possessions, toys, clothes, furniture, not only their own but other peoples, to allow a child to wantonly destroy anything not wise, in the first place everything has some use, there is no "junk" these days, and a habit of destructiveness or carelessness is apt to stick to one thru life.

I do not believe in punishing a child because he has offended you, nor in showing anger toward a child, that is not judicial, just let the wrong deed come back on the doer, do not interfere between the breaking of the law and the penalty. Natur never does. If you put your hand on a hot stove, it will be burned, if you read in a poor light for long, you will have a headache, the penalty for straining your eyes—we soon learn to be careful. Let a child learn that if he breaks the laws laid down by a kind and understanding parent that he will surely in one way or another suffer for it and he will soon reason out for himself that it is much pleasanter and safer to keep the regulations of the household, especially when he realizes that father and mother and all the rest come under discipline as well as himself. The laws of God, the laws of our country, the laws of our state all must be obeyed, for only by that method do we any of us have peace, security or liberty.

Here is a question, Do you, dear Reader, believe in giving the reason for a rule or do you just say "because I say so?" It would be interesting and perhaps profitable to get an expression of opinion from some thotful mothers.

THE STORY OF DENTAL DECAY

IT is difficult to explain how teeth decay without using names and words that are hard to understand, but every intelligent adult should have a reasonably correct idea about it, in order to help the children to have sound teeth.

Decay of the teeth always starts from the outside surfaces, never from the inside. The surfaces that decay most frequently are first, those between the teeth, where one tooth touches the other, second, in the fissures or rough surfaces on the tops of the teeth where you chew, and third, close to the gums where food clings to the border of the gums. Meat will not cause the teeth to decay, because, when it is decomposed by germs, an alkali is produced and the enamel of the teeth is not affected by an alkali,—an alkali is just the opposite of an acid. The enamel of the tooth is made of crystal-like rods and between them is a cementing substance which holds them tightly in place. This can be dissolved by acids, especially by lactic acid which is very easily formed from sugar. When milk becomes sour it is caused by germs decomposing the sugar in the milk, producing lactic acid which gives the milk its sour taste. Starchy foods if allowed to remain in the mouth, can be changed to sugar by an ingredient in the saliva. The sugar can then be acted upon by the germs in the mouth and can be changed into lactic acid, so that it can be easily seen that to leave starches and sugars on the teeth for any length of time is to produce some lactic acid which can dissolve out the cementing substance between the enamel rods. But in order that the acid be strong enough to actually dissolve the enamel it has to be held against the tooth surfaces for some time.

Using silk dental floss and a good tooth paste or powder every day will do much toward preventing decay by keeping the teeth clean. Both of these cleaning materials are rather expensive and on that account I wrote to Dr. Gibson of the Michigan Department of Health for directions for making a cheap and good powder. Here it is I have tried it and found it splendid. The cost was 65 cents and the quantity about a pint.

Place in a quart Mason jar the following: Finest grade English percipitated chalk, ½ pound; powdered castile soap, 1¾ ounces; light carbonate of magnesia, 1-3 ounce; oil of cloves, 46 drops; oil of wintergreen, 35 drops; oil of sassafras, 35 drops; oil of peppermint, 18 drops; saccharin, finely powdered, 4 grains. The glass top should be securely fastened and the contents vigorously shaken. Let stand 24 hours, shaking from time to time to hasten the mixing process.

PARENT TEACHERS AGAIN

HOW are the Parent-Teachers meetings coming along in the rural schools?

Not so many years ago American society was largely rural and simple in its organization, and in that day the school was nearer home. The teacher was most frequently a son or a daughter of the neighborhood or of an adjoining neighborhood and knew and was known to practically every home from which the children came. The school curriculum was elementary and well within the knowledge of the average patron. The parents knew what the school was aiming at.

How great the change. Today in by far the majority of our communities teachers drop out of the unknown. They are strangers in a foreign, frequently indifferent and sometimes hostile land. They neither know the homes nor are known to the homes which they serve. The curriculum is complex and often well-meaning with the purposes and methods of the schools which they support and their children attend. These things ought not to be.

The school is the biggest collective undertaking of our communities. by law every tax payer must contribute to its support and parents are legally compelled to send their children to school. In some communities from twenty to forty per cent of every dollar paid in taxes goes to the support of the schools.

"IT'S ONLY ME."

I thought myself indeed secure,
So fast the door, so firm the lock;
But, lo! he toddling, comes to lure
My parent ear with timorous knock.
My heart were stone could it withstand
The sweetness of my baby's plea,
That timorous, baby knocking, and
"Please let me in—it's only me!"
I threw aside the unfinished book,
Regardless of its tempting charms,
And, opening wide the door, I took
My laughing darling in my arms.
Who knows but in eternity
I, like a truant child, shall wait
The glories of a life to be
Beyond the Heavenly Father's gate?
And will the Heavenly Father heed
The truant supplicating cry,
As at the outer door I plead,
" 'Tis I, O Father, only I!"

Eugene Field.

AIDS TO GOOD DRESSING

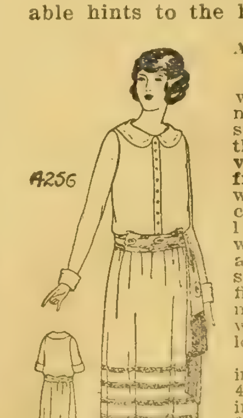
For Simplicity, Service and Style

Address orders to Mrs. Jenney, Pattern Department, M. B. F.

Watch for our new Spring styles, order your catalog now.
Catalogs 15c. Patterns 12c.

FASHION BOOK NOTICE

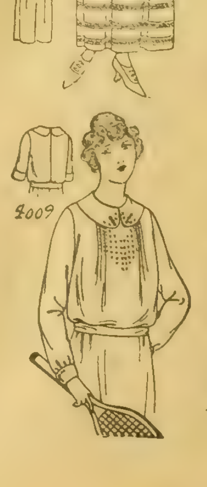
Send 12c in silver or stamps for our UP-TO-DATE SPRING and SUMMER 1923 BOOK OF FASHIONS, showing color plates, and containing 500 designs of Ladies', Misses' and Children's Patterns, a CONCISE and COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.



A New and Stylish Frock

5256. With the waistline gracefully normal, and with simple pleasing lines, this style features a very attractive frock. It may be of wool crepe, or of crepe de chine. In linen, and other wash fabrics it is also desirable. The sleeve is a new close fitting model, that may be finished in wrist or elbow length.

The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. 38 inch size requires 4 7-8 yards of 26 inch material. The width of the skirt at the foot is about 2 3-4 yards.



A Popular Style

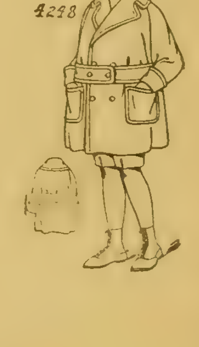
4009. This is a very serviceable model. It may be made of linen, voile or batiste or of flannel or silk. It is nice in net, or chiffon, as a guimpe, for "jumper" or "sleeveless" dresses.

The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 3 1-8 yards of 32 inch material.

A Jaunty Top Garment for "The Boy"

4248. Here is just the coat to make a boy comfortable and to keep him warm. The fronts are double breasted. The sleeve is in raglan style, with roomy armscye. Serge, cheviot, tweed and other coat materials may be used for this design.

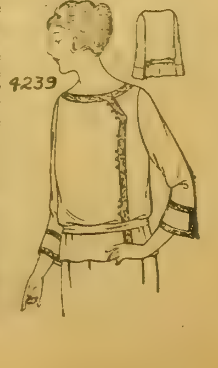
The Pattern is cut in 4 Sizes, 4, 6, 8, and 10 years. A 6 year size requires 2 1-8 yards of 54 inch material.



A Simple Popular Style

4239. This is a pretty suit model, and one that may be worn with a separate skirt. Crepe, satin, tricolette, and crepe de chine could be used, with braid or bands of embroidery for decoration. The side closing and pretty neck line are youthful, and becoming to most figures.

The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38 inch size requires 2 1-2 yards of 36 inch material.



The combined intelligence of parents, patrons and teachers is necessary to the wise expenditure of the people's money and the children's time. School superintendents and teachers do not pretend to omniscience but on the contrary they are painfully aware of their limitations, and good parents too feel their inefficiency to deal wisely with the boys and girls that bless their homes. Each group needs the encouragement and help which the other can render. The Parent-Teacher Club is an effective agency for the dissipation of ignorance, the thawing of iciness and the creation of sympathy and understanding between the parents and teachers and it all works for the benefit of those concerned.

A PRACTICAL SUGGESTION

YE farmers wives, can earn extra money by selling your eggs, butter, etc., to private parties living in town or city and get retail prices for same. The women are pleased to get nice fresh produce and in no time you will have a nice trade.

About two weeks before Thanksgiving I took my little book and pencil and started down one city block and in less than one hour I had orders for 9 dressed chickens and 2 live ones, I dressed them this way. Scalded and picked the feathers off. then weighed them, figuring them at 30 cents per pound. Then I singed them inside and out in fact scrubbed them with a brush using warm water and soap, then quickly rinsed them in cold water, washed the liver, heart, and gizzard and put inside and hung up to drip, and dry. They were all ready for the oven when delivered and oh, how pleased the women were, I delivered them the day before Thanksgiving and they gave orders for Christmas the same day and they kept on wanting more and still more.

Those I sold were all young roosters about six months old. I am a woman 60 years old and any woman could do as I did. My customers are all in one block. I sell eggs at the same time or any other articles I have to spare, I drive to the city in an auto and have time to shop. Try it sisters.

I should like to hear from some readers who like to piece quilts. I have some pieces that I do not need, percale, gingham and plush and would be glad to exchange for any thing useful.

Here is my recipe for Liver Sausage:1 pork liver, 1 heart, and any bony fat and lean meat, usually the head, wash and boil all together until the meat falls off the bones, then put thru the grinder, salt, pepper, and sage, if you like. Mix thoroughly with your hands and pour a little of the strained liquor over but just enough to moisten, not enough to make it sloppy. Then pack it in small bowls or cups until almost full, melt some lard and pour over the dishes of meat. The lard hardens and keeps the meat sweet, sausage may be done this way, it will keep for months. Then take off the lard and slice for sandwiches or table use, can be served with salad dressing. Hope others will try this. —Mrs. G. W. Morgan, R. 3, Vicksburg, Michigan.

CARING FOR A FERN

I have raised wonderful ferns, a Boston fern that was 12 feet in circumference, I always gave it all the sun there was, in the corner of my living room I had a south window and an east window, just a nice place for a fern. I always kept it in that place and turned it around so that it would grow evenly, I turned it about twice every year. Every one who came said it was the nicest fern they ever saw. I always water it with cold tea, I have made tea when the family were drinking milk, on purpose to water my fern. During the cloudy weather of November and December the plants do not require as much water but when the sun shines I usually water them once a day.—Mrs. H. C.

CORRESPONDENCE COLUMN

Dear Readers—I want to acknowledge many letters that lie upon my desk, some I want to answer personally, others I want to print but cannot get them in this issue, each one is appreciated and each one is read over carefully, I think in a near issue we will have the whole department given up to letters and comments on them, it would make interesting reading and perhaps bring us all a little closer in touch with one another; You can be editors pro tem. How do you like the idea?—Mrs. Jenney.

I noticed that a reader asks how to remove ink stains from cloth sacks; if she will soak them in kerosene oil before she washes them, then wash with soap and boil with some good washing powder the marks will all come out. If the reader wants a quick pan-cake recipe will use 1 level teaspoon of soda to 2 cups of sour milk adding flour enough for a thin batter or use a little less soda and a teaspoon of baking powder, will find them good.—Mrs. I. C. B. —I use this recipe but add 2 eggs and a tablespoon of melted lard or butter adding the whites of the eggs last, beating them very stiff. This makes the cakes very light, the proverbial pinch of salt is always necessary.—Mrs. Jenney.

Readers have been very kind in sending in the poem, Lasca, copying it by hand. If it were not so long I would be glad to publish it. As it is I have several copies and will send them to those first asking for them.—Mrs. Jenney.

Mrs. J. D. B.—As each sewing machine company makes it's own attachment for hem-stitching it would be necessary for you to write to the company that makes your machine, they could undoubtedly give you all the information you wish.

Who can tell us something about Patron's Day organization, how long leaders are elected for and whether there are programs to be obtained. —G. A.

Mrs. Celia A., Gobles, Michigan.—If you will write to the United States Department of Agriculture, for Department Circular 207, it will give you full instructions for making a paper dress form. Address your letter to Washington, D. C. There is no charge for these bulletins. The making of these dress forms has been taken up by the extension workers in the various States.

We should like to know whether sausage that is to be canned by the cold pack method should be made into patties ready for serving or should it be packed into cans in a mass?

Do you know a better method for canning sausage? We should be pleased to have this question answered in your paper.—Mrs. J. M. —I have sent for the latest method for meat canning and will publish the directions as soon as received. Mrs. Jenney.

In answer to Mrs. J. A., Honor, Mich., issue of Jan. 20th, I wish to state that the most convenient way of labeling maple syrup cans is to use a small portion of the syrup itself to paste on label. This method is recommended.—E. E. Pauli.

The New Spring Catalog will be issued about February 1st. As soon as it comes out I will fill the orders that are on hand. It would be wise to send immediately for this splendid new book, look it over well, choose the patterns you are going to need and order promptly. Then you will have your patterns all ready to use when you want them. It always takes a week to get the patterns thru. But our patterns sell so cheaply that one can well afford to wait a few days for them.

Baking Powder—
that's the big thing in successful baking

It determines failure or success in baking, more than any other ingredient.

If you do not *always* have satisfactory bakings, change to Calumet for just one trial.

It is pure: containing only such ingredients as have been officially approved by U. S. Food Authorities.

Within the Calumet factories — the largest and most sanitary on earth—hundreds of skilled workers clad in white are busily engaged in producing the baking powder that is used by millions. Human hands never touch it. Its sale is 2½ times as much as that of any other brand. Pure in the making—pure in the baking.

A pound can of Calumet contains full 16 ounces. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a pound when you want it.

82¢ Buys All the Wall Paper for An Entire Room

Here is a big Montgomery Ward offer! A DOUBLE LENGTH roll of wall paper for only 6c. Enough to paper an entire room 10x12 for as little as 82c! This includes side wall, border and ceiling paper.

Send for our new book of Wall Paper Samples and see the MANY OTHER big values we have ready for you. It shows you our complete new assortment —grass-cloths, tapestries, oatmeal papers, leather patterns, fabrics. And all at prices to suit your pocketbook. Among the better grades, we have a big variety for only 50c and up per DOUBLE LENGTH roll. And remember, you get *twice as much wall paper* in one of our 16-yard DOUBLE LENGTH rolls as in the ordinary 8-yard *single roll*.

This Wall Paper Book FREE

Contains over 100 Actual Samples

Be sure to get a copy of this book before planning your Spring decorating. It is made up of actual large-sized samples. With each side wall is shown a sample of the border to match. Easy and pleasant to select your wall paper this way.

Send for this interesting and valuable book *today*. Ask for Wall Paper Sample Book, No. 1923DD Address our House nearest you.

Just how *does* Kow Kare increase the milk yield?

Maybe you have been a regular user of Kow-Kare in treating cow diseases, but you may have never fully realized that this famous cow medicine is being used regularly in thousands of dairies to increase the winter milk yield.

Both uses are equally logical. Cow Diseases—nearly all of them—arise from a lowered vitality of the genital and digestive organs. Kow-Kare removes the cause by reaching these very organs and restoring vigor. The milk yield is controlled by the same set of organs. Dry winter feeds put a greater strain on their functions and produce a lowered vitality and yield.

Kow-Kare, fed moderately and regularly, gives to the milk-making organs the added strength they need to offset winter feeding conditions. A greater milk yield cannot fail to result.

The expense of this Kow-Kare treatment is decidedly small. Most dairymen give a tablespoonful morning and evening in the feed, one week out of each month. The increased milk-profit pays for this a hundred-fold.

No cow medicine can equal Kow Kare for the treatment of actual disease. For twenty-five years it has been the standard remedy for *Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite.*

Sold in two Sizes—large package $1.25; medium 65c, at feed dealers, general stores, druggists. If your dealer is not sup- [illegible] receipt of price.

FREE Cow Book

We publish a very valuable book on cow diseases called, "The Home Cow Doctor." We will gladly send you a copy free if you give us your dealer's name

DAIRY and LIVESTOCK

PROBABLE INCREASE IN SPRING PIGS INDICATED

THE number of sows bred during the first six months of 1923 will be 13 per cent more than the number of sows which actually farrowed in the spring of 1922, provided farmers carry out their intentions as indicated in the December 1, 1922, pig survey made by the United States Department of Agriculture. For the 11 Corn Belt states the survey shows an intention to breed 15.6 per cent more sows than a year ago. Most of the southern states show an actual decrease in prospect for 1923.

The probable increase in farrowings in the spring of 1923 over 1922 compares with an increase of 22.8 per cent in the spring of 1922 over 1921 in the 11 Corn Belt states. The spring pig crop of 1922 in the southern states was about the same as in 1921. Comparisons for other states are not available.

Whether or not the expressed intentions of farmers with regard to the number of sows to be bred to farrow next spring will be carried out will depend largely on the relative prices of hogs and corn, the Department says.

An actual increase of 16 per cent in the number of pigs in 1922 over 1921 is shown in the December survey as compared with the estimated increase of 14.5 per cent shown in the May survey. The number of pigs saved per litter up to July 1, 1922, in the Corn Belt states is placed at 5.8 as compared with 5.7 saved up to May 1. This increase in number of spring pigs in 1922, the Department says.

The number of litters farrowed in the United States in the fall of 1922 shows an increase of 18.6 per cent over the fall of 1921. An increase of 27.8 per cent is shown for the 11 Corn Belt states as compared with an intended increase in these states of 49 per cent in the number of sows to be bred for fall farrowing, as reported last May. The survey shows that in the Corn Belt states 6.1 pigs per litter were saved in the fall of 1922 as compared with 5.9 pigs saved from the 1921 fall litters. For the entire United States a saving of 6.1 pigs per litter in the fall of 1922 as compared with 6 pigs per litter in 1921 is shown.

The decrease in actual number of pigs produced last fall as compared with intentions of farmers the preceeding May is attributed to the decline in hog prices, increased corn prices, increased losses from hog cholera and other diseases, and of the publicity given the results of the spring pig survey made by the Department of Agriculture. Losses from hog cholera and other diseases in the 11 Corn Belt states for the year show an increase of 22.6 per cent over losses in 1921.

The Department received for this report more than 200,000 replies to questionnaires distributed and gathered by rural mail carriers in all sections of the United States where pigs are produced for market. The survey is but the second of its kind that has been made and there has not yet been opportunity to check any differences that may exist between the figures shown for the farms reporting and those for all farms. It is pointed out, however, that the forecast made last spring of an increase of 14.5 per cent in the number of spring pigs over the preceeding year is being borne out by the increased volume of receipts at the principal stockyards during the past three months. The surveys also show that the production of fall pigs in proportion to spring pigs has increased materially during the past two years, thus making a more stabilized supply of pigs throughout the year.

The Department points out that increased production does not necessarily mean an over-supply or decline in prices. Total receipts of hogs at all public stockyards during the first 11 months of 1922 were 5 per cent more than in 1921. During the last four months of 1922 the increase totaled nearly 20 per cent. The number of hogs slaughtered under Federal inspection during the same period was 7.7 per cent more than in 1921 and the total carcass weight of pork and lard resulting from this slaughter shows an increase of 461,246,000 pounds for the 11 months. Despite these increases old storage holdings of pork and lard averaged considerably less than during 1921 and prices showed a substantial advance over 1921. The Department's explanation for this situation is that improved industrial and economic conditions resulted in an increased consumptive demand and a much freer, current movement of pork and lard into trade channels.

MILK PRODUCTION LOW

I have a full blood Jersey cow, eight years old, fresh the 4th of November. She gives only about nine quarts of milk a day, but a wonderful amount of cream. Should she give more milk? We just purchased her two weeks before she came fresh and she was recommended highly. Now, when I churn the butter will not gather and I can do nothing with it, which is a loss. We feed her cornstalks, carrots with ground oats and cornmeal. Would be grateful indeed if you can advise me through your paper.—F. B., Frankfort, Mich.

—It is very difficult matter to tell why your Jersey cow does not give more milk this year without knowing more about the cow that you state in your inquiry. I cannot tell whether she ought to give more milk or not. If she has given more milk in the past, perhaps she is simply taking a year off and cows do this now and then. The fact that the cow is eight years old may account for the fact that she is gradually giving less milk. Some cows are old when eight years old while others are not old until 12 years. It all depends upon how they are fed and cared for in early life.

There is no reason why the cream should not churn well, if you have all the conditions right for churning. The feed that you are feeding would not affect the churnability of the cream in any way. The cream always churns better if allowed to sour first and during cold weather we know that it takes longer to sour than in warm weather. So if you have been making sour cream butter you should see that the cream is just as sour as it is in summer time or any other time when you had no trouble in making butter. This can be accomplished by putting it near the stove to give the bacteria souring. It may be too that your cream is too cold when you start in to churn and it will only foam or whip. The temperature for churning at this time of year should be around 55 to 60 degrees, but is very easy to have the cream from 30 to 40 at this time of year and at this temperature you need not expect the butter to gather very fast. Place the can containing the cream in a but of hot water or allow it to stand near a stove for a while before churning until the temperature is right. These are the principal things that you have to guard against in overcoming difficult churning at this time of the year.—O. E. Reed, Professor of Dairy Husbandry, M. A. C.

RATION FOR MILK COWS

Would you please tell me a balanced ration for my milk cows. I have plenty of good corn silage. I would consider it had just about the right amount of corn in it. I also have plenty of good timothy hay but no clover, this will be their main feed with a little bean straw and shelled corn stalks. I have plenty of oats. What should I buy to go with it and what amount and how much shall I feed? Is buckwheat bran good?—T. S., Sterling, Mich.

—It is very difficult to make up an economical ration for your milk cows with the feeds you have on hand. Any ration that has for its base as a roughage, timothy hay and corn fodder without clover hay or alfalfa in it, is always expensive. As a ration, however, for your cows, I would suggest the following: Give them all the hay and silage that they will clean up twice a day. Then feed one pound of the following mixture for each three pounds of milk produced per day: four parts ground corn, four parts ground oats, two parts bran, two parts cottonseed meal, two parts oil meal, mixed by weight. You will find this is a very expensive ration, but if you are going to make one that will give the cow the nutriments she must have, where you haven't alfalfa or clover hay, you will find that the ration will always be expensive. The feeder will undoubtedly cut this amount of grain down, but in so doing the cows will either cut down their milk flow or the good cows will take off a lot of flesh from their bodies to produce milk and come out in the spring in very poor condition.

Buckwheat bran makes a comparatively good feed. As compared to wheat bran it only contains 2.4 pounds protein while wheat bran contains 12.2—O. E. Reed, Professor of Dairy Husbandry, M. A. C.

CHEMICAL ANALYSIS OF CARROT AND ONION

What is the chemical analysis of a carrot, also an onion? Are carrots a good dairy feed? How many should be fed at one meal and how many meals a day? I have been told they would kill a cow if given carrots twice daily.—H. E. H., Alma, Mich.

—The analysis of the digestible nutrients contained in carrots and onions is as follows:

Carrots: Total dry matter in 100 pounds, 11.7; crude protein, 0.9; carbohydrates, 8.6; fat, 0.2; total 9.9.

Onions: Total dry matter in 100 pounds, 12.4; crude protein, 0.8; carbohydrates, 9.6; fat, 0.2; total, 10.8.

Carrots make an exceptionally good feed for dairy cows. They can be fed in quantities of 30 to 35 pounds per day in two feeds along with plenty of good roughage, preferably clover hay or alfalfa and with what grain the animals require.

I would not advise onions as a dairy feed, while cows do eat wild onions in the spring and seem to crave them, very largely because they are one of the first things that is green in the spring, we find that the milk is tainted with the odor of the onions and as market milk is very undesirable and is not at all desirable when the cream is going to be made into butter.—O. E. Reed, Professor of Dairy Husbandry.

POLLED SHORTHORNS AND RED POLLED

What is the difference between a Polled Shorthorn and a Red Polled? I would like to know how they compare in size, milk, etc., with Durhams.—L. O. T., Johannesburg, Michigan.

—The Polled Shorthorn and Red Polled cattle are two distinct breeds, the Polled Shorthorn having been developed in the United States and the Red Polled breed in England. The Polled Shorthorn and the Shorthorn, sometimes called Durham cattle, are of one and the same breed. The Polled Shorthorn is red, white, red and white, or roan in color, whereas the Red Polled is always red. The Shorthorns are larger, somewhat quicker maturing and of better conformation, as a rule, than the Red Polled. I would say also that the Red Polled is perhaps a somewhat better milker than the Polled Shorthorn, although there are strains of dual purpose Shorthorn cattle that are fully as good milkers as the Red Polled.—Geo. A. Brown, Prof. of Animal Husbandry, M. A. C.

COW TESTING ASSOCIATIONS TELL TRUTH TO DAIRYMEN

THE study of production records of large numbers of cows, made possible by the work of the many cow-testing associations that have been organized in almost every part of the country, has brought out a grist of information on the possibilities of dairy-cow improvement and on the efficiency of various methods and practices. The records of many thousands of cows have been gone over in the last few years by the United States Department of Agriculture.

From the lowest-producing group of cows to the highest-producing group every jump of 50 pounds in annual butterfat production was accompanied by an increase of about $16 in income over cost of feed. The more fat produced, the bigger this income. A few heavy producers of the 21,234 cows whose 12-month records have been studied was 6,077 pounds of milk and 248 pounds of butterfat, or about 50 per cent more than the average of all the dairy cows in the country. The records show that selection of animals and better methods of feeding raise average production rapidly during the first year or two that the cow-testing association is in operation, but the figures for subsequent years show small gains. This is proof enough that there is still much room for improvement in the breeding of cow-testing association cows.

Each year more farmers realize the value of the testing association as a basis for herd improvement. On July 1, 1922, there were in operation 513 associations, including 12,458 herds and 215,321 cows, as compared with 452 associations the previous year. Wisconsin and Minnesota, two of the greatest dairy States, showed great gains in testing associations. During the year the number in Wisconsin grew from 103 to 127, and Minnesota from 23 to 37.

MILKING AND FEEDING TIME

IT has long been a rule on well-managed dairy farms to milk and feed the cows at the same hours every day. Regularity was always thought to have a beneficial effect on production. However, experiments carried on by the United States Department of Agriculture on the Government farm at Beltsville, Md., have shown that cows of average production milked at the same hours every day produced but slightly more milk and slightly less butterfat than those milked at random, provided the feeding was done at regular times. When the feeding as well as the milking was done at random hours the cows produced about 5 per cent less of both milk and fat.

VETERINARY DEPARTMENT

CURE FOR LICE

Would you please tell me what to use on cattle for cattle lice?—M. E., Empire, Michigan.

During moderate weather when cattle will not be injured by being wet, an excellent remedy for lice is any one of the coal tar dips. We have used both Kreso and Zenolium with very satisfactory results, using about one part of the dip to sixty parts of luke-warm water; applying it to the cattle with either a spray pump or brushing it in with a brush. Two applications at intervals of two or three weeks are necessary to eliminate the lice and this will not do it unless pains are taken to cover all parts of the animal's body which the lice frequent.

For use during real cold weather, an excellent lice powder can be made by combining equal parts of powdered naptha flakes, finely powdered tobacco dust and sulphur, which can be sprinkled onto the cattle.—George A. Brown, Prof. of Animal Husbandry, M. A. C.

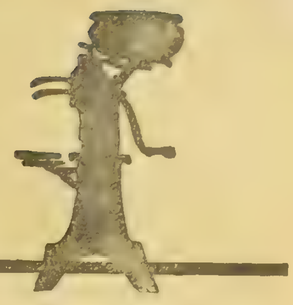
An Irishman working for a Hewbrew asked for an increase in pay. The Hebrew replied: "If you are worth it, I would be pleased to give it to you. Now, let us see what you do in a year, Pat.

"We have 365 days in a year; you sleep 8 hours every day, which makes 122 days you sleep, taken from 365 days leaves 243. Now you have 8 hours' recreation every day which makes 122 days taken from 243 days leaves 121 days. We have 52 Sundays in a year which you have off, leaving you 69 days. You have 14 days' vacation; take this off and you have 55 days left. You don't work Saturday afternoon: this makes 26 days in a year. Take this off and you have 29 days left. Now, Pat, you allow 1 1-2 hours for meals, which totals in a year 28 days. Take this off and you have 1 day left. I always give you Yom Kipper off, so I ask you, Pat, if you are entitled to a raise?" Pat then answered, "Well, what have I been doing, then?"

BIGGER AND BETTER

Dear Mr. Slocum—I am enclosing $1.00 for which please enter my subscription for the Michigan Business Farmer for 2 years as per your offer in this week's issue. I saw a copy today and it was so much bigger and better than when I was a subscriber before that I could not resist subscribing for it again.—Edward Finley, Calhoun County, Michigan.

How do you account for this?



Why is it that there are approximately as many De Lavals in use today as all other makes of seprators combined? For ust one reason, which is based on the actual experience of several milions of users over a period of forty years, who have found it the *most satisfactory*, in that it skims cleaner, lasts longer and is easier to operate and clean than any other

98% Of the best creameries use De Laval Separators

The creameryman knows the best cream separator. Practically all of them use De Lavals. Why? Because they have found by testing the skim-milk, and by experience, that the De Laval is the most profitable. They know that a poor separator can soon waste all their profit and that a De Laval soon pays for itself. The De Laval you use is built on the same principle as the creameryman's.

86% Of the exhibitors at the National Dairy Show use De Laval Separators

At the 1922 National Dairy Exposition an investigation among the exhibitors of purebred dairy cattle disclosed the fact that 86% of them use De Laval Separators. These exhibitors of purebred dairy cattle are the cream of the world's best dairymen—they know the best separator and use it. Butter made from De Laval cream also won first place in *every class.*

64% Of the Separators in the leading butter state are De Lavals

More butter is made and more cream separators are used in Minnesota than in any other state. According to an investigation by a prominent farm paper, 64% of the cream separators in Minnesota are De Lavals—almost two out of every three. A remarkable record—which simply drives home the fact that the more people know about separators, the more they appreciate De Laval.

51% Of all cream Separators are De Lavals

—according to an investigation by a group of prominent farm papers of wide circulation. There are, still, many inefficient and worn-out separators in use today which are wasting enough butter-fat to pay for new De Lavals. Get the most out of your butter-fat with a new De Laval. See your De Laval Agent or write us.

If Ruptured Try This Free

Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands

Sent Free to Prove This

Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 408B Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers from a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risks just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.

Free for Rupture

W. S. Rice, Inc.,
408B Main St., Adams, N. Y.
You may send me entirely free a Sample Treatment of your stimulating application for Rupture.

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today

The Children's Hour

PAYING MOTHER'S BILL

A TEN-YEAR-OLD Oxford lad heard a conversation about certain bills to be paid and conceived the idea of making out a bill for his own services. So next morning he laid this statement of account on his mother's breakfast plate:

"Mother owes Willie for carrying coal six times, 20c; for bringing water lots of times, 30c; for going errands, 15c." His mother read the bill, but said nothing about it. That evening Willie found on his plate the 75c and also another bill, which read as follows: "Willie owes mother for his happy home for ten years, nothing; for nursing him through a long illness, nothing; total, nothing."

When Willie saw the 75c he was pleased, but when he read his mother's bill his eyes grew dim and his lips quivered. Then he took the money to his mother, threw his arms about her neck and begged that she would let him do lots of things for her. Mother's bill is rarely presented, but it will pay each one of us to think it over ourselves, and then settle in love and service.

DEAR Nieces and Nephews:—The above was sent to me by Nephew Lee Valentine of Oxford, Michigan. It is so true that I want all of you to read it.

Many times you feel that your folks ask you to do so many things, and particularly when you are playing some game that is very interesting. I know just how it is. When I was a boy I was no better. I used to think that I did most of the work around home while all the work I did in one day did not amount to more than two or three hours and sometimes not that much. It seemed that mother always wanted me to run some errand for her just at the time I always wanted to play, and I felt just like asking for pay for the work I was doing. I never ask but mother often gave me money when I did something for her and I greedily accepted it believing she owed it to me for my labor. Mother never presented her bill and it was not until I was nearly grown-up that I realized fully what she had done for me.

Father will do all that he can but it is mother that does most of the sacrificing. It is she who shares more closely all your joys and sorrows. Do not be impatient and rude when she asks you to help her. Remember that many, many times mother sacrifices in more ways than one to give you some pleasure, like a new toy or doll, or a party, etc. Do not present your bill to mother because it will keep you busy half way out of debt to her.

What great man was born 114 years ago the 12th of this month? You have guessed it. I hope the day is observed at your schools in a manner fitting. If you are not going to have a program why not ask your teachers to discontinue classes the last two hours of school and read about Lincoln to the pupils. I am sure if you get together and ask that, your tachers will be pleased to do this.

St. Valentine's Day will also come and go before you hear from me again. I hope you all get many valentines. UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned:—I have written to the M. B. F., before and I saw my letter in print. I have 5 brothers and one sister. My youngest brother is 19 years old. He is in the Navy at the Submarine Base in Panama. I had a brother older than him in the World War. He died from the effects of diphtheria. He enlisted when only 17 years old. We have lived in Michigan since I was small We lived in Iowa before we came here. I am in the 8th grade at school. We have a fine teacher. Your niece.—Myrtle Neumann, Glennie, Michigan.

Dear Uncle Ned:—I am a girl 13 years old, and in the 7th grade. I like my teacher. We had two weeks vacation. I had some fun the last week. I went over to my cousins and stayed from Tuesday until Friday. Will some of the girls write to me?—Ruth Ream, R. No. 1, Clayton, Michigan

---

Dearest Uncle Ned—I have written before, but as you know, I have told you in my last letter, that I have no dear mother, as I lost her last July 15, and it is very lonesome without her, so I am writing again. We have been playing in the snow today, to keep me from being lonesome. It is very windy tonight. Last night it was cold and frosty and today it looked like spring had begun. My birthday comes on the 18th of November. I am 16 years old and I wish many of the boys and girls would write.

I haven't written many stories but will try and write one today which I heard a long time ago. My mother has told me. Valentine Day will soon be here.

Saint Valentine

Here is one of the stories that have been told about Saint Valentine.

Father Valentine was a priest who lived a long time ago. He spent his time in nursing the sick people and children, and comforting the sorrowing. As he went among his people, the children, too, found a kind and helpful friend. The children liked to talk with him and run by his side as he went from one house to another. Father Valentine loved all the little creatures of the woods and streams, and they seemed to love him in return. The birds would come at his call and the squirrels would scamper down the trees to take food from his hand. Years went by, and at last the good priest became too old to visit his people. How they wished to hear the sound of his footsteps at the door, again. How the children have missed their kind teacher and the stories that he told them! Father Valentine was very sad because he could no longer go about from home to home. Father Valentine soon found a way by which he could still be of use to those he loved. As he sat in his room he wrote the kind words which had always made his visits so full of good cheer. Every day he sent loving messages near and far. They were carried by boys and girls who had learned from him to be happy in helping others. Soon his friends began to watch for the kind words that were sure to come to them whenever they were in need of help. Even the little children, when they were ill would say, "I am sure Father Valentine will send me a letter today." After a time the good father passed away from earth. But he was not forgotten. Each year, when the fourteenth of February comes around, we still keep his birthday.

Well as my story is getting long so will close with a little verse:

Think of the lonely, remember the sad,
Be kind to the poor, make every one glad,
On good old Saint Valentine's day.

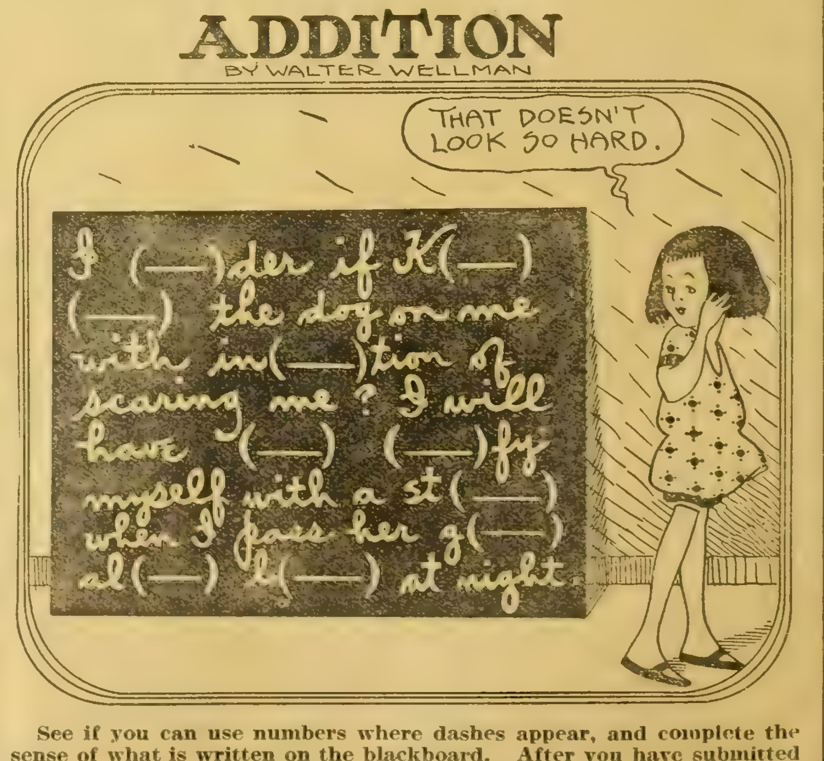
—Miss Elizabeth Kleido,, Elkton, Michigan.

Dear Uncle Ned—I have been reading the Children's Hour for a few years. We had frosty weather for a few days. Today it is warmer and the snow is melting. We have made about six snow men today. Two are about six feet tall or taller. We have been out with our pony for a ride. We have a new pony cutter and my sister Elizabeth hitches the pony to the cutter and away we go for a ride. I am 13 years old today, January 18. I have three sisters and four brothers. The oldest is 17 years old. As my letter is getting long and wish many of the boys and girls would write to me. I will close with best wishes to Uncle Ned and all the rest.—Miss Virginia Kleido, Elkton, Mich.

Dear Uncle Ned:—I have been a silent reader of the M. B. F., for some time, and am very much interested in the Children's Hour. I thought I'd write for the first time. I am a girl 13 years of age, and a blond. I am in the eighth grade and I like to go to school. There are 40 pupils in our school. I have 2 brothers, both younger than I.—Lucille Richards, Bad Axe, Michigan.

Dear Uncle Ned:—I would like to join your merry circle. I never have written before. My father takes the M. B. F., and I like to read the Children's Hour very much. I am a girl 12 years old and I am in the 6th grade. I live on a 100-acre farm, one-half mile from town and I go to high school. My birthday is the 6th of July. Good-bye Uncle Ned.—Wilma McTaggart, Silverwood, Michigan.

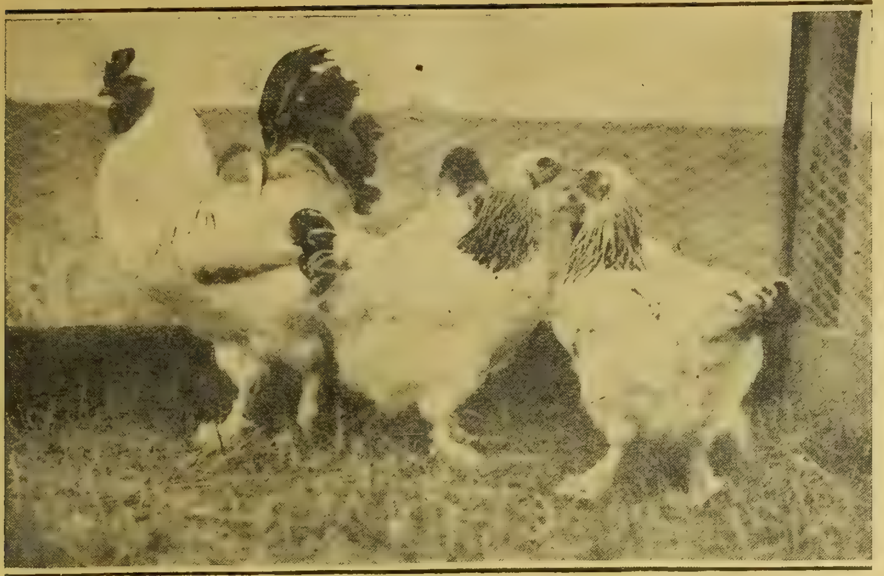
Dear Uncle Ned:—I am a farmer's boy 4 feet and 1 inches tall, I weigh 80 pounds and am 10 years old. I am in the 5th grade at school. I think Evelyn Grundy is about 13 years old. I have 40 rods to go to school. There are 20 pupils in my school. I enjoy reading the M. B. F. I have one sister, she is in high school. I hope to hear from the boys and girls. I will say good-bye, from your nephew.—Thomas D. Blair, R. No. 1, Box 64, Vestaburg, Michigan.



ADDITION
BY WALTER WELLMAN
THAT DOESN'T LOOK SO HARD.
I (—)der if K(—) (—) the dog on me with in(—)tion of scaring me? I will have (—) (—)fy myself with a st(—) when I pass her g(—) al(—) l(—) at night.

See if you can use numbers where dashes appear, and complete the sense of what is written on the blackboard. After you have submitted numbers, add them all together, and give the sum.

Answer to last puzzle: There are seven—Flea, Beetle, Waterbug, Bee, Ant, Hornet, Roach.



A pen of pure-breds, no matter what the breed, are about the best investment any business farmer ever makes.

Keeping Up the Egg Production

THE farm flock commences laying in the fall and early winter and gradually increase the monthly production until in April and May they may average two dozen eggs per hen. After the spring flow the average per hen begins generally to drop very fast unless special care is given the flock.

The flocks roam about the farm and are supposed to find their living about the farmstead. They may for a very short time, soon the proper food for egg-making has been consumed, worms and bugs become scarce, hot weather comes on, mites multiply and inevitably the hens stop laying, just as the cows go down in milk when the grass gets short, flies are plentiful and the weather is hot and they seek the shade.

There should always be egg-mash, or ground feed in a hopper to supplement the food that may be found about the farm. Skim milk, or buttermilk, should be supplied, or meat scraps to take the place of the departed worms that burrow deep in the ground when the weather is hot and air is sultry.

Grit, oyster shells and charcoal must be supplied just as in the winter when the flock is confined.

Many poultry houses are uncomfortable day and night. Filthy, hot, with air fouled by accumulated droppings, poorly ventilated, full of mites, swarming with lice, how can the flock do otherwise but quit laying in self respect?

A flock of 90 hens laid 53 eggs on July 14th, but they were properly fed and kept busy during the day and comfortable at night. The flock had a grove with plenty of shade to work in during the day seeking the scratch feed that was scattered in every nook and corner for them to find. A well balanced egg mash in a hopper, a moist, crumbly mash feed in a trough at noon day, plenty of cool, fresh water and buttermilk to drink, and grit, shell and charcoal always at hand.

It is easier perhaps, to keep a yarded flock up to a high percentage of production, but a farm flock may be so managed as to avoid the heavy slump that is common with the ordinary farm flock. The dairyman can keep his milk flow by the use of soiling crops when the grass gets short and the flies pester the herd day and night.

The farmer can so feed and house as to keep the egg flow up to 50 per cent and by systematic culling continue the high percentage thru the summer months. With such feed and care mentioned eggs of splendid quality can be produced throughout the season until the molt begins in earnest.

Hoppers for egg mash are not found on many farms. Some flocks are not fed out of hand for three or four months in summer, some flocks must find all the water they have and spend the nights in a house that is as hot as—well, hot enough, while the cows are let out of the barn after milking and they seek a high hill where the breezes blow.

Can't you do something to make your flock more comfortable day and night? They will repay you in more eggs to eat and sell.—Farm, Stock and Home.

ENORMOUS WASTE IN EGGS

THE waste in eggs in the United States every year amounts to nearly $50,000,000. It is estimated that 17 per cent of all the eggs produced in this country become unfit for human food before reaching the consumer because of careless methods of handling.

We should help to prevent this loss by producing infertile eggs, by not letting hens nest on the domp ground, by keeping the nests clean, by not washing the eggs, by being careful not to crack them while handling, by gathering eggs daily, by storing them in a cool, dry place and by marketing them at least once a week—twice a week if possible.

Few people understand that eggs are almost as perishable as meat or milk. They belong to the same class of food, but because they are enclosed in a hard shell, many of us think they will stand any kind of treatment.

We will need poultry and eggs. We must produce and conserve them.

CHICKEN POX (AVIAN DIPHTHERIA) AND ROUP

CONTAGIOUS epithelioma, chickenpox, avian or fowl diphtheria, canker, contagious catarrh, roup, cold, simple catarrh, swelled-head, etc., are terms used to designate various diseased conditions of fowls, the most prominent symptoms of which appear about the head. This array of names is very confusing and is due to the practic of naming pathological manifestations according to symptoms without taking the underlying cause into consideration. Leaving aside non-infectious diseases and using the etiology (the cause) as a basis for our nomenclature, we find that the lise of names given above represents only two distinct diseases, namely: (1) contagious epithelioma, commonly called sorehead, chickenpox or fowl diphtheria, and (2) roup, which also has various synonyms such as colds, swelled-heads, etc. Some authors distinguish between chicken-pox on one side and diphtheria on the other as if the latter ones were etiologically identical, but no experimental data support this view, while there is abundant evidence to show that chicken-pox and avian diphtheria are caused by the same organism, and that roup, which in its name resembles colds in man and higher animals, is etiologically distinct from the former. Chicken-pox and avian or fowl diphtheria are simply two different forms of the same disease the scientific name of which is contagious epithelioma, epithelioma meaning a tumor of epithelial cells.

Cause—This disease is caused by a so-called filterable virus, i. e., the organism is so small that it will pass through a dittomaceous earth filter, and cannot be seen under the most highly magnifying microscope. The virus may be found in the scabs, in

Here's My Greatest Offer on World Famous Detroit Incubator

HERE it is—my world-beating low price offer on a high-grade guaranteed hatcher. I've cut my usual low prices right to the bone. Why worry along with your old makeshift machine, when you can now get a new Detroit at rock-bottom price?

Look where you will, you won't find hatching equipment that has higher quality than I build into Detroit Incubators. Compare prices and see what you save. You waste money to pay more. Satisfaction or money back.

The Detroit is equal in every way to incubators costing twice my price—yes, and even more. The Detroit has double walls, hot water heat, copper tank, no cold corners, big nursery, automaticregulation thermometer that can be easily read without opening door and held in horizontal position so chicks cannot break or knock it down when hatching. Many other features that insure big hatches of strong, healthy, vigorous chicks. Capacity 140 eggs. Equally successful on duck and turkey hatches.

$12.45

DETROIT
INCUBATORS and BROODERS

represent the accumulated experience of 18 years devoted to perfecting a hatching outfit that would be as near 100% efficient as money and brains can make it. My low prices are possible only because of big production and my direct-to-you selling plan that cuts out all unnecessary expense.

Why wait and wish for big poultry profits when I place guaranteed equipment within easy reach? This is the year for you to start. Egg and poultry prices are still high. Act Now.

Freight prepaid east of the Rockies — north of Tennessee, and allowed to points beyond. Incubator shipped complete—all set up and ready to use except putting on the legs.

$7.10

My 140-chick brooder is another big bargain. Double walls, hot water heat, strong and durable, yet light and easily handled. A practical brooder in every detail. Will prove a big help in raising your brood and increasing poultry profits.

Big Combination Offer

I make it easy for you to get started in the poultry-raising business. My record-smashing combination offer is the talk of the country. Think of it! A complete hatching and chick raising outfit — Detroit Incubator and Brooder—worth $25.00 of anybody's money for only $17.50. You can't duplicate this value anywhere else in America. Order direct from this ad, or send for catalog containing complete descriptive information on both incubator and brooder. Write today— sure.

CHICKS—WE HAVE SHIPPED THOUSANDS each season since 1904. Different breeds, free booklet with guarantee and delivered price. Freeport Hatchery, Box 10, Freeport, Mich.

the exudate and, in acute cases, in the blood and internal organs. Besides affecting chickens it is pathogenic to turkeys, pigeons, geese ducks, and guinea fowls. Wild birds, such as pheasants, quail and some others, are also susceptible.

Mode of dissemination—Within the flock the disease may be spread by direct contact between diseased and healthy fowls. As the virus is contained in the scabs and discharges of infected birds it is clear that water, feed, litter, etc., form ready means of dissemination. The infection may be carried from coop to coop or from farm to farm by the introduction of birds from a diseased flock no matter whether they show signs of disease or not. The disease is very often brought from poultry shows, in fact this is one of the most common ways of disseminating chicken-pox from one territory to another. The infection may be spread from place to place by the people carrying the virus on their shoes, clothes and hands. It is also possible that dogs, cats, rats or wild birds may act as mechanical carriers and means dissemination.

Characterization and Symptoms—This disease may appear in three forms, namely (1) A pure skin disease, in which wart-like tumors or scabs appear on the combs, wattles, ears and skin of the head, and in some instances on the skin or other parts of the body. These tumors begin as whitish spots or elevations gradually growing larger until they appear as distinct papilla-like growths. As time goes on these lesions change from white to gray, to brown, and finally to an almost black color. The development of these scabs may take as long as three weeks.

(2). A pure mucous membrane disease. In this case grayish or yellowish white cheesy masses develop on the mucous membrane of the oral cavity and eyes. Sometimes the lesions are confined to the larnyx or mouth alone, at other times only one eye may be affected, and so on. In the mouth these patches of so-called pseudomembranes may vary from the size of a pinhead to large areas involving the larynx and almost the entire oral cavity. The eye effection begins with a thin discharge which if not taken care of will thicken and accumulate under the eyelids which finally become glued together preventing the escape of the discharge thus producing a more or less marked bulging.

(3) A combination of the affections described under 1 and 2. The virulence of the organism and the resistence of the fowls are the factors which determine the severity of the disease. In many cases of pure skin affection the general condition of the birds may remain apparently undisturbed. However, when the mucous membranes affected signs of general distress become evident. Such cases the following symptoms may be observed: more or less of a thin, clear, mucous discharge from the mouth, sometimes from one or both eyes, accompanied by difficult breathing, very light at first but usually increasing gradually until the bird dies of asphyxiation due to accumulation of muco-purulent or cheesy exudate in the larynx, or from starvation due to occulsion (closing) of the eyes which prevents the fowl from feeding. In the early stages one may detect the disease by a rattling sound in the larynx of affected fowls. Sneezing and the so-called bird cough may be observed. Concomitant symptoms are dullness, emiciation, cessation of egg production and diarrhea.

Cause and Mortality—The disease may be acute or chronic. Sometimes the birds may die suddenly without having shown any noticeable sign of a disease due to a toxemia or in other cases the cause of death may be occlusion (closing) of the larynx. Chronic cases may go on for weeks. In some outbreaks as many as 80 per cent of the exposed birds contract the disease, in others only 10 per cent may became ill. The death rate is also variable, sometimes reaching 50 per cent of those affected.

Diagnosis—A correct diagnosis of the disease is of paramount importance in order to handle the outbreak intelligently. Where the typical scabs and diphtheritic patches are present there is no need of any doubt as to the identity of the trouble, but in some cases the symptoms may be such as to make it very difficult to arrive at a diagnosis. Scabs on the combs, wattles and skins may be due to mechnical injury.

Canker of the eye and cheesy masses in the mouth may be due to foreign bodies lodging in the conjunctival sac or cleft of the palate causing inflammation of the mucous which, in appearance, resemble some lesions of chicken-pox (diphtheritic form). Conditions of this kind are called mechanical canker and disappear promptly when the irritant is removed.

Roup may be mistaken for the diphtheritic form of chicken-pox due to the bulging of the nasal sinuses which will resemble canker of the eye. However, on closer examination one will find that in the case of roup the eye proper in unaffected and that the closing of the eye is due to the accumulation of discharge in the nasal sinuses which bulges the bone and forces the eyelid upward. The nasal passages may not be involved in contagious epithelomia.

Malignant canker may also be mistaken for the diphtheritic form of chicken-pox. This disease is characterized by small pustules on the base of the tongue and side of the pharynx. They penetrate deeply and may be so numerous as tocoalesce froming masses similar to the pseudomembranes of chicken-pox. Malignant canker is rare, does not spread will not yield to treatment and is always fatal.

Prevention—The following points are essential in keeping the disease within due bounds:

(1) Caution in introducing fowls from strange flocks.

(2) Quarantining of newly purchased birds, or birds brought home from shows or fairs for at least one month.

(3) Prevent undue communication at shows and fairs.

(4) Prompt and complete isolation of diseased fowls.

(5) Good hygienic quarters.

(6) A sufficient knowledge of hygiene to be able to practice sanitation intelligently and efficiently.

Attempts at sanitation are often made, on account of lack of knowledge of the fundamental principles of hygiene, all that is gained is a lot of wasted labor.

How to Handle

Complete isolation of diseased individuals is essential to prevent dissemination of any contagious disease. Suitable facilities for this purpose should therefore be provided for on all up-to-date farms. The mere closing up of diseased birds in a room immediately adjacent to one containing healthy birds is of little or no use. Walls in chicken-houses, as the author has seen them, are not generally "infection-proof" in some cases they are hardly "chicken-proof" so they cannot be depended upon to keep infection from spreading. To keep fowls affected with contagious disease in wire cages placed in killing rooms, feeding rooms, some part of the stables or in any other place where people, cats, and dogs walk to and fro is also bad practice because of the possibility of infected litter, feathers or droppings, which have fallen out of the cages, being carried away on shoes or the feet of animals.

One fairly satisfactory way of providing for isolation is to put the diseased birds in a room at one end of the chicken house keeping the adjacent room empty. In the latter a pair of old rubbers, a duster, or suit of over-alls should be kept for use only in the isolated room. Other facilities necessary for the handling of diseased birds should also be kept in this room if possible. This latter room is just as important as the isolation room itself so some such arrangement as the one suggested should be made available in order to check the infection. After handling diseased fowls one should always carefully wash the hands in plain soap and water or some mild disinfectant before touching anything else. The entire flock should be gone over once or twice daily for the purpose of detecting any diseased birds, and their immediate removal is imperative. If they are too sick to justify treatment they should be killed and burned or buried very deeply. Throwing dead birds on the manure pile is an excellent way of spreading disease. It is well to put

AN AD IN THE MICHIGAN BUSINESS FARMER WILL SELL IT!

enough potassium permanganate in the drinking water to give it a purple or wine colored appearance. One may use sufficient to make one-half per cent solution for this purpose. Frequent cleaning of the coops with burning of the litter and thorough spraying of the walls, roosts, floors, etc., using a 3 per cent cresol solution or something similar, is advisable. Meat scraps should be reduced to a minimum during the outbreak. Buttermilk may be used rather freely.

Treatment of Individuals—As soon as symptoms of chicken-pox appear the heads of the affected birds should be dipped in a 2 per cent potassium permanganate or 3 per cent boric acid solution once or twice daily for 30 seconds. In dipping the head the mouth should be kept open and the beak elevated so as to allow the air escape and be replaced by the solution. Removing scabs from the combs, wattles or skin, and then applying salves or other preparations to the raw surface is unnecessary and inadvisable as it will never hasten the recovery but on the contrary lowers the birds vitality and often results in early death. Cheesy masses in the eyes should be removed by carefully pressing on the eyelids or by picking them out with a pair of forceps. A cotton swab may also be used to remove exudate from the eye. As eye wash one may use a 3 per cent boric acid or a 0.9 per cent cooking salt solution which may be applied with a medicine dropper or syringe and should be lukewarm when applied. Having removed the exudate and washed the eyes with one of the above-mentioned solutions, 2 drops of a 20 per cent solution of argyrol should be deposited directly on the eyeball. The latter solution should be applied twice daily in most cases while once daily will suffice for the remainder of the eye treatment. Cheesy membranes should be removed from the mouth and larynx and if raw surfaces are left they should be touched with a mixture of tincture of iodine and glycerin equal parts.

Immunization—Lack af space prevents a discussion of this subject. Suffice to say that vaccination against chicken-pox hàs not proved uniformly successful.

A general discussion on Roup, its symptoms, treatment, immunization, how to prevent, etc., will be published in our February 17th issue. The above article and the one to appear in our next issue are written by Prof. H. J. Stepseth, Bacteriology Section, Michigan Agricultural College.

BUY CHICKS FROM WELL ADVERTISER HATCHERIES

LAST spring at Cleveland, Ohio, operating under the name of "Kings Hatchery," H. H .Mason, an old offender in the mail-order fraud, put out post cards covering the states of New York, Pennsylvania, Ohio, Indiana, and Illinois offering bargain prices on Chicks on orders received before a certain date, in some instances, April 18th, and in others, April 25th. Mason obtained information as to the number of Routes out of each small Post Office in the States above mentioned and the number of Boxes on each Route. Then the post-cards were simply addressed:" THE POULTRY RAISER, ROUTE BOX JONESDALE, OHIO," or whatever State and Post Office was necessary. The responses to these post cards were of great volume and so many Money Orders were presented to the Post Office that the authorities became suspicious and started an investigation, but before an arrest could be made Mason disappeared taking with him $25,000 or more, which he had received thru the mails in a few weeks and leaving a considerable sum in Cleveland Banks. Those who sent him money for Chicks of course lost their money. He evidently had no intention of filling the orders at all. We are giving this information so that the public may be warned against patronizing any Chick-selling schemes or offers which come to them in this or similar manner from unknown parties. To play safe buy Chicks only from real Hatcheries who come out in the open through legitimate advertisements in reliable Journals and which present to you good Bank references. The operations described above are the third time that Mason has succeeded in defrauding the Chick-buying pub-

(Contiued on following page)

lic. The first was at Des Moines and the following year at Kansas City. All told he probably defrauded the public out of $100,000 or more. As we have said before, buy Chicks only from firms or individuals who can and do present proper credentials and references to you.

MANAGEMENT OF GROWING CHICKS

THE care of growing chicks, especially during the very warm weather, is most important, you should give them the best of care at this time if you wish to succeed. The baby chicks may be smart little fellows from strong, vigorous parent stock, and they may have been brooded carefully for the first two or three weeks, but unless they recieve proper care and management during their later growing period they will not develop properly, and many of them will be lost by sickness or disease.

The chief essentials to proper growth are good coops or houses, cleanliness, proper feed and water, shade, and free range.

Coops and Houses

Growing chicks should be provided with large, roomy coops or houses which will give them a comfortable place to stay at night and during stormy weather. No particular kind of house is necessary, but it should be so built that it will provide the chicks with lots of light, pure air, and sunshine, and protect them from dampness and storms of all kinds. It also should be arranged so that it can be cleaned easily and frequently, which is very important.

If brood coops are used, do not let too many chicks go into one coop at night, as crowding will cause them to become overheated, resulting in improper growth and sometimes in dead chicks. As the season advances and the chicks become larger, some should be removed and placed in other coops to prevent crowding. When possible it is best to provide larger quarters .

A good house can be built from dry-goods or piano boxes at a small cost.

Every coop and poultry house used for growing chicks should be kept clean at all times. Sickness or disease usually starts in unclean quarters, and in such quarters lice and mites are always more plentiful. The coops and houses should be cleaned and sprayed once a week, and clean shavings, chaff, or sand put on the floor. Examine the chicks and houses often for lice and mites, and if found they should be got rid of at once.

Feeds and Water

A variety of feeds, with fresh, clean water, is necessary if chicks are to grow properly. The three feeds most necessary for rapid growth are grain feed, green feed, and dry mash.

Grain Feed—In addition to the green feed and dry mash, which should be fed night and morning, giving as large a quantity as the chicks will eat clean, but no more. A good grain mixture for growing chicks consists of 3 parts cracked corn, 2 parts wheat, and 2 parts of hulled oats. When available, kafir corn or rolled oats or hulled barley may be substituted for hulled oats. In localities where hulled oats, kafir corn, or rolled barley cannot be obtained or is too high in price, a mixture of cracked corn and wheat only may be fed until the chicks are old enough to eat whole oats, when 2 parts oats only may be added to the corn and wheat mixture.

Green Feed—A reasonable supply of fresh green feed is almost as necessary as grain for growing chicks if they are to develop properly. If allowed liberty they will obtain much of it for themselves, but if kept in confinement or in quarters where green feed is not abundant, it should be supplied to them regularly. Lawn grass, beet tops, cabbage, and lettuce make excellent green feds.

When chicks are confined to brood coops with runs these should be placed on ground where the grass is green and tender, and as fast as it is eaten off the coop and run should be moved to a place where the grass is plentiful .

Dry Mash—In addition to grain and green feeds, dry mash should be kept before growing chicks at all times after they are three or four weeks old. It is best to feed it in a hopper inside the building or where it will nót be exposed to rain or wet. If a large number of chicks are raised the mash may be fed in an outdoor hopper.

The following mixture makes a good dry mash: Two pounds corn meal, 2 pounds middlings, 1 pound oatmeal, 2 pounds wheat bran, 1 pound beef scrap, and one-fourth pound of charcoal. When larger a larger quantity is desired it should be mixed in the same proportion.

Grit and oyster shell should be provided also, so that the chicks may help themselves whenever they wish.

Sour Milk—Nothing is better for growing chicks than a liberay supply of sour milk. If it can be obtained, it should be kept always before them in an open dish or pan where they can eat and drink it freely. When sour milk is feed, the amount of beef scrap in the dry mash may be reduced one-half.

Water—Plenty of fresh, clean water is absolutely necessary for all growing chicks. In hot weather it should be given twice daily and put into fountains or dishes and placed in the shade so as to keep as cool as possible. Clean the water dish thoroughly each day before filling.

An abundance of free range with plenty of shade is necessary if the chicks are to grow rapidly into vigorous fowls. Growing chicks that have free rangs obtain quantities of green feed, bugs, worms, and other things, therefore requiring less grain, and they are also less liable to sickness or disease. Give your chicks free range whenever possible.—Animal Husbandry Division, U. S. Dept., of Agriculture.

MICHIGAN BREEDER TRICKED AT NEW YORK

TWENTY-three years of scietific work gone for naught. Fifteen thousand dollars vanished. All because of a few missing feathers.

This is what a few words in a telegram received from New York said. At the Madison Square Gardens poultry show, several crates of birds entered by Mr. Ferris, were found to have been tampered with and $15,000 worth of prize winning white leghorns possibly rendered worthless. Tails of 14 male birds had been clipped, and they had been roughly handled. L. E. Heasley, representating Mr. Ferris at the show, was compelled to withdraw them from exhibition.

The management of the show posted notice of $500 reward for information leading to the arrest of persons responsible for the mutilation of the birds. It is believed the act was committed by a rival exhibitor.

Represents 23 Years' Work

The 14 mutilated birds are the result of 23 years' breeding, culling and selecting and were the choicest of his flocks. Although their market value is probably around $15,000, he says, to him they were worth many thousands more and were not for sale at any price.

For one year these birds had been carefully groomed for this show, Mr. Ferris said. In order that not a single feather should be broken or the plummage rufled, they had not been exhibited for 12 months, and when the crates had been prepared and the birds shipped it was Mr. Ferris' belief that they were the best to be found anywhere in the country. He was confident they would carry off all the awards as they have done time and again in previous years at other shows.

The loss of the 14 males will cause him many thousands of dollars' loss in addition to their actual value.

ANNUAL POULTRY CROP WOULD BUILD TWO PANAMA CANALS

The poultry in the United States yields over half a billion dollars every year—enough to build two Panama Canals.

The Panama Canal cost about $300,000,000. The poultry products are worth over $600,000,000 annually.

Ninety per cent of this amount is produced by the small flocks on the farms of the country.—International Harvester Co., of America.

DOING HIS SHARE TOO

Editor Michigan Business Farmer—Enclosed find order for one dollar to renew my subscription to Business Farmer for two years. I sure think you are doing something to help us farmers in these strenuous times so I feel we must do our part with you.—Thomas Rawson, Huron, County, Michigan.

HIGHEST QUALITY CHICKS
Michigan's Old Reliable Hatchery
(The most modern and best equipped Hatchery in the state)
PURE BRED English and American S. C. W. Leghorns; S. C. Anconas; Barred Plymouth Rocks and R. I. Reds. Strong, well hatched chicks from tested Hoganized Free range stock that make wonderful winter layers.
Chicks sent by Insured Parcel Post Prepaid to your door. 100% live delivery guaranteed. Fifteen years of experience in producing and shipping chicks has given adsolute satisfaction to thousands. Write for illustrated free catalog and price list. Get lowest price on best quality chicks before you buy.
Holland Hatchery, R. 7, Holland, Mich.

Day Old Chicks
From Select, Hogan Tested, Flocks on Free Range. Well-fed and handled to insure strong, vigorous chicks. Heavy Layers. PRICES: WHITE and BROWN LEGHORNS and ANCONAS, 50, $7.50; 100, $14; 500, $65. BARRED ROCKS, 50, $8.50; 100, $16; 500, $75. Hatched right and shipped right. Postpaid. 100% live delivery guaranteed. Bank Reference. Order direct from this ad. Circular free.
BORST & ROEK, Box P, Zeeland, Mich.

CHICKS From State Inspected Flocks
We Specialize In ARISTOCRAT BARRED ROCKS, TOM BARRON WHITE AND EVERLAY BROWN LEGHORNS, SHEPPARDS STRAIN ANCONAS. SELECT ARISTOCRAT ROCK CHICKS, $30 per 100. CHICKS—SINGLE COMB BUFF LEGHORNS only. Strong healthy chicks from good laying stock. J. W. WEBSTER, Bath, Mich.

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

SUMMARY:

Industrial output is beginning to catch up with agricultural production. The large volume of equipment now being ordered by the railroads is significant and encouraging. Automobile production is continuing at a pace that contains a warning. The favorable factors in Europe in 1922 were financial improvement in England and France and industrial activity in France and Germany. Disheartening features of the foreign situation include unemployment in England and financial collapse in Germany. The new move by France to force payment by Germany injects new uncertainty into European affairs.

Money and credit conditions point to continuing business revival in the United States. The general price level is 14 per cent above a year ago. Agricultural prices have made about a 6 point gain toward the relationship with other prices existing before the war but have 32 points yet to go.

I. PRODUCTION AND TRADE:

The year 1922 brought increasing industrial activity. Manufacturing output was around 30 per cent greater than in 1921. The output in December, 1922, was about 50 per cent more than the month of lowest production, July, 1921.

The railroads purchased eight times as many freight cars in 1922 as in 1921. This is particularly encouraging in view of the deficiency in railroad equipment. A fact which is not so favorable is the enormous output of automobiles which shows no sign of lessening. Automobiles fall partly in the luxury class. Prices of steel are rising and costs are and will be higher in lines of industry more necessary of present development than the automobile industry.

Agricultural output in 1922 was the third largest ever produced, being exceeded in the years 1915 and 1920.

II. FOREIGN TRADE:

Total exports for 1922, when higher price level is considered, were practically the same as for the previous year. Imports showed a slight increase. Agricultural exports which customarily comprise a little over one-half of the total, declined in volume. The decline in cotton and pork products was small, but in the case of wheat about 40 per cent. It should be remembered that wheat exports in 1921 were unprecedented in volume.

England, the leading purchaser of American goods, has improved its financial position to a marked degree during the year as reflected in a gain of about 50 cents in the price of British drafts. The price is still 20 cents under par. A discouraging feature of the situation in England is the large amount of unemployment which persists.

France made some progress during 1922 in stabilizing its finances and its population has been at work producing goods and rebuilding the devastated areas.

In Germany, during the year, production has been feverishly maintained partly as a result of rising prices due to the unlimited issue of paper money which has brought the financial structure to ruin.

American agriculture has a large stake in the stability of Europe and will be confronted with uncertainty until European affairs are arranged. The present activity of France, designed to force Germany to meet its obligations, has not gone far enough to indicate whether it will retard or hasten the coming of more settled conditions.

III. MONEY AND CREDIT:

Interest rates are low, ample credit is available and industrial profits are slightly higher than in 1921. This combination of circumstances should lead to moderate increase in the demand for credit, and expanding industrial activity. The Harvard Economic Service gives great significance to the money factor in forecasting a continuation of the upswing in business for the year 1923.

IV. PRICES:

Farm commodities made a gain of 21 per cent in price during the year 1922. Food products of which several are sold directly from the farm, advanced 6 per cent. All commodities, other than farm and food products, gained 16 per cent during the year. These facts are based on wholesale prices collected monthly on 400 items by the United States Bureau of Labor Statistics.

4. Relative Purchasing Power of Farm Products

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in November, 1922. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	123	100	88	144	104	107
Corn	71	58	51	83	60	62

MARKET FLASHES

MARKET SUMMARY

Wheat prices gain slightly as demand improves. Corn easy. Oats and rye remain unchanged. Beans are inactive. Live poultry, dressed calves and hogs are wanted. Receipts of butter and eggs exceed demand and market is easy. Potatoes steady. All live stock show more activity and the market is steady.

(**Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor**)

FOOTE'S MARKET LETTER

By W. W. Foote

IT is an old saying that advice is cheap and the more one gives, the more one has left. Perhaps this is an exaggeration; at any rate there are many requests from farming districts asking what appears to be the best course to follow at this time in regard to selling grain and other farm products. In replying, it should be said that much depends upon how the farmer is fixed financially and whether he is working his own farm or that is not mortgaged. Supposing that the Michigan farmer is out of debt, and physically able to carry on his farm work without hiring any helpers, there appears to be no good reason for worrying over the existing conditions over in Europe, bad as they are. Michigan farmers are as a class practically clear of the strined conditions in such states as Iowa and Illinois, where the great war boom in farm prices lifted lands to extremely artificial figures; and furthermore, our Michigan farmers are largely in the habit of diversifiying their crops, instead of depending mainly on a single crop. Then the farmers of this state are more than ever before realizing the importance of growing most of the foods consumed on the farm. It is worth remembering that about 9 per cent more of the food consumed on farms could economically be produced locally rather than brought in from distant producing areas, as a recent nation-wide survey made by the United States Department of Agriculture maintains. This statement is the result of questions mailed to 20,000 crop reporters in all parts of the country, revealing that about 60 per cent of the food consumed on American farms is produced locally. To this statement, it may be added that this applies especially to Michigan, and farmers who raise their own vegetables, apples, beans, hens, cows, and hogs have gone a long way to solve the vexing problem of living comfortably on the old farm. As for marketing the surplus products of the farms, that is, of course, quite a different matter.

Manifestly, the market reporter is fallible in judging the future outlook, but just now it seems to be advisable to let the live stock go to market as soon as fat enough to grade well and not try to produce as much weight as is possible. Much depends upon whether the farmer has sufficient feed for his stock, and if he is short of feed, the best course is to ship the stock without delay. In reading the market reports, it should be remembered that cattle classed as choice to prime cut no figure in the sales, so few are offered. Most of the cattle marketed are of what is termed an "in-between" kind, with good representation of the poorer kind. Hogs are bringing good prices still, despite the liberal marketing at packing points, while sheep are making their fortunate owners no end of money.

Why Wheat Prices Fell

While prices for wheat are lower than they were several weeks ago, being put forth by market writers ago, they are still higher than before the war. No end of predictions are being put forth by market writers, reinforced by figures showing the available stocks and what the world importing countries may be expected to consume; but it may be just as well for the farmer owning marketable grain to take a fair price so long as it is offered, even if the price is higher later on. As for corn, the farm is the place for using it, although after feeding all that is needed for home feeding and for seed, the remaining surplus should be sold without undue delay. Corn for May delivery has been selling recently on the Chicago market around 20 cents a bushel higher than a year ago, although remaining stocks appear to be ample. Traders are not showing much interest in the oats market, and supplies are ample, although stocks in sight are much smaller than a year ago. Oat prices are considerably higher than a year ago, and May rye sells a little higher than last year. Exports of wheat, flour, and rye have been running on quite a large scale, with heavy exports of rye to Germany and Norway, owing to the fact that rye is cheaper than wheat. Wheat for May delivery sells in Chicago at $1.17, while cash sales are made of No. 2 yellow corn at 71½ cents, No. 2 white oats at 46½ cents, rye at 86 cents and barley at 60 to 64 cents. Michigan pea beans sell at $8.35 to $8.45 per 100 pounds, with buying in a small way.

Live Stock on Farms

There were more hogs on farms in the United States on January 1 than at any time since 1919, as is shown by the recent government live stock report. The total number is 63,424,000 head, a gain of 5,000,000 as compared with the revised figures of the previous year and 7,327,000 in excess of two years ago.

Milch cows increased 347,000 head as compared with the previous year, while cattle increased 373,000 head. The largest increase in other cattle is in the states where the corn crop was largest, and represents a shifting of livestock from sections where the crops were short to other parts of the country where feed is abundant.

A gain of 882,000 was shown in the number of sheep as compared with 1922, while mules increased 39,000 and horses decreased 203,000 head. Comparative figures follow:

Farm Animals	Total
Horses—Jan. 1, 1920	19,766,000
Do Jan. 1, 1921	19,208,000
Do Jan. 1, 1922	19,056,000
Do Jan. 1, 1923	18,835,000
Mules—Jan. 1, 1920	5,427,000
Do Jan. 1, 1921	5,455,000
Do Jan. 1, 1922	5,467,000
Do Jan. 1, 1923	5,506,000
Milch Cows—Jan. 1, 1920	23,722,000
Do Jan. 1, 1921	23,594,000
Do Jan. 1, 1922	24,082,000
Do Jan. 1, 1923	24,429,000
Other Cattle-Jan. 1, 1920	43,398,000
Do Jan. 1, 1921	41,993,000
Do Jan. 1, 1922	41,550,000
Do Jan. 1, 1923	41,923,000
Sheep—Jan. 1, 1920	39,025,000
Do Jan. 1, 1921	37,452,000
Do Jan. 1, 1922	36,327,000

Swine—Jan. 1, 1920	59,344,000
Do Jan. 1, 1921	56,697,000
Do Jan. 1, 1922	57,834,000
Do Jan. 1, 1923	63,424,000

The Chicago Cattle Market

More cattle are being fed in feeding districts than a year ago, and western markets are receiving more than at that period, the bulk of the beef steers grading only fairly well and few of the prime long-fed heavy steers going at $10 to $11 per 100 pounds. However, prices are still much higher than a year ago or before the war, and there is a good profit for the stock feeder who understands the business. Not many stocker and feeder cattle are being shipped back to the farms for a proper finish, and such cattle sell at high prices, the packers competing with country buyers for the best offerings. Beef steers are selling mainly between $8 and $10, with sales down to $6.25 to $7.25 for the commoner kinds and plenty of cows and heifers taken at $4.50 to $7. Veal calves are selling at $6 to $12.50 per 100 pounds and stockers and feeders at $5 to $8, mainly at $6.50 to $7.50

Chicago Hog Market

Because of greatly increased receipts, prices have undergone a great reduction within a short time, ruling the lowest in a long time, notwithstanding a large demand for the better classes of swine for shipment to eastern packing points. Meanwhile, the consumption of fresh pork products is extremely large, and exports of provisions are heavy, recent exports of lard being far greater than a year ago. Hogs are marketed mostly very heavy in weight, recent receipts averaging 241 pounds. This is the heaviest at this season in over ten years and 15 pounds above the average for the period. The large number of hogs feeding points to heavy consumption of corn and corresponding high prices. Unusually heavy receipts of hogs last week caused big breaks in prices, late sales being made at $6.80 to $8.40.

Big Profits from Sheep

Michigan farmers have never gone back on sheep, and seldom have they made such handsome profits as this season. Michigan is one of the important feeding states, and owners have been marketing their fat flocks of sheep, yearlings and lambs in Chicago freely recently, prices alternately advancing and weakening, but all the time ruling much higher than a year ago or before the war. Colorado is a large sheep state, and many flocks are being marketed from there. Demand runs much strongest on fat handy-weight lambs, and consignments averaging 90 pounds and over are severely discriminated against by packers. Late sales were made of lambs at $12.75 to $15, with feeding and shearing taken at $13.75 to $15.25. Shorn lambs fetch $1.50 to $2.50 less than these prices.

WHEAT

In spite of the fact that during the past fortnight the wheat market has had nothing but bearish news the price has changed only slightly. In general, the price has been at about a standstill. Any increase in the price brought out a large supply of grain while any decline found the market well supplied with buyers. export demand is practically nothing. Dealers are expecting only a very little business from that source until a settlement has been reached between France and Germany. It is hard to predict what the market will do. The supply is large and demand small at present and if times were normal the natural trend of prices would be downward. But conditions are far from normal at present and the supply and demand position is not exercising its usual influence. Many of the larger dealers are confident that the wheat market is in a position for an advance in the near future. Some look for the advance to amount to as much as 5 cents.

Prices

Detroit—Cash No. 2 red, $1.35; No. 2 white, $1.33.

Chicago—No. 2 hard, $1.15¾.

New York—No. 2 red, $1.29½; No. 2 hard, $1.25½.

Prices one year ago—Detroit, No. 2 red, $1.27½; No. 2 white, $1.24½; No. 3 mixed, $1.24½.

CORN

The corn market was agected by the action of wheat during the past two weeks. The price at Detroit has shown little change during this period. Demand is light being mostly local and receipts are of fair volume, although not enough to overload the market and cause prices to decline.

Prices

Detroit—Cash No. 2, 76½c; No. 3, 75½c; No. 4, 73½c; No. 5, 71½c.

Chicago—No. 2 mixed, 70@71c; No. 2 yellow, 70¼@71c.

New York—No. 2 yellow and No. 2 white, 88¾c; No. 2 mixed, 88¼c.

Prices one year ago—Detroit, No. 2 yellow old, 57c; No. 3 yellow new, 53c; No. 4 yellow new, 51½c.

OATS

Oats are featureless and continue to follow the trend of other grains. The market is inactive with demand light, both domestic and shipping.

Prices

Detroit—Cash No. 2, 49c; No. 3, 47½c; No. 4, 46c.

Chicago—No. 2 white, 43¼@44½; No. 3 white, 42½@44c.

New York—No. 2 white, 55c.

Prices on year ago—Detroit, No. 2 white, 40c; No. 3, 37½.

RYE

This market has been quiet the past couple of weeks. Demand and supply are just about balanced. At the present time many of the larger dealers believe that the market is in position to decline although the tone is steady and quiet on the majority of the larger markets.

Prices

Detroit—Cash No. 2, 90c.

Chicago—Cash No. 2, 86½@86¾c.

Prices one year ago—Detroit, Cash No. 2, 87c.

BEANS

There has been several declines in the price of beans on the Detroit market during the past fortnight and many are becoming frightened believing that the market is at the beginning of a long slump. We cannot believe this is true because present conditions justifies an upward trend instead. To the "Bean and Pea Journal" the market for the navy beans appear as follows, according to the most recent issue of that publication: "The predictions that beans will see 9 or 10 cents seems possible of fulfillment. Many believe there will be a steady drift upward well into the spring and summer months.

But another view is coming to the fore. With the price at present high point, there is a slight nervous feeling. Realized that it will take little to swing the market the other way. It is most authorativedy stated that in Michigan most of the beans are out of the farmers' hands, and that elevators are filled to the brim with beans of finest quality.

"They were bought at much lower prices. They are in strong hands, in the hands of those who intend to get the highest figure they can. And while there has been a distinct lessening of demand, canners are said to be badly in need of beans.

"Thoughts are turning to acreage. The government has urged that more beans be planted. Various new sections are experimenting with beans, and it is very likely that 1923 will see one of the largest acreages of beans in recent history.

"Importations continue to be a slight factor, but not enough to cause much domestic concern.

"Several bean orders have been filled during recent weeks, one for the navy."

Prices

Detroit—C. H. P., $7.70 per cwt.

Chicago—C. H. P., $8.10@8.15.

Prices one year ago—Detroit, C. H. P., $4.80.

POTATOES

The tone of the potato market is better than it has been for some time. The car shortage is causing the surplus on the eastern markets to disappear at such a rapid rate that dealers are beginning to worry, and there is a stronger and healthier appearance to this market at this time in that section than for some time in the past. The car shortage along with increased demand is giving the western markets a firm tone and higher prices are expected in the near future. However, higher prices are of no interest to the potato producers if he cannot secure the cars to ship his supply to the market.

Something must be done, and done soon.

Prices

Detroit—Michigan, $1@1.10 per cwt.

Chicago—Minnesota sacked, $1 per cwt; Minnesota sacked round whites, 85@90c per cwt.

Prices one year ago—Detroit, $2.30 per cwt.

AUCTION!

FEBRUARY 6, TUESDAY 12 SHARP

To dispose of our surplus breeding stock.

ANDREWS FEED BARN, WILLIAMSTON, MICH.

60 Reg. Poland Chinas 60

18 bred sows. Big rugged sows with lots of quality. In the best of condition. Bred for March litters. 42 fall shoats. Some nice gilts and boars in this lot.

50 Ewes 50

50 medium wool breeding ewes. Mostly 2 and 3 yr. olds. Bred to Reg. Oxford buck for March lambs.

4 Scotch Shorthorn Cows 4

Range from 3 to 6 yr. olds due to calve or will have calves by side. Grand sires and grand dams Imp. Bred to a son of Imp. Lorne. 10 mo. old red heifer calf 10 mo. red bull calf

Percherons

2 pure bred stallion colts 8 mo. old, dark greys. 1 pure bred stallion colt 9 mo. old, wt. 1,000. These colts will be shown at M. A. C. Farmers' Week. Pair 3-4 yr. black mares. Full sisters. Terms 2 per cent discount for cash. Bank notes 8 mo. at 6 per cent. The above stock will positively be sold regardless of price.

J. M. HICKS & SONS, Williamston, Mich.

W. MURRAY, AUCTIONEER

PUBLIC SALE!

OF BIG TYPE

Poland China Hogs

Feb. 14, 1923

50 HEAD PURE BRED, IMMUNED—5 YEARLINGS, 43 SPRING GILTS, AND 2 GOOD SPRING BOARS

This is as good a bunch as Northern Ohio ever has offered for sale.

Location 18 miles south east from Toledo on North Western Ohio Electric. Stop 43. Write for Catalogue.

RED POLLED

RED POLLED CATTLE—A few choice bulls and heifers for sale.
ROYSTAN STOCK FARM,
Will Cottle, R. R. 1, West Branch Michigan

HAY

Eastern markets generally are steady under smaller receipts of the good qualities of hay. Some embargoes last week curtailed shipments and very few permits were issued. This has created a little better feeling as not enough hay arrives to cause any accumulation. Western markets, however, are a little lower, as in some instances the receipts exceed the demand. There are many reports of poor hay in the daily offerings.

Prices

Detroit—No. 1 timothy, $16.50@17; standard, $15@16.50; light mixed, $16@16.50; No. 2 timothy, $15@15.50; No. 1 clover mixed, $14@14.50.

Chicago—No. 1 timothy, $20@21; standard No. 2, $17@18; light clover mixed, $18@19; clover No. 1, $14@15.

New York—No. 1 Light clover mixed, $23@24; No. 1 timothy, $23@24; No. 2, $21@23.

Prices one year ago—Detroit, No. 1 timothy, $19@20; standard timothy, $18@19.

Aalfalfa—Detroit, No. 1, $14@17 per ton; Chicago, No. 1, $22@24 per ton.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Tuesday, Jan. 30th.

BUTTER—Best creamery, in tubs, 48c per lb.

EGGS—Fresh, according to quality, 35@36½c; refrigerator, 26@27½c per doz.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS

Week of February 4

BRIGHT, sunshiny days and clear moonlight nights will usher in the week of February 4. Each day nearer the middle of the week after Sunday will average warmer in Michigan as a result of the eastward movement of a moderate storm center.

By the middle of the week rain or snow in scattered localities together with moderately strong winds will have reached the state and immediately following, say about Thursday or Friday, there is expected to be a sudden and extensive drop in temperature.

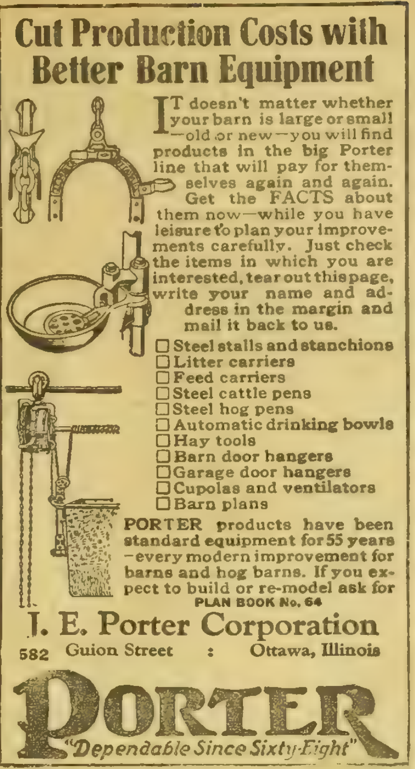
About Saturday of this or Sunday of next week Michigan residents may expect moderate snow and sleet storms with strong winds that will cause drifts and blockades in many sections unless proper precautions have been taken.

Week of February 11

Rain, sleet or snow will be falling in Michigan as this week begins that may cause local drifts and blockades. These will not necessarily cripple business or transportation for any great length of time, if at all but we do look for a sudden and rapid fall of sleet or snow that in combination with the high winds and storminess will occur about Monday but another storm that was formed soon after the last storm got its start will have reached the Lake region about Tuesday. Some wind with snow or sleet may be expected in Michigan just before the middle of the week as a consequence.

During the next two or three days of the week temperatures will drop far below the normal for this month in Michigan and no moderation is to be expected until after the middle of the week.

About Thursday temperatures will be getting warmer in Michigan, the sky will be cloudy and there will be more indications of rain or snow. Much colder weather is to be expected during the closing days of this week.



Cut Production Costs with Better Barn Equipment

IT doesn't matter whether your barn is large or small—old or new—you will find products in the big Porter line that will pay for themselves again and again. Get the FACTS about them now—while you have leisure to plan your improvements carefully. Just check the items in which you are interested, tear out this page, write your name and address in the margin and mail it back to us.

☐ Steel stalls and stanchions
☐ Litter carriers
☐ Feed carriers
☐ Steel cattle pens
☐ Steel hog pens
☐ Automatic drinking bowls
☐ Hay tools
☐ Barn door hangers
☐ Garage door hangers
☐ Cupolas and ventilators
☐ Barn plans

PORTER products have been standard equipment for 55 years—every modern improvement for barns and hog barns. If you expect to build or re-model ask for PLAN BOOK No. 64

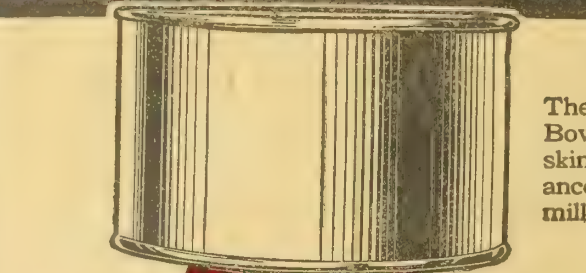
Belgium Melotte
Imported Separator

Self-Balancing Bowl

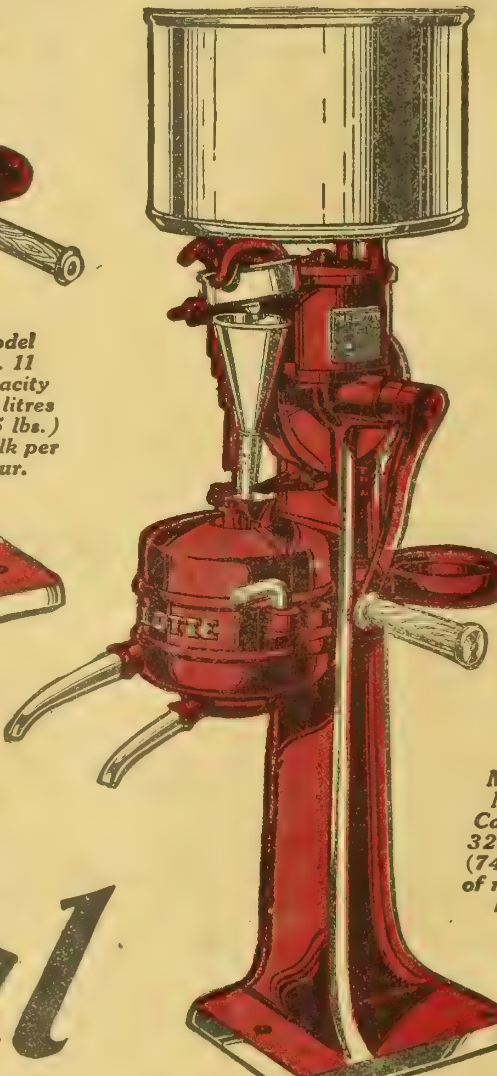
The Belgium Melotte is the only single-bearing-bowl separator ever made. This patent Bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing.* It skims as perfectly after 15 years of use as when new. Positively cannot ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by remixing with milk. Send coupon below today. Get the Free Book that tells about this great Melotte.



Model No. 11 Capacity 500 litres (1135 lbs.) of milk per hour.

$7.50 After Trial

We will send an imported Belgium Melotte Cream Separator direct to your farm on 30 days' absolutely Free Trial. Use it just as if it were your own machine. Put it to every possible test. Compare it with any or all others. The Melotte is easy to keep clean and sanitary because it has only one-half the tinware of other separators. Turns so easily that bowl spins 25 minutes after you stop cranking unless brake is applied. No other separator has or needs a brake. After you have tried it for 30 days and you know it is the separator you want to buy, pay $7.50 down and balance in small monthly payments.



Model No. 7 Capacity 325 litres (740 lbs.) of milk per hour

Free Trial

Your choice of any of these three models. NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE. This wonderful Belgium Melotte Separator has been picked by a jury of thousands of farmers—picked by dairy experts throughout the world to be the "king" of all separators ever manufactured. It has broken all records for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability. Send coupon below for Big Free Book.

The Melotte Separator, *H. B. Babson, U. S. Mgr.*
2843 West 19th Street, Dept. 9302, Chicago, Ill.
2445 Prince Street, Berkeley, Calif.

Without cost to me or obligation in any way, please send me the Melotte catalog which tells the full story of this wonderful separator and M. Jules Melotte, its inventor and hundreds of letters from American farmers.

The Michigan
BUSINESS FARMER

An Independent
Farm Magazine Owned and
Edited in Michigan

VOL. X, NO. 13 SATURDAY, FEBRUARY 17, 1923 $1 PER YEAR

FEB 27 1923

In this issue don't miss reading: Dr. David Friday's "Agricultural Program for an Industrial State"—The Long Desired "50-50" Sugar Beet Contract Has Arrived—Farmers' Week a Big Success

Sailing Under False Colors

SENATOR YOUNG has introduced Senate Bill No. 62 in the Michigan Legislature, known as the "full crew law." Under the guise of a Safety measure, it means really—

An additional tax of $1,500,000 at least to the users of Transportation in Michigan.

The creation of an artificial demand for more labor.

Waste in man power.

Greater hazards to the men, it is designed to protect, since it divides responsibility.

THERE is another phase to the issue: In the event of a strike, such as the "outlaw switchmen's strike" of three years ago, complete paralysis of the transportation system will follow, because one clause of that measure makes experience mandatory upon the newest recruit to the train crew—the flagman. Had such a law been in full force and effect when the strike referred to occurred, there would have been a complete tie-up of not alone the railroads, but of every factory in the country. Not a pound of farm produce could have been transported to market, nor a ton of coal brought from the mines *by rail.* There would have followed in its wake greater misery, greater chaos, greater general suffering upon all who are dependent upon transportation—and profiteering on a scale the like of which the country had never seen!

This bill would give to organized labor in times of peace what the country reluctantly gives to the general in the field in times of war.

SENATOR GANNSER'S bill No. 72, requiring automatic fire doors installed on all locomotives means the scrapping of a number of serviceable engines. This bill, too, means higher transportation costs to you, who "pay the shot" eventually.

Send your local representative a "case card" today telling him that these measures are uneconomic, unreasonable, unnecessary and un-American.

Frank H. Alfred

President and General Manager.

Detroit, Mich., February 4, 1923.

Current Agricultural News

LECTURE COURSE ON LAND CLEARING TO START FEB. 19

A SERIES of forty-one land clearing meetings arranged for northeastern Michigan by N. A. Kessler, assistant land clearing specialist of the Michigan Agricultural College with the co-operation of the Northeastern Michigan Development bureau, will start at Midland February 19. As with the land clearing schools conducted by the college last fall, the Michigan Central and Detroit & Mackinaw railroads are cooperating in this project.

The program at each meeting will consist of movies and a talk on land clearing by L. F. Livingston, land clearing specialist, of the M. A. C., and a discussion of the dairy business in northern Michigan by E. J. Loonhouts, assistant agricultural agent for the New York Central lines. A part of the land clearing talk which will be of vital interest to the farmers will be that on how explosives, both government and commercial, may be obtained at a lesser cost than heretofore.

All of the meetings will be held in the big white demonstration car which has a seating capacity of a hundred people, and is admirably equipped for the showing of moving pictures. It is expected that this car will be taxed to its capacity at the various places listed in the itinerary.

FARMERS OPPOSE DAYLIGHT SAVING

OFFICIALS of the Michigan State Farm Bureau state that the burreau's questionnaire distributed recently among the farmers of the state, clearly shows the attitude of the Michigan farmers as regards various problems affecting rural life.

The majority went on record as opposing the proposed eastern time for the state, the abolition of the primary school fund, and the creation of county assessors.

The questionnaire showed that the farmers favored a state income tax law calling for a $4,000 exemption limit, and a progressive rate, the removal of the existing corporation tax limits, a minimum two-cent gasoline tax, the primary election law, state and federal laws to abolish tax-exempt securities, and the state regulation of motor busses, and commercial operating over state highways.

POTATO GROWERS AIM FOR GREATER EFFICIENCY

MEANS of bringing about greater efficiency in Michigan potato production were brought out before the meeting of the Michigan Potato Producers Association at M. A. C., Farmer's Week.

Thomas Buell, of Elmira, president of the association; Hal B. Fullerton, director of agriculture for the Long Island Railroad, Medford, Long Island; and J. W. Weston, extension specialist in potato work with the M. A. C. crops department, were headliners on the program.

Increase in the use of certified seed potato stocks of high quality was discussed by Mr. Buell, who also pointed out the large amount of Michigan seed stock which is going outside of the state each year. Fullerton told of disease control work being carried out among the Long Island potato growers.

Recommendations that Michigan potato growers aim in 1923 for better seed, better culture, better grading and better storage were contained in J. W. Weston's address. Weston told of the ways in which the college extension department is endeavoring to bring about greater efficiency in the state potato industry.

GERMANY TO REDUCE PURCHASES OF AMERICAN CORN

A MATERIAL reduction in the demand for American corn in Germany because of the large potato crop harvested in Germany in 1922, is indicated in reports received by the United States Department of Agriculture from its agricultural representatives at Berlin.

Germany has been importing American corn largely for the manufacture of alcohol, since the Government food regulations limited the quantity of potatoes which could be used by distilleries. Because of the potato surplus, permission has been granted German distillers by the Ministry of Agriculture to use potatoes in the production of 60 per cent of the alcohol instead of 20 per cent as heretofore.

Normal exportation of corn from the United States to Germany has totaled about 6,000,000 bushels annually. In 1921, exportations were nearly 13,000,000 bushels, and in 1922 more than 30,000,000 bushels. It is estimated that in recent months fully 75 per cent of this corn was used by German distilleries, leaving little more than the normal exportation for other uses.

The estimated 1923 production of alcohol in Germany is 53,000,000 gallons, so that it will still be possible to manufacture 32,000,000 from potatoes. This will leave only 21,000,000 gallons to be manufactured from other materials, including corn. Even though American corn is used exclusively to produce this remaining 40 per cent, the distilleries will require only about 8,000,000 bushels of corn in 1923, the Department of Agriculture says.

SHIAWASSEE FIGHTS BOVINE TUBERCULOSIS

WHAT is regarded as the most important and effective step yet taken in Shiawassee county in the fight for the eradication of bovine tuberculosis, has been ordered by the state commission of agriculture, in proclaiming a quarantine against the entrance of any cattle, not tuberculin tested, for dairy or breeding purposes.

The ban also prohibits the offering at a public sale of any cattle not tested and found to be free from the disease.

A penalty of a fine not to exceed $500 or a jail sentence of not to exceed six months, is provided for violation of the proclamation.

Testing has been under way in that county for nearly a year and six of the sixteen townships have been inspected. The percentage of re-acting cattle is very low.

MICHIGAN HEREFORD BREEDERS HOLD ANNUAL MEET

MICHIGAN Hereford Breeder's Association held their banquet and annual meeting at the Kerns Hotel, Lansing, January 30th during Farmer's Week.

The Hereford judging demonstration called at the Stock Pavilion at 10 A. M. was well attended and new breeders were much interested in the good points brought out by Professor Brown and T. F. B. Sotham during the demonstration of M. A. C. Herefords, two sires four matrons and three steers being used in the ring.

At six P. M. forty seven Hereford boosters set down to a banquet; Michigan Earliripe Hereford Beef being served for the occasion. After all had done justice to the banquet everybody joined in the singing of the Hereford song; as everybody on the program was present the instructive talks were given and enjoyed by all present.

The officers elected for 1923 are Presidents, Frank H. Sanders, Eaton Rapids; L. Whitney Watkins, Manchester; E. V. Morgan, Boon; Warner E. Ramsey, Pt. Hope; and Earl C. McCarty, Bad Axe, Secy.-Treas.—Earl C. McCarty.

MASON CO-OPERATORS PROSPER PAST YEAR

AT the annual meeting of the Co-operative Shipping association held at Mason recently, the former officers of the association were all re-elected as follows: president, John Coy; vice president, H. W. Lyon; secretary-treasurer, Claude Edgar; manager, L. T. Lasenby. The report of the secretary showed an increase in business amounting to around $74,000 during the past year. The total receipts of the association for the year were $312,069.53, and the total disbursements were $311,983.93, leaving a surplus on hand at the present time of $874.42, this having proved to be one of the best years the association has had.

Desired "50-50" Sugar Beet Contract Arrives

Owosso Sugar Company First to Meet Growers' Fight for Square Deal Proposed Years Ago—Big Meeting at Durand Hears Good News

THE "50-50" SUGAR BEET CONTRACT

As suggested by the Michigan Sugar Beet Growers Association and first accepted by the Owosso Sugar Company.

What it is—(three sections of the actual contract being offered Growers, which explains method in which the "50-50" contract operates):

13. The following example is given to show the method above described:

If 160,000 net tons of beets are delivered by the growers to the company, from which 40,000,000 pounds of sugar are made, the extraction per net ton of beets will be 250 pounds of sugar. If the average market price of sugar is determined to be $6.75 per hundred pounds, the value of sugar produced per net ton of beets will be $16.88, and the grower will then be paid 50%, or $8.44 per net ton of beets delivered to the company.

14. The company agrees that substantial preliminary payments to growers shall be made per net ton of beets grown and delivered under this contract on the fifteenth day of each month, for beets received during the preceding month. Final payments to be made the grower shall be paid on the fifteenth of February, 1924.

15. For beets delivered and unloaded by the grower in beet sheds at the factory, an additional seventy-five cents (75c) per ton shall be added.

ANOTHER milestone in the progress of the business of farming in Michigan was passed last week, when it was announced that an agreement had been secured by a committee representing the growers, with the president of the Owosso Sugar Company whereby that company offers the growers the "50-50" contract so long desired.

Most growers in Michigan will well remember the organization of the Michigan Sugar Beet Growers Association three years ago and the valiant efforts made by that small body of enthusiasts, led by The Business Farmer, to secure recognition and an equitable contract from the beet sugar manufacturers.

At that time the manufacturers, condemned the efforts as "radical," hinted that the men behind it ought to be deported as "undesirables" and refused point-blank to contaminate themselves by exposing themselves in any meeting, open or secret in which the representatives of the organized growers were present.

Since that time a lot of water has run under the mill! Sugar prices have been down in the basement, along with the farm prices of wheat, corn and a few other staples that fell with a sickening thud when old man Mars was tumbled over.

Early in the fall of 1922, A. B. Cook of Owosso, head of the Michigan Grange, who has long been a leaders in the beet growers fight, opened negotiations with C. D. Bell, Vice-President and General Manager of the Owosso Sugar Company, who had indicated an interest in the proposed "50-50" contract, if he could be assured that the growers would be willing to run the risk of a split in losses, as well as a split in profits. Mr. Cook assured him that the farmer was calloused to taking the whole loss and possible prospect of having to split the loss for a season would not drive the beet growers panicy.

Negotiations from this point progressed rapidly, because Mr. Bell, represented a sensible company which recognized that the future successful operation of their factory depended pretty largely upon a satisfied body of growers. The Owosso company was the first in Michigan to lift their heads out of the sands into which they had shoved them like silly ostriches when the growers association first loomed on the horizon seven years ago. C. E. Ackerman, of Durand, secretary and undaunted main-spring of the old beet growers association, worked with Mr. Cook, as did D. S. Stewart, St. Johns; Bert Mellinger, Ithaca; and Fred Holland, Swartz Creek.

Meeting Called at Durand

A meeting was called by C. E. Ackerman, at Durand High School, on Thursday, February 8. Invitations to attend or send delegates to the meeting were mailed to the officers of every local association in the state. About 80 growers came, mostly from Shiawassee, Genesee, and Clinton counties.

Others at the meeting were A. B. Cook, Master of the State Grange, and Mr. Clark Brody, Secretary and General Manager of the Michigan State Farm Bureau. Mr. C. D. Bell, Vice President and General Manager of the Owosso Sugar Company, represented the manufacturing interests.

Objects of the meeting were:

(1) To announce to the growers the granting of the "50-50" contract by the Owosso Sugar Company for which the Association has been working for the last seven years.

(2) To urge Association members to support the Owosso Sugar Company and the "50-50" contract by signing up a liberal acreage, and to talk the "50-50" contract to all growers.

(3) To arouse enthusiasm among the Association membership to work for "50-50" contracts from other companies, and to try to solve other problems of the growers.

Beet Raising Conditions

Mr. Cook spoke on the beginning and growth of the sugar beet industry in Michigan from the experiments conducted by the late Dr. Kedzie, of the Michigan Agricultural College. How this earnest professor convinced that the beet sugar industry was a promising one for Michigan, and after much effort interested capital in the beet sugar manufacture in the state. From a first factory at Bay City, the industry has grown rapidly to the present time at which there are 17 factories in the state. Some seven years ago the growers became dissatisfied with the prices they were receiving for their beets and sponsored by the Grange and Gleaners, the present state Growers Association was formed. At that time it was figured out that a "50-50" contract was the most just price arrangement between the manufacturers and growers. During the seven years since, the Association has worked toward this contract as an ideal. Finally the Owosso Sugar Company has granted their growers the long fought for "50-50" contract.

The contract is fair, continued Mr. Cook, just what the growers wanted and they should come across with a good acreage. Backed by the "50-50" contract, sugar beet raising is sure to be a permanently profitable industry. The "50-50" contract is the best one out, better than $7.00 a ton with 6 cent sugar and $1.00 a ton raise, for each cent raise in sugar price.

Mr. Cook concluded by saying, "Give the "50-50" contract a trial this year, and watch results."

Mr. Ackerman, Durand, formerly Manager of the Beet Growers Association, at present a member of the Board of Directors, carefully explained the "50-50" contract as follows: The grower delivers his beets and sees that the weights and tare is correct. At the end of the season's run of the factory, the total weight of beets brought is figured, and the total output of sugar. The total output is divided by the total beet tonnage, and the average yield of sugar per ton for the season found. The average price of sugar at New York for the months of Oct., Nov., Dec., and Jan., is figured, relying on daily market quotations of a reliable market reporting firm. Each grower is paid that average New York price for the four months for one-half the sugar yield from his beets. The pay received for the sugar is split 50-50 between the grower and manufacturer, hence the name "50-50" contract.

It is the simplest form of contract. The grower can follow market quotations and figure his own price as well as can the manufacturer. To insure fairness on the part of the manufacturer, the Owosso Sugar Company has offered to have a certified public accountant audit their books at the end of the seasons and furnish the Growers Association with a report of the tonnage of beets bought and the yield of sugar. The Growers Association also has permission to station men in the factories during the campaign to tally the sugar production.

Mr. Ackerman explained how it was decided seven years ago that a '50-50" contract would be most just. The grower and manufacturer have about equal investments. To grow a ton of beets, however, requires six times as much labor as is required to manufacture them. On the other hand, the manufacturer takes much greater risk than the grower. He cannot turn his equipment to other uses as the grower can, and he has no other enterprises to fall back on in case the sugar business proves unprofitable. The factory has the by-products, which are sometimes, however, so low in price that it hardly pays to handle them.

The increase in price to the grower under the "50-50" contract over that under the old contract was pointed out. The old rate was $7.00 a ton with sugar at 6 cents, and a raise of $1.00 a ton for each rise of one cent in the price of sugar. The "50-50" rate for 6 cent sugar, assuming the sugar yield to be average, 250 lbs per ton, the sugar from a ton of beets would be worth 6 times 250 or $15, of which the grower gets one half or $7.50, an increase of 50 cents a ton over the old rate. Should sugar increase in price one cent a pound, the "50-50" rate increase would be one-half of 1 times 250 or $1.25, as against an increase of but $1.00 under the old rate. So the grower is sure of at least 50 cents a ton more with six cent sugar, and $1.25 increase per ton instead of $1.00 for every cent increase over six cents.

Mr. Ackerman predicts that sugar certainly will not go much below 6½ cents this year, and may be higher. That will mean $8.25 to $8.50 a ton for beets under the "50-50" contract.

"A better contract cannot be made than the "50-50" contract," declared Mr. Ackerman. "It is the right solution of the beet price question!"

The grower furnishes his own labor under the "50-50" contract. The Owosso company will furnish labor at a 5% charge, making a 45-55 split on the sugar price. Or they will loan growers money at regular interest rates to pay for labor if they wish to hire their own.

Mr. Ackerman spoke of the possibility of other companies coming across with a "50-50" contract. The Association should work for statewide "50-50" contracts for growers. The Continental Sugar Company, operating three factories in southern Michigan, have already offered a "45-55" contract.

Mr. Ackerman doubts if the Michigan Sugar Company, operating seven large factories in the state, will come across with a "50-50" contract. The company is said to be controlled by eastern capitalists whose holdings are largely cane interests, and Mr. Ackerman believes the trust will dispose of its holdings in beet sugar factories and confine its capital to cane sugar rather than meet the growers demand for a "50-50" contract.

Since the Owosso Sugar Company has taken the lead in offering "50-50" contracts, it is hoped other companies will follow.

Mr. C. D. Bell, Vice President and General Manager of the Owosso Sugar Company, told the meeting of the manufacturer's side. Mr. Bell spoke of the efforts of the Association to get a '50-50" contract. "It seems to me that Mr. Cook or Mr. Ackerman have interviewed me seven times a day every day for the last seven years in behalf of a "50-50" contract, until we have finally given it to them." Mr. Bell, who is responsible for the "50-50" contract offer of the Owosso company, admitted that it seems to be the fairest basis for a growers contract. The manufacturers will profit in that the growers will try to raise better beets with a higher sugar content, for they will be paid for the sugar which the factory gets out of their beets. A factory must be equipped with efficient machinery which will recover all the sugar from the beets before it can afford to offer the growers a "50-50" contract. The Owosso Sugar Company spent $350,000 last year for better machinery before they could offer a "50-50" contract. They now recover from 30% to 40% more sugar from the beets than by the old process. Mr. Bell concluded with the statement that the "50-50" contract will net the grower higher pay for his beets than any other contract out.

Mr. N. C. McBride, of Burton spoke on "Industrial Relations." For farmers and maunfacturers to make a satisfactory bargain, there must be a profit for each. Mr. McBride believes that sugar beets is one of the most profitable crops at the present time. There is prospects of a sugar price rise, the "50-50" contract assures the growers a square deal, and the tariff is satisfactory. Michigan consumes more sugar than she produces, so a market is assured. High freight rates will act only as a protection.

A grower of grain or other crops takes a chance of losing all his profit by selling when the market is low, but a beet grower with a "50-50" contract is not affected by price fluctuations. With a "50-50" contract, the growers and manufacturers will have the best industrial relations, their interests will be the same, and they share equally in the profits. Beet growers with the the new contract now have the best assurance of a profitable crop they have had for years. Beets are a money making crop at present prices, and the prospects are that the prices will go higher. Mr. McBride concluded by assuring the growers that they would get a square deal from the Owosso Sugar Company, and recommended the "50-50" contract over any other.

Farmer's Week a Big Success

Big Round-Up of Farm and Live Stock Organizations at East Lansing Lauds Work Being Done at Agricultural College

By GEORGE IRVINE

DR. DAVID FRIDAY
President Michigan Agricultural College and acknowledged as one of the foremost economists in United States.

ALTHOUGH the fountain of youth has never been discovered, about four thousand farmers of Michigan found a fountain of inspiration and new ideas in the 1923 Farmers' Week at M. A. C. The Farmer's Week visitor this year found himself in the predicament of a spectator at a three ring circus, there was so much to see and hear that it was impossible to take in everthing.

The outstanding idea impressed upon the Farmer's Week throngs was the necessity for lower cost of production of farm products. Preident David Friday, who needs no introduction to Michigan farmers, in his opening address predicted that there will be a steady decline in prices for at least a few years. His prediction was seconded by Dr. G. F. Warren of Cornell, the noted farm managment expert, in an address later in the week. If the farmers of Michigan hope to prosper, they must produce their crops, livestock, poultry products, milk, and fruit at a lower cost than now prevails. Mr. Friday believes there are wonderful opportunities for cutting the production costs of farm products in Michigan.

An idea new to many farmers, that of a policy for agriculture for the state and nation, (see page 6 this issue) was the subject of President Friday's first address to the Farmer's Week audience. Michigan's policy for agriculture should be to lower cost of production by better methods and by the use of better seeds and livestock; to make farming sufficiently renumerative and attractive to keep an intelligent and highly cultured class of people on the farms. A thorough survey of markets is also needed. Reclaiming of waste land, in President Friday's opinion, is a great waste of time and energy at the present time when land can be bought within ten miles of most of the cities of the state for the value of the improvments on it. He also brands agitation for a "back to the farm" movement as foolishness. There are enough people on farms now.

The vital importance of tuberculosis eradication was impressed on the livestock men by Dr. W. J. Kiernen of the Bureau of Animal Industry, Washington. This matter was also discussed at several of the live stock association meetings, and resolutions were passed requesting an appropriation by the legislature to make possible the immediate resumption of this work which is now halted in Michigan for lack of funds.

Rep. Sidney Anderson of Minnesota, an agricultural leader in Congress, gave some good advice on marketing farm products. Produce what the consumer wants, standardize your products, and market as near home as possible was Mr. Anderson's word to the farmers of Michigan.

Dr. Friday Discusses Taxation

Dr. Friday gave his viewpoint on that vital question of the hour, taxation, in a talk before the Michigan Press Association at the close of the week. We cannot hope for a lowering of taxes, in Mr. Friday's opinion, for we will continue to demand public improvements at the same rate as in the past. Mr. Friday's plan for a more just placing of the burden of taxation provides for the removal of the upper valuation limit in the corporation tax, the enactment of the gasoline tax, and a reduction in the general property tax of about 25%.

Regarding the gasoline tax President Friday said "I believe that the gasoline will pass, although it is not entirely equitable."

Dr. Eugene Davenport, formerly Dean of Agriculture at the University of Illinois, told of the conditions necessary to a permanent agriculture. If the farmers of our country are to be land owners, a farm must yield a sufficient income to provide the farmer a comfortable living and a large enough surplus to enable him to pay for the farm in twenty years. If farm incomes prevail below this level, the land will revert to a landowning class and will be farmed by a tenant or peasant class.

How Russia, through changing conditions in the Black sea area, has lost her supremacy among nations for world export of wheat and other cereals, and how it has resulted in making the United States the greatest exporter of these products, was explained by Louis G. Michael, foreign agricultural economist for the United States department of agriculture.

Mr. Michael's statements had the authority behind them of eight years research and agricultural experimental work in the countries of southeastern Europe.

"When the countries of the world awake sufficiently to realize they are interdependent on one another in the economics of agriculture, then prosperity for the world can be assured and the present state of unrest find an end," said Signora Oliva Agresti of Italy, in an address to some 5,000 farmers Thursday afternoon.

The annual meeting of the Michigan State Farm Bureau was held at the College during Farmer's Week, there being 126 voting delegates present. The only changes made in the officials of the Bureau were in the president's office, where Walter Phillips of Decatur succeeds James Nichol, and in the election of one new member to the Board of Directors, V. Gormely of Newberry.

The Housewives Congress for farm women was an important feature of the week. Several prominent women addressed the Congress on home making, clothing, and nutrition. An interesting talk by Bess Rowe, Field Editor, revealed the fact that most farmer's wives in Michigan are satisfied with their lot. The results of a contest Miss Rowe has recently conducted show that a large percentage of farm women of Michigan are willing to have their daughters marry farmers. Milinary, clothing, and nutrition exhibits in the Women's Building of the College were an additional source of interest and information to the women visitors.

The annual meetings of most of the livestock breed associations were held during Farmer's Week this year for the first time.

The County Agent's Conference boosted 100% attendance, this year. Talks by members of the agricultural faculty and of the research department gave them the latest information on college and experiment station activities. The County Club Agents were also out to a man for their Conference. State Leader R. A. Turner reviewed the work of the past year and outlined the program for 1923.

Grain and Potato Shows

Two new Farmer's Week features this year were the grain show of the Michigan Crop Improvement Association, and a potato show. Both were well supplied with entries by state growers, and were prominent points of interest to the farmers.

The Horticultural Show displayed an even greater collection of apples than usual; thirty-eight varieties were entered. Allegan county won first place in county collections. The Round-Up Poultry Show attracted considerable interest and a large number of entries from breeders of the state.

The central idea running through all exhibits this year was lower cost of production. The Michigan exhibit at the International Livestock and Grain Show at Chicago last fall were re-assembled by the Farm Crop Department as their exhibit for Farmer's Week. A large wall exhibit showing how Michigan cheapens production by growing alfalfa, it proved one of the most attractive of the exhibits.

A pig feeding exhibit showing the value of skim milk, by the Dairy Department attracted much interest. Two pens of pigs, one fed on corn alone and the other on corn and skim milk were of such great difference in size that it was almost unbelievable that they were from the same litter.

A record attendance viewed the campus parade, Thursday afternoon, when the student body and all movable equipment and live stock appeared in a procession which extended for more than a mile and a half. The parade was the biggest and most impressive ever put on by the college, M. A. C. officials said.

Educational exhibits by every department of the college filled all available space. All the engineering shops and laboratories were open to the visitors throughout the week. and student guides were ready to show and explain the equipment. All machinery was kept in operation most of the each day.

That Michigan ranks foremost among the several states of the union in agricultural education was plainly demonstrated, it was agreed by numerous leaders of agriculture who visited M. A. C. during the fifth annual Farmer's Week. At the final check of the total registrations of visitors at the college during the week, it was reported that close to 4,000 names had been recorded.

The drop in attendance at the 1923 Farmer's Week of about 20% from that of last year's, due to the almost impassable roads in the central part of the state during most of the week, is by no means discouraging when we consider that the next largest Farmer's Week held this year, that of Iowa, had an attendance ranging from 300 to 800.

Had road conditions been more favorable in the central part of the state, it is believed the total registration this year would have far exceeded that of any previous year. The heavy registration of the first two days was attributed to the fact that the early comers are usually dependent on railway transportation while the attendance during the last few days is swelled by motorists who drive 40 or 50 miles to the exhibits and return the same day. It was a cut in the latter class of visitors which has tended to keep the total figures for attendance about equal to a year ago.

The Michigan Farmer's Week is by far the largest and best annual state wide convention of farmers ever held; and is yearly becoming of greater benefit to Michigan farmers as a source of new ideas, broader views, and a better understanding of farming conditions.

One corner of Horticultural Show

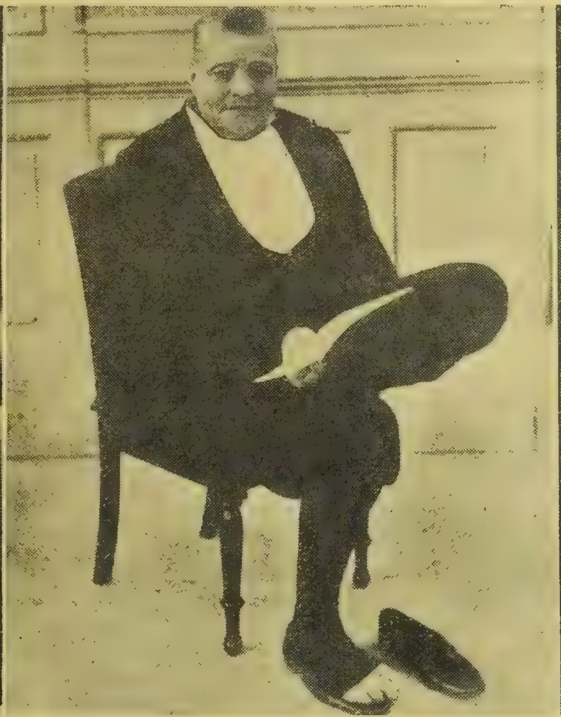
Another corner of the Horticultural Show

PICTURES FROM FAR AND NEAR

Philadelphia Mummers hold belated New Year parade.—Philadelphia paid belated tribute to King Momus by turning out a record crowd recently to view the postponed parade of New Year Mummers. Prizes were given away for the most fancy and comic displays. The above shows the prize-winning cape in the fancy division. Over 100 attendants were required to carry it.

British debt commission finally arrives.—After years of delay England finally sent over the above group whose duty it was to strike a bargain, the best they could drive with their Uncle Samuel. They found Uncle Samuel was a hard-hearted money lender, because he insisted on their paying the billions they owe us sometime, even if it takes forty or fifty years.

Youngest lawyer in New York State.—Miss Roberta Levy, who at the age of 21 holds the rare distinction of being the youngest lawyer in New York State. At present a member of a Brooklyn, N. Y. law firm, Miss Levy is pretty and up-to-date in every way. She is a graduate of the Brooklyn Law School, but had to wait 2 years for admission to the bar after graduation because of her age.



He refuses to be handicapped.—Karl Herman Uhlhaus, 72 years old, is a living example of optimism. Crippled by the loss of his hands, he was nothing daunted and began to learn to use his feet. He has taught hundreds of German crippled soldiers how to work without their hands. Photo shows him reading a letter which he holds with his feet.

A new photograph of the Duke of York.—He's a fine looking chap, is the second son of King George of England, and its no wonder the girls all like him. It has been rumored in London, where such things generally start, that the Duke of York is paying court to the charming Lady Elizabeth Boews Lyon and she may be using the title of "Duchess" as a prefix before long.

Led French troops into Germany.—These French cyclists led the invading French troops into the Ruhr Valley. As a result of the invasion of the industrial district all lines of business are at a standstill.

"League of Notions" winter carnival in New Hampshire.— To complete a perfect day of winter sports these merrymakers engaged in a tug-of-war contest and made it one of the features of the carnival held at Jackson, New Hampshire.

An Agricultural Program for an Industrial State

By DAVID FRIDAY

PRESIDENT MICHIGAN AGRICULTURAL COLLEGE

(Reprinted from the Saturday Evening Post, Copyright 1923 by the Curtis Publishing Co.)

IF you are fed-up on the clap-trap mouthings of cheap politicians who pose as willing Moses to lead the farmer out of the wilderness into which their business was forced this past two years, read this article by Dr. Friday.

If you believe, as The Business Farmer does, that there has been too much brainless legislation and too little real business action proposed by the leaders in the farming business, you'll like Dr. Friday's article.

Those who would rather listen to flag-wavers or read wonderful theories of a farming millineum, which sound nice, are swallowed easily, but only serve to get us deeper in the hole, will not like what Dr. Friday says, because he writes without gloves on.

If you want to know what has happened and what is going to happen, particularly in Michigan, you'll consider this article, which we have reprinted in full, worth its weight in gold to the industry of agriculture.

IT NO LONGER interests people greatly to be told that the farmer is dissatisfied. That fact has been beat in upon the public mind during the last eighteen months through both the spoken and the written word until we feel a little like an audience that has been listening to a snare drum solo. The farmer has had abundant cause for dissatisfaction. His prices have fallen more than the average. He finds it difficult therefore, to maintain his customary standard of living, to say nothing of meeting the debts he may have incurred in the optimistic days when Europe was ruining its monetary system and its financial standing to pay him, as well as other producers fabulous prices for the things it wanted.

What the country wants to know now is how the farmer is to be got out of his present situation and restored to prosperity. Not the prosperity of wartime, for that comes only several times in a century, but a stable and dependable state of well-being such as he enjoyed from 1898 to the outbreak of the war in 1914. American agriculture suffered more seriously during the depression of 1894 to 1896 than during these last two years. Yet in the spring of 1900 Ray Stannard Baker, who knew the agricultural situation well, opened his book Our New Prosperity with these paragraphs:

> A witty Western writer, summing up the marvels of growth, expansion and prosperity of the year 1899 in the United States, made this telling climax: "And every barn in Kansas and Nebraska has had a new coat of paint."
>
> As anyone who knows the great unpainted West of 1896 and 1897, with its bare, weather-stained houses, its dilapidated barns, its farm machinery standing out in the rain, its ruinous boom-towns, its discontented inhabitants crying out for legislation to relieve their distress this bit of observation raises a picture of improvement and smiling comfort such as no array of figures, however convincing, could produce.

Nor did agricultural prosperity cease with 1900. During the next fifteen years the gross value of farm products more than doubled. In 1899 they amounted to $4,700,000,000; by 1914 they stood at $9,800,000,000. The number of people engaged in producing this product had increased by only 10 per cent, while the volume of farm products had increased by more than 30 per cent. Prices of farm products had risen more than 50 per cent, while the wholesale prices of other commodities had increased less than 30 per cent. If the farmer was prosperous in 1900 he must have been well off indeed by the outbreak of the European war. The problem that interests the public is how this march of agricultural prosperity can be restored.

The Farmer as Exporter

There are those who believe that agricultural improvement will come through political action. But the fact that the increase in well-being which preceded the fifteen years before the war came about without any political action whatever, casts doubt upon the efficacy of the legislative measures that politicians have been willing to enact for the farmer's benefit. It is dawning upon the rural community that political relief can aid him but slightly. In the long run some benefits will undoubtedly accrue from the legislative measures that have been passed, but immediately they will avail the farmer little. Neither badgering speculators, nor regulating packers, nor providing credit facilities that enable the farmer to borrow money to be repaid in the far-distant future, will help him materially.

The root of the farmer's immediate difficulty is not to be found in the nature of our credit structure; nor in the speculative markets that have developed out of the experience of the past for the marketing of his produce; nor in the nature of the institutions that manufacture and distribute our meat products. His present trouble arises rather out of the disheveled industrial situation in those foreign countries that have bought his product heretofore. It was the foreign situation which brought about the fall in prices in 1920 and 1921. Almost simultaneously industrial depression struck our home industry. The consequent fall of productive activity and of purchasing power among our industrial groups accentuated the downward movement of agricultural prices.

Nor does production for the foreign market promise the farmer much for some years to come. In the disheveled state of European industry agricultural production is more nearly normal than are manufacturing and mining. Agriculture differs from other industries in one important respect: Business depression always reduces the output of manufactures, mines, industrial construction and building operations, but it has practically no effect upon the acreage of crops planted or upon the average yield. We have seen again during the last few years that the farmer does not lower either his acreage or his activity when prices are falling and times are hard. At such times he tries to make up through increased production for the fall in prices. Those of us who lived through the depression of the '90's as farmers flouted the idea so commonly put forth during the winter of 1920-21 that agricultural acreage and output would be reduced because of the price decline. Nothing of the sort happened; it never does.

European agriculture is not different from ours in this respect. The war and proceeded, with their families, and with their sons who had returned from the armies and from the disturbed industrial centers, to till their fields. These were not so fertile as they had been in 1913 and 1914; the work animals were poorer; the quality of the seed had been deteriorated but the farmer proceeded to utilize his labor and resources to the full. The result is a more nearly normal state of production in agriculture than in other lines of industry. Europe is not so well supplied with agricultural products as she was before the war or as she would like to be. But she is better supplied with these products than with the manufactures she must send us in payment if she is to buy farm produce in America. Europe is in no position to buy large quantities of American agricultural products at high prices. We produce a surplus for export which must be sold on the European market, and that portion of the product sold at home will not bring a higher price than that which goes abroad.

In view of this situation, one of the means for getting the farmer out of trouble is to take him as far as possible off the international market. For though the home market suffered from the business depression that extended from the latter part of 1920 to the spring of 1922, the purchasing power of the people has now been restored with the revival of industry. Never before has the nation had such activity in the building trades as during the past year. This bids fair to continue for another twelve months. The production of automobiles defeats all previous records and industry generally is enjoying a revival of prosperity. Though this may slacken somewhat after the building boom has spent itself, there can be no question of its existence at present. Large production, complete employment of labor, rising profits, wages and prices are the order of the day. The best evidence available indicates that the total wages and salaries paid by government and by industries other than agriculture amounted to $38,000,000,000 for the year 1920. They fell in 1921 to $30,000,000,000. They cannot be less than $33,000,000,000 for the year 1922, and will probably be larger in 1923. It is doubtful whether these payments were ever as large as $18,000,000,000 in any prewar year. The purchasing power of the inhabitants of our cities and towns is, therefore, adequate to absorb a large volume of agricultural products at prices materially higher than those of the prewar period.

Purchasing Power of Home Markets

Nor do wages and salaries constitute the entire income of the people living in cities and towns who buy and consume the products of our farms. They are less than three-quarters of that income. Rents, interest and profits make up another $12,000,000,000 of income for the urban dwellers. When this is added to the wages and salaries we have a total spending power in our cities and towns of $45,000,000,000 for 1922. If prosperity continues for 1923 it will amount to even more. As a consequence of this revival of purchasing power among our people the gross value of the farmers' product will be almost fifteen billion dollars for 1922 as against twelve and one-third billions in 1921, and less than ten billions in 1914.

Our town dwellers have, therefore, $7,000 of spending power for each of the six and a half million farms in the United States. **No other agricultural population in the world has within its own nation any market remotely comparable with this in purchasing power. In states like Michigan, which have become predominantly industrial during the last decade, the urban purchasing power is even larger. Though the United States as a whole has two and one-third persons living in town for every one on the farm. Michigan has three and one-third. The townspeople of that state have a net income which amounts to more than $11,000 for every one of its 196,000 farms. Besides this they have access to an urban population of 3,000,000 people in Illinois and Wisconsin through the cheap transportation by water. The total income which the farmer of Michigan may tap by venturing less than 100 miles outside the boundaries of his state is adequate to consume his entire product at prices that would make him prosperous.**

The problem of getting the Michigan farmer out of difficulty and establishing him once more in a state of prosperity has for its setting this disparity between urban and rural population in the state and this growth of purchasing power among our industrial population. Neither the foreign situation nor the high freight rates that now prevail on our American railroads need concern him greatly. If he will adjust his production to the needs of this consuming population the high transportation costs may serve him as a protective tariff wall. For Michigan, like our Eastern industrial commonwealths has now a net import of farm products. No one can come into this market to compete with the farmers unless he pays the prevailing freight rates. The great mass of our producers for the home market can reach the consumer over good roads with motor trucks. The automobile is one of the few things that can be bought more cheaply now than in the prewar period. In this manner the farmer avoids paying a wage for railway labor and a price for coal consumed which are twice as high as in the prewar period. The farmer who grows wheat finds the international market impoverished and has been forced to sell for a dollar a bushel or less. The grower of potatoes finds the national market overcrowded this year. But the growers of early tomatoes for the local market were receiving $2.50 a bushel when the grower of ever early potatoes was receiving only thirty-five cents.

The product of Michigan's vineyards was five or six tons of grapes an acre. The price was sixty dollars a ton.

The hope of our Michigan farmer must lie, then, in the developement of production for his home markets. Thus will he escape at once both the ruinous competition of an impoverished foreign market and the high freight rates that are necessary to cover the labor and fuel costs that have been saddled upon railroads and to provide the investors who own these transportation systems with a paltry five per cent return.

The same situation prevails in many of our other states that have a mixed industrial and agricultural population. In the New England and Middle Atlantic States we find almost eleven persons in cities and town for every one on the farms. Ohio has four; Illinois five; and Deleware and Maryland, including the District of Columbia, have three and one-third and five and three-quarters respectively. The Pacific States have four and one-half. In the remaining states there are, on the average, only one and one-fifth townsfolk for each person on farms. Thirteen states have more people on farms than in cities or towns.

Adjustments Difficult

This situation is of such recent development—in the Great Lakes basin at least—that agriculture has only partly adjusted itself to the new conditions. Twenty years ago the population on farms and in urban communities in Michigan almost evenly balanced. The towns had one and a quarter persons for every one on the farm. In 1910 the ratio had risen to one and three-quarters and now it is three and a third. We have had an industrial revolution in the Middle West since 1900, and Michigan has enjoyed more than its share of it. The wages and salaries paid by manufacturers in the state have multiplied by ten during the last two decades. Twenty years ago the income of the total population of the cities and towns of the state amounted to less than $2,000 for each farm; in 1910 it had become almost $4,000 and today it is $11,000. Yet during these twenty years the acreage of a crop like strawberries has fallen 20 per cent, when it should have doubled.

The manner in which the farming industry is organized always makes adjustment to a rapidly changing market situation a slow process. **The number of people engaged in Michigan agriculture approximates 350,000. There are 196,000 farms. We have, therefore, less than two persons working on the farm.** What **shall be produced and what methods of production shall be employed depend upon the decision of almost 200,000 men, each one of whom is** not only manager of the farm but is ordinarily its principal laborer as well. It is inevitable that a man chared with the aduous work of the field should rarely possess either the knowledge of the market or the managerial sense of necessity for adjustment and change which characterizes industries like manufacture.

This difference in the organization of agriculture and other industries is one of the chief facts that underlie what is commonly known as the agricultural problem. It is the principal reason for the failure of agriculture to reduce its output in times of depression and falling prices. When curtailment of demand has reduced the price of manufactured products to the point where they no longer cover the cost of labor and materials and leave a profit, the manager ceases hiring labor and purchasing materials until the curtailment in the output of commodities has raised their price once more above cost, or until wages and material have fallen far enough to make production at a profit possible once more. But the farmer is at once capitalist, manager and laborer. He cannot dismiss himself without a net loss. He purchases few materials produced by others than himself. His farm is quite as much a tool which he utilizes to sell his labor as it is a capital investment which might yield its owner a living without working.

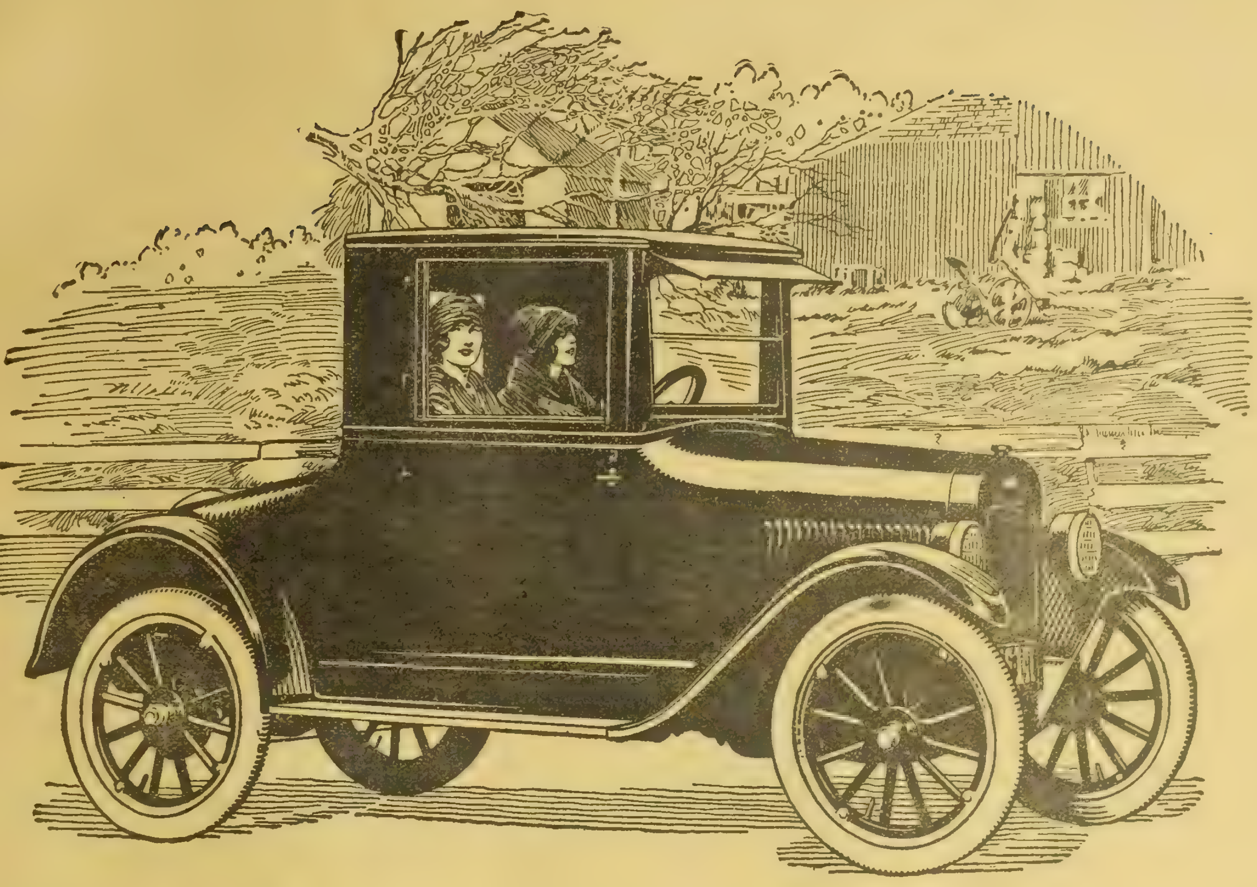
Diversity of Output

It is clear that the individual farmer cannot undertake any adequate analysis of the market situation which will keep him informed of the varying opportunities it affords. Our state contains cities that have grown from 13,000 people to more than 90,000 during the last twenty years. It is small wonder that production has not adjusted itself to the changed demand that this growth has brought. The co-operative marketing organizations in the agricultural field have grown largely out of this necessity for adequate market analysis. They perfirm their most useful function in keeping this analysis up to date and in combining the producers into a compact organization such that the volume of output may be adjusted to needs. The Department of Agriculture and the extension divisions of agricultural colleges must assist in this task in all our industrial states.

The inflexibility of agricultural production which grows out of the nature has been supplemented by another set of forces which impeded the adjustment of production to markets. From 1915 on, the European demand for American food products carried the prices of cereals, meats and other animal products, such as condensed milk, to unheard-of heights. Even at these high prices Europe stood ready to take all we could supply. In an industry where the manager owned his plant and equipment and furnished more than half the labor; there was no necessity for adjusting production to the changed situation. War and war prices were a sedative which made him content to remain in old paths. Transportation costs, controlled as they were by public authorities, long lagged behind the general price level, as did the level of wages. Today agriculture in the Middle West faces a situation that gives little promise of increased prices for the commodities that enter the international market. Transportation rates are high, and relief must be attained by removing the farmer as far as possible from the international market.

The extent to which this can be done in any state depends upon one further factor—that of diversity of output. Fortunately Michigan is in an enviable position in this matter. It grows all the important cereals except rice, and all the forage crops. It is among the first few states in its output of small fruits. It produces in commercial quantities all the tree fruits except citrus fruits. It is one of the principal producers of both beans and sugar beets. It has a large production of dairy products, and is not unsuited to the production of meats. In such a state there is no need to dispair because the foreign market is poor or because the cost of transporting agricultural products to market is burdensome. What is needed is a thorough analysis of the market possibilities and an adaptation of production to the local demand. To this end the Agricultural College and all organized forces of

(Continued on page 18.)



The Car for the Woman On the Farm

CHEVROLET
for Economical Transportation

The country woman needs her own car.

When the farm has only one car it is usually in use on the business of the farm, just when the wife or daughter needs to go to town or to a meeting or church or to make calls.

The Chevrolet Utility Coupé is an ideal car for the purpose, as it has full weather protection, a high-grade Fisher Body upholstered in gray whipcord, plate glass windows, which can be instantly lowered or raised to any desired position, a mammoth rear compartment for luggage, bundles, a jar of butter, a crate of eggs, or even a trunk.

The inside of the car can always be kept clean, because all packages can be carried in this rear compartment.

The Utility Coupé is comfortable, easy to operate, and has ample power to handle bad roads.

See Chevrolet first.

(Copyright by James Oliver Curwood

SYNOPSIS

JOANNE GRAY is one of the passengers on the train bound for Tete Jaune Cache, the home of "The Horde," where she has no friends and all will be strange to her. The train stops at a town composed of several tents, she goes in search of food and a bath. She is directed to "Bill's Shack" and here she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass out of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which they have passed. In but a moment the girl steps out, face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl money but before he can do so Aldous steps to the girl's side and floors Quade with a terriffic blow. Aldous hurries the girl away from the scene to the home of friends. Joanne tells Aldous she is going to Tete Jaune to find her husband, Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner Culver Rann. Aldous believes FitzHugh is dead and locates a friend who declares he has seen the grave. Upon their arrival at Tete Jaune they are met by friends of Aldous, the Blacktons, at whose place they are to stay during their stop. Later they secure horses and supplies and start off into the wilderness accompanied by Donald MacDonald who believes he knows where the grave of FitzHugh is located.

(Continued from Feb. 3 issue)

"HE doesn't know whether he buried his wife or left her her lying on the sand floor of the cave. He doesn't know how he got out of the mountains. But he did, and his mind came back. And since then, Joanne—for a matter of forty years—his life has been spent in trying to find that cave. All those years his search was unavailing. He could find no trace of the little hidden valley in which the treasure-seekers found their bonanza of gold. No word of it ever came out of the mountains; no other prospector ever stumbled upon it. Year after year Donald went into the North; year after year he came out as the winter set in, but he never gave up hope.

"Then he began spending the winter as well as the summer in that forgotten world—forgotten because the early gold rush was over, and the old Telegraph trail was travelled more by wolves than men. And always, Donald has told me, his beloved Jane's spirit was with him in his wanderings over the mountains, her hand leading him, her voice whispering to him in the lonliness of the long nights. Think of it, Joanne! Forty years of that! Forty years of a strange, beautiful madness, forty years of undying love, of faith, of seeking and never finding! And this spring old Donald came almost to the end of his quest. He knows, now; he knows where that little treasure valley is hidden in the mountains, he knows where to find the cave!"

"He found her—he found her?" she cried, "After all those years—he found her?"

"Almost," said Aldous softly. "But the great finale in the tragedy of Donald MacDonald's life is yet to come, Ladygray. It will come when once more he stands in the soft white sand of that cavern floor, and sometimes I tremble when I think that when that moment comes I will be at his side. To me it will be terrible. To him it will be—what? That hour has not quite arrived. It happened this way: Old Donald was coming down from the North on the early slush snows this spring when he came to a shack in which a man was almost dead from smallpox. It was DeBar, the half breed.

"Fearlessly McDonald nursed him. He says it was God who sent him to that shack. For DeBar, in his feverish ravings, revealed the fact that he had stumbled upon that little Valley of Gold for which MacDonald had searched through for forty years. Old Donald knew it was the valley, for the half-breed raved of dead men, of rotting buckskin sacks of yellow nuggets, of crumbling log shacks, and other things the memories of which stabbed like knives into Donald's heart. How he fought to save that man! And, at last he succeeded.

"They continued south, planning to outfit and go back for the gold. They would have gone back at once, but they had no food and no horses. Foot by foot, in the weeks that followed DeBar described the way to the hidden valley, until at last MacDonald knew that he could go to it as straight as an eagle to its nest. When they reached Tete Juane he came to me. And I promised to go with him, Ladygray—back to the Valley of Gold. He calls it that; but I—I think of it as The Valley of Silent Men. It is not the gold, but the cavern with the soft white floor that is calling us."

In her saddle Joanne had straightened. Her head was thrown back, her lips were parted, and her eyes shone as the eyes of Joan of Arc must have shone when she stood that day before the Hosts.

"And this man, the half-breed, has sold himself—for a woman?" she said, looking straight ahead at the bent shoulders of old MacDonald.

"Yes, for a woman. Do you ask me why I go now? Why I shall fight, if fighting there must be?"

She turned to him. Her face was a blaze of glory.

"No, no, no!" she cried. "Oh, John Aldous! if I were only a man, that I might go with you and stand with you two in that Holy Sepulchre—the Cavern—— If I were a man, I'd go—and, yes, I would fight!"

And Donald MacDonald looking back, saw the two clasping hands across the trail. A moment later he turned his horse from the broad road into the narrow trail that led over the range.

CHAPTER XV

From the hour in which she had listened to the story of old MacDonald a change seemed to have come over Joanne. It was as if she had risen out of herself, out of whatever fear or grief she might have possessed in her own heart. John Aldous knew that there was some deep significance in her visit to the grave under the Saw Tooth Mountain, and that from the beginning she had been fighting under a tremendous mental and physical strain. He had expected this day would be a terrible day for her; he had seen her efforts to strengthen herself for the approaching crisis that morning. He believed that as they drew nearer to their journey's end her suspense and uneasiness, the fear which she was trying to keep from him, would, in spite of her, become more and more evident. For these reasons the change which he saw in her was not only delightfully unexpected but deeply puzzling. She seemed to be under the influence of some new and absorbing excitement. Her cheeks were flushed. There was a different poise to her head; in her voice, too, there was a note which he had not noticed before.

It struck him all at once, that this was a new Joanne—a Joanne who, at least for a brief spell, had broken the bondage of oppression and fear that had fettered her. In the narrow trail up the mountain he rode behind her, and in this he found a pleasure even greater than when he rode at her side. Only when her face was turned from him did he dare surrender himself at all to the emotions which had transformed his soul. From behind he could look at her, and worship without fear of discovery. Every movement of her slender, graceful body gave him a new and exquisite thrill; every dancing light and every darkening shadow in her shimmering hair added to the joy that no fear or apprehension

Croup at Night

No longer causes alarm

WHEN the child seems croupy in the evening apply Vicks over throat and chest. It usually averts a night attack. If croup comes on without warning, use of Vicks often brings relief in 15 minutes—eases rough breathing, subdues the brassy cough. Vicks is ideal for all children's cold troubles—it avoids so much dosing. Just as good for grown-ups' colds, and for cuts, burns, bruises, stings and skin itchings.

could overwhelm without him now. Only in these wonderful moments, when her presence was so near, and yet her eyes did not see him, could he submerge himself completely in the thought of what she had become to him and of what she meant to him.

During the first hour of their climb over the break that led into the valley beyond they had but little opportunity for conversation. The trail was an abandoned Indian path, narrow, and in places extremely steep. Twice Aldous helped Joanne from her horse that she might travel afoot over places where he considered dangerous. When he assisted her into her saddle again, after a stiff ascent of a hundred yards, she was panting from her exertion, and he felt the sweet thrill of her breath in his face. For a space his happiness obliterated all thoughts of other things. It was MacDonald that brought them back.

They had reached the summit of the break, and through his long brass telescope the old mountaineer was scanning the valley out of which they had come. Under them lay Tete Jaune, gleaming in the morning sun, and it dawned suddenly upon Aldous that this was the spot from which MacDonald had spied upon his enemies. He looked at Joanne. She was breathing quickly as she looked upon the wonder of the scene below. Suddenly she turned and encountered his eyes.

"They might—follow?" she asked.

He shook his head.

"No danger of that," he assured her.

MacDonald had dismounted, and now he lay crouched behind a rock, with his telescope resting over the top of it. He had leaned his long rifle against the boulder; his huge forty-four, a relic of the old Indian days, hung at his hip. Joanne saw these omens of preparedness, and her eyes shifted again to Aldous. His .303 swung from his saddle. At his waist was the heavy automatic. She smiled. In her eyes was understanding, and something like a challenge. She did not question him again, but under her gaze Aldous flushed.

A moment later MacDonald closed his telescope and without a word mounted his horse. Where the descent into the second valley began he paused again. To the north through the haze of the morning sun gleamed the snow-capped peaks of the Saw Tooth Range. Apparently not more than an hour's ride distant rose a huge red sandstone giant which seemed to shut in the end of the valley. MacDonald stretched forth a long arm in its direction.

"What we're seekin' is behind that mountain," he said. "It's ten miles from here." He turned to the girl. "Are you gettin' lame Mis' Joanne?"

Aldous saw her lips tighten.

"No. Let us go on please."

She was staring fixedly at the sombre red mass of the mountain. Her eyes did not take in the magnificent sweep of the valley below. They saw nothing of the snow-capped peaks beyond. There was something wild and unnatural in their steady gaze. Aldous dropped behind her as they began the gradual descent from the crest of the break and his own heart began to beat mare apprehensively; the old question flashed back upon him, and he felt the oppression that once before had held him in its grip. His eyes did not leave Joanne. And always she was staring at the mountain behind which lay the thing they were seeking. Her face had not paled. Its coulor was like the hectic flush of a fever. Her eyes alone betrayed her; their strange intensity—the almost painful steadiness with which they hung to the distant mountain and a dread of what was to come seized upon him. Again he found himself asking questions which he could not answer. Why had Joanne not confided more fully in him? What was the deeper significance of this visit to the grave, and of her mission in the mountains?

Down the narrow Indian trail they passed into the thick spruce timber. Half an hour later they came out into the grassy creek bottom of the valley. During that time Joanne did not look behind her, and John Aldous did not speak MacDonald turned north, and the sandstone mountain was straight ahead of them. It was not like the other mountains. There was something sinister and sullen about it. It was ugly and broken. No vegetation grew upon it, and through the haze of sunlight its barren sides and battlemented crags gleamed a dark and humid red after the morning mists, as if freshly stained with Aldous guessed its effect upon Joanne, and he determined to put an end to it. Again he rode up close beside her.

"I want you to get better acquainted with old Donald," he said. "We're sort of leaving him out in the cold, Ladygray. Do you mind if I tell him to come back and ride with you for a while?"

"I've been wanting to talk with him," she replied. "If you don't mind——"

"I don't," he broke in quickly "You'll love old Donald, Ladygray. And, if you can, I'd like to have you tell him all you know about—Jane. Let him know that I told you."

"I will," she said.

A moment later Aldous was telling MacDonald that Joanne wanted him. The old mountaineer stared. He drew his pipe from his mouth, beat out its half-burned contents, and thrust it into its accustomed pocket.

"She wants to see me?" he asked. "God bless her soul—what for?"

"Because she thinks you're lonesome up here alone, Mac. And look here"—Aldous leaned over to MacDonald—"her nerves are ready to snap. I know it. There's a mighty good reason why I can't relieve the strain she is under. But you can. She's thinking every minute of that mountain up there and the grave behind it. You go back, and talk. Tell her about the first time you ever came up through these valleys—you and Jane. Will you, Mac? Will you tell her that?"

MacDonald did not reply, but he dropped behind. Aldous took up the lead. A few minutes later he looked back, and laughed softly under his breath. Joanne and the old hunter were riding side by side in the creek bottom, and Joanne was talking.

He looked at his watch. He did not look at it again until the first gaunt, red shoulder of the sandstone mountain began to loom over them. An hour had passed since he left Joanne. Ahead of him perhaps a mile distant, was the cragged spur beyond which according to the sketch which Keller had drawn for him at the engineer's camp—was the rough canyon leading back to the basin on the far side of the mountain. He had almost reached this when MacDonald rode up.

"You go back, Johnny," he said, a singular softness in his hollow voice. "We're a'most there."

He cast his eyes over the western peaks, where dark clouds were shouldering their way up in the face of the sun, and added:

"There's rain in that. I'll trot on ahead with Pinto and have a tent ready when you come. I reckon it can't be more'n a mile up the canyon."

"And the grave, Mac?"

Is right close to where I'll pitch the tent," said MacDonald, swinging suddenly behind the pack-horse Pinto, and urging him to trot. "Don't waste any time, Johnny."

Aldous rode back to Joanne.

"It looks like rain," he explained. "These Pacific showers come up quickly this side of the Divide, and

MR. OWNER OF AUTOMOBILE, TRACTOR, TRUCK OR MOTOR ENGINE:

Dear Sir:-

In the designing and building of a motor engine, truck, tractor or pleasure car, expert engineers design the motor to perform with the greatest efficiency and the greatest economy. After the engineer has performed his work in the laboratory of the motor builder, then he must come to the laboratory of the maker of Motor Oils, because the absolute life of the motor, tractor, truck or gas engine depends upon scientific lubrication and the best Gasoline and Motor Oil that can be used.

This Company, thru its process of scientific refining, produced En-ar-co Motor Oil and White Rose Gasoline. Its chemists and engineers claim for it the best Motor Oil and the best Gasoline on the market, but, not satisfied with their knowledge, expert engineers took the oil and tried it in every make of automobile, tractor, truck and gas engine, proving its success, and our salesmen can show you evidence of the approval of the oil by prominent motor builders.

In the manufacture of En-ar-co Motor Oil and White Rose Gasoline, we use the best Crude Oil and, in our scientific refining, our laboratories are constantly checking the results by testing samples hourly, so that, during a year's time, a Million Tests are made in our laboratories, guaranteeing to the user of En-ar-co Motor Oil and White Rose Gasoline absolute uniformity and quality, and if you use En-ar-co Motor Oil and White Rose Gasoline, your repair bills will decrease, the life of the motor will increase, and more power will be developed.

This statement, we make, based on our reputation, having served the public for forty years and being recognized as the scientific refiners of the highest grades of petroleum products. If you have not used En-ar-co Motor Oil and White Rose Gasoline, will not this statement lead you to the nearest place that you can purchase it? Then, you will see the satisfaction it will give.

Yours very truly,
THE NATIONAL REFINING COMPANY,

Frank B Fretter
President.

NOTIFY HIGHWAY COMMISSIONER REGARDING CULVERT

Who should I notify if a culvert in a quarter line is out, making the road unfit to travel? Same has been out all summer. I have notified the Highway Commissioner of same but he fails to repair same.—C. E. R., Sanilac, Michigan.

—The statute provides that it is the duty of the Highway Commissioner to see that the road is kept in reasonable repair, safe and fit for public travel and in case he neglects this duty, after receiving your notice you should then bring this matter to the attention of the township board.—H. H. Partlow, State Highway Department.

PAYING TUITION

Does the district have to pay the tuition for a child if the application was filled out and filed with the director on or before the fourth Monday of June and the child remained in the district until November 16, 1922? At this time the parents moved to Lake View, Michigan, but the child was attending Owosso high school.—J. W. S., Lake View, Mich.

—The question apparently arises because the parent is now living in a school district that maintains a legal high school and if the child were at home no tuition would be chargeable.

Section 1 of the tuition law, which is Section 5380 of the compiled Laws of 1915, found on page 320 of the 1921 school laws, provides in part as follows:

"The district board or board of education of any school district which does not maintain a high school shall have authority and is hereby required to vote a tax sufficient to pay the tuition to any high school which is approved by the superintendent of public instruction of any children of school age residents of said district at the time of giving notice as hereinafter provided.

The parents of the child in this case were living in a district which did not maintain a legal high school at the time of making application for tuition. The statute quoted provides that if that is the case the district must pay the tuition for that school year. The fact that the parent may move into a district that maintains a high school would not relieve the district where the application was filed from the payment of high school tuition, if the parent continued to send his child to another high school.

This construction of the tuition law is in accordance with justice both from the standpoint of the child and the district. If a child has entered high school it might cause an interference with his work if he were required at any time if the parents moved into a high school district, to change high schools. It might be also that the child could better attend some other high school than the one in the district where his parents had moved. There might be several reasons why this would be true. Further, if the parent is living in the district at the usual time of making application the child's name is on the census list of the district and that district will draw primary money for the following year, regardless of where the parent may move. If the parent has any property in the district it would be on the assessment roll and subject to tax. You will see, therefore, that there is no hardship to the district because it is obliged to pay the tuition.—W. L. Coffey, Dept. of Public Instruction.

LINE FENCE DISPUTE

I own a farm along the corporation line of the village of Portland. There is no street laid out along the line. I and the man I bought of, had the County Surveyor, survey it out. There are corner stakes at each end one-half mile apart. It is on a section line. Then I stretched barbed wire and fastened it to trees about a rod from the line on my farm. Now a party has bought an acre of land on contract. The place has been worked a good many years, and plowed to the line. Now he has grubbed out the extra land, and claims the fence is the line, and has cut the trees the wire was fastened to, has planted corn right up to the fence so that my stock can reach through the wires and eat it. Would those wires be called a line fence? How long would it have to be there to be an established line fence? I have filled in between the trees with stakes and posts to hold stock. I put the wires all along the corresponding line. Would I have to deal with the party on the place or the man that holds the deed?—C. V. P., Portland, Mich.

—You do not state in which one worked and claimed the rod of fence to the corporation line. To gain title by adverse possession to the rod strip of land it requires something more than just laying idle and growing up to weeds. If your title by deed goes up to the section line it would require some overt act claiming title to the strip adverse to the title by deed and it must be continuous and without interruption for 15 years. A two strand wire fence may be a line fence but not a lawful fence. A line fence is the line between two properties and may be marked by any line even though that line may not stand the test of a lawful fence. If you claim to own the strip of one rod of land and another has taken possession and not necessarily with the man who owns the adjacent land. His contract to the purchase of one acre may not include the strip but only to the section line. I think you will need to consult with a good attorney to explain to him just what the facts are so he can tell you what your rights are.—Legal Editor.

MUST BUILD SHARE OF LINE FENCE

I own an apple orchard and it is open on two sides to public highways that is no fence. There are two farms that join to my farm on the two sides. I have no stock and no need for a fence. Does the state require me to share the expense of fencing?—J. H., Holland, Mich.

—Chapter 68, of the compiled laws of 1915 provide a method whereby abutting property owners of improved lands may compel you to construct and maintain your portion of the line fence between your orchard and the adjoining property owner. There is nothing in the law however that requires you to construct highway fences on the two sides of your orchard abutting the public highway.—H. H. Partlow, State Highway Dept.

COMMON LAW MARRIAGE

I understand that if a couple live together as man and wife and pass for the same, it is called a common law marriage after a few years say 10 or 12 years. In case such couple should separate, does a divorce have to be obtained before the parties are free same as in a lawful marriage? Can a common law wife claim any of a man's property if he has no other heirs?—C. D. H., Muskegon, Mich.

—The law is that if a couple live together for a period of two years or more and hold each other out to the world as man and wife, it is a common law marriage and it would be necessary for either of them to secure a divorce; their children would be legitimate and the wife could inherit property from the man, or the man from the woman.—C. DeL.

LAND CONTRACT

In regard to a land contract, what right has the second party to the timber on the same farm. Here is the condition of the contract:

"It is expressely agreed as a part of the consideration that first parties may have their fire-wood for their own domestic use from the premises herein conveyed for a period of 15 years from the date hereof, they to cut the same from dead and down or dying timber and to clean up tops and leave the premises in a good and workmanlike manner." There is not anything stipulated for sec-

Why Not PUT THIS NEW MILL ON YOUR OLD TOWER
Albion steel and wood mills are quiet and powerful. *One-third the working parts of any other mill.* Only main Pitman bearing subject to wear. This is *oilless*, and easily replaceable. Governs by dependable weight without springs. Fits any 4-post steel tower. Why not shorten your chore hours *now* with a *good* Windmill? *This is your chance—F. O. B. Albion.* Erect it yourself. Ask your dealer, or write direct to

ond party. The first party goes in and takes his first choice of the down timber, cuts some that would make lumber and cuts about 25 cords of wood when it was customary to cut about 15 cords the first year, even leaving some two year old wood in the woods. What can second party have to say?—E. W., Woodbury, Michigan.

—If the purchaser in a land contract takes possession and occupies the land under the terms of the contract, and is not in default in his payments, he has the right to the use of the timber on such land, so long as he does not cut and sell it in excessive quantities so as to amount to waste. He may hold the seller to his contract to use only such wood as is required for domestic purposes, and may recover from him for any wood in excess of this amount, or in violation of any terms of the contract.

The fact that the seller takes the choice of the down timber does not alone make him liable, however, so long as he is permitted by the contract to cut down such timber. —Assistant Legal Editor.

EXPENDITURE OF COUNTY ROAD FUNDS

I would like to know through the columns of your paper if the Board of County Road Commissioners have the authority to spend the good road money for other purposes other than to construct and maintain highways?—A. E., Waltz, Michigan.

—The county road law specifically provides for the purchase of right of ways for relocations of highways, for the purchase of lands for gravel, borrow or other necessary material to be used on the highway, also they are given authority to pay for the services of a Deputy County Clerk when such clerk is necessary by reason of the volume of work. They are also given specific authority to employ such servants and laborers as may be necessary and may purchase such machines, tools, appliances and materials as shall on their judgment be necessary or conveni- for the proper carrying on of their work.

The statute further provides that the Board of County Road Commissioners shall have all the authority in respect to roads, bridges, culverst, etc., which is vested in highway offices in townships and the statute specifically provides that township commissioners shall provide a suitable place for the storage and proper housing of all tools, implements and machinery that are owned by the township. It would therefore follow that Boards of County Road Commissioners are vested with the authority to purchase land and erect the necessary buildings for housing and storage of their equipment and for making necessary repairs incident to such equipment.

I believe this constitutes their authority for the expenditure of money with the understanding of course that the superintendents, engineers and the construction of bridges are included in the above.—H H Partlow, State Highway Department.

ANYONE KNOW WHERE TITUS CHAULKLIN IS?

Some time ago we published a request from Mrs. Bergman, R. 1, Gulliver, Michigan, in this department. She desired information regarding her nephew, Titus Chaulklin, whose home address is Ensign, Mich. In June, 1922, he worked for a motor company in Muskegon. She received a letter from him at that time and he advised he was about to move. Since that time none of his relatives have received a word from him. They are afraid something has happened to him. He is 5 feet 5 inches tall, 21 years old, and dark complexioned. His mother is nearly heart broken and any word from a reader who knows anything about where the boy is will be appreciated. Address your letters to Mrs. John Bergman, R. 1, Gulliver, Michigan.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

FOR YOUR PROTECTION!

THE following Fire Insurance Underwriters rules should be preserved and studied. The proper installation of a radio set is not a fire hazard—but if the rules are not followed, you may lose your insurance, no matter what the cause of fire may be!—Radio Editor.

FOR TRANSMITTING STATIONS

Antenna—g.—Antennas outside of buildings shall not cross over or under electric light or power wires of any circuit of more than six hundred (600) volts or railway trolley, or feeder wires, nor shall it be so located that a failure of either the antenna or of the above mentioned electric or power wires can result in a contact between the antenna and such light and power wires.

Antennas shall be constructed and installed in a strong and durable manner and shall be so located as to prevent accidental contact with light and power wires by sagging or swinging.

Splices and joints in the antenna span shall, unless made with approved clamps or splicing devices, be soldered.

Lead-in Wires—h—Lead-in wires shall be of copper, approved copper-clad steel or other metal which will not corrode excessively and in no case shall they be smaller than No. 14 B. & S. gage.

Antenna and counterpoise conductors and wires leading therefrom to ground switch, where attached to buildings, must be firmly mounted five (5) inches clear of the surface of the building, on non-absorptive insulating supports such as treated wood pins or brackets equipped with insulators having not less than five (5) inch creepage and air-gap distance to inflammable or conducting material. Approved suspension type insulators may be used.

i.—In passing the antenna or counterpoise lead-in into the building a tube or bushing of non-absorptive material shall be installed so as to have a creepage and air-gap distance of at least five (5) inches to any extraneous body. If porcelain or other fragile material is used it shall be installed so as to be protected from mechanical injury. A drilled window pane may be used in place of bushing provided five (5) inch creepage and air-gap distance is maintained.

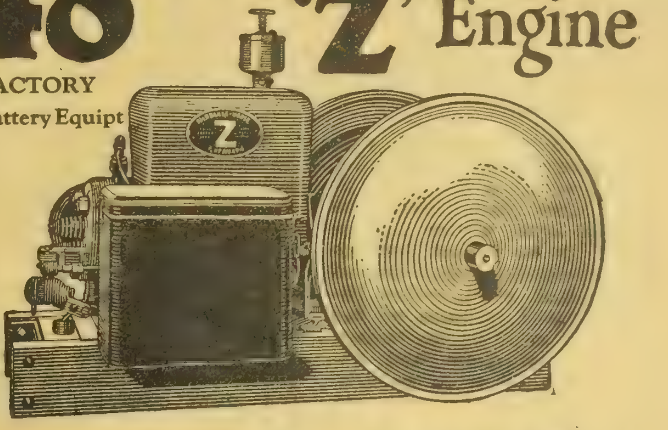
Protective Grounding Switch—j.—A double-throw knife switch having a break distance of four (4) inches and a blade not less than one-eighth (⅛) inch by one-half (½) inch shall be used to join the antenna and counterpoise lead-ins to the ground conductor. The switch may be located inside or outside the building. The base of the switch shall be of non-absorptive insulating material. Slate base switches are not recommended. This switch must be so mounted that its current-carrying parts will be at least five (5) inches clear of the building wall or other conductors and located preferably in the most direct line between the lead-in conductors and the point where ground connection is made. The conductor from grounding switch to ground connection must be securely supported.

Protective Ground Wire—k.—Antenna and counterpoise conductors must be effectively and permanently grounded at all times when station is not in actual operation (unattended) by a conductor at least as large as the lead-in and in no case shall it be smaller than No. 14 B. & S. gage copper or approved copper-clad steel. This ground wire need not be insulated or mounted on insulating supports. The ground wire shall be run in as straight line as possible to a good permanent ground. Preference shall be given to water piping. Gas piping shall not be used for the ground connection. Other permissible grounds are the grounded steel frames of buildings and other grounded metal work in buildings and artificial grounding devices such as driven pipes, plates, cones, etc. The ground wire shall be protected against mechanical injury. An approved ground clamp shall be used wherever the ground wire is connected to pipes or piping.

only $48 for a FAIRBANKS-MORSE 'Z' Engine

F. O. B. FACTORY

1½ H.P. Battery Equipt



Increase your farm profits!

Here's a helper that will do a hundred jobs around your farm; save time and money all day long every day; do more work for less money than any other aid you can employ.

The Fairbanks-Morse "Z" Engine is helping more than 350,000 farmers increase their farm profits. Instead of wasting their own valuable time and strength, or employing high-priced labor, they are turning the time-killing drudgery jobs over to a tireless, willing "Z" Engine.

The 1½ H. P. Battery Equipt Engine uses gasoline alone. Has high-tension battery ignition, hit-and-miss governor and balanced safety flywheels. Control lever gives six speed changes. Carburetor requires no adjusting. A remarkable value.

The magneto equipt 1½ H. P., 3 H. P., and 6 H.P. are *real* kerosene engines, but operate equally well on gasoline. Have simple high-tension oscillating magneto. Throttling governor assures steady speed. Prices F.O.B. Factory. Add freight to your town.

1½ H. P. $71 3 H. P. $105 6 H. P. $168

Other "Z" Engines up to 20 H. P.

Write for complete details. See the engines at your dealer's.

4 TIMES Around the World with ONE OILING

100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The **Auto-oiled Aermotor** after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

The Truth About Henry Ford

Helping America During World War—Chicago Tribune Libel Suit

By Sarah T. Bushnell

(Copyright by Reilly & Lee Co.)

(Continued from Feb. 3rd issue)

IT was essential to produce a seamless wall in the cylinder and four men, Emde, Findlater, Hartner and Martin, set to work to find a method of doing it. This they did by placing the point of the cone to one side, so that the defect was located on the spot where a two-inch hole had to be drilled for the valve seat. Production was started under this method, but another delay was experienced because of the slow method of cutting the tubes. Emde set to work again and designed and built a shear to be used instead of a steel saw. The result was that 4,000 cylinders a day were produced. In other plants the valve housings, intake and exhaust were acetylene welded to the top of the cylinder. Emde with a companion, Riemenschneider, worked out a method of butt welding which made a superior weld and saved much time. This method was subsequently adopted by other makers of the Liberty motor. In all 511,854 cylinders were made by the Ford company. Approximately 125,000 were used at the Ford plant and the remainder delivered to the government for other Liberty engine makers.

The company also turned out 700,000 bearings for the Liberty motor, and these were so superior that the government had placed orders with the company for all the Liberty motor bearings made in this country. Up to the day of the publication of the Hughes statement 400,000 of these bearings had been delivered.

Another important war-time achievement of the Ford company was in the making of caisson axles. The problem was to get away from the solid axle forgings, as these required the drilling of a three and one-half inch hole for seventy-six inches through solid metal. The Ford company made the axles from steel tubing at one-sixth the cost. And every axle passed the government test.

But Mr. Pipp knew much more about the achievements of the Ford company. It had delivered 2,000,000 steel helmets, 8,000 caissons, more than 8,000 trucks and 25,000 Ford cars and 6,000 ambulances, several hundred of which were given free. Nor was that all. Much experimental work had been done on three-ton tanks and a smaller two-man tank. More than a million dollars' worth of work had been done in producing special devices for the British navy, and the Ford chemical department had co-operated in the making of gas masks. Motion picture reels for the Liberty Loan, the Red Cross and other patriotic uses were made by the company and supplied to the government in sufficient quantities to be used all over the country. Other motion pictures were sent to the American forces on every fighting front.

How much of this information he would be warranted in publishing as an answer to the Hughes criticisms was the problem that confronted Mr. Pipp. However, time pressed and he set to work, and a statement was completed on Monday morning. Just as he finished his labors Mr. Ford, who was in the room, started to the telephone. "I want to get Emde," he explained. "I want to tell him not to worry." Emde, it is true, was born in Germany, but he had been a naturalized citizen of the United States for many years.

"Let me read this statement to you first," urged Mr. Pipp. "Then I can give it to the papers. Any delay in getting it published may mean your defeat."

"If this candidate has to go through this sort of thing to get into the Senate I don't want to go there," said Mr. Ford. "Wait until I talk to Emde." After considerable delay he got Emde on the wire. "Don't worry, Emde," said Henry Ford. "I have seen the papers. I know you; I have watched you work and I know you are honest and faithful. If they try to hang you they will have to hang me first. I am going to see that you get a square deal."

When Mr. Ford had finished his conversation with Emde, Mr. Pipp induced him to read the statement. Mr. Ford approved it and Mr. Pipp sent it to the newspapers. It was too late; the Monday noon papers had gone to press and it was these editions that the Ford managers had relied upon to undo the harm wrought by the Hughes statement, for they circulated throughout the state. The statement did get into the night editions, but these have little country circulation, and the papers that reached the rural districts on election morning carried the Ford statement tucked away where comparatively few saw it. It is probable that many who read the Hughes statement never saw the Ford answer.

This was as follows:

"Our policy is to make men, not to break them. In times of panic great injury and injustice are often try to keep our heads.

"We would not allow injustice to be done to an old, trusted and valued employee, even though he was born in Germany. The results speak for themselves. Mr. Emde, referred to as the special example in the Hughes report, has been with us a little over twelve years, and he is a most able and excellent engineer and has always given perfect satisfaction. Not one word could be found by Mr. Hughes or anyone else with regard to Mr. Emde's actual work. We in the plant know that he gave valuable assistance and many suggestions with regard to the development of the Liberty motor cylinders, which are being furnished to all the manufacturers, with a saving of three hundred and forty-five thousand dollars a month to the government over former orders.

From the beginning of the war we have taken the greatest precaution. * * * We have had no interference with our work that could be in any way traced to enemy aliens. * * * The United States Marshall can speak for himself as to our organization and work with regard to that. Mr. Ford was a witness before Mr. Hughes, but he was not asked a single question with reference to enemy aliens, Mr. Emde or anyone else."

Under the Ford reply was printed a statement from the United States Marshal:

"We have had less trouble with enemy aliens in the Ford plant than in any other large plant. If there is any blame with regard to the Forn plant, it should be on the marshal's office and not on the Ford people. The Ford company did not employ a single German alien without a permit of the marshall's office.

Friends who dropped in to see Mr. Ford that day still expressed confidence that he would be elected, but as he and Mr. Pipp left the campaign headquarters together Mr. Ford said to his companion, "I noticed that you did not join with the others when they were insisting that I would win tomorrow.

"No," replied Mr. Pipp. "I think you have plain sailing. I think you have a fair fighting chance, but only a fair one."

"But that wasn't what you said Saturday."

"No; if the election had been held Saturday you would have won. But today is Monday and it's a different story."

"Do you mean that you think the Wilson letter—"

"In my estimation," interrupted Mr. Pipp, "the Wilson letter cost you ten thousand votes. You could spare that many. There were people in Michigan who had forgotten all about party lines; they only remembered that you were a candidate and they wanted to pay you the highest honor they could. The Wilson letter jerked them up. It reminded them that they were Republicans and that you are running as a Democrat. I would wager that letter cost you their votes. You could spare ten thousand votes, but you can't spare many more."

"Then you thing the Hughes statement—"

"The Hughes statement will work more havoc than anything else could have done. People will not have time to learn the truth. If I could have got a reply out in time for it to reach every voting precinct it would have helped some. Up-state and in the rural districts they won't see tomorrow's papers, but you can be perfectly sure that they'll get word of the Hughes report. If they don't see it themselves some one will pass it along. The gossip that you're keeping a German working in your cylinder department will reach them. Coming from a man of Mr. Hughes' prominence it will carry weight. I know that last minute rumors often turn the tide. In my opinion you have a fair fighting chance. You may pull through by a narrow margin. You probably will lose by between five and ten thousand votes."

The first election reports gave the state to Commander Newberry by 7,567 votes. The official recount, some eighteen months later, changed the figures somewhat, but not the result. Mr. Pipp had been right.

The results of that contest were far reaching. If Henry Ford had won there would have been an equal number of Republicans and Democrats in the Senate and the Vice-President, a Democrat, would have cast the deciding vote where there was a tie. Moreover, the Republicans would not have had the chairmanships of all the committees. Finally, but for the Republican majority of two in the Senate the League of Nations might have been endorsed.

The many good Americans who are opposed to the League feel that it was fortunate for the country that Commander Newberry was elected. Many others, firm believers in the League, regard the outcome of the Michigan campaign as a defeat, not alone for Henry Ford but for the hope of permanent peace. Certainly the whole nation, was involved in that contest. It was not until a short time ago, on May 2, 1921, that the case was finally disposed of by the decision of the United States Supreme Court at Washington, which set aside the conviction of our Commander Newberry in the Michigan District Federal Court and declared unconstitutional the Corrupt Practices act under which he had been indicted.

There are those who say that Mr. Hughes never made the statement attributed to him, and that he would not have stooped to such campaign methods had he been aware of the Republican committee's plan. "That statement was held back until the last minute so that Mr. Hughes would not have an opportunity to deny it," they argue.

His defeat brought to Henry Ford, no doubt, a feeling of relief. He had made the best fight any candidate could make. He was surprised and hurt by the eleventh-hour methods of the Republican organization. For himself his conscience was clear; he had fought a clean fight and had not stooped to underhand methods. Long before the votes were recounted and the official election figures filed he had received several citations from the United States War Department, which meant much more to him than a seat in the United States Senate. The citation which gave him the most pleasure is printed herewith:

"To Ford Motor Company,
Detroit, Michigan:

"In accordance with the recommendation of the Director of Air Service a certificate of merit has been sent to you under separate cover.

"The citation by the Director of Air Service is as follows:

"THIS COMPANY PRODUCED 3,950 COMPLETE LIBERTY-12 MOTORS OF UNUSUALLY GOOD QUALITY. THEY ALSO PRODUCED ALL CYLINDER FORGINGS USED BY ALL PLANTS IN THE MANUFACTURED OF LIBERTY MOTORS, AND THEY INVENTED AND DEVELOPED SPECIAL MACHINERY AND PROCESSES FOR THIS PURPOSE. THIS PLANT WAS 100 PER CENT ON WAR WORK.

"The Chief of Ordnance also made similar recommendation and citation:

"IT IS VERY GRATIFYING TO ME TO BE ENABLED TO TRANSMIT THIS VISIBLE RECOGNITION OF PATROTIC WAR SERVICE.
GEO. W. BURR,
Major General,
Assistant Chief-of-Staff."

This proved that Henry Ford, in his own field, had done all that any living man could do for his country. Without doubt he had been the medium of saving the lives of many soldiers.

The strangest thing about this Senate race was that Mr. Ford was not a Democrat. He was and is a Republican. He made the race for Senator because he belived in the principles for which President Wilson was standing. With the exception of that one campaign, and the time when he voted for the reelection of Woodrow Wilson, he has always voted the Republican ticket. Yet he was the storm center of one of the bitterest political battles that ever has been waged.

CHAPTER VII.

The Chicago Tribune Libel Suit

Shortly after the time of the Ford-Newberry campaign an eastern writer came to Detroit to secure material for a book dealing with Henry Ford and his achivements. He failed to secure the "copy" he wanted and for that or some other reason gave out a story dealing with Mr. Ford and the American flag that had no foundation in fact. The story was widely circulated among newspapers throughout the country and was, also, the subject of much editorial comment. It should be said that many newspapers printed the original telegram from Detroit in good faith, merely as a matter of news, and with no thought at the time that the article was untrue.

The editorial comment that the "fake" story provoked was, however, extremely severe in many instances and especially in some of the papers which had opposed Mr. Ford's senatorial candidacy. Those familiar with Mr. Ford, his work and his aims, knew, of course,

Three close friends, Henry Ford, Thomas A. Edison and the late John Burroughs. The death of John Burroughs broke up this trio of world-renown men who spent many happy hours together.

that he was not an anarchist and had no sympathy with anarchists, yet sharp-penned editorial writers made the charge against him. Mr. Ford waited patiently, but the attacks continued. Finally, his patience exhausted, he placed the matter in the hands of his attorneys, who sent letters to the offending papers, but no retractions were printed.

At length Mr. Ford and his advisors decided that in defense of his good name he must act. The leading paper among the group that had attacked him most bitterly was selected and suit for libel was started against it in the Circuit Court for Wayne County at Detroit. This paper was the Chicago Tribune. It had challenged his patriotism, had termed him an ignorant idealist and had linked his name with the names of noted anarchist leaders whom Mr. Ford did not know and with whom he never had had any connection whatever.

A more absurd charge probably never was brought against a well known man than the allegation that Mr. Ford was an anarchist. At his great plants in Detroit an Americanization school had been maintained for five years, one of the primary purposes of which was to instill respect for American principles in the minds of the foreign-born employees of the Ford company. This school had prepared thousands of immagrants for the duties of citizenship. Mr. Ford, himself, had done great things for his country in the critical days of the war and the beneficial results of his example and influence were far-reaching. He was a member of the Episcopal church, attended services regularly and was by instinct as well as by training a champion of law and order, of patriotism and truth. He knew little and cared less about history, although he played a part in its making, and concerned himself with what could be done today for the good of his fellow men, rather than with what had transpired in past ages. He enjoys books on philosophy and science and is a close read of Tolstoy. Darwin, Maeterlinck and Emerson. A volume of Emerson is always to be found beside a couch in the library where, after dinner, he frequently spends much time reading before a huge fireplace.

In bringing suit against the Chicago Tribune Mr. Ford's position was simply this: He disliked the idea of protracted litigation and all the attendant publicity, but he was no coward, and once he had decided that he must act, act he did and vigorously. He reasoned that in order to secure adequate satisfaction from the paper that had libeled him he must demand a sum that would make a lasting impression on the press of the country, hence the million dollars asked in the bill filed by his attorneys. He believed that his suit would have a salutary effect upon the press in general and serve as a warning that "free speech" does not shield the slanderer. He felt too that he was championing the cause of other men similarly wronged, but not so well equipped financially for a long and expensive struggle in the courts. He was not fighting the newspapers; he was fighting falsehood.

Elaborate preparations for the suit were made on both sides. Alfred Lucking, former member of Congress, and senior counsel for Mr. Ford, was assisted in the presentation of the case by Judge Alfred Murphy, who resigned from the Wayne County bench to enter the case. The case came to trial in the summer of 1919 at Mt. Clemens, where it was sent on a change of venue from Detroit. Among the attorneys for the Tribune was Elliott G. Stevenson, who had been counsel for the Dodge brothers in their suit against Mr. Ford a few years before. Mr. Stevenson is an expert in cross examination, adept in the ridiculing of a witness, catching him off his guard and disconcerting him with sudden and unexpected questions. Report reached Mr. Ford and his lawyers that Mr. Stevenson had boasted that he would force Mr. Ford to read aloud in court long documents and extracts from books with which the inventor was unfamiliar. Mr. Ford was determined to do nothing of the kind. Upon the day when he was on the witness stand he carefully neglected to take his glasses to court, and whenever documents were presented to him to read he refused to do so. It was following one such refusal that Mr. Stevenson, with profuse apoligies, blandly said to the witness:

"Mr. Ford, I dislike to ask you this question, but I have heard that you cannot read or write. Is it true?"

Counsel for Mr. Ford were on their feet instantly with vigorous objections to the question and the argument was sharp and bitter. To say that a boy who had grown up on a Michigan farm under home conditions such as had marked the childhood of Henry Ford, was illiterate was, of course, absurd. Mr. Ford's friends believed that the sole purpose of the question was to supply a basis for a sensational newspaper story that would be widely circulated and thus further wound the inventor.

(Continued in March 3rd issue.)

INTERESTED IN FORD STORY

Dear Mr. Slocum—It is with great pleasure that I enclose $1.00 for the renewal of my subscription to your very valuable paper. We have found it almost invaluable. We are very much interested in the Ford history, and would be disappointed should we miss a single number. I consider it one of the best farm papers published. Long may it live and prosper.—Prof. F. W. Scott, Commissioner of Municipal Market, Ypsilanti, Michigan.

DON'T WANT TO MISS A COPY

Your paper surely is of great help. We don't want to miss a single copy of it if possible.—Mr. Andrew Kallungi, Houghton County, Michigan.

MUSINGS OF A PLAIN FARMER

AROSE early, being tired of the bed where I spent most of my time since last October, being ill with typhoid fever.

Was given a dish of oat meal porridge spread thick with brown sugar, which I crave.

As the sun became higher I was bundled up and then hobbled to the barn. My wife wishing me to look at the stock and mows.

It was fine to see the horses. I believe they knew that I had been absent.

Stood gazing up the silo chute, wishing my leg was equal to my eye.

Returned to the house, weak of leg. Commended my wife on the fine condition of the stock; thanks to her, and the good neighbors, who have been most kind.

Was ordered to my couch, my wife being firm about my rules of exercise, more so than the good nurses at the hospital.

Was aroused for dinner which I attacked with vigor, having an appetite like an ostrich.

Spent the afternoon smoking a bit and gazing out on the fields which will soon need my hand.

Made a few plans for next crop season, which I hope my health will permit me to carry out.

Was busy this evening assisting my daughter with her problems, which muddled my brain and I retired to my cot, very tired but thankful that have been spared.—A. P. Ballard.

"The Farm Paper of Service"

FARMER MUST PROSPER TOO!

"IT takes no prophet to scan these facts and foretell an early collapse of the present city prosperity unless the farmer soon gets his equitable share. This present prosperity is a sham, because it is the opulence of some at the depletion of others, the profits of unfair and therefor ruinous trade. Half this country cannot long run riot in plenty abstracted from the capital of the other half. The source will run dry. The way out? Only the slow integration of farmers into powerful economic groups and a recasting of the whole system of agricultural finance and marketing. This is a national need and a national duty."—Gray Silver, Washington Rep. American Farm Bureau.

A TEST FOR LEGISLATORS

IF we had been consigned to Lansing in either the house or senate by the voters of our district, which we will assume was largely rural we would set for ourselves a sort of laboratory-test to which we would put each bill that came up for our vote. Perhaps we would even have it printed up on cards so that we could hand them out to the persistent lobbyist, male or female and thus save ourselves many an ear-full of absolutely meaningless information or advice.

We would print in two colums and under heads as follows:

VOTE "YES"	VOTE "NO"
Lower Taxes	Higher Old Tax
Lower Salaries	Any New Tax
Lower Expenditures	Higher Salaries
Less Jobs	More Jobs
Less Officials	More Officials
Less Legislation	More Legislation

And under these classifications we believe we could easily arrive at a sane answer for any bill which would come up in Lansing during the present session.

Only last week nearly five hundred business men, representing practically every industry, came to Lansing as a "committee-in-boots" to beg for, insist on or fight to a finish for—EXACTLY WHAT THE FARMERS OF MICHIGAN ARE DEMANDING— LOWER TAXES! Thus, for once, are the people on both sides of the town line demanding the same thing.

Every man in Lansing who has been sent there by popular vote has promised to lower taxes—every man among them from Governor down, has promised on his word NOT to increase state expenditures. Pretty soon, the people of Michigan are going to call a "show-down" and they are not going to be satisfied with anything but a hard-boiled proof that these pre-election promises have been lived up to.

THE "50-50" CONTRACT ARRIVES!

EVERY beet grower from Messers. Cook and Ackerman down, can feel a glow of pride in the fact that their seven years of honest endeavor to have the manufacturers of beet-sugar in Michigan see the necessity of a square-deal, has borne fruit.

The owners and managers of the Owosso Sugar Company are to be congratulated on the fact that they were the first to see the light and acknowledge the grower as a partner in the problem of placing Michigan sugar in the markets of the world, at a price which will make the continuation of the industry economically sound.

The Business Farmer hopes that before another issue goes to press we will be able to announce the names of other manufacturers who are willing to give the plan a trial for two or three seasons at least.

We importune the beet-growing farmers to stand by the word and the spirit of this contract to the letter. When a man shows you he is willing to work with you, that is your opportunity to show what you are made of. There is no indication but what this will be a profitable year for the manufacture of sugar, but if by any chance this contract should not prove as profitable because of a slump in the sugar-market or some other unforseen reason, let the beet-growers show the stuff they are made of—it will be an object lesson for big business who now make the easy claim that farmers are "good fair-weather sailors!"

There are a dozen branches of the farming business that ought to be operated on a 50-50 basis—perhaps this will be an opening wedge in that direction.

We are more than happy that The Business Farmer played its part in getting the producer and the manufacturer of beet-sugar into working harmony—now let's make it unanimous!

THE DEATH PENALTY IN MICHIGAN

AS often as the legislators meet at Lansing comes forward from its depths the skeleton of "capitol punishment." We thought this had been the subject of enough school-room debates to settle it, pro and con, for all time to come, but like Abel's ghost it haunts us always!

When that crazed criminal, "Gypsy Bob," already serving a life-sentence for two terrible murders, jumped from his pew in the prison-chapel and stabbed the warden of Marquette prison to death, inflicting almost fatal wounds on the warden's son and a guard, we said: "that man should be killed!" and the state echoed with the demand that such a dangerous member of society had no place among living men.

When, within the past fortnight, a man was released from Jackson, who had by mistake of justice, been serving a sentence for a crime which he did not commit, we said "how fortunate that he was not hanged for the crime!"

That seems to be the whole answer to this problem of society's right to take the life of the murderer. If we know that a man or a woman is guilty of a murder which has been planned and executed in cold blood as was the warden's slaying by "Gypsy Bob", then why should we let that being live as a constant menace to others? But, if there is any possibility of innocence, what right have we to take that which no power on earth can replace—life?

FARMERS' WEEK AT EAST LANSING

WHATEVER has been your own personal opinion of the annual Farmers' Week at the Michigan Agricultural College in former years, prepare to change it for unless your opinion was formed this year, you are drawing your conclusions regarding it from the days before Dr. Friday was brought to head our institution.

Not that other Farmers' Weeks have not been filled with worth-while meetings and worth-while speakers, but this year's Farmers' Week, showed the guiding hand of a man who was determined that the farmers who braved the February elements to come to East Lansing should have some insight into what was going on in the world to influence their business.

On one program Dr. Friday, introduced a man who was the avowed representative of "big business," as represented in the ownership of the great railroads of these United States. This man defended present-day freight rates and apologized only because they had not kept pace with the high-prices of farm produce during war-times, nor had they come down when prices hit the toboggan. A great many farmers and others who heard all or part of this talk criticised Dr. Friday for his allowing such a speaker. Cornered, however, by the thinking business farmers in attendance, these critics had to admit that what the farming business of America is suffering most from just now, is a horde of headless, loud-talking politicians who say only what their farmer readers or listeners want to hear, NOT what they ought to hear.

It is a pity and a wonder, that more farmers do not avail themselves of a day or two at East Lansing, during Farmers' Week each year. It comes at a time of year when farmers can most easily leave their daily work. It serves to break the long monotony of the winter. It's a good thing to do for mother or the older bys or girls at home. This year they had a registration of between three and four thousand, probably sixty per cent of whom were men and women who earn their living from farming exclusively. All the live-stock and crop improvment association meetings were well attended.

If the college wants an attendance of ten thousand farmers next year, The Business Farmer offers the following suggestions: (1) Aggressive advertising and publicity, the same as is given the state and county fairs. (2) Special trains on every road into Lansing, leaving the end of the line early enough in the morning to arrive in Lansing for the first meetings of the day and return at night after the evening meeting is over. The special fare and a half rate should induce a large crowd, if they were not obliged to stay over night in Lansing. (3) For this purpose one big day, say Thursday, in which morning, afternoon and evening meetings were devoted to the top-notch speakers. Association and other meetings all on other days.

Farmers' Week can be made the biggest thing in Michigan for the farming business and this first year under the direction of Dr. Friday, with the help of his very able staff, was a long step in that direction.

FARM LOAN ACT JUSTIFIED

THE Billion dollar mark in loans to farmers through the federal farm loan system is in sight. At the close of business December 31, 1922, the total of loans closed by the federal land banks and joint stock land banks since organization was $890.506.782. More than 250,000 farmers have borrowed at these banks. The federal land banks lend in every one of the forty-eight states, while the joint stock land banks operate in thirty-nine states.

The federal land banks, co-operatively owned, furnished the farmers of the country more than $681,000,000 of credits, while the joint stock land banks supplied $209,000,000.

While the first loans made through the system were placed in 1917, it was in 1922 that it experienced its largest growth, when nearly $350,-000,000 of loans were made, of which nearly $230,000,000 were through the twelve federal land banks and over $120,000,000 through the joint stock land banks. The great volume of business since organization justifies the expectations of the farmers of the farm loan act, and is evidence that the farmers use extensively both branches of the system.

THE JOINT STOCK LAND BANK

FROM the published reports of the total loans made by both branches of the Federal Farm Loan System. it is apparent that Michigan has been laggard in its use of the facilities offered by the Joint Stock Land Banks.

Out of a total of $10,579,640 borrowed by farmers of Michigan from the inception of the system to December 31, 1922, only $59,600 had been borrowed from the Joint Stock Land Banks, altho in states like Iowa and Illinois, the same report shows that more money has been borrowed from these than from the Federal Land Banks, altho they are both operated under control of the same act.

There are advantages, which were well planned by the framers of the Farm Loan System to both divisions of this service. It is obvious that the farmers of Michigan are not acquainted sufficiently with both systems, to judge between them. We will be glad to answer questions of our readers who are contemplating loans from either branch.

The appointment of Honorable L. Whitney Watkins of Manchester, to be commissioner of the state department of agriculture, filling in the unexpired term of John A. Doelle, who leaves to become associated with the Federal Land Bank at St. Paul, will meet with the approval of most farmers in Michigan. Mr. Watkins will not resign his position on the Board of the Agricultural College, nor should he. This will mean that practically all of his time will be devoted to the farmers problems at Lansing. The Business Farmer assures Mr. Watkins of an earnest desire to co-operate in making his department all that it should mean to the farmers of this state.

* * *

The story is told of the down-south coon dog that sat out in front of a store howling pitifully. A traveling man asked the village-loafer what made the dog howl so. "Sure, Sah," he replied, "that 'er darg is a'sittin' on his own tail, but he's too dorned lazy to get offen it!" There are some senators who find it easier to howl, than to make efforts necessary to actually help the farming business.

What the Neighbors Say

DR. FRIDAY MISQUOTED?

IN a recent issue of M. B. F. you published an article on the whole milk situation of Detroit district in which you made reference to Dr. Friday's decision which gave the producers $3.00 per cwt. for milk during December.

Such advance in price was not only fair and just but lent encouragement to many who had become discouraged.

Recent reports would indicate that he favors a cut of 50c per cwt. to the producers in order to give Detroit consumers milk at 12c per qt.

Dr. Friday allows that in several districts producers are receiving $3.40 to $3.60 per cwt. whilst consumers pay but 12c. Knowing as he must, what conditions of laboring classes are better in Detroit than any other industrial center of the U. S. (Men as a whole boasting of high wages received.)

We fail to understand why he chooses to favor Detroit dealers and consumers at the expense of the farmer who is struggling against great odds to make ends meet.

If Dr. Friday is really interested in the welfare of farmers, we feel confident he will use his good office in our behalf that we also may become something more than mere servants for Detroit consumers.—J. B. Younglove, Monroe County, Mich.

—The inference that some city papers gave, that Dr. Friday would give the consumers 12c milk at the expense of the producer was not correct. Dr. Friday, represents the farmers of Michigan first and in his present investigation, he hopes to prove that the cost of distribution is unjustified and should be split in a saving to the consumer, which would increase the demand for milk and a greater price to the producer, which would increase the production.

AGAINST CHANGING PRIMARY SCHOOL LAW

PLEASE print the following resolution in the Business Farmer at your earliest convenience:

Whereas; Two bills will be presented to the present session of our State Legislature for changing the Primary School Law.

Whereas; The present law is an equal benefit to all.

Whereas: The proposed change would benefit some, and harm others.

Therefore; Be it resolved that the Fayette Grange No. 1368 of Fairbanks Township, Delta County, hereby puts itself on record as being opposed to any change in the present Primary School Law, and that we respectfully urge our representatives in the legislature, Hon. Edward R. Carter, and Hon. Frank Bohn to oppose any change in the present Primary School Law, and that copies of this resolution be sent to our above named representatives.—Fayette Grange No. 1368, Marie Peterson, Secretary.

MANISTEE BEETS STILL IN GROUND

THE sugar beet question is again about to get another airing out. I wish to inform you that the farmers of Manistee township had the pleasure of growing sugar beets last year and some of them made barrels of money and others are going to make barrels of money when they dig their crop in the spring.

One of my neighbors contracted one-half acre and he raised one full wagon load which netted him $5.00 and some odd cents, others did equally as well. Another farmer done his weeding with a spring tooth harrow and planted corn for a nurse crop. The best field of sugar beets that was grown here is left in the ground for the company to come and get them, but the company has not come; $5.50 per ton was their price.

One day, last April, the agent called on me accompanied by one of our farmers, a member of the Grange, and a "knocker" of the Farm Bureau, and tried to write me a contract for beets. We had a real conversation and it ended up when I told him to go back home and fix things up with the fellows that were dissatisfied and by doing so he would get the required acreage. He insisted that the growers had got independently rich in growing beets and now they didn't know what they wanted, so I had to tell him what the growers wanted and when they got it (a fair deal, 50-50) to come and see me. He bid me good bye and we shook hands over a barbed wire fence.

I wish to ask one question: "Are the beet growers organized?" The reason I ask is because I talked the matter of growing sugar beets with our county agent as he was in favor or having them tried out here at $5.20 per ton. He insisted the growers were not organized and said that he would organize them here, but there's one thing I am sure of when it comes to organizing the sugar beet growers here he will have to get out a bench warrant to find the growers.—Joe Switalski, Manistee County, Mich.

PAY EACH WHAT HE EARNS

I WOULD like to say a word in behalf of "Mr. Warnock" of Presque Isle county. I think he has struck the nail on the head. When everything is run economically, and for the benefit of all not for a few, then the people in general will have some heart to work. Let everyone get paid for what they produce. If it's $5 or $10 per day let it be that and no more, and those that do not work with hand or brain, that is, those that are able to perform a day's work, and those that will not work, shall not eat. Not let a few "stalwarts" be the means of impoverishing the many, same as our system is composed today. A few rides the backs of the many, get their living by the sweat of some other one's brow. You can call it what you are a mind to but that is the only remedy.—S. H. Slagle, Harrietta, Mich.

—Over in Russia right now they are having an interesting experiment right along the line which Mr. Slagle suggests in his letter above. Everything was usurped by the revolutionary government. The rich class or so-called aristocray of Russia was driven penniless into the streets from their homes and palaces. The czar, his family and many, many thousands of men and women and children were murdered in cold blood. The government took over all industry and incidently, demanded of the peasants, who filled the soil, a part of all they raised. All men were supposed to be equal. The government took all and provided all. Incentative, ambition and success are unknown in Russia. How has this Utopia worked out?

The communists have killed more people in their five years in power than the czars did in fifty. Russian money is valueless. America has been feeding 11,000,000 starving Russians and more than that number have died unfed. Conditions in Russia can hardly be described. Many hundreds of misled persons, who believed everything was wrong in these United States, left here and got into Russia one way or another. Once in awhile one of these deluded persons escapes out of Russia or smuggles a letter home to friends. If you have any idea that a revolution would make the United States a better place to live and work in, if any red-flag waver has touched home in your heart with one of his lies, go to a library and get all the information you can on what has happened in Russia. It ought to cure the sensible people of the world from following hair-brained fanatics for several generations to come. Step by step, America is leading the world towards the perfect form of democratic government, but a jump towards the millenium will land us where Russia is today—in the scrap-heap!

POISE

An apt definition of poise is: The quality that keeps a hostess smiling when a departing guest holds the screen door open and lets the flies in.—Everybody's Magazine.

IF YOU HAVE ONE—TELL US!

As it is getting difficult in many counties to find qualified men who care to serve as commissioner of schools, may we not have some articles from people living in counties having women commissioners who are getting good results? Subscriber, Petersburg, Mich.

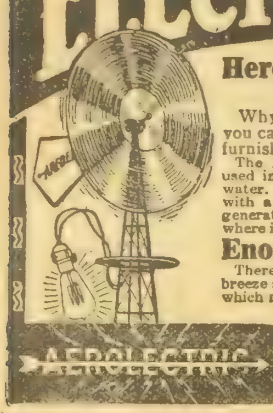
ELECTRICITY From The WIND!



Here's Electric Light and Power FREE!

Why pay for costly gasoline and fuss with a stubborn engine, when you can erect an AEROLECTRIC in your own yard and let the wind furnish your electricity free?

The Aerolectric is built on the windmill principle but with the same precision used in the automobile industry and it generates electricity instead of pumping water. It is a complete electric plant and has a 14 ft. Perkins Windwheel equipped with a built-in Westinghouse generator. When the wheel turns in the wind the generator makes the "juice" and sends it along a wire to the big storage batteries, where it is stored, ready when you need it, for either light or power.

Enough "Juice" for 11 Days Without Wind

There is always wind enough for current. The generator charges in as faint a breeze as 6 miles an hour, and even if no wind blew for 11 days—a condition which nevers happens—the big batteries have stored up enough "juice" to run you.

BOOK FREE "Electricity from the Wind"

Send for the interesting story of Aerolectric—read all about this wonderful invention. Write today for your co[illegible]—it's FREE.

Perkins Corporation, 923 Main St., Mishawaka, Ind.

DEALERS: Sales possibilities are big. Write for proposition.

Every crib chockfull

Every bin running over—the Solvay-limed farm is known by its bumper crops. Pure, soluble Solvay lime is ground fine and feeds easily through drill or sower; sweetens the soil to rich fertility. Guaranteed high test 95% carbonates, furnace dried, non-caustic—safest, cheapest.

Ask for Solvay Booklet about lime and how to use it. Sent FREE.

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

SOME NEW APPLES

THE Delicious may still be classed among the new varieties, though it is now widely known and deservedly popular. The large demand for the trees which nurseries have reported make it evident that within a brief time the fruit will be one of the common apples in the Great Lake district, but that need discourage no one. It is impossible that the supply will equal the demand for years to come..

While the fruit has received most attention as a dessert apple, it has other uses as well. It is not trat enough for sauce and pies, but for baking it has few equals. Indeed, if anything can bring the baked apple into the place it deserves on the American table it will be this variety.

The tree is a good grower when on heavy soil, but not one of the early bearers. However, if one has thrifty stock of any kind he need not wait long, for the Delicious responds generously and quickly when top worked. This is something that has not received the attention it deserves. Large trees of undesirable varieties, so long as the wood is sound, can by grafting be changed into profitable members of the orchard in three or four years. There are many such trees. The coming spring will be a good time to begin.

Golden Delicious

The Golden Delicious is correctly named, in so far as the apple is concerned, but names so nearly alike for two distinct varieties are liable to cause confusion. The apple is a golden yellow and the flavor fine. Really, it seems as though it might have stood on its own merits, instead of borrowing from another variety by having 'Delicious' tacked upon it.

To most persons the Golden Delicious is known as a highly advertised possibility. Those who have really become acquainted with it have found the fruit a high quality and a good keeper. The tree is a wonderful grower and an early and abundant bearer.. When top-worked on strong stock it has produced apples the second year of grafting.

The value of the tree for a commercial orchard is still in doubt. Such a rapidly growing and early maturing tree may be short lived, or it may be a poor bearer as it grows older. Too much should not be expected, but it may fall far short of the claims made for it and still be a desirable variety. That it will take the place of the time tried Grimes Golden remains to be seen.

Whitten

The Missouri Agricultural Experiment Station has brought out a new apple, the result of cross fertilization 13 years ago by Dr. J. C. Whitten, using pollen of the Delicious upon Ingram blossoms. The variety has been named the Whitten. It is said to possess the size and shape, sweetness and aroma of the Delicious, also the firmer and jucier flesh of the Ingram, a combination which is hard to improve upon. By some special freak of fortune, late-blooming is added to the other desirable qualities.

The Whitten is a promising variety, but is not to be recommended for commercial planting until further test has been made, for which purpose scions or to be distributed among the apple growers of the state. The results of the coming four years will be awaited with interest. The variety may prove a valuable addition to the list of apples, or it may develop weak points that will make it useless. After so many years of waiting it is certainly to be hoped that the propagator will not be dissappointed.

ROOT GALL

IS root gall injurious? The nurseryman says it is not, the orchardist says that it is, and each prove his point by examples.

Several years ago a Michigan nurseryman selected the worst specimeans of gall he could find among his peach trees and planted them on sandy ground. They grew, bore three good crops, then were killed by a severe winter. After standing seven or eight years they were pulled out. No galls were found on the roots.

A similar test was made by a Missouri nursery. Two rows of apple trees were planted, one composed of badly diseased specimens, the others being clean. After twenty years there was no difference between them.

A pioneer nurseryman of Michigan stated that when he began business in the early fifties, trees with bunches of fibrous roots were at a premium. Nobody had heard of gall in those days.

Infected trees had been planted that had developed into thrifty, productive orchards that had stood for 60 or 70 years.

Against this evidence the orchard man puts his experience. Some of his trees have been weak, sickly or have died, the first or second year after planting. On digging them up he found galls on the roots, sometimes many and large, so that it is hard to convince him that they are harmless.

From the evidence thus far submitted it may be concluded that the gall may kill a tree or it may not. If it can easily be cut or broken clean from the root and the tree is otherwise healthy and viborous it will probably overcome the disease, but it is not safe to plant a tree with a large gall at the crown or on a main root, which has become insparable from the wood. Such trees are liable to die the first or second year.

It is unlawful for nurserymen to send out trees with galls on them and pay for such stock cannot be collected. But these much abused gentlemen should not receive too much blame. Reputable firms carefully guard against sending out undesirable stock. Nevertheless, some trees will be overlooked by the best of sorters.

The nurseryman has many troubles of his own, so it is no more than fair to suppose that the poor fellow is doing the best he knows how. If anything is wrong with his stock he should be treated honestly and given a chance to make good.

BUSH EVERBEARING STRAWBERRY

Can you tell me anything about the Bush Everbearing Strawberry? Do you think it is worth planting? Is it really a strawberry or what is it?—R. A. P., Akron, Ohio.

—The strawberry in question we have not seen, but reports regarding it are not favorable. Are any of our readers acquainted with this "wonder?" If so, we shall be pleased to hear from them. Meanwhile, go slow in planting it.

PORTER "Dependable Since Sixty-Eight"

PUBLISHER'S DESK

DID McRAE "SELL" YOU OR YOUR FARM?

SINCE last November we have had under investigation the Warren McRae Farm Agency, of Logansport, Indiana, who judged by the number of inquiries that have come from our readers, must have been carrying on extensive advertising, principally by mail, to the farmers of Michigan.

When the first of his circulars was sent us by a reader, we read them, saw that they resembled a class of so-called "farm agencies" who usually advertise under assumed names as "farm buyers," so we wrote asking for their references and also the names and addresses of Michigan farmers who had sold farms through their agency.

Some weeks passed and a letter finally arrived from Mr. McRae, in which he stated, "this is a new agency and has only been operating a few weeks. We have not made any sales as yet, but have several very good prospective buyers." A bulletin of farms offered for sale was enclosed and we wrote the four Michigan farm owners who had, presumably accepted Mr. McRae's proposition and sent him $10 each, to have him list their farms.

One answered: "I have not sold my farm, nor had any prospective buyers from the Warren McRae Farm Agency, however it was late in October when I listed with him." Another: "I have not heard a word from Warren McRae since the listings were given, nor of any of his so-called buyers he writes about!" The third answer said in part: "I was overloaded and needed the money badly, therefore the ridiculously low price, as it was cash that I wanted and still do want, as I must sell this property to save some other property. So he sent me a special delivery letter asking me if I still had the 880 acres and if so he would send me a buyer. ***But I have not sold it yet and the buyer has not arrived!"

Mr. McRae's letters, which many of our readers have sent in are really very clever. One letter starts off, with the address and Dear Mr. Blank, filled in by a typewriter on an imitation typewritten letter, signed in ink, supposedly, by none other than Warren McRae himself:

> "Dear Mr. Blank:—
>
> "The writer had the pleasure of visiting your section a short time ago and was very much impressed with your farming community; also the low price that farm land was selling for.
>
> "Upon his return to this State he got several of our good Indiana farmers interested in your neighborhood. These are all good farmers and hard workers, but want to get away from the high-priced land. Most of them have several thousand dollars to invest and will be ready to do business within the next sixty days.
>
> "If you are looking for good, quick sale, kindly fill out the enclosed listing form and return to me with the regular listing price of $10 and I will send the buyer direct to you and notify you when to expect him so you can meet him at the station. In case the first one does not buy, please let me know and I will keep on sending you buyers until you do make a deal.
>
> "I do not care to charge this listing fee, as I make my profits on commissions, and would not have to do so if every one was on the square and meant business, but as we do not have a representative in your section we simply have to protect ourselves against triflers, curiosity seekers and men who try to get twice what their property is worth. This listing fee is simply a guarantee of good faith and will be returned to you when your property is sold.
>
> * * * *
>
> "I only want a limited number of farms in your section for my clients that are ready to buy at once. When this number is listed the above offer will be withdrawn. Some of these buyers will want possession at once and others in the Spring. The time to sell is when the buyers are ready to buy. If you are going to be one of the lucky ones act at once."

Mr. McRae certainly lets no grass grow under his feet, for when our reader did not rush his hard-earned ten-spot back by the next mail, he received this letter dated only three days after the first.

> "Dear Mr. Blank:—
>
> "Mr. M. A. Brown is very much interested in Michigan farm lands and is doing to take a trip with his car some time within the next couple of weeks through your section.
>
> "Mr. Brown is a well-to-do farmer living in the Northern part of Cass County, Indiana. His son and a couple of friends will go to Michigan with him. Mr. Brown does not want to buy a farm for himself, but will help the other boys select a good farm home. He also informed me that there are other men in his neighborhood that are looking for farms in a cheaper section. I will call on these men at once and try and get them interested in your section as the land is a great deal cheaper there than it is here.
>
> "Some of the people that I have interested in Michigan farms were under the impression that most of the farms that I have listed were misrepresented because I did not personally inspect them myself, but when I explained that I charged a listing fee and that no one would pay a listing fee unless they really meant business and were anxious to sell, they were satisfied and are willing to spend their money to make the trip and investigate. In case these people does not buy please let me know and I will keep on sending you buyers until you make a deal.
>
> "Please hurry your listing along as I would like to get a few more listings in your section before sending the buyers."
>
> Very truly yours,
> Warren McRae.

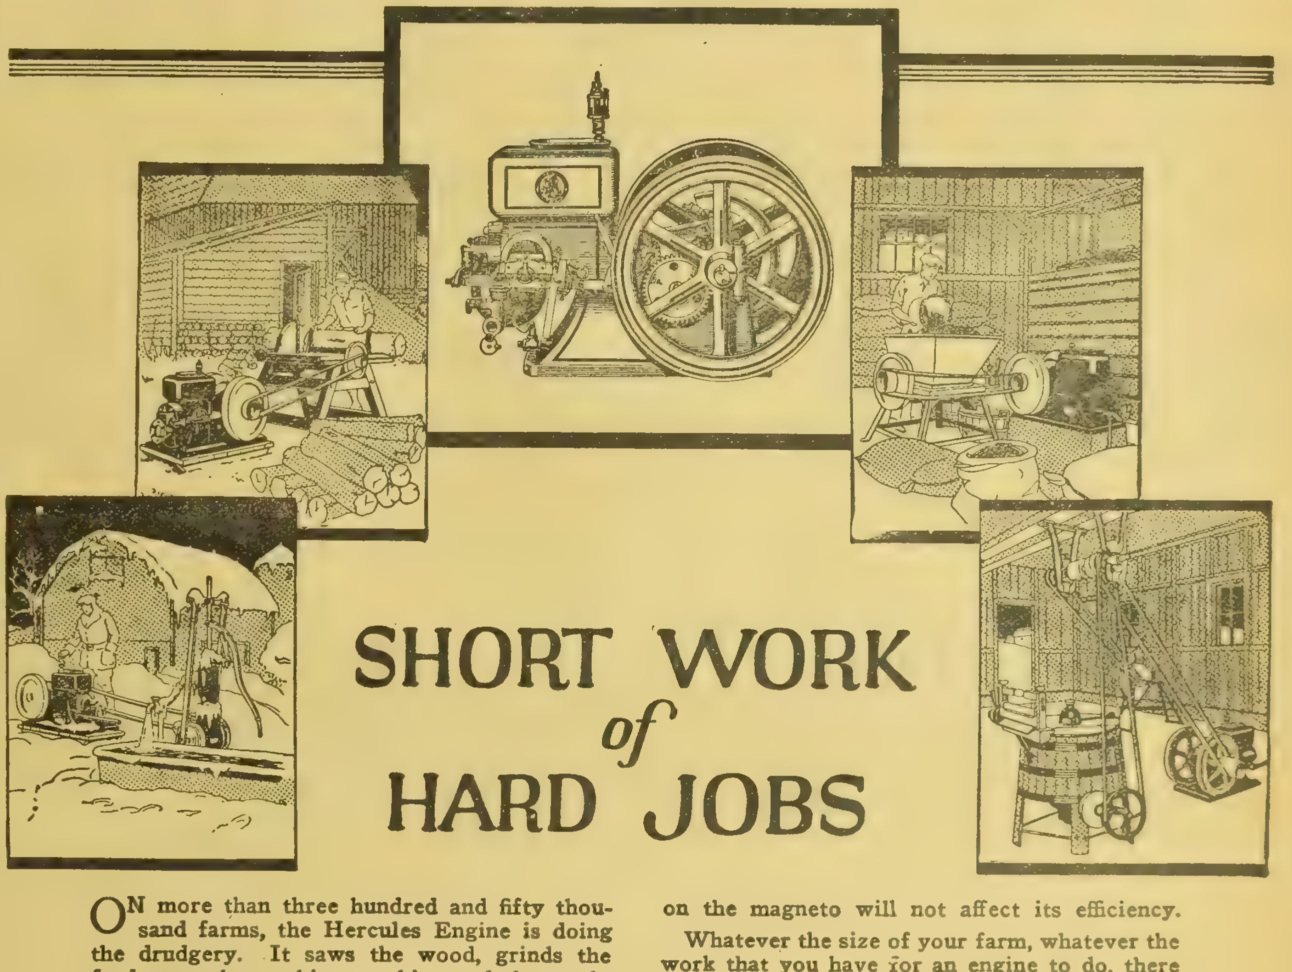
We would be interested to know if any of the readers of The Business Farmer, have sold their farm thru the McRae agency, to Paul Paulinski, of Logansport, Mr. McRae's home city. As recently as January 11th, Mr. McRae wrote one of our readers:

> "Mr. Paulinski of this city has just recently sold his farm for $400 per acre and we have him interested in Michigan as he wants to buy where land is cheaper than it is here and where land will increase in value. Mr. Paulinski is mostly interested in a well improved farm with good buildings and will pay cash for anything that suits him. He also will consider a couple of small cheap farms that can be bought right for speculation. Mr. H. L. Skinner has also just sold his farm and will be leaving for Michigan within a few days. We have several renters that will be buying Michigan farms between now and March 1st."

But the most recent disclosure, vouched for by one of our readers, is that Mr. McRae is so determined not to loose his postage, that if you do not send him $10, he gets impatient and cuts his regular listing fee to $5, and then—becoming desperate at your lack of appreciation of his offer to turn your farm immediately into golden cash, he cuts his listing fee to $2.50! But read our subscribers letter:

> "I am a subscriber of your paper and like it very much. I would now like to ask a favor of you. Could you find out for me if the Warren McRae Farm Agency, Logansport, Ind., is a swindle or are they working in good faith. I received a letter for them last Sept. claiming they had been in this locality and were delighted with conditions here, etc., and with a listing fee of $10 would guarantee a sale within 90 days, for which they charged 2½% commission. The $10 to be taken out of the commission at the time of sale. I filled out the blank for listing but told him I would deposit the $10 here in the bank in his name. If he sold the farm within 90 days I would give him the $10 besides the commission, and if he sold it within 60 days I would give him $15 besides the commission, but I could not send him the $10 as I must protect myself from fraud.
>
> "They did not answer this letter. After a little while I received another letter saying that for a certain number of days they had cut the listing fee to $5 and urged me to act quickly as they knew of men with means who wished to buy farms. I did not answer this letter. After a while I received another letter saying that for a certain time cut the listing price to $2.50. I filled out another blank taking more pains and telling things I neglected in the former.

(Continued on page 23.)



SHORT WORK of HARD JOBS

ON more than three hundred and fifty thousand farms, the Hercules Engine is doing the drudgery. It saws the wood, grinds the feed, runs the washing machine and the workshop, turns the grindstone, pumps the water—does all the wearing work that costs so much in effort and wages.

An all-weather engine is the Hercules. Winter and summer, day in and day out, it sticks to the job — consistently, uncomplainingly — until the work is done.

The Hercules is equipped with latest type of magneto. Out-of-doors in rain or snow it keeps the engine at work. A stream of water directly on the magneto will not affect its efficiency.

Whatever the size of your farm, whatever the work that you have for an engine to do, there is a Hercules for the job. They range in size from 1¼ to 12 H. P., both gasoline and kerosene. Each one of them is the same in sturdy construction and excellence of workmanship—each backed by the five-year guarantee.

It costs you no more to own a Hercules. In fact, the initial cost is less than that of most standard makes of engines.

There is a dealer near you who will gladly show you the Hercules and explain it. Write us about your power problems.

If Ruptured Try This Free

Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands

Sent Free to Prove This

Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 408B Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers from a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risks just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.

AN AGRICULTURAL PROGRAM FOR AN INDUSTRIAL STATE

(Continued from page 7.)

agriculture within the state are directing their efforts. When the program has been carried out the industrial cities and towns of the state should be more abundantly supplied with food products of a higher quality than they have ever enjoyed before. These should be furnished to them at prices that are reasonable and that will pay the farmer a profit far greater than he could make by producing for the foreigne market. This is Michigan's program for taking her farmers off the international market.

The other source of relief for the farmer is to be found in his costs of production. These are, upon the whole, far larger than they need be in view of the advance which scientific agriculture has had and of the methods which our best farmers are practicing. An industry may prosper, even when prices are falling, provided it can reduce its costs. The automobile industry is a good example; it is selling its product at less than prewar prices, yet is is one of the most prosperous lines of business today.

Though it is impossible to prove absolutely that the prices of agricultural products may fall during the remainder of this decade, it would be the sheerest folly to base any agricultural program upon an assumption of rising prices. Even now prices of agricultural products are twice as high as they were during the '90's, and 60 per cent above the decade of 1900-09. They are 38 per cent higher than they were in the five-year period of 1910-14. The gross value of agricultural output in 1922 is 65 per cent higher than in the half-decade 1910-13. Though the prices of farm products may attain a level slightly higher than at present, there is no reason to expect any pronounced or constant rise during the remainder of this decade. Profits must be increased, if at all, through the reduction of costs.

Checking Up Hens and Cows

Fortunately this is quite within the mounds of possibility. To anyone unacquainted with the technic of scientific agriculture and with the practices of our best farmers, it is startling to learn the wide range of difference that prevails among the productive units with which the farmer carries on his business. An ordinary flock of one hundred hens normally contains thirty that lay no eggs whatever. A man trained in poultry can discover these by inspection. If these hens are segrated the seventy remaining ones will lay as many eggs as did the one hundred. The average production of such a flock will be about 600 dozen eggs a year. Obviously the mehe elimination of the culls has increased the average production per hen from six dozen to almost nine: and it has decreased the cost of production by approximately one-third. Furthermore, your poultry expert will find ten hens out of the flock whose everage egg production is around twelve dozen. If these hens are segrated and supplied with a cockerel of a high-producing strain the chicks from these eggs will not contain more than 10 to 15 per cent of culls. If this process if culling is repeated during a period of three years the average production of the flock will increase from six dozen to more than ten dozen eggs, and the cost of production will be correspondingly reduced.

There are further important economic differences between the output of an ordinary flock of hens and of one that has gone through this process of evolution. A hen that lays only six or seven dozen eggs will produce most of them during the months from March to June inclusive. Even the crows lay eggs at this season of the year, and it is the season of overproduction and low prices. The hen whose production amounts to twelve dozen or more a year will produce a substantial portion or her output during the months from November to February. This is the season of the year when the demand for eggs must now be satisfied largely out of cold storage eggs, and fresh-laid eggs bring a fancy price. The output of a hen that lays twelve dozen eggs will ordinarily sell upon the market for three times as much as that of the one that produces only six dozen.

Michigan has 10,000,000 hens, and they now produces 60,000,000 dozen eggs. It has on its Agricultural College faculty one of the ablest poultrymen in the world. There is no reason why a like number of hens should not be producing 100,000,000 dozen eggs by the end of three years. To accomplish this we must have a tremendous campaign of education which shall aim to reach practically all the 196,000 farmers in the state. This will cost $50,000 a year for the next three years; and the legislature will be asked to appropriate this amount within the next few months. Surely there can be no question about the wisdom of the expenditure, for if the program succeeds in accomplishing only half what is hoped for, it will increase the income of the farmers from this source alone more than $6,000,000 a year.

At this point someone is sure to raise the objection that such a campaign of efficiency in production is self-destructive for the farmer because it will increase production to the point where the decline in price will offset the decrease in cost. Though this will benefit the consumer it does not necessarily help the poultryman; indeed his last state may be worse than his first. And this might be the case if this were a program for the whole United States; but we are formulating a program for only a single state. Besides this, the methods here outlined will probably be applied quite universally within the next decade. The road to success for any one state in such a situation is to enter upon the program first and to push it more vigorously than anyone else, for a general improvement in the methods is bound to lower prices. Profits can be maintained only if the reduction in costs proceeds as rapidly as the fall in prices. Time is of the essence in this situation, so that those who start earliest on a campaign for cost reduction will find that their profits are increased. Those who reduce their costs only when they are forced to do so by competition will suffer a decline in profits.

The situation in the dairy industry illustrates well the possibilities of reduction in costs. The State of Michigan has 800,000 dairy cows two years old and over. They produce 3,600 pounds of milk, on the average. The total output for the state, therefore, is somewhat under 3,000,000,000 pounds. This average of 3,600 pounds is made up of cows that give 20,000 pounds of milk a year, and of others that give 16,000 and 12,000 respectively. There are large herds in the state that average 10,000 to 12,000 pounds of milk a cow. No man is considered a successful commercial dairyman unless his output averages 6,000 pounds an animal. And yet it must be quite obvious that if there are many cows which produces 6,000 pounds of milk or more, at least half of all the cows of the state must yield less than 3,000 pounds, in order to bring the average down to 3,600. These cows that give so low a yield are being fed and cared for at a loss. Much could be accomplished to increase production and decrease cost through better feeding; but no phenomenal decrease in the cost of milk can be obtained until 400,000 scrub cows that are now grafting upon farmers' time and effort are eliminated and replaced by animals of superior breeding.

Raising the Average of the Herd

To accomplish this is undoubtedly a slow process, for it involves testing all our dairy herds with a view to discovering the unfit individuals. Two hundred thousand cows are so poor that they can be eliminated simply by inspection. If we can induce our farmers to sell these for beef during the next year or two, and to practice better feeding, we shall probably produce as much milk with the 600,000 cows remaining as we are now getting from the larger number.

But the great improvement must come from superior selection and breeding. It is nothing more or less than a problem in eugenics. These grafters, or scrub cows, are what they are very largely because they are the offspring of scrub sires. Fortunately, monogomy does not prevail in the dairy industry, so that it is possibly to attack the problem simply through the sire. There are at present 24,000 dairy bulls in the state. Of these, 16,000, or two-thirds, are scrubs that are not fit to be fathers of dairy cows. If they can be eliminated within the next year or two and replaced by pure-bred dairy sires of good breeding, an immense step will have been taken toward a reduction in the cost of producing dairy products in the future. The Agricultural College, through its extension department and the county agents of the state, has for some time past been planning a state-wide series of bull funerals for these scrub sires. The plan is to have these animals brought to the market and sold for sausage meat, and to leave in each community at least one pure-bred sire of good lineage. There-after there must be an intensive campaign for the elimination of scrub cows and for better feeding. Such a campaign should increase the net profits of the dairy business by $15,000,000 a year during the next two years, and by twice that amount in four years.

The crux of these programs for the lowering of production costs is the fact that the efficiency of the individual productive unit varies so widely. This is a stubborn physical fact, the economic implications of which are of tremendous import. The productive capacity of hens varies from 300 eggs down to zero. Even the ordinary flock will vary from 180 eggs to zero.

This variation is by no means confined to the animal kingdom. It holds for seed quite as truly. The necessity for selection there is just as great and the possible results are just as striking as in the animal kingdom. The situation prevails even as between two crops. There are more than 1,500,000 acres on old and established farms in the state of Michigan which do not produce crops worth ten dollars an acre, but which should produce annually thirty dollars' worth of alfalfa. Besides producing a profitable forage crop these old and run-down soils would be renovated and restored. At present there are only 350,000 acres of alfalfa in the state. We must have an aggressive program directed to the sowing of 400,000 acres a year for the next four years. Michigan can raise alfalfa profitably at a price that is no greater than the cost of freight and handling charges from the points where it its supply ns now grown to the point of consumption within the state.

No doubt the reader has questioned before this why it is necessary to formulate programs and legislate public money to put into effect practices that are sc obviously to the benefit of the individual farmer. If the question is one of defending the use of public money for the promotion of more economical production of agricultural products the answer must be that an abundant food supply at a cheap price is a matter of public interest for which it is quite legitimate to spend public revenue. It must always be in the public interest, too, that the production of public necessities that go to make up the standard of living, whether food, clothing or shelter, shall be effected with the minmum of toil and labor.

If the problem is not that of defense, but of explaining why the farmer has neglected to do of his own initiative what is so obviously to his own self-interest the answer will be found in the nature of the organiza-

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

tion that prevails in the agricultural industry. The average manufacturing establishment in Michigan employs more than sixty men. Its output is sufficient to enable it to pay for all the materials it uses, and to leave $150,000 for the payment of salaries, wages, taxes and interest, and to provide for depreciation. What remains constitutes profits. The organization of the farming industry is very different. There are only 35,000 people engaged on our 196,000 farms; and this number includes the farmers themselves. Their average annual sale of products does not, at this time, exceed $2,500 a farm.

Expert Guidance Needed

It is clear that most of the manufacturing establishments have enough at stake and command an income that enables them to employ managers and professional men who shall keep the processes of the establishment abreast of the discoveries made by science pertaining to the line of manufacture in which the concerns are engaged. As long as we have research laboratories and technical schools we shall have a continually advancing body of knowledge and a supply of professional men who stand ready to sell their services to those who desire the latest advances of science incorporated in the art of manufacture. Ordinary commercial motives move the individuals concerned to avail themselves of the services of these men.

But in agriculture, where the farmer is not only manager of the establishment but constitutes its chief laborer as well and where the gross money income is less than $2,500, it is apparent that the individual farmer will not hire the services of scientists and other professional experts. Something can be done in this direction by co-operation, but for the most part ordinary commercial processes, under the urge of self-interest, will not insure that the advances made by scientific agriculture are incorporated in the every-day processes of farming. If they are to be so incorporated this must be accomplished in pursuance of public policy and at public expense. Our agricultural colleges are not only institutions of research and learning; they, through their extension departments and the county agents, must render to the agricultural industry a professional service comparable with that which the manufacturer hires upon the market. No industry organized on the small scale that prevails in agriculture will keep pace with the rapid progress of our modern world unless this public service is rendered it.

In the past the knowledge of the scientist and the practice of the best farmers have been incorporated into the industry all too slowly. The reason has been that the various institutions charged with this duty have used almost exclusively the methods of education. They have printed bulletins and sent them to those who wrote in concerning their problems. If no bulletin answering the inquiry was available the technical expert in whose field the problem lay wrote to the farmer. If the problem was new and of sufficient interest, field men were sent out to conduct research on the spot. In this manner only a very small number of the managers and operators of our farms have been reached. The average farm still lags far behind the best practice, and has availed itself to a disappointing degree of the best that is known about agricultural production.

Co-operative Effort

Of late the Department of Agriculture and the colleges have supplemented these methods of education by the methods of publicity and propaganda. Michigan expects to rely upon these methods to a large extent in carrying through its program for taking the farmers off the international market, and for reducing their costs of production. They must have skilled assistance in analyzing their local markets, which have grown so rapidly and become so complex that the average farmer can afford neither the time nor the money for their analysis. They must have continuous and effective agricultural research, and they must have a profession of adequately trained agricultural specialists. But beyond this they must be made conscious of the possibilities that await the man who will readjust his production to the new demand that has grown up at his door. He must be made to realize the wastefulness of his productive methods and the possibility of reducing his costs and increasing his product by the practice of better ones. To accomplish this the farmers must be organized into groups along lines of their common interest. Each of these groups must set up for itself definite ends for realization.

It is just at this point that the co-operative spirit which has been so greatly in evidence during the past few years will find its chief field of activity and usefulness. People must be made conscious of this program, of its value, and of the importance of the methods through which it will be realized. They will be brought to this state of self-consciousness by co-operative endeavor and discussion. Such a program of publicity and propagonda will be expensive, measured by the standards of the past; but it should return twentyfold every dollar spent. In our endeavor to help the farmer we have poured water into the sand in driblets, as it were. We can never create a river in that way.

Political action plays small part in this program. It may just as well be frankly stated that those who have evolved it have but slight confidence in most of the political action that is being proposed for the benefit of the farmer. The spirit of co-operation and of interest in agriculture which led people to political action, and which culminated in the formation of the farm bloc, is significant. It has brought about social cohesion among the group and has stimulated an interest in agriculture that will lead to fruitful activity. Every great intellectual movement must have as its motive power a reservoir of emotional heat. Considered from this point of view our political activity has been of great benefit. Considered from the point of view of any practical legislative suggestions now before the public the results are bound to be disappointing. We in Michigan shall pin our faith primarily to a program that proposes to take our agriculture off the international market, and that looks to the reduction of costs as one of the chief roads to the maintenance of profits.

BEAVER CULTURE

ALTHOUGH the practicability of beaver farming has not been fully demonstrated, the U. S. Department of Agriculture believes that the business of raising beavers for their fur may develop, under proper control measures, into a profitable branch of fur farming. With as small beginning, the enterprise seems to promise an advance to good returns and even greater possibilities.

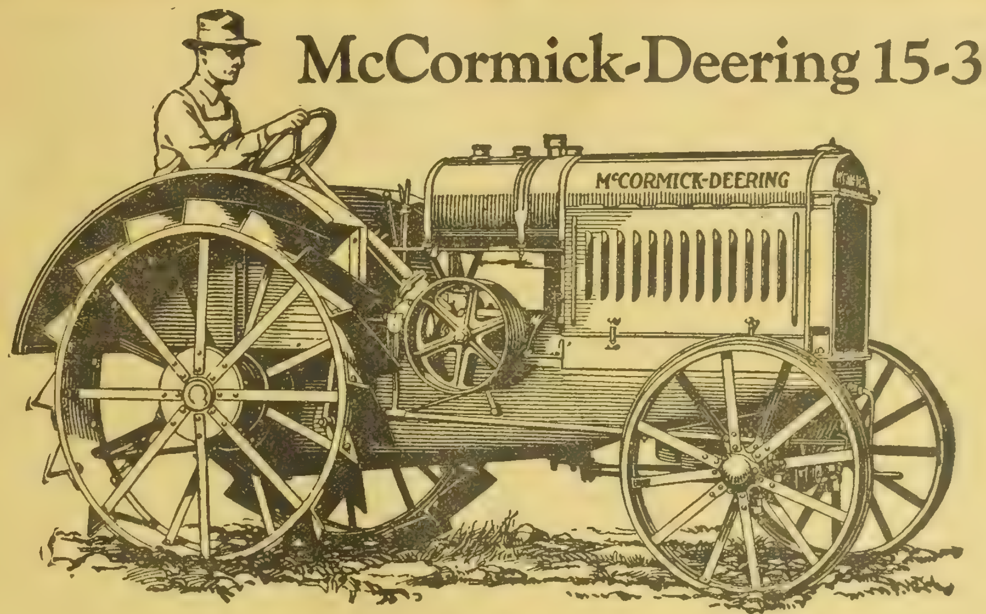
A fertile field for beaver culture may be found in connection with projects for the reforestation with conifers of burned or cut-over timber-lands. Many of these areas, cleared by ax or fire and later covered with a second growth of aspen, willow and pin cherry, are for the time considered almost worthless. Over much of the northern border of the United States and still larger areas of Canada where such land is found it is generally unsuited for agriculture and would not pay taxes until covered by valuable forest timber, but would supply ideal food for beavers, and if stocked with them could be made to yield an income while the process of reforestation is going on.

The animals should not be introduced or uncontrolled into places where their activities may menace irrigation or power ditches, important road or railroad grades, or agicultural districts. A suitable food supply and permanent water should be assured.—Dakota Farmer.

THOSE WHO FAIL

The farmer who takes everything out of the soil, and gives but little back to it; the one who neglects to make the home attractive to the young folks, gradually driving them to the city—all these, and then some, are but examples of farmers who fail to render a maximum they they must give.—A. F. Sheldon.

You can not do wrong without suffering wrong.



McCormick-Deering 15-30

A Three-Plow Tractor With
Ball and Roller Bearings
at 29 Points

In developing the McCormick-Deering 15-30, the Harvester Company has produced a tractor which gives maximum service and economy in operation. The features in design of this tractor are the result of field experience gained through 18 years of contact with tractor farming conditions. Ball and roller bearings have been used at the points of high speed or extreme strain, and all other parts have received the same consideration. The resultant smooth-running, modern tractor meets the many power requirements of the present-day farm.

Practical design, ease of operation and handling, make the McCormick-Deering tractor an ideal three-plow power unit. It also develops a surplus of power to handle a great variety of belt jobs (threshing, silo filling, husking and shredding, feed grinding, etc.) and its smooth, flexible operation and increased speed make it a leader for all kinds of draw-bar work.

You will want to know more about this latest McCormick-Deering tractor. Ask the McCormick-Deering dealer for complete details or write for our new catalog.

HER THIRD BIRTHDAY

By Sir Milliam Watson

(One Hundred Poems)

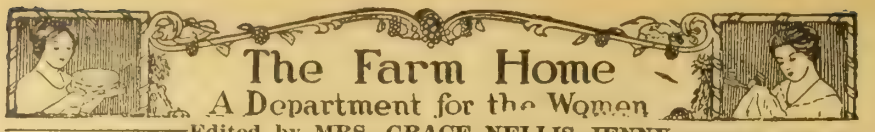
My tiny lady, can it
Be true that you and I
On something called a planet
Are somewhere in the sky?

Yes—and at such a tearing
And madcay speed we've spun,
That you with dreadful daring
Have thrice been round the sun.

Nay it yet more amazes,
That my far-venturing girl
Can be as fresh as daisies
After so wild a whirl!

And now 'neath western billow
The sun is put to bed
And you, too, on your pillow
Must lay a golden head.

Ah, tears—they come so quickly
For grief so quickly gone!
Yet joys have rained as thickly
For you to dream upon.



The Farm Home
A Department for the Women
Edited by MRS. GRACE NELLIS JENNY

THE CONQUEST OF FEAR

I HAVE just finished reading the above named book, written by Basil King and feel that when one has happened upon anything, so reasonable and so convincing, it is selfish not to pass the knowledge of it on, especially as the ideas set forth in the book if put into practice would certainly make many people happier, and as the author says even richer, according to the author.

Anyone and I believe that means every one who fears for his health, his family, or his business, who fears the future, who fears to live or fears to die and who reads this book, with an open mind, will receive some benefit from it.

I am going to print a bit from the first chapter but to give an adequate idea of his philosophy would not be possible in this column. We are neither selling nor advertising the book—I am just passing a good thing along.

"When I say that most of my life I have been a prey to fears I take it for granted that I am expressing the case of the majority of people. I cannot remember the time when a dread of one kind or another was not in the air. In childhood it was fear of going to bed, of that mysterious time when regular in life was going on down stairs, while I was buried alive under sheets and blankets. Later it was the fear of school, the first contact of the tender little soul with life's crudeness. Later still it was the experience which all of us know of waking in the morning with a feeling of dismay at what we have to do on getting up; the obvious duties in which, perhaps we have grown stale; the things we have neglected; those in which we have made mistakes; those as to which we have wilfully done wrong; those which we weary or bore or annoy or discourage us. Sometimes there are more serious things still; bereavements, or frightfully adverse conditions, or hardships we never expected brought on us by someone else.

It is unnecessary to catalog these situations as we at all times in our lives have to face them daily. Fear dogs one of in one way and another, but everyone in some way.

Look at the people you run up against in the course of a few hours. Everyone is living in fear. The mother is afraid for her children. The father is afraid for his business. The clerk for his job. The worker is afraid of his boss or his competitor. There is hardly a man who is not afraid that some other man will not do him a bad turn. There is hardly a woman who is not afraid that the thing she craves may be denied her, or what she loves may be snatched away. There is not a home or an office or a factory or a school or a church in which some hang-dog apprehension is not eating at the hearts of the men, women and children who go in and out.

If, therefore one has the feeblest contributions to make to the defeat of such a foe it becomes difficult to withold it."

This is just part of the opening chapter and from there the author goes on thru 270 pages to give a cure for fear, one that has not only been a curative to him personally but to his knowledge to hundreds of others. He does not claim the ideas are original with him.

They have come from many sources some deep in the past, others of so recent a date that the very day or hour when they revealed themselves is known. He has just put these ideas thru the mill of his own mind developed and practiced them and benefitted to such an extent that he has constrained to broadcast them. The dominant idea on which he builds is, that every one is necessary to his Creator and to his community, each one has a part to play and a destiny to work out and therefore by putting himself in harmony with the plans of his Maker has for him he draws upon such resources as he cannot estimate. He may put himself in a state of mental quiet and trust and draw upon a limitless supply of devine energy, drawing unto himself the health, success and happiness he craves.

BRINGING UP CHILDREN

THIS subject is as old as life itself, animal or human. The dumb animals of the wild train their young and the bear of today is the same in nature as a hundred years ago.

But in the human, well, we hear parents make the remark. I don't know where my children or child got such ideas, I never was that way, showing that there are influences in human life not met with in animal life, or rather these influences are not dealt with in the human as in the animal.. A story will illustrate. Preacher No. one, proud father of a little boy called with his wife and boy on preacher No. two who had two children, boy and girl. When bed time for the children came preacher No. two said to his children, it's your bedtime now, put away your playthings and get ready for bed. They immediately complied without any resistance. Whereupon preacher No. one remarked to preacher No. two. will they always do that? to which preacher No. two replied "Will they." We furnish the will, they do the rest. The point is parents do not furnish the will while the child is yet too young to judge and use his will correctly. We furnish them a home, clothes, food; watch over them and guard them against injury, why not furnish them the will while they are dependent little folks. We mistake temper for will. Temper is a good thing, in steel it is a condition for which steel has been brought by a process of heating, cooling and drawing until we know just what its temper is. Until then it is of no use. So with children. We can help temper them.

Remember that every proclivity a child displays is the direct product of their subconscious mind and this product is in turn the result of repeated thot of their forbears.

What I am in my subconscious mind up to the age of reason is what as before stated was the oft repeated conscious thot of my progenitors. What I am in my subconscious mind after I reach the age of reasoning is what I allow to reach my subconscious mind, thus there is a great work for us to begin at that age, take an inventory of our proclivities and if we find there undesirable ones, supplant them with desirable ones, always remembering the law that two things cannot occupy the same place at the same time. Understanding and doing this work in myself I can start the work for my children earlier in their life thus saving them much hard work later in life. "It is man's privilege to take part in the process of his own creation." We enter and leave this world without having anything to say about it, but we have all to say about it while we are here and if we do the work above stated while here we will be kept busy. As to the bouyancy of children spoken of by Mrs. Bacon. Be glad of it sister, you cannot guide a ship unless it is under motion.—M. A. Connor, Grand Haven, Michigan.

SPRING FASHIONS

WHILE Winter still lingers in the lap of Spring we know that in a few short weeks we will have to lay aside our drab winter clothing and blosson out like the crocuses. A little planning and a few patterns chosen from our paper or our splendid new catalog, which by the way has been reduced to 12c will make the accomplishment easier.

Some of our new blouses are very gay. Made of crepe de chine in most gorgeous colors and designs. Egyptian figures, Paisley-shawl patterns and arebesques that make one gasp and say—what next? I saw one that looked like a snapshot of the congregation on the tower of Babel, so varied and grotesque were the figures. The windows show many pretty sport skirts of silk, and wool. In cottons, pique, poplin, and gabardine are in use as formerly. Vieylla flannel makes a splendid skirt and blouse for summer wear, a plaited or plain skirt buttoned on one side and a blouse such as those pictured in the last issue, will make a practical and pretty outfit. This flannel will neither fade nor shrink and of course wears exceedingly well. It comes in the lovely useda green so much worn this coming summer and in many other colors. I saw one very attractive design, the skirt of of cream colored wool, side plaits all around, worn with a pretty green crepe de chine blouse. A soft white hat completed the costume. In cloth suits of dark material one sees the plain straight lines in coat and skirt and long, close sleeve.

UNDER PONTIUS PILATE

My letter to the publishers of this book, about which we had an inquiry, was answered as follows:

Dear Madam:—

We are in receipt of your favor of the 20th regarding the authenticity of the letters published in Mr. Schuyler's book "Under Pontius Pilate." We beg to advise you that the letters are not authentic but are the creation of the late Mr. Schuyler, based on historical documents which came into his possession. We believe they are authentic as far as the descriptions of the happenings are concerned, but they are not translations of actual letters. Very truly,—Funk & Wagnalls Co. Per N. G. D.

CORRESPONDENCE COLUMN

Your offer to print anything that promises to be of mutual is fine, I think our Editor is doing her share in offering those fine patterns, for women and children at that price. Others charge war prices. Would Ye Editor allow us women to send in our favorite quilt patterns and could we have them illustrated? Would we have to send them pieced of cloth? It would help the older women pass away many tedious hours, piecing and designing. There is no farm paper that does print quilt patterns and your subscribers would surely be pleased.—Reader.

—We will be glad to make up the patterns sent in, just send a drawing, having all lines carefully and clearly marked using a good ruler so that the lines may be perfectly straight and mark the length of each line in inches.

Notice Please

A pattern here for Mrs. D. A. Nichols. It was sent to wrong address. A stocking foot pattern and child's romper suit also wrong address. I will forward them if given correct address.

The Michigan Agricultural College is sending out a splendid bulletin on home canning, taking up fruits, vegetables and meats. Full directions are given and illustrations of equipment used. The One-Period Cold Pack method is given preference. Canning, drying and brining are the three methods resorted to in preserving food but the first is recommended as it keeps the products in a condition more like freshly cooked foods, also they can be prepared for the table so much more quickly. Send to the M. A. C., East Lansing, Michigan, for this bulletin. It is Club Bulletin No. 10.

Mrs. J. A.,—I read your request for a preparation to make labels stick to syrup cans. We had the same trouble until we used cooked starch, we apply it with a lather brush, the same as used for shaving. The brush can be cleaned afterward. The labels stick now.—Mrs. G. D., Woodland, Michigan.

I would like to find out thru the columns of your paper, the M. B. F., what was the name of the Secretary of the Treasury, under the Lincoln administration, also who originated the idea of the (Greenback money.) It was before my day, but I think it was during the war. I am anxious

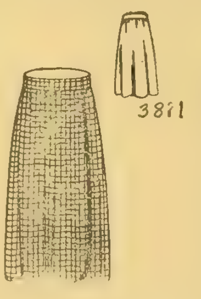
SPRRING FASHIONS

Catalogs 12 cents **Patterns 12 cents**

FASHION BOOK NOTICE

Send 12 cents in silver or stamps for our UP-TO-DATE SPRING and SUMMER 1923 BOOK OF FASHIONS, showing color plates, and containing 500 designs of Ladies', Misses' and Children's Patterns, a CONCISE and COMPREHENSIVE ARTICLE ON DRESSMAKING.



A Practical Utility Skirt

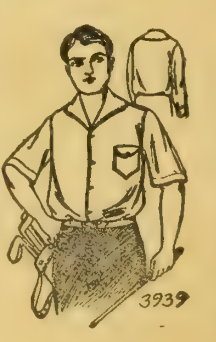
3871—Here is a pleasing version of the "wrap" skirt, which is made in one piece and closes like a coat, or wrap. The advantage is at once apparent. No disarranged hair or blouse, just ease and comfort in adjusting and removing this skirt. It may be made with or without a back seam. The style is nice for sports materials, as well as for taffeta, moire, prunella and crepe. It is excellent for wash materials.

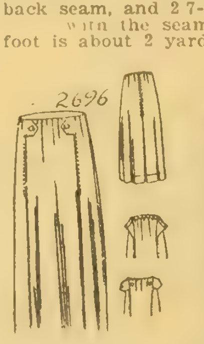
The Pattern is cut in 8 sizes: 24, 26, 28, 30, 32, 34, 36, and 38 inches waist measure. A 30-inch size requires 2 5-8 yards of material 44 inches wide if made without back seam, and 2 7-8 yards of 42-inch if with the seam. The width at the foot is about 2 yards.

A Desirable Model

2899—Men's and Boys' Shirt, with Two Styles of Collar and with Regulation or Coat Closing. Suitable for madras, percale, linen, cambric, silk, soisette, or flannel.

The Pattern is cut in 8 sizes: for Men: 36, 38, 40, 42, 44, 46, 48 and 50 inches breast measure, and in 4 sizes for Boys: 10, 12, 14 and 16 years. It requires 4 3-8 yards of 27 inch material for a 36 inch size.





A servicable Practical Skirt

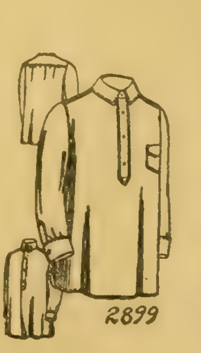
2696—This is a splendid model for maternity or invalid service. The side gores and back have plait extensions at the seams. Serge, broadcloth, gabar dine, satin, velveteen and crepe, also wash fabrics are good for this style.

The Pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Width of skirt is about 2 1-2 yards at the foot, with plaits drawn out.

A Serviceable Practical Model

3939.—Madras, percale, gingham, soisette, poplin, linen, pique, flannel and silk are nice for this style. The short sleeve is a new feature and fine for warm work.

The Pattern is cut in 7 sizes: 38, 40, 42, 44, 46, 48 and 50 inches breast measure, neck measure to correspond in sizes, 15, 15 1-2, 16, 16 1-2, 17, 17 1-2 and 18. It requires 3 1-2 yards of 36 inch material for a 17 inch neck size.



to know and will be very glad if some one can tell me, and oblige.—A sonstant reader of your good paper—Mrs. S. H. Andrews.

—Salmon P. Chase was Secretary of the Treasury under Lincoln. It was he who originated the Greenback money.

F. Pierce—After the war, the the Kaiser was sent to Doorn, Holland, and remains there, virtually a prisoner of war, having freedom only of his house and grounds. He is obliged most simply.

His first wife died since the war and recently he married again, a widow much younger than himself. She has a family of children. The report is current that they do not get along very happily, in fact, that they have virtually separated, living in entirely different parts of the domicile. It is also reported and no doubt true that his health has failed, that he is broken in mind, spirit and body, practically deserted by his children who entirely disapproved of his second marriage.

Mrs. M. C.—Many thanks for your good letter. You may be sure that when I am in your locality again I shall be most happy to pull that latch string you speak of. I can imagine what your view must be and surely would enjoy seeing it and you.

Does any reader have directions for making hominy with soda? I would like to print them.

Mrs. H.—Peroxide will bleach the hairs and in time kill them. Electricity kills the roots but is rather trying. There are many good and safe depilatories on the market. If you wish I will send you the name of several that can be purchased at any drug store.

RECIPES, ASKED FOR

Corn Starch Cake

2 cups pulverized sugar, ¾ cup of butter, 1 cup of corn starch dissolved in 1 cup of sweet milk, 2 cups of flour, whites of 7 eggs, 2 tps of baking powder, mixed well into the flour. Cream the butter and sugar, add starch and milk, then add the whites and flour gradually. Flavor with lemon or rose.

Panned Oysters

18 to 30 small oysters, 1 tbs butter, 1 tbs cracker crumbs, salt and pepper to taste. 1 tps lemon juice, a dash of cayanne. Put oysters on in their own liquor and when they boil up add the other ingredients. Cook one minute and serve on toast.

Oyster Stew

1 quart of milk, 1 pint of oysters, butter, salt and pepper. Serves four people. Let milk get hot, then add oysters aand cook until they shrivle, add a generous piece of butter, seasoning and serve piping hot.

Canning Sausage

I will give my way that I have used for years. Having never lost a quart, I clean small casings and fill with sausage, usually the day after butchering. I fill pans and skillets and fill my oven. Then I have my jars sterilized and ready. I cook meat just enough to get the water out, do not brown, fill the cans, use the cooked out liquid to pour over the sausage in the cans. Adding lard if the liquid runs short. I put on rubbers and caps and boil 30 minutes in my boiler. Then tighten covers very tight.—Mrs. V. Lidgard.

I found the following recipe in a government bulletin on maple sugar making. It has proven very satisfactory. Purchase ungummed labels and apply paste. It does not rust the cans as acid does and it sticks.

½ oz. silicate of soda, 1 oz. corn starch, 1½ pints cold water. Mix soda and starch with a little water, add all of the water and cook in a double boiler until clear. Yours truly.—Mrs. Fred Rowlander.

AWAY WITH SPOTS

HAVING received so much help from our paper, I feel that I must do my bit to help some others. I am sending some stain removers and hope these will be of help to those inquiring about them.

To remove ink—Melted tallow or butter and salt.

To remove oil—A few drops of chloroform will remove the oil from the finest goods. Place a piece of blotting paper under the spot and drop a few drops of chloroform on soiled spot.

To remove rust stain—Make a paste of cream of tartar and water, cover the spot and hang the article in the sun, when dry brush off, repeat this until the spot is removed.

To remove mud stain—From white goods by dipping in kerosene before washing. From the colored clothes by letting the mud dry, brushing out as much as possible and covering the spot with a mixture of salt and flour, let stand several hours in a dry place and then brush off.

To remove tar—Rub the spot with lard, let stand a few minutes then rub to loosen tar and wash in the usual way.

To remove axel grease—Put sweet cream on white goods, leave until dry then wash with soap and water.

To remove mildew—Mix two teaspoons of baking powder with the juice of one lemon, apply and let article dry. After drying, wash and hang in the sun.

To remove perspiration stain—If the spots are of recent origin, rinsing with ammonia is usually sufficient: if the stain has been on the goods for some time, treat the stain with oxalic acid and rinse in water.

My favorite cookie recipe is for ginger cookies. 1 cup sugar, 1 cup shortening, 1 cup molasses, 1 cup of hot water, 1 tps. each of soda, salt, ginger, and flour to roll out.

Hermits—drop from spoon: 1 cup of brown sugar, ½ cup of shortening ½ cup each of molasses and warm water, 1 egg, 1 tps soda, 1 tps vanilla, ½ tps salt, ½ tps nutmeg, 3 cups of flour, 1 tps baking powder, ½ cup of fruit or nut meats.

Pancakes—Part buckwheat flour can be used, 1 quart of skim milk, 2 tablespoonfuls sugar, 1 tps salt, 2 tps. baking-powder, flour to make a batter, 2 tbls of cream will improve them.

If the lady will put a spoonful of borax in her starch, her irons will not stick I have written so much I fear you will not want to hear from me again.—Mrs. R. E. Combs.

—Indeed we will, and many thanks for all the help in your letter. In last issue there are instructions for caring for a fern.

WHAT IS YOUR MILEAGE?

THE inspiration for the motion picture was finished by a Tired Housewife to whom her husband remarked one evening. "You have nothing to do but housework. I don't see why you should always be so fagged out at night."

The wife decided that she would prove to her husband some reason for being tired. In order to do so she purchased a pedometer, hooked it to her belt, gaged to the length of her step, to measure the steps she took about the house.

In one average day's work she had taken 27,840 steps. They covered a distance of nearly eight miles. At the rate she was going she could have walked around the world in less than ten years.

This, of course, did not include the "labor of heart or hands," but it was sufficient to call the attention of her husband to the amount of actual physical energy which was being consumed in her housework and to induce him when he made an addition to the house to include in his plans a model kitchen that would save steps.

A FABLE

Having slept for three months, a boa constrictor woke up with an appitite that respected neither weak nor strong, friend or foe.

As a first victim he caught a rabbit which he devoured in his usual way, poor bunny being but a mouthful. Having whetted his appetite with this tidbit, the boa constrictor started out on the quest of further victuals. Presently he came to a rail fence and started under it. But the undigested rabbit made a lump which could not pass through the fence.

Too stubborn to back out, the reptile remained in that position until another rabbit came along and was also swallowed by the boa constrictor.

This rabbit went down as far as the fence rail and with his predecessor on the other side of the fence formed a perfect locking arrangement which held the boa constrictor so firmly that he could move neither forward nor back and fell an easy victim to a farmer who came along just then.

Moral: When you're in wrong don't hesitate to back out before it is too late.
—The Walk-Over Man.

CATTLE

HOLSTEIN-FRIESIAN

OCT. CLEARANCE SALE. WE ARE OFFERING 20 heifers and bulls. Heavy producing dams. Sire has 7 dams averaging nearly 1,100 lbs. on yearly test. Free from T. B., $50.00 and up.
WOLVERINE DAIRY FARM
Prop.—H. G. Booth Gladwin, Mich.

FACINATION FARM, SOUTH MAIN ST., Vassar, Mich. Auction Sale, Wednesday, Feb. 21, 1923, 1 P. M. 10 cows milking; 7 heifers; 3 bull calves; 1 registered Percheron stallion; 1 registered Percheron Mare. J. F. GLADY, Vassar, Mich.

Size!

Every man who makes his living milking cows knows that size is one of the best reasons for Holsteins.

Size Means:

Capacity - Ruggedness - Economical Production - Strong Calves that Live - Ability to Turn Rough Feed Into Milk - More Meat Value at the End of Their Milking Days

Let Us Tell You the Whole Story of the Holstein Cow

EXTENSION SERVICE,
The Holstein-Friesian Association of America
230 East Ohio Street, Chicago, Ill.

HOLSTEINS

FOR SALE—REGISTERED HOLSTEIN COWS give from 60 lbs. to 88 lbs. milk. $160 to $250. Would like to place where would be tested.
BACON BROTHERS, Pittsford, Mich.

DISPERSION SALE OF 35 Pure Bred Holsteins ON MARCH 7, 1923

Representing 22 years of selecting and breeding. All but herd sire are direct decendants of two cows bought one in fall of 1900 and one in fall of 1901, one of which won three firsts at Sheboygan County Fair at Plymouth, Wis., in 1905, with N. J. Jelet of Rosendale as judge; first as best Holstein cow shown, first as best of all breeds shown and first as cow giving most milk at fair. A daughter of hers won first over Meneva Beats, the cow that has won more state and national prizes than any other of the breed. A granddaughter of hers is to be sold in the sale, Neeltji Terzool Segis. She has a 7 day record of 28.46 lbs. butter and 633.5 lbs. milk, milking 99.4 lbs. her best day as a 3-year-old. There are also 2 of her sons to be sold. They are from the herd sire to be sold, Paul Pieterje Wane Princi; his dam has a record of 117 lbs. milk in a day and an average of 107 lbs. for 30 days with 30 lbs. butter in 7 days and 122 lbs. in 30 days. He has two sisters that at 2½ years of age milked 80 lbs. and 75 lbs. respectively and made 22 and 24 lbs. butter each. There are also 13 of his daughters in the sale.

The herd has passed four tuberculosis tests without a reactor and they will be sold on a 60-day gurrantee retest.

The herd is also free from abortion.

W. H. Krouse, Thorp, Wis.; Homer Green, Bronson, Mich.; Auctioneers

DAIRY and LIVESTOCK

SUGGESTIONS ON CARE OF THE BROOD SOW

PROVIDE sufficient bone and muscle forming foods, such as oats, middlings, oil meal, digester tankage, skim milk, butter milk, or fine alfalfa hay, to insure healthy development of both sow and litter. The amount of fattening foods such as corn and barley should be regulated largely by the condition of the sow.

Good rations are: 1. Equal parts by weight of corn and barley, oats and middlings. 2. Nine or ten parts of corn with one part of digester tankage. By feeding fine alfalfa hay in a rack, bulg and growing constituents are added and a larger proportion of corn or barley can be used in these rations. A small amount of roots add variety and acts as a conditioner. Provide plenty of fresh water.

If the sow was in fair condition when bred, she should gain from 50 to 75 pounds before farrowing. The amount to feed cannot be stated definitely as much depends upon the individual, but one and one-quarter pounds of feed per 100 pounds live weight is a guide to follow for mature sows. Gilts should have about two pounds per day for 100 pounds live weight.

Do not allow the sow to become overly fat but keep her in strong, healthy condition. She should gain steadily throughout the period of gestation, but especially during the last six or eight weeks.

Give the sow a small amount of wood ashes, charcoal or soft coal ocassionally.

If your sows in the past have farrowed hairless pigs, add 10 grams of potassium iodide to each 100 pounds of feed given during pregnancy.

Exercise is very essential. Give the sow a fair-sized lot to run in.

Provide a clean, dry, well-ventilated, well-bedded pen. This need not be very warm. If the sows are steaming in the morning, they are being kept too warm. A portable cot gives excellent results and exercise can be induced by feeding at one end of lot and placing cot at the other end.

Do not keep more than three average-sized sows in one regular sized cot (6 feet by 8 feet) especially near farrowing time. They are liable to tramp on one another and cause abortion or kill the unborn pigs.

Do not allow the sow to become infested with lice or other parasites. Rub her thoroughly with crude oil a couple of times during the winter.

Put a sow in a farrowing pen about ten days before she is due to farrow. Place a guard rail around pen about ten inches from the floor and same distance from wall so she cannot crush the pigs against the wall. Provide a limited amount of short or cut straw for bedding. If floor is cement, cover a portion with boards to make a warmer bed.

Allow the sow exercise after being placed in farrowing pen. Lack of exercise causes constipation which causes the death of large numbers of pigs. Control this by regulating the feed rather than by drugs. A small amount of oil meal daily is a good laxative.

The sow should be watched at farrowing time and assistance given, if necessary. If the weather is cold, put weak pigs in a basket with a covered bottle of warm water or a warm brick for a short time. See that each pig nurses as soon as possible after being dropped. Do not disturb the sow even to feed, for at least 12 hours, but provide fresh water slightly warmed if weather is cold. Feed very lightly with a thin slop at first. Gradually increase the amount as pigs consume more milk. Be very careful to not overfeed at this stage as it will cause digestive troubles in the pigs and may injure the sow's urred.

As the pigs develop, feed the sow more liberally as feed fed through the sow will make larger gains in the pigs than the same amount of feed given direct to the pigs after being weaned. A good ration at this stage is 100 pounds each of ground corn or barley, oats and middlings with 20 pounds of oil meal.

As soon as the pigs begin to eat, start feeding them in a separate trough, where the sow cannot molest them. They may be fed as much as they will eat twice a day of the following mixture: 20 pounds of middlings, 10 pounds of ground oats, 10 pounds of ground corn, barley or rye with sufficient skim milk to make a fairly thin slop. If skim milk is not available, 1½ pounds of 60% digester tankage or 2½ pounds of oil meal should be added to the above ration. If ground oats are fed in fairly large proportions, the hulls should be screened out, as they are apt to cause digestive disturbances.

Remember that a brood sow worth keeping is deserving of close attention. Catering to the individual needs is what spells success with any class of live-stock.—W. E. Edwards, Animal Husbandry Dept., M. A. C.

Breeders Meetings During Farmers' Week

The 15th annual meeting of the Michigan Horse Breeders' Association was held at Michigan Agricultural College on Wednesday, January 31, 1923, in conjunction with the annual Farmer's Week.

A parade of prize winning horses owned at the college was the first event. This was followed by a judging contest in which the breeders of the state participated.

In the stallion foal class, 1st, 2nd, and 3rd went to C. M. Hicks and Son of Williamstown, Michigan, and 4th to M. A. C. In the yearling class 1st went to M. A. C., 2nd to M. A. Hatch, Okemos, 3rd to L. D. Cook, Wiliamstown, Michigan, and 4th to M. A. C. John Sharkey of Bellevue tied the ribbons.

A meeting of the Association followed the horse show. President Ray Whitney of Onondago, presiding. An address of welcome by Dean Shaw, F. T. Riddell of the Farm Management Department, M. A. C., followed with a talk on "The Results of a Survey of Michigan Farms to Determine the status of the horse and Tractor Situation." Addresses by John Sharkey of Bellevue, and John Jacobs of Lansing on the "Supply and Market for Work Horses" was followed by Jacob DeGeus, who spoke on "The Supply and Market in Registered Belgians." An explanation of the changes in the Stallion Law was given. All made up a program of unusual interest. The meeting was unique in that no outside talent was used and yet one of the most inspiring meetings ever put on by the Association. The meeting adjourned until 1:30 when after a dinner with the Exchange Club of Lansing the meeting was again called to order for the business session.

Upon motion of John Sharkey of Bellevue a rising vote of appreciation was extended Superintendent Hudson and College authorities for the splendid improvement and work being done with College horses.

Following the reading of the minutes and Treasurers report officers were elected as follows:

President, John Jacobs, St. Johns; Vice-Pres., Jacob DeGeus, Alicia; Sec'y-Treas., R. S. Hudson, East Lansing.

Executive Board: John Sharkey, Bellevue; O. E. Belle, Mason; L. C.

bred to a son of Big Bone Giant Sensation of Brookwater Farm for April and May farrow; also three fall boars. **John O. Dean, Mason, Mich., R. 1.**

SENSATION MARSI Our new herd boar. Sired by "Marsi" Reserve grand champion National Swine Show 1922. We are taking orders for gilts and sows for spring farrow bred to this wonderful boar.
SCHAFFER BROS., Route 4, Oxford, Mich.

Hunt, Eaton Rapids; R. E. Whitney, Onondago; Wm. Bird, St. Johns.

Favorable action was taken upon the following matters:

1. A resolution requesting the State Fair Board to make premiums in Horse Classes uniform, ie., giving as large a premium for young animals as for old making a class for brood mares and colts, and putting the book on a par with that of other states.
2. A request that the Extension Division of the College, through the State Club Leader, give some attention to the formation of colt clubs, as well as pigs and calves.
3. The discontinuance of the small premium offered at the State Fair by the Association and the money used in Club work if necessary.
4. To accept the invitation of Jacob DeGeus to visit the Prairie Farm the date to be set by the Executive Board working with Mr. DeGeus.
5. To put on a banquet in connection with next years' meeting.

Meeting adjourned—attendance 50—R. S. Hudson, Sec'y-Treas.

DUROC BREEDERS MEET

The Michigan Duroc Jersey Breeders Association held their annual meeting on Jan. 30th, 1923, at East Lansing, Mich.

The morning session was a regular get together meeting, new members were received and officers for the coming year were nominated.

Mr. C. C. Terrell of New Vienna, Ohio gave us a very interesting talk on Duroc Salesmanship and was voted the thanks of the association.

Bob Evans was also on the program, but notified the association that business made it impossible to be present.

The "Lion's Club" then entertained the visitors at a luncheon held in the College Gymnasium and Prof. Gardner addressed the breeders and gave the boys lots of encouragement for 1923.

The afternoon session opened at 2:00 P. M. Pres. Foster called the meeting to order and the following officers were elected for 1923:

Pres., O. F. Foster, Pavilion, Mich., Sec'y, and Treas., F. J. Schaffer, Detroit, Mich.; Directors, V. A. Freeman, East Lansing, Mich., Carl Story, Lowell, Mich., N. Barnhart, St. Johns, Mich.

A resolution was then offered by V. A. Freeman that all county association be made member of the state association and that each county has a representative at the state meetings.

Mr. N. Barnhart was then elected to represent the Duroc Association at the Mich. Swine Breeders Association on the 1 ton Litter Club, with full power to act.

The meeting then adjourned and the balance of the day was spent in visiting the fine new hog houses and splendid display of Dairy and Stock Cattle. The poultry exhibit was also large and the fine display of draught horses was very complete.—F. J. S., Sec'y.

DID McRAE "SELL" YOU OR YOUR FARM?

(Continued from page 17.)

I sent no money but made him the same offer as in that of the first letter. I also told him that winter would soon be here and I hoped his rich Mr. Brown and the other wealthy men he spoke of were not setting around and missing opportunities to buy good farms, waiting for him to get a few dollars out of some poor widow woman. I have never heard from him since. He is now running an ad in the Benzie Record published at Beulah, Michigan. My neighbor a widow, with a farm told me yesterday that she sent him $5. I am anxious to know if he is a swindle"

From the above, you may take it that Mr. McRae is not exactly living up to his statement to the publisher under the date of December eighth, last, when he said "We are here to stay and expect to build up a nice clean business!"

Settled woman wishes to reduce expenses of trip any place near or north of Omaha, Nebraska. Would accompany corpse. Tel. 65909.—Los Angeles Times.

YOU CAN'T AFFORD TO HAVE SICK OR BACKWARD COWS

Kow-Kare Insures Profitable Dairying for Thousands All Over the Country

Cut out the constant leaks of dairying that result from sick cows and disappointing milk-yield, and you will begin to reap the real profits. Stop looking upon cow diseases as inevitable; they CAN be prevented.

The cow's winter diet is hard on her digestive and genital organs—runs them down. Overfeeding of rich concentrates only aggravates the condition. What is needed is to keep the milk-making and digestive organs healthy enough to maintain top-notch production and at the same time throw off disease.

Kow-Kare has the medicinal properties to accomplish just that. It acts directly on the vital organs of the milch cow, toning up and giving strength. It is this marvelous rebuilding action that has made Kow-Kare famous in the treatment of cow diseases, such as Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Milk Fever.

We get thousands of letters each year, like this one from Jacob Germann, Farmingdale, Ill.

"I had three cows this Spring, one had garget, and one had milk fever, and one was done up completely from calving and could not get up or walk and I had a veterinarian with no good results. I began feeding Kow-Kare and she is able to go to pasture with the other cows now. I just know I would have lost the three if I had not had your medicine."

Remarkable increases in winter milk yield can be attained by feeding just a tablespoonful of Kow-Kare twice a day for one week in each month. Try it, and you will never go through a winter without Kow-Kare.

KOW-KARE
DAIRY ASSOCIATION CO. INC.

Our 32-page book on cow diseases, free. Kow-Kare is sold by feed dealers, general stores and druggists. $1.25 and 65c sizes. If your dealer is not supplied, we will mail postpaid, on receipt of price.

SMOKES HIS MEAT BY PAINTING IT

Utah Farmer's Simple Method Gives Wonderfully Delicious Flavor and Saves 20 pounds in Every 100

You can flavor your hams and bacon deliciously and save time, money and meat by the easy method successfully used by W. H. Laws, Richfield, Utah.

Mr. Laws simply paints his meat with Wright's Smoke, which smokes meat perfectly in a few minutes without fire, trouble or loss, gives better flavor, keeps insects away and saves 20 pounds in every 100 by preventing shrinkage. Mr. Laws sugar cures his meat with 27 pounds of salt and a bottle of Wright's Ham Pickle. Large bottles of Wright's Smoke or Wright's Ham Pickle cost little at any drug store, and are guaranteed.

Send your name to the E. H. Wright Co., 850 Broadway, Kansas City, Mo., and receive, free and postpaid, a new $1 book, "Meat Production on the Farm," which tells how to cure every kind of meat. This $1 book is free to farmers only. Write for it today.

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

The Children's Hour

DEAR Nieces and Nephews:—I do not know what to write this week. My brain does not appear to be working just right I seem to be suffering from a popular disease which quickly spread over the world about two years ago. I am all right during the day at the office but as soon as I get home I sit down and sit for hours and hours in one spot. My loved ones talk to me but I hear them not and then becoming vexed they call in loud tones but still I do not hear and they are obliged to touch me to attract my attention. And still all of this time there are sounds passing into ears—beautiful music, songs, talking and also strange noises that are not so pleasant to hear. I contracted the disease from the bite of an insect and while it is said that while one may get better they will never become the same as before. One that contracts this disease desires to sit up until all hours of the night, bed having no attraction for them until around three o'clock in the morning: that is if the disease has secured a good hold upon you. Yes, I was bitten by an insect, a bug in fact, the "Radio Bug," and I have a small receiving set. I am sure all of you girls and boys who have radio sets in their homes know just how I feel. I hope that some day all readers of the Children's Hour will own radio sets so that they can hear the interesting and educating lectures, fine music, songs, and stories, that are in the air nearly all hours of the day and night. Maybe when that time comes we can call each other up just like we do over the telephone. It's about time for a Detroit broadcasting station to open one of their programs so I am going to sign off and listen to it.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned and Cousins:—We still take the M. B. F and like it very much. I enjoy reading the Children's Hour. I am in the eighth grade at school and hope I will pass. I thought I would tell you of a day's outing I had in the summer. One nice summer's day mother, sister and I took our lunch and went out in the woods. We stopped by a spring and ate our lunch. After lunch we gathered a large basket full of beautiful flowers and walked through the woods. It certainly was wonderful scenery, trees growing on the sloping banks and flowers growing on the mossy banks along the cool rippling stream. And our cows were lying under the shade of the large maple trees, chewing their cuds. We also saw many beautiful birds such as the robin, canary, bluebird and many others. Their melodious voices were delightful to hear. It was about four-thirty when we reached home. Somewhat tired, but pleased with our day's outing. I will close, with love to Uncle Ned and Cousins.—Eleanor D. L. Stovel, Hubbard Lake, Michigan.

Dear Uncle Ned and Cousins:—I suppose you will be very much surprised to hear from me as I have not written in so long I expect you have forgotten me. How are all of you? I hope well and enjoying this lovely winter. It is snowing this morning. We've had a lot of snow this winter. I wonder how many of the cousins have ever gone to a spelling match and for a sleigh ride. I mean go to another school and spell against them. Well we went last Thursday, January 18. We went to a school six miles from our school. We just went a little ways off the main road though when we had to get off the sleigh and walk a ways, it was thawing a little and the sleighing had all gone off and left the mud so we would have had a mud ride instead of a sleigh ride if we had stayed on the sleigh, don't you think so? Well we got to the school at last but they were not expecting us and I guess they got afraid and they didn't want to spell very badly so we played a few games and came home. We had a good time though. Nellie Inman, if you are reading this letter I wish you would write to me again or did that picture of me scare you? I hope not, you know you have not written since I sent it to you. Well I will be taking up all of the space if I don't stop. Won't some of the cousins please write to me? I am a girl 14 years old and I am now sick in bed and would like to hear from you. Goodbye everyone. From your niece and cousin.—Audrey Conlin, R. 4, Bay City, Michigan.

Dear Uncle Ned:—I have never written before and I only saw one letter from around here, so I thought I would write. What is the matter with our page, is it going to sleep? Lets wake up cousins and write some nice letters. Well I will describe myself. I am 63 inches tall, have dark brown hair and light brown eyes and a light complexion. How many of you cousins wish summer was here I do. We have a big ditch near our place but the ice is no good, there is too much snow on it. This is my first letter and it is not very good but I will write again and that will be quite soon. What! Am I hearing you sigh Uncle Ned? Oh, I did not intend to write a story book. Will Myrtle Baress of Owendals please write to me. Oh, I forgot to tell you my age. I am 14 years old. Please cousins, boys and girls, write to me and I will try and answer everyone.—Alma Holland R. 2, Owendale, Michigan.

Dear Uncle Ned:—May I join hand in hand in the circle of letter writers? This is the first time I have written to you or any of the rest. I am a farmer's daughter, 13 years old. We have a farm of 40 acres and also took a contract for pickles so this means work. I am attending Hemlock High School now and am in the ninth grade. Some mornings when my partner and I go to school there is ice on our coat collars so you may be sure it is cold. I often wonder why we don't have school in summer and not in winter, because in winter it is too cold to go to school, while it would be warm in summer. Your niece.—Catherine Baker, R. 4, Hemlock, Michigan.

P. S.—I think it would be a nice thing for you to put a nmber of words on our page for us to see who can get the most words out of it, if the rest will second the motion.

Dear Uncle Ned:—I am a girl 15 years of age and live on a farm of 800 acres. We came out here from Michigan over three years ago and all want to go back in the spring as we do not like it out here. I am in the second year of high school and I like my school and teachers very well. I think I will have to close now. I enjoy reading the letters in the M. B. F., from the other boys and girls very much. Will some readers of the M. B. F., please send me the piece "How Little Katie Knocked at the Door of Heaven?"—Miss Fairy M. Dunklee, Farmersville, Station, New York, Box 102.

Dear Uncle Ned:—May I join your merry circle. My father takes the M. B. F., and I enjoy reading the Children's Hour very much. I have one mile to walk to school and I am in the 5th grade. There are 32 children in our school. We have examinations every month. We have them on Thursday and Friday. I am 10 years old, my birthday is the 12th of May. I have 7 sisters and 1 brother. We have 5 cows, 3 calves, 2 horses and 96 chickens. I live on a 120 acre farm. We have 2 pigs, 2 cats and 1 dog. I remain your niece,—Ida Gill, R. 1, Box 100, Kalamazoo, Michigan.

Dear Uncle Ned:—I have read in the M. B. F., many interesting letters of boys and girls, and enjoyed them very much and thought I would write to you. I have 1 brother and for pets I have a bull dog and a cat. I am 13 years old and in the 8th grade. My birthday is January 9th. I hope you all enjoyed your Christmas as much as I did mine. If I have any twin sisters or brothers I would like to hear from them. If I have no twin sisters or brothers, I would be pleased to hear from any boy or girl. Love to all.—Ruby E. Smith, Box 138, Webberville, Mich.

Dear Uncle Ned:—Here I am again. How are you and all cousins? I am fine. I was home from school one week and I started again today. I live on an 80-acre farm. For pets I have 1 dog and 2 cats. My dogs name is Shep. My father takes the M. B. F., and I like it very well. I have 3 sisters. My two greatest sports are skating and skiing at which I have a very good time. My birthday comes May 1st, and I will be 16 years old. I have light hair and eyes and I am 5 feet and 1 inch tall. Have I a twin? Your friend.—Frank Stimax, Box 101, Engaldine, Michigan.

Dear Uncle Ned—May I join your merry circle? I will be 13 years old next Sunday and I am in the Seventh grade at school. I'm five feet and four inches in heighth and weigh about 90 pounds. I have blue eyes, brown hair and light complexion. I live on a 40-acre farm and we have 4 cows and 4 horses and 8 sheep. We have about 200 hens and 6 turkies. How many of the girls know how to knit? I do. I am knitting my little niece a scarf. She was 5 years old last Sunday. I got a ring, a sweater, two pencils and tablets, a air of stockings, and shoes, a book of "Timothy's Quest" and candy, and nuts last week.—Miss Bernice Drew, Hubbardston, R. 3, Mich.

Dear Uncle Ned—Is there enough room for another cousin? I will tell you about myself. I am 13 years old, in the 8th grade. I weigh 80 lbs. I have brown hair, brown eyes, fair complexion and wear glasses. My birthday is July sixteenth. Have I any twin sister or brother? I have 3 sisters and 2 brothers. Uncle Ned did you ever go coasting, well if you didn't you have missed a lot. I am sending you a story. Will sime of the cousins write to me? Your neice.—Francis Nielsen, Coral, R. 2, Box 4, Mich.

Once upon a time some boys were playing at the edge of a pond in which lived a family of frogs. The boys amused themselves by throwing stones into the pond so as to make them skip on top of the water. The stones were flying thick and fast and the boys were enjoying themselves very much; but the poor frogs in the pond were trembling with fear.

At last one of the frogs, put his head out of the water and said, "Oh please, dear children, stop your cruel play! Though it may be fun for you, it means death to us!"

Always stop to think wether your fun may not be the cause of another's unhappiness.

—Yes, I have coasted and it sure is great fun—that is if you don't tip over and get a lot of snow down your neck. Your story is fine.—Uncle Ned.

THAT WOOD-BOX

OH, gee whiz. That wood-box makes me sick.
I have to trot, and trot and trot,
To fill it stick by stick.
And then it simply disappears
Within the big stove door,
And Ma she up and hollers out for me to get some more.

No matter where I want to go
Or what I want to do
Why Ma looks in the woodshed and at the wood-box
And if the wood ain't piled up high,
And split up nice and fine,
She frowns and tells me, "No Siree,
You cut up wood till nine.

And if the sun's a shinin' bright
And you have got some ski's,
You wish the darned old wood-box
Was in Halifax, by gee.
You see the other neighbor boys
Go rearin' tearin' by.
And someone whispers, "Come on, Jimmie,
Can't you get out on the sly."

Then if you mutter to yourself
And out the door you slips,
When you get back you have to go
And pick up all the chips.
And so I say, most every day
When time is on the wing:
My goodness, gracious, MERCY ME.
I'LL be GLAD when it comes spring.
—Mrs. Charlotte Byers.

FARM MECHANICS

CARE AND REPAIR OF THE FARM TRACTOR

A CERTAIN amount of time regularly employed should be given to the care and repair of the farm machinery. It is now the acceptable time to investigate the ills of the iron family and remedy them for their maximum efficiency in the spring.

The tractor, of all modern farming tools, is perhaps the least understood and will be considered first. The tractor, after each year's use, should be given a thorough examination for wear and defective parts. In ordinary usage, connecting rod bearings, piston pin bearings, rings and pistons will show signs of wear, which should be attended to at this time. A competent repair man is desirable for this work as a job poorly done is worse than no job at all. A manufacturing company should be better able to furnish competent help at this season than any other time.

However, for the owner mechanically inclined, the following is a suggested procedure for the adjustment of loose connecting rod bearings. Remove lubrication oil and necessary covers to make connecting rods and crank shaft accessible. With spark plugs removed, place crank shaft so that pistons are about one-half way on their strokes. Grasp the lower end of the connecting rod for one piston and move up and down and also sidewise in a direction parallel to the crank shaft. The up and down motion will indicate the extent of the looseness which requires adjustment. The looseness will be evident. Do in like manner with the rest of the rods. Assuming that all rods are loose, remove cotter keys and loosen nuts, holding caps of bearings to the body of the rods. Adjust one by one by first removing cap and then removing liner on both sides of the bearing. The cap is replaced with the remaining liners fastened rigidly to the rod by means of the bolts and nuts. Considerable care should be exercised in making sure that the nuts are drawn tightly against the cap and the liners properly placed. Turn the starting crank and note its ease in turning. If it turns too easily, it is an indication that not sufficient liners have been removed. Remove more until, when assembled in place, there will be considerable effort required to turn the shaft. The adjustment is now too tight. Again remove cap, add a thin liner and readjust. This should be the correct setting. If not, repeat the operation.

Now unscrew the nuts by about one turn and proceed to the next connecting rod until all are adjusted. tighten all caps, replace cotter keys with new ones, replace covers and add the required amount of new lubrication oil. Where there are no liners between the bearing halves, it will be necessary to carefully file the cap to eliminate the looseness. When thick liners are used, apply the file to the liner for adjustment. Bearing adjustment is not difficult. It requires a little patience but is worth while.

Just as the tractor will require attention from time to time, so will the various other farm machinery. Proper housing is a great factor in preserving machinery. At least a week each year should be set aside, know as farm machinery week, when each farmer can give his implements the attention that means better service and longer life.—E. C. Sauve, Asst. Prof. Farm Mechanics. M. A. C.

MICHIGAN CROPS

HUBAM CLOVER

As we would like to try some of the Hubam clover seed would like to have your advice on this. Whether it is necessary to inoculate and is it advisable to sow it with the grain? Does it withstand the winter? Also about what time to cut it for hay and can clover seed be threshed from this and is it a good soil builder? We have a clay and sand mixed soil. —J. S. Y., Burr Oak, Mich.

—Hubam may be sown with a grain crop or, when used for pasture and the land is comparatively free from weeds, may be seeded alone. The soil should be well supplied with lime, the seed bed should be well firmed, and the seed should be inoculated.

Hubam is an annual and does not live through the winter. Seeds scattered on the ground during the late fall usually germinates and produces a crop the next season.

In tests conducted here at the Agricultural Experiment Station practically the same yield has been secured from Hubam as the biennial white sweet clover when sown on the same day. The root system produced by the biennial white sweet clover the first season is much more extensive than that produced by Hubam.

Sweet clover should be cut for hay just before the blossom buds appear, and if cut at this stage the Hubam is not likely to produce a seed crop unless the fall is very favorable.—C. R. Megee, Farm Crops Dept., M. A. C.

VETCH AS A FEED

I would like to get all the information I can about sand vetch as a feed, the time to sow, amount of seed per acre and time to harvest.—H. E. C., Secord, Michigan.

—Hairy vetch may be sown with rye and used for seed, pasture or for plowing under. When sown with rye it should be planted about the middle of August using a bushel of rye and from fifteen to twenty pounds of hairy vetch seed per acre.

Hairy vetch is also used with oats for hay in which case it should be sown during the early spring, using approximately two bushels of oats and twenty pounds of hairy vetch seed.

Circular No. 50 on the culture of hairy vetch may be secured through the Business Farmer by addressing Director R. S. Shaw of the Michigan Agricultural College, East Lansing.—C. R. Megee, Farm Crops Dept., M. A. C.

Two ways to work alfalfa into the rotation: Corn, oats, alfalfa, alfalfa; potatoes, wheat, alfalfa, alfalfa.

Club girls baked 370,000 loaves of bread in 1921 in connection with extension club work carried in by extension club workers in the United States.

Getting the Ground Ready for Spring Crops

Michigan Farm Bureau Brands include the Best varieties of alfalfa, clover, seed grains and other field and grass seeds. Their Vitality, Description and Purity are guaranteed to be as represented to the full amount of the Purchase Price.

Michigan Grown Alfalfa Seed

Monroe County, Michigan, has been producing one strain of Alfalfa seed for thirty-seven years. The farms on which this Alfalfa has been grown are mostly heavy clay with poor drainage.

These conditions are commonly considered the most difficult for Alfalfa production.

We believe this Monroe County Alfalfa is the best strain of Common Alfalfa grown anywhere and that it is thoroughly adapted to Michigan conditions.

For further information write us for our pamphlet or write the Farm Crops Department M. A. C., East Lansing, for their literature.

Order early from your Local Co-op. Get Farm Bureau Brand Seeds of all kinds.

Farm Bureau Brand Seeds are tagged with our analysis and guarantee which covers the full amount of the purchase price.

Walsh No-Buckle Harness

NO BUCKLES TO TEAR

NO RINGS TO WEAR

30 DAYS FREE TRIAL

Post Yourself on this new way of making harness, which is three times stronger than buckle harness. Before you buy harness, let me send you a set of Walsh No-Buckle Harness on 30 days' Free Trial, to show you why this harness is three times stronger without buckles, better looking and handier in every way. If not convinced, send it back at my expense. The Walsh is a proven success on thousands of farms for over 8 years.

Three Times Stronger Than Buckle Harness

Buckles weaken and tear straps. Walsh 1⅛-inch breeching strap holds over 1100 lbs. The same strap with buckles will break at the buckle at about 350 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles. Easy to see why Walsh is three times stronger than ordinary harness. Packer's Northern Steer Hide Leather—best that can be tanned.

Thousands Praise Walsh Harness

"The Walsh is strongest, neatest, most convenient harness I ever put on a team." Geo. Heath, Penn Yan, N.Y.

Mr. C. G. Anderson, Aitken, Minn., who bought his first Walsh 5 years ago and bought 3 new sets since for his other teams says:—"Walsh has buckle harness beat a mile."

Mr. E. E. Ward, Seneca Falls, Wis., says: "Have used harness for over 40 years. The Walsh is the best yet."

COSTS LESS — LASTS TWICE AS LONG

The Walsh Harness costs less because it saves many a dollar in repairs. Users show average repair cost of only 9 cents per year. No patching, no mending, because no rings to wear straps in two, no buckles to weaken and tear straps. Greatest advance in harness making. Easily adjusted to fit any horse. Write today for new reduced prices.

$5 AFTER THIRTY DAYS' FREE TRIAL

Balance easy payments, or cash after trial if you wish. Write today for free book, prices, easy payments and thirty days' trial offer, also how to make money showing Walsh Harness to your neighbors,

POULTRY

POULTRY SHOW HELD DURING FARMERS' WEEK

MEMBERS of the Michigan Branch of the American Poultry association met in conference three days at M. A. C. Farmers' Week.

Judge Chas. Gibson, Ellwood, Ind., spoke to the association Wednesday on the general care of rabbits, while scientific selection for egg production was taken up by Professor E. C. Foreman of the M. A. C. Poultry department. Professor W. R. Graham of the Ontario Agricultural College told of experiments in poultry nutrition carried on at the Canadian college.

On Thursday, C. M. Ferguson, M. A. C. Poultry Extension Department discussed how invironment affected egg production. Professor W. R. Graham, O. A. C., told of Canada's National Egg Policy. Different kinds of poultry feed and the feeding were taken up by D. E. Hale, Chicago, who judged the Poultry Show.

At the meeting on Friday, Professor E. C. Foreman outlined various forms of poultry house construction. This was followed by a caponizing experiment conducted by C. M. Ferguson of the college Poultry extension department.

Over 400 entries were made for the annual poultry show. The largest entries were found in the classes White Wyandottes, Light Barred Rocks and Dark Barred Rocks making the competition exceptionally strong here.

One of the attractions of the show was a four-legged pullet exhibited by the college. This bird caused much comment among the visitors.

Judging in the various classes was done by Judge D. E. Hale, of Chicago, one of the best known poultry experts in the country.

POTATOES AS POULTRY FEED

POTATOES should be boiled or steamed before being fed to fowls and are fed to best advantage when mixed with mash. Since potatoes are quite fattening, they should be fed in limited quantities to laying hens or growing chickens, and should be used in connection with other feeds. One hundred hens will consume about 10 pounds of cooked potatoes daily, and these potatoes can be used to replace cornmeal in the poultry mash. If so used, an equal weight of potatoes and mash may be mixed together. A laying mash for this purpose may be made of 1 part meat scrap, 1 part middlings, 2 parts bran, and 4 parts potatoes, by weight.—Colorado Agricultural College.

WATCH WHITE DIARRHEA

WHITE Diarrhea is one of the most deadly diseases we have in the poultry yard. It has attained its present prevalence over the country largely because poultry keepers have failed to take organized steps toward its eradication through the simple means of breaking up the life cycle of the germ. This is done by the simple expedient of refusing to use any birds in the breeding pen which have had the disease or were exposed to it as chicks.

It reaches its greatest activity two or three days after the chicks are hatched, oftentimes killing an entire brood. Some may survive and apparently be in excellent health, but the truth of the matter is that the germs are still in the reproductive organs, where they lie dormant until the fowl commences to produce eggs, and are in the chicks at the time they are hatched. The simplest way in which to stop the disease is to refuse to breed from stock ever exposed to it. It seems to have slight effect upon matured stock.

One way of preventing its spred as much as possible is to thoroughly disinfect the incubators and brooders in which chicks infected with it were hatched or brooded before the young stock this season is produced. Do not pack eggs for hatching in straw, chaff, sawdust or any other material likely to become musty. Wiping the shells of the eggs with a cloth dampened in 60 per cent grain alcohol

will destroy any germs adhering to the outside of the shell, and this precaution will be well worth the expense and effort.

The disease spreads among chicks through contamined drinking water or mash hoppers, or the droppings. As soon as their is any evidence of it in the brood kill on sight every chick "pasted up" behind and keep the droppings cleaned up in the run several times a day. Be very particular to prevent the little fellows becoming chilled.

After the chicks are two weeks old there is practically no danger whatever of infection. It seems to be most virulent the first two days.

PROTEIN FOR LAYING FLOCK

I want to know what would be the best and cheapest way to furnish protein for chickens. How about steeping alfalfa leaves in hot water for winter feed?—Mrs. G. M.

—Alfalfa leaves steeped, but more especially steamed, furnish considerable protein. Steamed alfalfa leaves are somewhat bulky for a chicken to properly handle. Alfalfa leaves help, of course, but as the only source of protein they fall somewhat short. I would keep on feeding steamed alfalfa leaves and in addition would supply protein in some other form. In the winter, pieces of raw meat, such as a dead rabbit, or portion of any animal that did not die of some disease can be kept hanging in the poultry house where the chickens can pick at it. The probabilities are that with alfalfa leaves and fresh meat together with scaps from the table the chickens will receive sufficient protein. Another good way to supply alfalfa is by using it as litter in place of straw.

The egg production of a flock is almost entirely governed by the amount of protein fed. If a sufficient amount of protein is not fed the chickens cannot be profitable egg producers, therefore under average conditions it seems only wise to feed protein in an excessive rather than in a scanty manner. A good ration for laying hens consists of either one quart of oats or one quart of barley fed as scratch feed, that is, it is thrown in the litter as a morning feed. One quart is usually sufficient grain for from 12 to 20 birds depending on the breed. The evening meal consists of one quart of corn for every 12 to 20 birds, then in addition to the scratch feed they should have before them at all times in a self-feeder the following dry mash mixture: Equal parts ground oats, ground corn, bran, shorts and meat scrap and tankage. Under average farm conditions it is necessary to buy the shorts and bran and it is always necessary to buy meat scrap or tankage, however an investment in these feeds will usually prove profitable in that your chickens will produce eggs in such quantity as to make an investment in such feeds profitable.

ROUP

General Discussion—This disease resembles in its nature colds in man and higher animals. It is not, as far as our present knowledge goes, caused by one specific organisms. Roup is not etiologically related to chicken-pox but may under certain conditions occur as an accompanying disease. On up-to-date farms where chickens are kept under hygienic conditions and are properly fed this disease is seldom seen except under exceptionally bad weather conditions. On the other hand it is rather common where chickens are poorly fed and kept in small, damp, filthy or poorly ventilater coops. It is probable that a number of organisms are instrumental in the production of this disease, and that these organisms, which ordanarily are low in pathogenic power, depend on other influences to lower the resistance of the fowls so as to make a general infection possible.

Symptoms—The primary seat of infection is in the nasal cavities. First a watery discharge is noted escaping from the nostrils. The anatomical arrangement of the nasal cavities of fowls is such as to make damage very inefficient. Consequently the discharge accumulates and gradually thickens, sealing the nostrils and finally a bulging of the bones below one or both eyes which

KNIGHT STRAIN WHITE PLYMOUTH ROCK cockerels $5.00 each. Baby chicks $20.00 per 100. ROBERT E. KNIGHT, New Baltimore, Mich.

in time may force the lower eyelid upwards and at last close the eye. From this condition the disease has derived the name swelled-head. The nostrils being closed the bird is forced to breathe through the mouth. This will dry the tip of the tongue which becomes brownish and hard, a condition commonly called "Pip," which may be observed in any disease causing the bird to breathe through the mouth. Other symptoms egg production and occasionally are dullness, sneezing, suppressed diarrhea.

Treatment—As improper feeding and unsanitary conditions are largely responsible for an outbreak of this disease prompt attention to these matters will usually terminate the attack. Diseased fowls should be isolated and treated as follows: Remove dried exudate covering the nostrils and using a medicine dropper or syringe wash out the nasal cavities with a 20 per cent solution of baking soda. B. F. Kaupp, North Carolina Experiment Station, recommends forcing this solution through the nasal passages into the mouth. He then suggests the use of hydrogen peroxide in like manner, the former solution dissolving the mucus and the latter cleaning the cavities. Following this treatment he recommends injecting a small quantity of the following mixture: oil of thyme 1 dram, oil of eucalyptus 20 drops, oil of petrol 2 ounces. It may suffice to remove the crust over the nostrils and by applying pressure over the sinuses force the exudate out thru the nasal openings. The heads of the fowls may then be dipped in the same solution and in the same manner as suggested under chicken-pox.

Immunization—Knowing as little as we do about the role played by microorganisms in this disease and having abundant evidence to show that feeding and sanitation may determine its seriousness it seems that one should feel fully justified in condemning the use of vaccines or bacterins the value of which no one knows.

J. R. Beach of the California Experiment Station reports a disease which as to external manifestations resembles roup very closely. This disease has been proved to be due to faulty nutrition and may be easily distinguished by post mortem examination. Small, deeply penetrating pustules are found on the base of the tongue and on the sides of the pharynx. The kidneys and sometimes the liver and heart will be found to be marked with a fine network of white lines which probably represent tubules filled with urates. Change of diet will correct this malady.

How to Prevent Recurrence

When no new cases have appeared for some time and the diseased individuals seem well, a general cleaning of all coops with burning their litter and thorough disinfection of the interior of the chicken-houses should be undertaken. This includes the isolation quarters. To disinfect properly one should spray (soak) the walls, roosts, floors, inclosed runs, eating, drinking and other utensils with a 3 per cent solution of some reliable disinfectant such as compound solution of cresol or a similar preparation and the whitewash if so desired. In the poultry yard quicklime may be used and whenever it is possible to do so the ground should be turned over by plowing or spading. The isolated birds should be kept from mingling with the rest of the flock for at least one month after recovery of the last case.

How to Make Per Cent Solutions

Per cent means parts per hundred, e. g., 2 per cent potassium permanganate, 2 parts pt. perm. to 100 parts of water. 1 level teaspoonful 4 grams. 1 level tablespoonful 15 grams. 1 heaping teaspoonful and 1 heaping tablespoonful 5 and 20 grams respectively. 1 full quart milk bottle 1000 cubic centimeters. 1 cubic centimeter 1 grain by weight. 20 grams of a solid or liquid to 1000 grams of water, 2 per cent solution. From these equivalents one should be able to mix up any strength desired.—H. J. Stapseth, Bacteriology Section, M. A. C.

RAISING GEESE ON SHARES

A loaned B four geese and two ganders, for one year. B is to return the four geese and two ganders at the end of the year. What share of the profits should each share?—V. A. B., Carson City, Mich.

—The goose raising enterprise which you mentioned as being carried on by two parties, A. and B. is an unusual one. Poultrymen distributing hatching eggs generally work on the basis that for every setting of eggs released they will have the privilege of selecting one cockerel or pullet when matured. I think in this particular ase that the party B. should receive at least two thirds of the stock produced because he has assumed the responsibility in taking care of the breeding stock and the raising of the goslings.—E. C. Foreman, Associate Prof. of Poultry Husbandry, M. A. C.

MOISTURE FOR HATCHING EGGS

PROBABLY no question concerned with the incubation of eggs has called forth the comment and controversy that the moisture question has. Whether it should be supplied to hatching eggs during the incubating period or not, is one of the favorite topics for an annual spring argument among poultrymen and hatchery operators.

There can be no doubt but that where the incubation of eggs takes place under hens that there is more or less an application of moisture to the eggs through external sources. This is responsible, more than anything else, for the currency given the idea that moisture ought to be applied externally from time to time during the incubation period.

We are not absolutely opposed to the application of moisture, for we recongnize that there are times when this is desirable, but, in the majority of cases, it is unnecessary and will do more harm than good. If good, fresh eggs are set—eggs that have not been held more than two or three days and not over a week, if possible, no application of moisture will be necessary unless you are using a very unsatisfactory type of incubator. Nature makes ample provision for the moisture content of an egg sufficient to supply all the needs of the developing embroyo chick during the process of incubation provided reasonably fresh eggs are set. But as an egg ages the moisture content evaporates and the chance of hatching a good, strong chick diminishes.

Many people advocate sprinkling the eggs with lukewarm water from time to time during the hatching period. We are absolutely apposed to this direct application of moisture to the shell of the hatching egg because we have tried that method time and again and have convinced ourselves that it affects the size of the chick hatched adversely. The more moisture applied to the shell of the egg, the smaller the chick hatched. This is due to the fact that the moisture drying off the surface of the shell rapidly, as it is bound to do, draws further on the natural moisture content of the egg and thereby decreases the size of the chicks hatched. Of course, the plan of dipping all eggs in lukewarm water is to be discouraged for the same reason.

Where moisture must be added in the incubator we feel that the plan of keeping a saucer of water under the egg tray is the best. It is naturally true that a wooden incubator well dried out will absorb considerable moisture as it warms up and unless it comes from some such source, it is bound to come from the eggs placed in the machine. Incubators that have stood idle in a dry place for a whole season will absorb more moisture than those that have been running several hatches.

The moisture question is taken care of by automatic arrangements on many incubators, more particularly on the large mammoth machines used in hatcheries for the large flocks. Some of the smaller machines provide sand trays which are to be kept moist all the time. We see no objection to these provided the sand is kept moist. If it happens to dry out overnight or during the day it will, in turn, absorb moisture from the eggs and may do more harm than can be remedied. If you have such a moisture tray, be sure to keep it moist according to directions all the time for the best results.

In order to get away from the moisture habit or evil, set absolutely fresh eggs whenever possible. Eggs set the same day they are laid will hatch larger and better chicks than eggs a week old. The difference is

HIGHEST QUALITY CHICKS

Michigan's Old Reliable Hatchery

(*The most modern and best equipped Hatchery in the state*)

PURE BRED English and American S. C. W. Leghorns; S. C. Anconas; Barred Plymouth Rocks and R. I. Reds. Strong, well hatched chicks from tested Hoganized Free range stock that make wonderful winter layers.

due largely to the difference in the moisture content of the eggs. Absolutely fresh eggs set in machines which do not and cannot absorb the natural moisture content, such as in metal machines or other machines having automatic moisture control do not require the addition of any moisture at all.

The safest rule to follow is to keep in mind that the less moisture applied to the eggs the better the results. If you want to test the truth of our contention, it will be simple enough to apply moisture to eggs in one machine and not apply it in another, but use saucers or other means, keeping all moisture off the eggs themselves. The results will prove the case.

THE HUNTED WOMAN

(Continued from page 9.)

they drench you in a jiffy. Donald is going ahead to put up a tent."

By the time they reached the mouth of the canyon MacDonald was out of sight. A little creek that was a swollen torrent in spring trickled out of the gorge. Its channel was choked with a chaotic confusion of sandstone rock and broken slate, and up through this Aldous carefully picked his way, followed closely by Joanne. The sky continued to darken above them, until at last the sun died out, and a thick and almost palpable gloom began to envelop them. Low thunder rolled through the mountains in sullen rumbling echoes. He looked back at Joanne, and was amazed to see her eyes shining, and a smile on her lips as she nodded at him.

"It makes me think of Henrik Hudson and his ten-pin players," she called softly. "And ahead of us—is Rip Van Winkle!"

The first big drops were beginning to fall when they came to an open place. The gorge swung to the right; on their left the rocks gave place to a rolling meadow of buffalo grass, and Aldous knew they had reached the basin. A hundred yards up the slope was a fringe of timber, and as he looked he saw smoke rising out of this. The sound of MacDonald's axe came to them. He turned to Joanne, and he saw that she understood. They were at their journey's end. Perhaps her fingers gripped her rein a little more tightly. Perhaps it was imagination that made him think there was a slight tremble in her voice when she said:

"This—is the place?"

"Yes. It should be just above the timber. I believe I can see the upperbreak of the little box canyon Keller told me about."

She rode without speaking until they entered the timber. They were just in time. As he lifted her down from her horse the clouds opened, and the rain fell in a deluge. Her hair was wet when he got her in the tent. MacDonald had spread out a number of blankets but he had disappeared. Joanne sank down upon them with a little shiver. She looked up at Aldous. It was almost dark in the tent, and her eyes were glowing strangely. Over them the thunder crashed deafeningly. For a few minutes it was a continual roar, shaking the mountains with mighty reverberations that were like the explosions of giant guns. Aldous stood holding the untied flap against the beat of the rain. Twice he saw Joanne's lips form words. At last he heard her say:

"Where is Donald?"

He tied the flap, and dropped down on the edge of the blankets before he answered her.

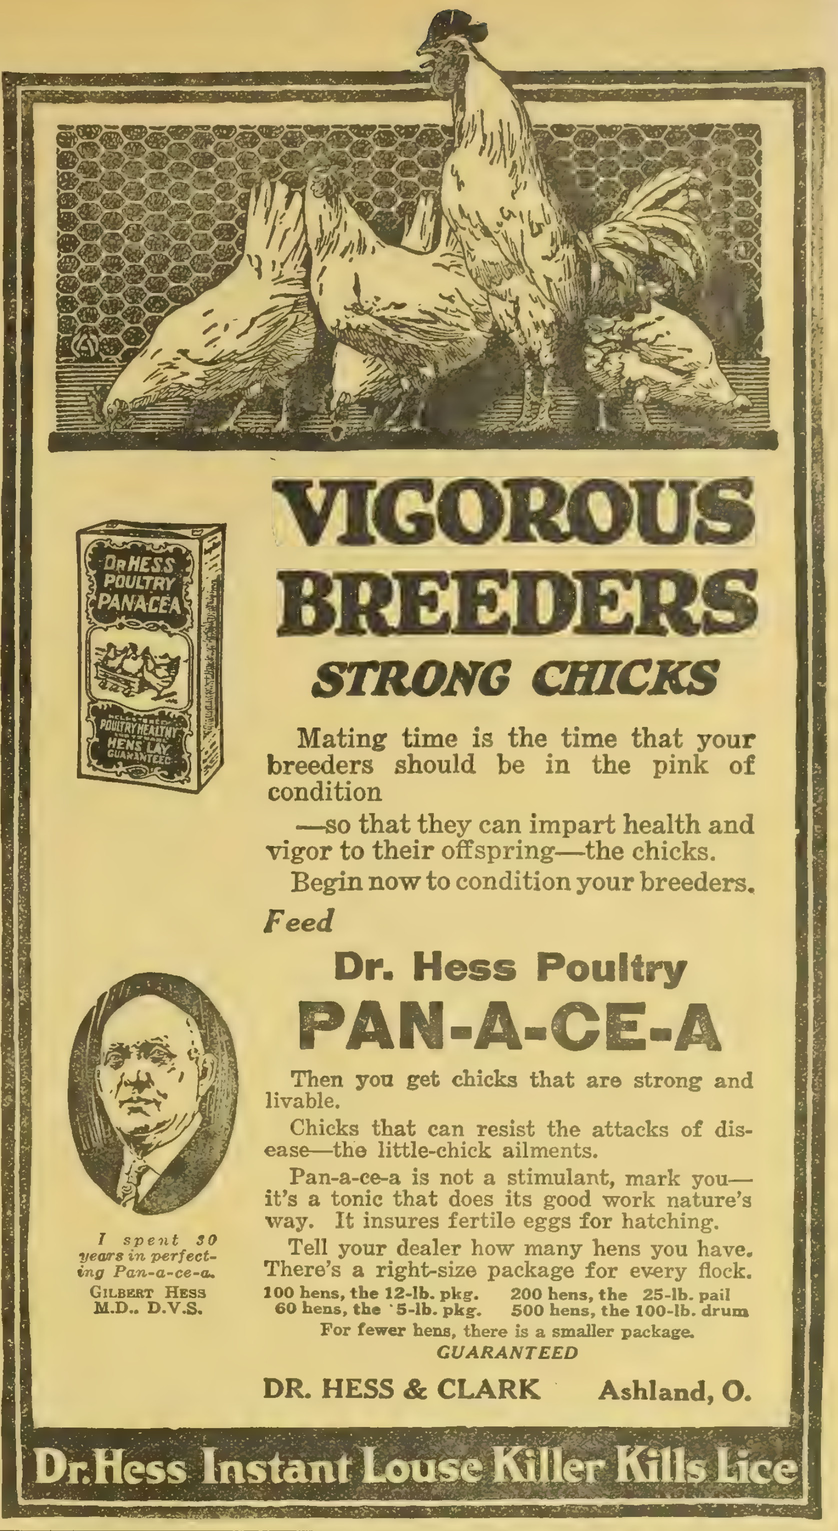
"Probably out in the open watching the lightning, and letting the rain drench him," he said. "I've never known old Donald to come in out of the rain, unless it was cold. He was tying up the horses when I ran in here with you."

He believed she was shivering, yet he knew she was not cold. In the half gloom of the tent he wanted to reach over and take her hand.

For a few minutes longer there was no break in the steady downpour and the crashing of the thunder. Then, as suddenly as the storm had broken, it began to subside. Aldous rose and flung back the tent-flap

"It is almost over," he said. "You had better remain in the tent a little longer, Ladygray. I will go out and see if MacDonald has succeeded in drowning himself."

(Continued in Mar. 3rd issue.)



VIGOROUS BREEDERS
STRONG CHICKS

Mating time is the time that your breeders should be in the pink of condition

—so that they can impart health and vigor to their offspring—the chicks.

Begin now to condition your breeders.

Feed

Dr. Hess Poultry
PAN-A-CE-A

Then you get chicks that are strong and livable.

Chicks that can resist the attacks of disease—the little-chick ailments.

Pan-a-ce-a is not a stimulant, mark you—it's a tonic that does its good work nature's way. It insures fertile eggs for hatching.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum

For fewer hens, there is a smaller package.
GUARANTEED

I spent 30 years in perfecting Pan-a-ce-a.

MARKET FLASHES

MARKET SUMMARY

Cold snap causes wheat prices to advance, market firm. Other grains follow trend of wheat. Beans advance 15c with demand brisk. Eggs steady. Butter not wanted and easy. Potatoes quiet. Cattle slow and prices unsteady. Hogs active but lower. Sheep quiet.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

By W. W. Foote.

A GREATER contrast between business conditions in the United States and those prevailing in several European countries could hardly be imagined, and refraining from getting mixed up in the controversies over there has saved us from all kinds of evils. Furthermore, not only is our home trade showing marked improvement over that of last year, but we are still exporting a great deal of provisions. As to the future, predictions are hazardous perhaps, but bankers, manufacturers and merchants believe that sufficient credit will be arranged to admit of large exports of food and other necessities. The railroads report the largest movement of freight ever seen at this season of the year, recent shipments running far ahead of the previous week, as well as far above the corresponding weeks of the last two years. There is a continuance of easy money conditions, and the Chicago banks are making loans on collateral at 4¾ to 5¼ per cent. Liberty bonds have sold at advanced prices, while government bonds of leading European countries have sold off sharply, French issues going down materially, with British finances much better than those of continental war countries and promise of an early settlement for payment of the huge loans made by the United States to Great Britain. While the home trade of this country is active and on sound basis, there is no disposition upon the part of merchants to load up heavily with commodities, and farmers should not look for any boom. It is encouraging to know that savings in the banks of this country have shown a large increase during the past year. Labor is well employed at high wages, and this means large consumption of meats and other food. Despite the greatly increased marketing of hogs this season, the stocks of lard and hog meats in this country are unusually small, the prices are higher than last year.

Large Sales of Grain

Only a short time ago it was very generally expected that a renewal of war in Europe would bring about much diminished exports of the several grains and flour, but thus far this has failed to take place, and such shipments have been running much ahead of a year ago. Besides liberal exports from North America of wheat breadstuffs, Germany and Norway have been large buyers of rye, and other countries have taken a good deal of rye, which is much cheaper than wheat. Exports of corn and oats are smaller than they were a few months ago, and price fluctuations in oats are usually within narrow limits, sales being made at an advance of several cents above the prices current a year ago. Wheat, while advancing in price within a short time, is selling well below the prices of a year ago, and rye is cheaper than last year, but barley is higher. Corn is controlled mainly by home influences, and its unusually large consumption on the farms is mainly responsible for its selling nearly 20 cents a bushel higher on the Chicago Board of Trade for May delivery than a year ago. Reports from most parts of the corn belt are that corn is plentiful, and farmers are in no hurry about parting with their surplus stocks at ruling prices. Late reports are that Germany is buying Russian rye at much below the American prices. It is impossible to forecast the future, but farmers who market their grain at fair profits are not likely to regret it. May wheat has been selling in Chicago at $1.12½, compared $1.31¾ a year ago. May corn sells at 76½ cents, comparing with 59 cents a year ago; and May oats at 45½ cents comparing with 40½ cents last year.

Large Supply of Hogs

The Department of Agriculture a short time ago reported the number of hogs in the United States as unusually large, and the heavy receipts in Chicago and other packing points bear out this statement, supplies running far ahead of a short time ago and a year ago. The Chicago packers, in common with those of other packing centers, want a great many hogs to convert into fresh pork products and lard and cured meats, and there is a very large call in the Chicago market for hogs to ship to eastern packing points, but the large receipts have put prices much lower. The bulk of the hogs sell within a range of about 50 cents per 100 pounds, with prime light bacon hogs going highest and the best heavy butchers are selling 35 cents below them. Hogs are selling at much lower prices than in recent years, and so long as this keeps up it will be difficult to check the downward tendency of prices. The marketings are largely of well matured hogs, weights being much heavier than in past years, causing killers to pay a good premium for the lighter offerings. Looking ahead, it may be said that all the indications are that large numbers of hogs will continue to be marketed, forcing prices gradually lower, and the best authorities advocate marketing hogs averaging from 200 to 250 pounds, as corn valued at feeding points at 60 cents a bushel makes rather dear feed. Provisions are having a large consumption in this country, as well as abroad, exports continuing much heavier than a year ago. Stocks of lard in western packing centers are much less than a year ago, but stocks of cured hog meats are far heavier, while prices for provisions are higher. Recent hog sales on the Chicago market were made at $6.85 to $8.70, comparing with $8 to $10.25 a year ago.

Beef Cattle Plentiful

Farmers are feeding many more cattle than usual, and they are shipping them to market after short feeding, the offerings on the Chicago and other markets including an unusually small proportion of long-fed steers and fat yearlings. Much of the time supplies are too large, causing declines in prices, but quite recently they have been on a more curtailed scale, and this caused an upward turn in Chicago prices for fat beeves. The choicer steers sold for $10 to $11 per 100 pounds, with a good class at $9 and upward, the bulk of the steers crossing the scales at $7.75 to $10.25, and common to medium at $6.40 to $7.50. Most of the cows and heifers found buyers at $4.50 to $7.50, and calves sold at $6 to $13.50, most of the light veal calves fetching $11 and over. The stockers and feeders had a fair sale at $5 to $8, the desirable kinds selling at $6.50 and over.

Lambs Sell High

Despite occasional breaks in prices in the Chicago lamb market, sales are made all the time at far higher figures than in most former years, particularly under pre-war values, and Michigan sheepmen are making generous profits on well finished consignments of lambs, yearlings and sheep, while feeding lambs sell as high as the best killers, with nowhere near enough offered to meet the demand. Wooled lambs are selling in Chicago at $13.50 to $13.25.

WHEAT

As we predicted the wheat market has advanced. To date the price has advanced 4 cents over that of a fortnight ago and it is in a position to advance further. The opinion entertained by the trade in general is that the trouble in Europe will soon be settled, which means that Europe will soon be bidding in the American market for supplies. The market was firm all of last week. Supplies were fairly large but dealers only fed the market what it could take care of. Domestic demand is small at present and business from the seaboard is practically nothing; however, it is reported that there is a heavy shortage in Europe, and although Europe's financial condition is handicapping her at present, the bulls in the market think there will be a way out and that American grain will find the way to Europe. They expect congress to do something to improve Europe's buying power in this country.

Prices

Detroit—Cash No. 2 red, $1.39; No. 2 white, $1.39; No. 2 mixed, $1.37.

Chicago—No. 2 hard, $1.23½; No. 4 hard, $1.19¾.

Prices one year ago—Detroit, No. 2 red, $1.42; No. 2 white and No. 2 mixed, $1.39.

CORN

Corn has followed the trend of wheat during the past couple of weeks and prices are somewhat higher. Advances at Detroit amounted to 4 cents. Although demand has been light there has been considerable bullish talk about this market, observers believing the supply will be light. Farmers seem ready to sell at prevailing prices and some dealers are disposing of their stock.

Prices

Detroit—No. 2 yellow, 80½c; No. 3, 79c; No. 4, 77c; No. 5, 75c.

Chicago—No. 2 mixed, 75c; No. 2 yellow, 75@75¾c; No. 2, 74c.

Prices one year ago—Detroit, No. 2 yellow, 60c; No. 3, 55c.

OATS

This market made a weak attempt to follow wheat and corn but it fell rather flat. Demand has improved slightly and the supply is small, but enough to take care of present demand. The tone of the market is firm .

Prices

Detroit—No. 2 white, 50c; No. 3, 48½c; No. 4, 47c.

Chicago—No. 2 white, 45¼@46½c; No. 3, 44@45¾c; No. 4, 43¾@44c.

Prices one year ago—Detroit, No. 2, white, 43c; No. 3, 40½c

RYE

Rye remains unchanged with little doing in the way of demand or receipts. The market seems to be in a rut and there is no indication as to whether it will leave the rut and if it does which way will it go, up or down. The future trend of this market depends considerably on the outcome of the European troubles.

Prices

Detroit—Cash No. 2, 90c.

Chicago—Cash No. 2, 87½@89c.

Prices one year ago—Detroit, Cash No. 2, $1.00.

BEANS

Elevator men throughout the state reported the middle of last week that the bean market was lifeless, that they could not dispose of their stocks very readily and that they were paying the farmer from $6.75 to $7 per hundredweight. The market ruled easy for a few days but before closing Saturday the price at Detroit advanced 30 cents bringing the Detroit price back within 10 cents of what it was two weeks ago. Although deliveries increased when the market weakened there were not enough receipts to bear the trend.

Prices

Detroit—C. H. P., $7.60 per cwt.

Chicago—C. H. P., $8.15@8.50 per cwt.

Prices one year ago—Detroit, C. H. P., $5.50 per cwt.

POTATOES

The quantity of potatoes in the 35 late potato states on January 1 of this year is estimated by the United States Bureau of Agriculutral Economics to have been 125,290,000 bu. or 29.7 per cent of the total production of those states. These figures include those for sale for local consumption as well as those available for shipment, but do not include the stocks necessary for family consumption on the farms where produced nor those retained for seed. One year ago the stocks amounted to 90,023,000 bushels and two years ago, 107,991,000 bushels. Of the total stocks on hand this year, Michigan held 13,160,000 bushels, or 10.5 per cent, according to the report issued by Verne H. Church, U. S. Agricultural Statistician and L. Whitney Watkins, Commissioner of Agriculture. This represents 34.8 per cent of Michigan's crop.

The Dept. estimate caused the market to weaken at some points in the east and declines in prices were made in some instances. Western markets were steady as the car shortage continues to hold up receipts and prices have made only slight changes during the past couple of weeks. Holders of potatoes should not become too anxious and unload all of their potatoes at once. Indications are that the potato market will enjoy a more healthy condition than at present.

Prices

Detroit—Michigan, $1@1.10.

Chicago — Wisconsin, 90@95c; Michigan, 80@85c.

Prices one year ago—Detroit, $2.20.

HAY

Hay markets generally show very little change. A general dullness has been shown with holders anxious to realize. Snow and colder weather exerted little influence in demand conditions. Prices generally are steady to a little lower. A stronger feeling is reported in New York market at present, but higher prices have not been realized.

Prices

Detroit—No. 1 timothy, $16@16.50; standard $15.50@16; light mixed $15.50@16; No. 2 timothy, $14@15; No. 1 clover mixed, $14@14.50.

Chicago—No. 1 timothy, $19@21; No. 1 clover, $12@14; No. 1 light clover timothy and clover mixed, $17@18.

New York—No. 1 timothy, $24; No. 1 light clover mixed, $24; No. 2, $22@23.

Prices one year ago—Detroit, No. 1 timothy, $19@20; standard, $18@19; No. 2 timothy, $17@18.

Alfalfa—Chicago, No. 1, $23@26.

WOOL NOTES

The seaboard wool markets have not displayed the activity expected after the recent showing in New York and sale of finished goods by some of the prominent manufacturers in the United States. The prices at which these fabrics were offered were less than had been anticipated by the trade; as a result of this sale the prices for wool have not changed materially. More attention is being directed to wool of the medium grades such as ¼ Blood and ⅜ Blood and if any hardening tendency is noticed it is for these grades. It may be said that the market is moderately active with prices fairly strong.

WEEKLY MARKETGRAM

U. S. Bureau of Agricultural Economics

Washington, D. C., for the week ending February 10, 1923.

FEED—Markets steady for transit feeds. March, April, and May bran offered at $2 below prompt shipment prices. Cottonseed meal weak, demand dull, offerings plentiful. Linseed meal about $2 lower, demand light. Gluten and hominy feed quiet, inquiry and offerings light. Alfalfa meal draggy, prices lower. Receipts and stocks generally good. Movement fair. Quoted Feb 9—bran $26.50, middlings $26.75, flour middlings $28.75, rye middlings $25, Minneapolis; gluten feed $42.65 Chicago; 34 percent linseed meal $52 Minneapolis, $50 Buffalo; 36 percent cottonseed meal $40 Memphis; $41 Atlanta; white hominy feed $30 St. Louis, $30.50 Chicago, No. 1 alfalfa meal $25 Kansas City:

DAIRY & POULTRY PRODUCTS—Butter markets firm most of week but are weak at close. Prices have advanced to 2½ over a week ago. The firmness during the week was due to speculative support, altho interest primarily was lacking in face of the holiday Monday the 12th, and anticipated heavy receipts following this, but little interest in foreign butter now. Closing prices 92 score butter: New York 49c; Boston 49½; Philadelphia 50c; Chicago 49c. Cheese markets partly stedy to weak. Decline occurred on Wisconsin cheese boards Monday, but trading interest is still lacking in view of further declines. Prices on Wisconsin primary cheese markets Feb 9: Twins 24¾c; Flats 25¾c; Daisies 25½c; Double Daisies 25¼c; Long Horns 25¾c; square prints 26c.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of February 18

THE week beginning February 18 promises to be quite cold for the season in Michigan.

The warmest period of the entire week will occur about Wednesday and possibly again at the close of the week, while the coldest period of the seven days in question will come during the very early part of the week.

During Sunday and Monday and probably Tuesday the weather is expected to be fair in Michigan but during these latter days the temperature will be rising. These conditions will be due to the eastward advance of a southwestern storm that will bring with it much rain, sleet or snow according to latitude and particular portion of any stated town in relation to the storm center.

We expect that this will be one of the greatest moisture carrying storms of the month and Michigan will receive its share of the burden as the passes which will be during middle part of week. Locally there will be severe winds, sleet, ice storms and blizzards.

No sudden change to colder is expected immediately following in the wake of this storm although the temperature will drop and live stock should not lack attention.

There is a probability that storminess will again effect Michigan about Saturday with more rain, sleet or snow and strong winds.

Temperatures Below Normal

During the next three or four weeks the temperatures will average colder than normal and during this same period there will develop some severe sleet and blizzard storms.

Week Ending February 25

The opening days of this week promises to bring Michigan a decided rise in temperature.

The weather will have become threatening, the winds increasing and before Wednesday general rain or snow may be expected in the state. During the storm there may also be some sleet but in any event we figure that storminess will be severe enough to cause delays or hinderances to traffic and business in at least parts of the state.

Following close on the heels of this storm there will be a cold wave. This decided drop in temperature is expected to hit this state about middle of week.

For the balance of this week, with the possible exception of Saturday, temperatures will remain cold in Michigan.

PROFIT SHARING SALE
"A Kalamazoo Direct to You"

The Finest Fox Cubs in U.S.

Get Rich Raising Foxes

We Show You How---We Start You Right

The money you can make in raising foxes, if you get the right start—the right help, advice and co-operation, is so enormous when compared to ordinary farming, as to be almost unbelievable. Six months old fox cubs of our quality bring from $2,000.00 a pair up to $5,000.00. Single pelts from $300.00 to $1,000.00. It takes some capital to start—$500.00 to $1,000.00,—but our installment payment plan takes care of that—your profits will soon start you on the road to a fortune.

De Luxe Silver Black Fox Ranch

is owned and operated by men who have had years of experience. Quality has been our slogan and as a result we have breeding stock that is second to none in the United States. We are now booking orders for 1923 cubs. Our supply will be limited, so we advise writing to us promptly. We are fully equipped to care for your foxes, breed them to unrelated stock, help you sell your offspring, get you started right and then assure your success. Write for full particulars today, if you want to get into the most profitable and fascinating kind of farming you ever experienced.

4 TIMES Around the World with ONE OILING

100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The **Auto-oiled Aermotor** after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

For full information write **AERMOTOR CO.** Chicago Kansas City Dallas Minneapolis Des Moines Oakland

PLAN for Greater Profits

Let us show you a better way of building—a way that means permanence, fire protection, appearance and more profit.

Kalamazoo GLAZED TILE BUILDINGS

If you have been waiting for metal roofing prices to come down, here they are—direct from factory prices—lower than you can get anywhere else. Send for our New Catalog covering all styles Metal Roofing, Siding, Shingles, Ridging, Ceiling, etc., will save you money.

PREPARED ROOFING ONLY $1.05

Don't buy Roofing, Paints, Fencing, Gas Engines, Tires—anything you need until you get our latest catalog. You can see and try our roofing before you pay. All sold on money back guarantee. Write for Money Saving Catalog today.

The United Factories Co., 704 Marion Bldg., Cleveland, Ohio

ALL AROUND SATISFACTION FOR ANY CULTIVATION PURPOSE

Its thru right kind of cultivation that foul growths are kept down and can be eradicated. THE KOVAR DIGGER has opened the field for the right kind of cultivation and having exclusive features will give satisfaction which no other machine will produce. Thousands of farmers have been convinced and we want to show you. Write for free booklet on land cultivation and how to work foul growths. Besides our regular tooth we make a Special Sow and Canadian Thistle Tooth. This will work deeper and move the ground more thoroughly. KOVAR has the most successful Spring Tooth Corn Cultivator. Also a Harrow Cart. **Write for further information.**

Current Agricultural News

TO DETERMINE VALUE OF MICHIGAN WOODLOTS

THE Department of Forestry of the University of Michigan is sending out short and simple questionnaires to farmers in some thirty or fourty counties of lower Michigan in an effort to determine the value of the woodlots of southern Michigan. They wish to ascertain with some degree of accuracy their annual returns to the farmers and their economic position in the wealth of the state. Their idea in this study is to obtain sufficient data that they may present forcefully the need of government or state agents to assist the farmers in the handling and marketing of their woodlot products, and the care of the woodlot, in much the same manner that county agricultural agents now assist in farm products. You all realize the importance of this work and you will be helping both yourself and your neighbor by filling out the questionnaire if you receive one. As soon as it comes set right down and fill it out so you can return it by the next mail.

COW TESTERS HEAR ABOUT MICHIGAN DAIRY LAWS

MEMBERS of the Michigan Association of Cattle Testers met at the Dairy Department of the Michigan Agricultural College, East Lansing, on February 2nd for a general discussion of their work and a better understanding of the value of the work of the Association. The dairy laws of Michigan were explained by Mr. T. L. Broughten, director of the State Bureau of Dairying and Prof. O. E. Reed, head of the Dairy Department of the M. A. C., spoke on the value of the tester in his cow testing association work. Other things considered were the Register of Profit work as explained by Mr. R. H. Addy, Extension Specialist in Dairying at the College, and also the Bull Association work was emphasized by Mr. S. J. Brownell, another Extension Specialist in Dairying at the M. A. C. The cow testers elected the following officers: President, Hoyt D. Shisler; Vice-President Fred Leonard; Secretary-Treasurer, J. M. Mathiesen; and S. P. Sexton and L. J. Carter, directors.

HORTICULTURISTS MEET THIS THIS WEEK

THE annual pre-spring meeting of the Michigan State Horticultural Society is being held this week, Feb. 28 to Mar. 2, at Paw Paw. Grape culture, insect and disease control. cure and harvest of small and tree fruits and marketing problems will be discussed by some of the leading pomologists and growers in the Middle West.

A vice president of the society will be elected by the executive committee at this meeting to fill the vacancy caused by the election of A. J. Rogers of Beulah as president at the Grand Rapids meeting last December, Two candidates mentioned for the office are George Friday of Coloma, brother of the president David Friday of the Michigan Agricultural College, and Robert Anderson of Covert, one of the leading peach growers of Michigan.

The itinerary for the annual summer tour will probably be decided upon at this meeting. President David Friday, economist, will be one of the principal speakers.

UPPER PENINSULA BOOSTING CLUB WORK

SUBSCRIPTIONS of $1000 and $500 to promote, respectively, the boys' and girls' club work program, and the land-clearing campaign throughout the Upper Peninsula of Michigan during the ensuing year have been made by the Upper Peninsula Development Bureau of Michigan. The Decision was reached at a recent meeting of the officers and directors, at Menominee meeting.

The $1000 appropriated for the club work will be devoted, largely, to making possible the sending of a group of upper Michigan calf club boys, with their prize-winning animals to the National Dairy Show in the fall of 1923. It is a feature never before attempted by Cloverland's dairying interests. The boys' and girls' club work in upper Michigan is carried on under the direct supervision of A. C. Ketunen, Marpuette, Michigan.

The $500 for land-clearing purposes will be added to the general fund appropriated for the various upper Michigan counties. "Larry" F. Livingston, land-clearing expert for the Michigan Agricultural College, is in charge of these activities throughout the state. A. J. McAdams and George Amundsen, two experienced land-clearing workers, will be directly in charge of the upper Michigan campaign with the opening of the land-clearing season, this spring.

INTERNATIONAL EGG LAYING CONTEST

HIGH individual honors for the week ending February 13 go to Mr. Whittaker's Reds when they finished with 51 eggs for the week. The Ontario Agricultural College claims second honors with 50 eggs for the week with the Wolverine Hatchery third honor with 49 eggs.

In the Barred Rock class Brummer's Poultry Farm now hold first place with a total to date of 528 eggs. Dennison's pen second place, only two eggs behind the leading pen. Christophel holds third place.

In the Wyandotte section Evergreen Poultry farm still maintains an easy lead. Sink's pen from Farmington is in second place with 477 eggs, Carterloa Farm is third. Keister's pen are in fourth place.

Van Rallte still leads in the Ancona section with 354 eggs. Manning holds second place with 306 eggs and DeGoot third with 302.

The production in the Rhode Island Red class have been very satisfactory for the past few weeks. Dunning's pen takes the lead, four eggs ahead of Mrs. Travis's pen. The excellent production of Whittaker's pen is making them a dangerous rival.

Mr. Shaw's pen with 10 birds in action again lead the White Leghorn section with 587 eggs to date.

PRODUCERS TO OPEN IN KANSAS CITY MARCH 5

THE National Live Stock Producers' Association announces that its seventh co-operation commission house will open for business in Kansas City, Missouri, on March 5. Seven organizations are directly interested in supplying the new Kansas City terminal with live stock. They are: Missouri Farm Bureau Federation, Missouri Live Stock Shippers' Association, Kansas Farm Bureau Federation, Kansas Live Stock Shippers' Association, Oklahoma Live Stock Shipping Association, Texas and Southwestern Cattle Raisers Association, and the Texas Farm Bureau Federation. The new co-operative will also draw livestock from Colorado, Utah, Nebraska, and other western states.

MICHIGAN WOMAN CHAMPION HORSESHOE PITCHER

LAST Thursday, February 22, at St. Petersbery, Florida, a Michigan woman proved herself to be the greatest woman "barnyard golfer" in the country. This lady, Mrs. J. F. Francisco of Muskegon, won the national women's championship over five of the best women pitchers in the United States. This is the second time Mrs. Francisco has held this title as she won it for the first time in 1921. Last year she took second place.

FARMER-MERCHANT PICNIC IN MAY

ONE of the largest joint picnics of business men and farmers ever held in the vicinity of Lansing will take place in May. This picnic is to help bring about closer relationship between the merchants of Lansing and the farmers in the surrounding territory. Mrs. Dora Stockman, of the Michigan State Grange, represents the farmers and a well known business man represents Lansing business men as a committee to arrange the affair. This idea would work to the good of all in any community.

Detroit Jumps Ahead As a Live Stock Market

Farmer Owned Packing Plant Helps Swell 1922 Totals and Yet Great Market is Only Partially Supplied by Live Stock From Michigan Farms.

By FRANK GARRISON

SOME five or six months ago it was estimated that we would handle for 1922 over 100,000 head of livestock. This figure was not quite reached, although an increase of 18,000 head was handled the second half of the year, or practically 50% more than from January to June inclusive thus showing a consistant gain in volume throughout the year, and right here is a good place and time to make the statement that at no stage of the game were our livestock purchasers made contingent on having an outlet for products, as it has always been the case with the sales department that difficulty existed in filling orders than in getting the orders, the fact being we could only cut the garment to suit the cloth and purchase what our available money would buy in raw materials, consequently limiting and cramping both the manufacturing department and sales department accordingly, to the handling of a small volume not commeasurate with available facilities and automatically creating a situation where neither could operate except on excessive costs.

With the natural healthy progress of the business, coupled with full and complete co-operation of our stockholders, this condition will undoubtedly show up to better advantage during the current year.

All things considered, the results obtained to date are encouraging and the figures mentioned below show this farmer-owned packing company to be more than a flash in the pan. We have absolutely made good in our plan of saving to share-holders heavy marketing expense by absorbing livestock out of first hands, as our figures show but 25% of our livestock to have been purchased in the local stock yards. No later than last week one community (where our representation of stockholders is perhaps larger than any where else in the state) had five car loads of live-stock for us and this week they are back with two more. Previous to our starting slaughtering operations all the livestock from these same people was subject to heavy toll in yardage, commission, insurance and feed which now are absolutely saved to them by shipping direct to the Detroit Packing Company.

75% Direct from Farmers

More power to their elbows. Others can, will and do benefit equally and I personally look for largely increased receipts from such sources as our business becomes better known.

Now for the figures:

Livestock Handled in 1922
(Detroit Packing Company Plant)

	Bought at Yards	Direct from Farms	Total Killed
Cattle	3183	6067	9250
Calves	1595	6360	7955
Sh. & Lbs.	1203	9270	10473
Hogs	12944	48114	61058

88736 head of livestock.

Total money value being:
Yards purchases..$ 487,643.05
Direct purchases..$1,501,096.09

Total........$1,988,739.14

These figures indicate that for every dollar expended in the M. C. Stock Yards we spent four dollars with the men who would otherwise have had to market their cattle, sheep, lambs and hogs through the stock yards at great expense to them. Now then, if these men saved the yard expense on a volume of business exceeding one and one-half million dollars, they surely found their affiliation with our company to be worth while.

Figuring the average value of $1-500.00 per car the $1,501,096.09 bought better than a thousand cars and consequently saved to the shippers between twenty-five and forty thousand dollars, in other words it paid them to this extent to have a great modern packing plant in Michigan's metropolis.

Detroit Gains 23% in 1922

Outside of being of direct benefit financially to its stockholders I consider that the Detroit Packing Company has materially helped the livestock interests of Michigan as a whole by not ouly our campaign of education which has carried over several years and will never stop, but also by supporting the local stock yards and helping to establish a better market in Detroit for Michigan livestock. Perhaps the commission men in the yards and other "powers that be" will hardly consent as freely to my contention as I am to contend, but facts speak for themselves and it is a fact that 19796 more cattle, 32303 more calves, 4513 more sheep and lambs, and 74663 mare hogs were handled through the M. C. Yards at Detroit during 1922 than the year previous, the increases being 23% on cattle, calves and hogs, with sheep and lambs showing relatively small differences.

Just a word further on livestock: It is a proven economic fact that the best is the cheapest and I have seen so much three cornered, mullet-headed, poor-bred stuff and often well-bred but poorly-fed stuff come into our yards the past year that I plead with you as a livestock producer to mend your ways and make more money with the same expenditure of time and effort by handling the right kind in the right way hereafter.

People Eating More Meat

To aptly illustrate what quality and condition mean in livestock it is only necessary to compare purchases made the same week by us—steer cattle, all of them, one lot costing us under 4¾c at the plant while for some fancy, well-bred and fully finished cattle we paid close to 12c, so it looks like a three to one bet in favor of the quality and condition proposition. Think it over, then do the necessary to get a good run for your time, feed and money.

The per capita consumption of meat for the U. S. in 1921 was:

Beef	57.7 pounds
Veal	8. pounds
Mutton	6.3 pounds
Pork	72.8 pounds

Or 144.8 pounds, which seems in line with reason, as this would mean but six and one-third ounces per day for 365 days.

We have within easy trucking distance of our plant in Detroit over two million people who on 1921 basis would consume 115,400,000 pounds of beef, equivalent to about 200,000 cattle; 16,000,000 pounds of veal, equivalent to about 110,000 calves; 12,600,000 pounds of lamb, equivalent to about 300,000 sheep and lambs, and 145,600,000 pounds of pork, equivalent to about 1,000,000 hogs, so you can realize how even this small percentage of Michigan's population insures absorption of all the meat food products of quality and condition Michigan can produce.

If You Think You Can Raise Ton of Pork from Litter Here's Your Chance

HOW YOU CAN ENTER

ANY FARMER in Michigan can enter before April 1st, 1923. All the rules and regulations are printed here. Simply write a postal card to V. A. Freeman, State Leader, Michigan Ton Litter Club, East Lansing, Michigan, asking for an entry blank which he will gladly mail you, free.

IF you have barbored the idea that you know just about as much about putting fat on a litter of pigs as the next fellow, here is a chance for you to test your prowess!

A ton of pork from one litter!

Thats the order and if you can fill it, with any litter to farrow between the first of March and the fifteenth of May, 1923, you are right in line for the suitable prizes to be awarded by the Michigan Ton Litter Club at the annual meeting of the Michigan Swine Breeders Association next fall. There is not a pennies cost for you to nominate any litter and any farmer in Michigan is eligible to enroll.

Any Litter is Eligible

"The idea of a Ton Litter Club is being taken up enthusiastically by Michigan pork producers," said V. A. Freeman, of M. A. C. the state leader of this club. "Most of them believe in their own hogs and in their ability to make them produce large litters and rapid gains. The results of the contest in Indiana brought home many facts related to economic pork production. We believe it will do the same for Michigan.

"It will demonstrate the value of large litters raised to weaning age. and many of the factors which will make these large litters possible will be shown. The importance of controlling parasites, particularly the round worms and hog lice, will be brought out by the contest. Practical combinations of feeds that will give rapid gains and make vigorous pigs will be demonstrated. Blood will certainly tell and the competition is open to all breeds as well as to grades and any kind of cross-breeds that anyone wishes to enter."

We are reprinting for Business Farmer readers the complete rules and regulations for 1923, as there is no time to be lost if you are to enter one or more litters before May 15th.

Rules and Regulations

The Michigan Ton Litter Club will award suitable prizes to Michigan farmers who produce litters of pigs, farrowed between March 1, and May 15, 1923, that reach the weights given below when six months (180 days) old:

1. Litter weighing 2,000 pounds or more. 2. Litter weighing 1,800 pounds and less than 2,000 pounds. 3. Litter weighing 1,600 pounds and less than 1,800 pounds.

Who is Eligible?—Any Michigan farmer is eligible to enroll in the Michigan Ton Litter Club without charge.

Enrollment—1. Members may enroll any time before the pigs are farrowed and previous to April 1, 1923 through the county agent or direct with the State Leader of the Club. No litter farrowed before enrollment of the member can be nominated for award. 2. Names and addresses of members shall be in the hands of the State Leader of the Michigan Ton Litter Club not later than April 5, 1923. 3. Boys and girls who are properly enrolled in the Boys and Girls Sow and Litter Clubs, and who comply with all requirements of the Ton Litter Club, can compete as regularly enrolled members of the Club.

Memorandum of Rations—1. Members shall keep a memorandum of rations fed to the breeding herd during the gestation and suckling periods, and forward same through the county agent to the state leader of the club as soon as the pigs are weaned. 2. Members shall keep a memorandum of the rations fed to the pigs from the time they are weaned until they are officially weighed and forward same through the county agent to the state leader of the club as soon as the hogs are officially weighed.

Ear Marking of Pigs—1. Members shall ear-mark each litter within seven days after birth, and forward a certified report of this marking, along with the date of farrowing and the number of boar and sow pigs in the litter, to the state leader of the club within seven days after the litter is farrowed. 2. Litters that are to be kept eligible to nomination for an award shall be ear-marked by the notch system recommended by the Michigan Ton Litter Club, or by some similar system by which the litters can be identified easily and accurately by the committees on inspection and weighing. 3. All the pigs in litters that for any reason are not to be kept eligible to nomination for an award shall be ear-marked with a single notch in the outer or lower side of the tip of the left ear. 4. Reports must be sent in for every litter of pigs farrowed on the farm in the spring of 1923. Failure to ear-mark and report a litter within the seven day limit shall make the entire herd ineligible for an award.

Inspection of Herds—1. All herds from which litters are nominated for a wards shall be inspected before July 1, 1923. 2. The county agent or the state leader of the club, or both, and a committee of two or more disinterested farmers that represent the swine or general agricultural interests of the county or township, shall make this inspection. 3. The committee on inspection shall examine the ear-marks of all the spring pigs on the member's farm to see that each litter has been ear-marked as required under these rules and regulations, and shall certify to the nomination of the litter nominated by the member if they are eligible to nomination.

Nomination of Litters—1. Mem-

(Continued on page 31.)

Educational? A deep-sea diver, in a glass tank, works in this tent on the Midway.

The "Ballyho" or "Barker"; not a word of truth in what he says, but no believes him anyway!

The "Free Show" to attract the crowd for the "Barker" is usually better and more entertaining that that inside the tent!

Is the Midway Necessary to Support Our Fairs?

DO YOU WANT THE MIDWAY ELIMINATED?

TO have or not to have a midway, not only at the Michigan State Fair, but West Michigan State Fair and the many excellent county fairs held in this and nearby states is the problem that is bothering every fair director and manager.

A bill has just been introduced in the Michigan Legislature which shows that the state, if the midway were to be abandoned at the Detroit fair alone would have to put up about one hundred thousand dollars to make up the resultant deficiency.

George W. Dickinson, who because of his phenominal development of the Michigan State Fair is regarded as the foremost manager in America, does not believe there is any basis for the criticism of the present midway, which is, in his opinion, clean, wholesome amusement which the people demand and which brings in a revenue large enough to allow the fair to progress more rapidly along the many necessary lines of education.

The Business Farmer would like to hear from its readers on this important subject.

HAVE managers and boards of directors of agricultural fair associations underrated the capacity of the people to enjoy a good, wholesome entertainment? Is it necessary to appeal to the rabble to increase attendance? Do they have to sell concessions to know fakers who operate their games from the same stands from year to year, in order to obtain the money necessary to pay legitimate premiums and expenses? Isn't this "Just to advertise" stunt a little out of keeping with fairs claiming to be great educational and industrial institutions?

It is true that patrons of fairs demand and expect entertainment. At least a portion of those who attend go for no other purpose. They also demand a variety of entertainment and are willing to pay just a little more than it is worth. But, it is a mistake to believe with Barnum that "the American people like to be humbugged." Rather, it is better to believe with Lincoln that "You can fool some of the people all of the time; all of the people some of the time, but you can't fool all of the people all of the time."

Old practices, like old habits, are hard to break, and so many fair managers "kid" themselves into believing that their patrons continue to be enthusiastic about the same old carnival that they have seen year after year since they were children. They still believe that the average patron rates so low in mentality that it is highly amusing to look into a box-like enclosure at a deformed, crippled or idiotic human being who should be receiving treatment at an eleemosynary institution instead of being exhibited as the "Wild Man from Borneo." The five-legged horse and the fat lady are expected to be a never-failing source of amusement, drawing the thousands through the gates daily. It is a great show, say the directors, because the show manager said so. None of them ever visited a single one of them. "But," they say, "look at the big crowds on the carnival grounds and around the doll racks and other contraptions" (barred from all decent cities and resorts except fair grounds). Of course. There is always a certain percentage that have their curiosity aroused by the flaring banners who are willing to risk a dime to learn just how badly they are fooled, and another class who wander up and down the streets to get free enjoyment out of the "suckers." Some of these also spend dimes because, as it is frequently remarked, the shows are so "rotten" they are good.

In the same neighborhood, generally adjoining, are the games of chance. The police are supposed to have already rounded up the hundreds of crooks who are attracted to cities where fairs and conventions are in session. They have even gone around to the drug stores and confiscated all the little punch boards where a lucky number draws a box of candy. "Nigger" crap games are raided and the city put on its good behavior, so to speak. But gambling devices on fair grounds are exempt with the "smooth" gentry who collect in that neighborhood.

Are these things necessary to the successful conduct of any fair?

Ohio "Cuts Out" Carnivals

Not many years ago there were thousands of good people who earnestly believed that making Dallas a saloonless town would kill growth. Did it? How many were of the honest opinion that the State Fair of Texas could not exist without horse racing and the accompaning book makers? The enforcement of the law against selling liquor on Sunday, many years ago, was going to depopulate the Galveston beach, but it didn't, and so we find conscientious objectors to every reform. When the directors of the Ohio State Fair decided that carnival companies and gambling games

(Continued on page 19.)

Make Your Woods Produce Profitably Both as Sugar Bush and Woodlot

By P. L. BUTTRICK

ASSISTANT PROFESSOR OF FORESTRY, M. A. C.

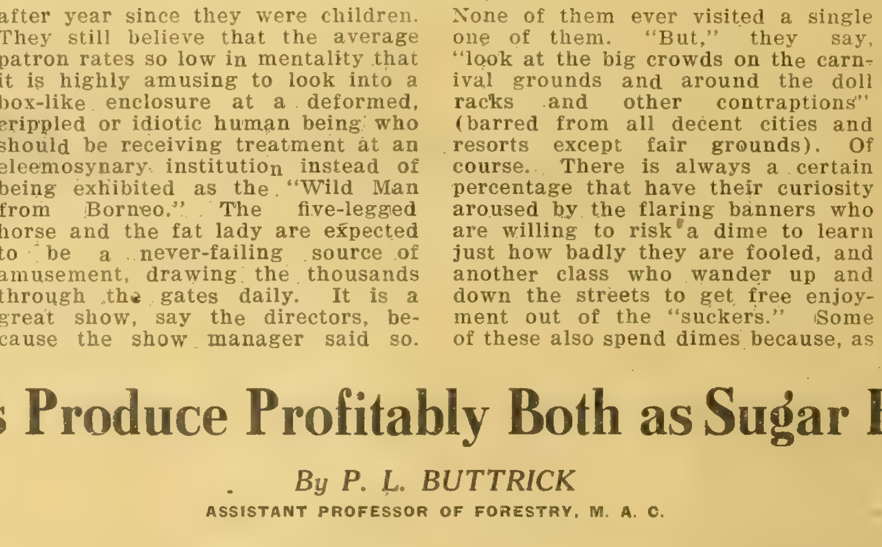
MANY Michigan farmers have to decide this question for themselves: "Will my woods yield me the greatest return if managed as a sugar bush or if managed to produce fuel wood, fence posts, and farm timbers generally?" The answer is, of course, the old one—the one that can be used for almost everything—"that depends." In this case it depends upon the kind of woods the farmer has with which to start.

Obviously a stand containing but little maple could not be used as a sugar bush, and would in that case as a matter of course be managed for fuel wood and farm timbers. The policy being to cut out the poorer trees for fuel and posts, leaving the better trees to grow and increase in value, or if the stand is poor and straggling to cut nothing till new growth has come to fill it up.

On the other hand if the woods consist largely of mature maples, too big to be easily made into cord wood, it would without question be better policy to let them remain standing and tap them for syrup, or if they had to be cut to make them into lumber.

There are thousands of acres of woods, however, which do not at once classify themselves as best suited to be managed either as woodlots or as sugar bushes. They consist of mixtures of maples and many other kinds of trees both old and young, big and little, with one kind or size of tree predominating. The owner may well be puzzled as how to best handle such a piece of woods. The owner generally is: If there are maples enough to justify it, tap them and increase the amount of maple by carefully removing the other trees from there immediate vicinity of the larger maples, thus stimulating their growth so that they may become in a few years large enough to be tapped. Some of the trees removed to favor the smaller maples will be large overtopping trees and some of them will be smaller trees which shut in the maples from the side, therefore both fuel wood and farm timbers may be obtained from the trees which are cut. Under careful management there is no reason why the woods should not go on almost indefinitely increasing in values as a sugar bush and at the same time continuing to produce a supply of fuel wood and farm timbers. It is possible and easy to grow fuel wood trees under the shade of the maples.

Maples to produce sugar abundantly must be fairly large trees and their tops should not be too close together. This leaves room for a crop of smaller trees underneath the maples, which after a few years of growth are large enough to work up for fuel, fence posts and the like. As an example one sometimes sees a woodlot which is composed of an overstory of large maples that are used to produce sugar and an understory composed of smaller beeches which are used for fuel wood.



Maple sugar, the golden by-product of the woods, provides an income when there is little money coming in from other sources on the farm. This sap boiling scene was taken on the farm of Mr. Edwin Lentz, Charlotte. Mich.

Beech and maple are trees which are frequently found together and do well in each other's society. Beech lends itself readily to growing as an understory, since it is what the forester calls "tolerant" meaning that it will grow well in the shade of the other trees. It makes good cordwood and when small reproduces itself readily by sprouting from the stumps and roots of trees which have been cut, so that a new stand of beech will spring up rapidly to take the place of those cut off.

In developing a combined wood lot and sugar bush it will be necessary to keep sheep and cattle out since they will eat or trample down the young sprouts and seedlings which if left ten or fifteen years will be large enough to cut for fuel. A few old beech trees should be left to furnish seed for the understory in case the sprouts fail, so that it may always be renewed as fast as it is cleared off. It may be necessary at times to leave a few anyway to protect the big maples from windfall since they are shallow rooted and easily tipped over by heavy winds.

Look over your woods and see if you can't make them into a two-storied sugar bush and woodlot. The Forestry Department of the M. A. C. will be glad to help you.

PICTURES FROM FAR AND NEAR

Michigan Holstein third highest producer in the world.—The state's highest senior two-year-old producing cow in 1922 for ten consecutive months is Eden White Rose, owned by G. W. Ridgeman of Vassar. With a record of 19,446.3 lbs. milk containing 706.56 lbs. butterfat her production is exceeded by only two other Holstein cows of her age in the world.

Main bone of contention.—This is an unusal view of Essen, in the heart of the Ruhr region, which has been occupied by the French. Despite the determination of the French authorities to operate the industries in this city on a normal basis, very little activity is in evidence thus far. Strikes by the various groups of workers have curtailed production of mines and factories and the French are unable to induce the Germans to return to their work.

Charlie to marry.—The famous movie comedian, Charlie Chaplin has decided to embark upon the matrimonial sea for the second time. This time his companion will be Pola Negri, continental film star. The engagement was announced a few days ago but when the wedding will take place has not been disclosed.

Novice is champion swimmer.—Little fourteen-year-old Miss Hilda Curtis, of Alameda, California, won twelve coast championships for women in 1922, according to the annual report of the Pacific A. A. U. Swimming Committee just published. This record is unusual inasmuch as she was a novice last spring.

Highest paid postmistress in U. S.—Elizabeth D. Bernard, woman postmaster of Tampa, Florida, receives a salary of $6,000 a year. This is the first time in the history of the U. S. postoffice that a woman has been appointed to so high salaried a postmastership. Up to this time the highest salary paid to a woman in this line of work was $2,500.

Wild element wrecks havoc in Ireland.—There is no peace in Ireland. Here is a photo showing the latest outrages by the wilder Irish element.

Chinese Republic celebrates anniversary.—Reviewing troops at the ceremony of the 11th anniversary of the Chinese Republic, at Pekin, China.

USE AND VALUE OF MARL

As I have some marl on my farm I would like to know what is the best way to vitalize it to the best advantage? Can I sell if for cement? What is it worth, where is there a market for it, is it good as a fertilizer, and how would I use it? I had this tested by the State Geoligist, Lansing, it tested 90% pure and 10% sand.—P. F. C., Ithaca, Mich.

—As to the commercial possibilities of marl for Portland cement, it may be said that this depends largely upon the quantity and quality of the marl available; its location; transportation facilities and markets; distance from competition, especially cement plants using limestone; nearness to suitable clays or shale; physical conditions for winning the marl; and nearness to coal supplies. Small deposits of marl or deposits variable in chemical composition have no value from the standpoint of the cement manufacturer.

Obviously a large deposit of pure marl would have very little commercial possibilities if located away from railroads or from cement markets, or in close proximity to other cement plants having the advantage of lower costs. In short, the value of a marl deposit for cement manufacture depends upon several very important factors, none of which can be lacking or deficient to any great degree without seriously jeopardizing the possibilities of success.

It may be of interest to know that we have some 27,000 acres of proven deposits of sufficient size, depth, and purity to warrant the use as a source of cement manufacture; and the mere fact that but few attempts have been made during recent years to utilize any of these deposits is significant.—R. A. Smith, State Geologist.

—Marl is used the same way that ground limestone is, to correct the acidity of the soil. It is doubtful whether you will find a market for it other than the local market, on account of the extensive marl beds in Michigan. It is no good as a fertilizer, being used only to correct acidity. This should be applied as limestone, preceding a crop—most generally a legume—and worked well into the soil before seeding.—O. B. Price, Dept. of Soils, M. A. C.

CANNOT COLLECT ON NOTES

I am a young man of nineteen years. Without consulting my parents I signed a contract with a certain school agreeing to take a commercial course by correspondence. It is stated in the contract that it is unforfeitable. They hold six notes against me. Five for $25 each and one for something over $100. Since my parents have found out the circumstances of what I have done they are dissatisfied. They say that I should drop the correspondence course and help them. They need my help and I now realize that I should help them first and sincerely hope that it is not too late. I have received five lessons from the school but am willing to pay for them and return my contract. What I want to know is whether they, the college, can force me to pay the money that is mentioned in the notes. My father says that they cannot.—J. F., Ruth, Michigan.

—Contracts with infants other than contracts for necessaries, cannot be enforced against the infant. He may, upon reaching the age of 21, either affirm the contract or repudiate it, but unless and until he affirms it he is not bound by its terms. If, however, the contract has been partially executed, he cannot repudiate and at the same time retain the benefits he has received.

I would write a letter to the company, frankly telling them that circumstances had prevented me from taking the course and that I could not preform the contract, offering to return any books or other material sent me, and to pay a reasonable sum for the damage they may have suffered. The clause in the contract against forfeiture does not affect your liability. They cannot collect from you on the notes.—Ass. Legal Editor.

DIVISION OF HUSBAND'S PROPERTY

Upon the death of a married man leaving a widow and children, what amount the widow will share in his property? Is the balance divided equally among his children? There being no will left, what does an administrator allowed for his services? —F. S. S., Coldwater, Michigan.

—If there were two or more children, the widow would receive one-third and the other two-thirds would be divided equally among the children, the issue of any deceased child taking its share. If there were only one child, the widow would receive one-half and the child one-half.

The administrator of an estate receives as compensation, in addition to all his expenses, 5 per cent for $1,000, up to $5,000, and 1 per the first $1,000; 2½ per cent for all over $1,000, up to $5,000; and 1 per cent for an estate of over $5,000. He is also paid at the rate of $1.00 per day for time employed by him in taking care of the estate. —Asst. Legal Editor.

TELEPHONE COMPANY CUTS TREES

Some years ago, I planted walnuts along my fence inside and the telephone poles are set two feet from the fence. As the trees grew up near the wires the linemen cut the tops off and destroyed the looks of the trees and stop the wrangle I sold the trees and they cut them down. Since I have heard it was a crime to cut trees along the road; this is not a state road. I would like to know if the telephone company has a wholesale slaughter right along the roads and over the fence? If so farmers should move back.—J. O. C., Jackson, Michigan.

—Your statement that these walnut trees were planted some years ago is so indefinite that it is difficult to tell what your legal rights are. Previous to 1899 telephone companies had the right to trim trees along the highways and they were practically permitted to destroy the trees if in their opinion the telephone lines were interfered with in any way by the existence of the trees. In 1899 the legislature passed an Act providing that telephone companies should have authority to build their lines along public highways "provided that the same shall not injuriously interefere with or injure any trees located along the line of such streets or highways." In the cases of Boland vs. Washtenaw Home Telephone Company, 161 Mich. 315, the court said "When the telephone company in its alleged maintainance of its line went upon the property of the plaintiffs and trimmed said tree, if in such cutting and trimming shall injure the tree, it had no statutory authority so to do, but on the contrary was expressly forbidden so to do by the plain language of the statute."

The legislature of 1921 by Act 2, of the Special Session provided that "It shall be unlawful to cut, destroy, or otherwise injure any shade or ornamental tree or shrub growing within the limits of the public highways within the State of Michigan without the consent of the authorities having jurisdiction over such road."

This statute goes on to provide that the authority having jurisdiction of state trunk line highways is the State Highway Commissioner and is silent with regard to who may have roads.— Michigan Public Utilities authority over county or township Commission.

WAGES OF HIGHWAY COMMISSIONER

In reference to the wages set at four dollars per day for every day spent on the work, I am thinking of running for Commissioner of highways in a certain township that only pays fifty dollars per year. If elected could I demand the four dollars per day and also for auto if I should need one.—J. G., Dollar Bay, Mich.

—Act 57 of the Public Acts of 1921 fixes the compensation of township highway commissioners at the rate of $4.00 per day for each day actually and necessarily devoted by them to the services of the township in the duties of their office. The township board has no authority for fixing the compensation of the commissioner. The township Board would, however have the right to pass upon the commissioner's expense account if he were to charge for the use of his auto or other method of transportation and they would have a right to deny it or allow it.—H. H. Partlow, State Highway Department.

CANNOT SUE FOR TAX MONEY

A sells a farm to B for $9,000, on a contract, receiving $2,000 down, balance to be paid with interest in annual payments. Some time later B dies and his estate is taken over by an administrator and is thus held at present. The administrator tries to sell the farm but is unable to do so and fails to pay the payment and interest and allows the farm to go back by default, and last December surrenders the contract to A. B during his life, paid the taxes, as they were assessed to him but the administrator did not pay the taxes due December 1922. In order to avoid return of the taxes and increased charges A paid them when due. What I wish to know is, should not the administrator have paid the 1922 taxes, since they were assessed to B and since the estate was able to pay, both in real and personal property? If so does the fact that A has already paid the taxes, to prevent increased charges, keep A from suing the estate for the amount of taxes paid?—R. E. G., Alma, Mich.

—The duty of the vendee of a land contract to pay the taxes is one arising out of the contract relationship, and if the vendor voluntarily pays the taxes in order to protect his interest in the property, his right to reimbursement from the vendee is a right arising out of the contract relationship. Now, if B voluntarily surrenders the premises and the contract, forfeiting all his rights under it, and if A elects to accept such forfeiture and to consider the contract as void and of no effect, then A could not recover for taxes voluntarily paid by him before B's forfeiture.

In this case, if A acquiesced in B's forfeiture and accepted the return of the premises and contract without refunding the installments already paid by B, I am of the opinion that A could not recover from B's estate the amount of taxes paid.—Asst. Legal Editor.

CAN DAM STREAM WITHOUT PERMIT

Would a man have to get a permit from the state to put a dam on a small trout stream? If so who would I write to, would I have to put a fish chute on a dam 6 feet high and what are the dimensions required? —W. W., Glennie, Mich.

—It is not necessary to have a permit to build a dam in a stream in this state. The law requires, however, that all dams in the state be supplied with fish chutes. Specifications for chutes are furnished by this Department.—John Baird, State Dept. of Conservation.

FORCE PAYMENT BY SUING

Now if a person has small accounts or notes due and has not got the money to pay for them can a person force payment by suing? I am going to put this question in four parts. 1. Gave first and second mortgage on his land to party two. He also gave third mortgage to party No. 3. Now party No. 3 owes party No. 4 a sum of money and gave the party No. 4 his third mortgage papers as security on the debt. The third parties condition is such that he cannot pay the debt and interest. Now has the third party a right to foreclose on the third mortgage, and has the fourth party a right to buy our mortgage from the second party, being he is only a holder of the papers on third mortgage. Mortgage on land was due last May. Could they do anything if the interest is paid each year? Would it be necessary to make a new mortgage? How long is a mortgage good? Now about a chattle mortgage. Is a person better off if a woman don't sign off? And is it necessary that she should sign off? in case the chattel mortgage is foreclosed, can they turn him out empty-handed or do they allow a certain amount of money or personal property? Please give me an explanation. Where can a person get one of the latest law books and what is the price.—Reader.

—One who owes accounts or notes may be sued if he does not pay. Upon suit, if sufficient proof is offered, a judgment may be taken. After the judgment is taken then an execution may be issued and placed in the hands of a constable or the sheriff who have a right under the execution to take any property the debtor has that is not exempt from execution. Such property as seized by the officer may be offered by him for

WONDER WHAT THE FARM TELEPHONE THINKS ABOUT? By Tyson

ACKNOWLEDGEMENTS TO BRIGGS

sale after he has advertised it. From the money obtained from the sale he has the right to pay the judgment and his own expenses in seizing the property and making the sale. The officer would have no right to seize any exempt property. Suits are not usually instituted on the note given with a mortgage. In the foreclosure of the mortgage they must certify that no suit or proceeding at law has been had to recover the money secured by the mortgage. Any one to whom you gave a mortgage has the right to assign it to another and that person has a right to foreclose if there is a default in the agreement to pay. One who has a 3rd mortgage would have a right to buy the 2nd if the owner of the second will sell it to him. A mortgage may be foreclosed after it is due even though the interest is paid up to the time it is due. If the mortgagor does not want a mortgage foreclosed he must get an "extension" or give a new mortgage as he can agree but the owner of the mortgage does not have to give an extension nor take a new mortgage. He has the right do demand payment when it is due; and, if not paid, he has the right to foreclose, subject to the right of redemption.

I do not know what you mean by "better off if a woman doesn't sign off." A "woman" may be your mother, your daughter, or your sister, as well as your wife, and be interested in the property. There is no law to make a woman "sign off" her interest in property unless she is willing and agrees to do so. It is a matter of bargain. She only signs when she thinks it is best for her to do so. There are some chattel mortgages that would be worthless unless signed by both husband and wife. It might cover property that the law says the wife must sign with the husband to make valid. There is other property that the husband could mortgage without the wife's signature. The property covered by chattle mortgage may all be taken, if it is a valid mortgage, regardless of the amount of property left the mortgagor. When he gave the mortgage the mortgagor promised to pay the amount specified in the mortgage and also agreed that if h did not pay, the mortgagee could seize the property and offer it for sale. A foreclosure is carrying out this agreement.

I would not be surprised if there were a hundred new law books published this month and possibly another hundred next month and so on every month in the year. There are thousands of "law books in law libraries. I do not know what kind of a "law book" you would like to buy. You would have to have thousands of dollars to buy all the law books. It would be less expense to you if you would go up to the office of some good lawyer and ask him to tell you what law you would like to know about. Law books can be bought from 25c to $150 a set. You see it would be hard for me to tell you which one to pick out. I am afraid your head would ache frightfully before you get half read through the first volume—Legal Editor.

MONEY GOES TO HEIRS

A wife has money in the bank in her own name. Upon her death would this money be held by husband or would it go to the children? Suppose this money was held jointly by the wife and one of the children? What disposition would be made of her share in case of her death?—A. W., Clare, Mich.

—Upon the death of a married woman the money which she has in the bank in her own name would descend to her heirs, and not to her husband. If the money was deposited in the bank as a joint fund of the wife and child, it would vest in the child on the death of the mother.—Asst. Legal Editor.

WHO PAYS TAXES

On November 21, 1922, I sold on contract my house and lot, contract reading that said party of the second part shall pay all taxes and assessments from date November 21, 1922. Now said party of the second part says that I must pay taxes falling due December 1st, 1922. There is nothing said in regard to taxes other that what the contract reads. I would like to know who is the one to pay these taxes. The party of the second part or myself. Of course I want to pay them if it is my duty to do so, but not unless.—C. R., Lowell, Michigan.

—The terms of a contract are to be construed according to what the parties had in mind when making the contract. As to whether second party should pay the taxes due on December 1st, would depend upon whether the parties meant taxes accruing after November 21st, or taxes falling due after November 21st. In the absence of any contract or stipulation relative to taxes, the purchaser pays the taxes due December 1st, if he purchases before that date, otherwise the seller pays.—Asst. Legal Editor.

ASSESSMENT ON PROPERTY

Has the supervisor a right to assess property for more than it will sell for on the grounds that it might cost the owner more to replace it? Has he the right to raise his own salary while in office? Has he the right to take his team and work on the road for wages while in office? If he has no such right to do these things is there any penalty?—F. S., Blanchard, Michigan.

—Article 10, Section 7 of the Constitution of Michigan provides that all assessments on property shall be at its actual cash value. Cash value means what the property would actually sell for at a private sale.

The Supervisor's compensation is fixed by statute. For services not provided for by law, the township board allows such compensation as they deem reasonable, but the supervisor cannot raise his own salary.

The law will not permit a public officer to place himself in a position where his own private interest and the interest of the public might conflict.

Willful neglect of his official duty by an public officer is punishable as a misdemeanor, where no special provision is made to cover the particular offense.—Ass't. Legal Editor.

SHEEP PELT TANNING

Through the Michigan Business Farmer advise me how I can tan raw sheep pelt.—Mrs. W. S., Camden, Michigan.

—Put the pelt into a vessel containing enough cold water to cover it; dissolve one-half pound of alum and one-half pound of salt in three pints of boiling water; pour the mixture over the skin, rinse it up and down in the water, and let it soak twelve hours. Then hang it up to drain. If the pelt has much wool (say an inch or more in length) tack to the barn or some other floor, wool to the floor, stretch well and when nearly dry, rub into the skin one ounce of powdered alum and saltpeter.

The more rubbing that the pelt gets the better, more pliable will it be. In fact the pelt should be rubbed for an hour or more and a very good method is for two to take hold of the pelt and draw back and forth over a smooth round stick or over the edge of a smooth board.

Michigan highways are to retain their beauty if the state highway department can preserve it. A new law, recently passed, prohibits the destruction of trees or shrubs along the highways except with the permission of the highway department. This law includes the activity of the owner of property abutting on the highways.

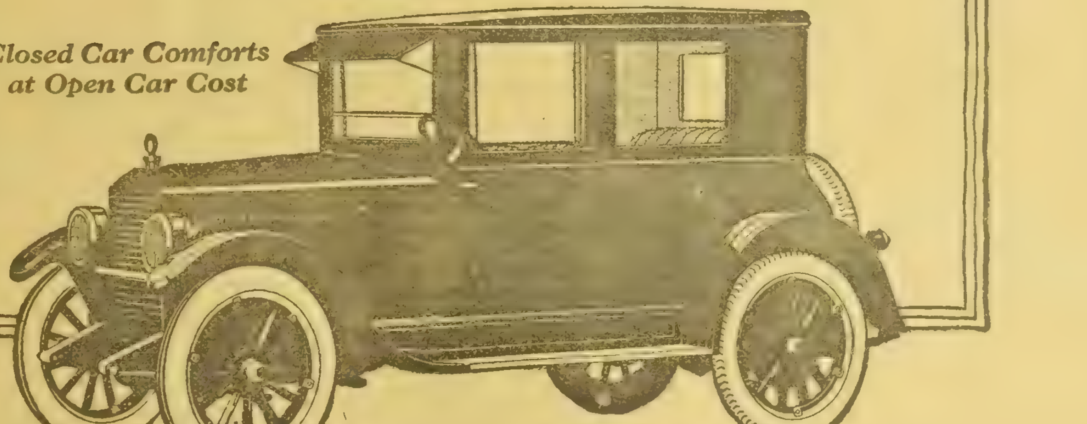
ESSEX COACH

$1145 *Freight and Tax Extra*

Closed Car Comforts at Open Car Cost



Hidden Values in Every Essex

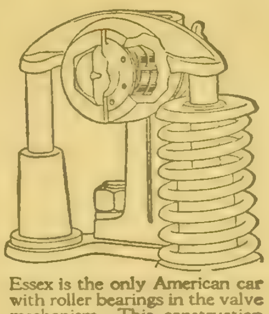
They Keep the Car Young in Long Hard Service

All models have the noted Essex chassis. European and American experts call it the greatest of its size.

After fifty, sixty and seventy thousand miles, Essex cars keep the dash and action of new cars. They stay tight and quiet. They keep their economy of operation and maintenance.

Service like that is not accidental. It results from hidden values which are fully revealed only in long hard service. Attention to detail extends to parts you never see. Finest roller bearings are used where commonly plain bushings are used. For the weight carried the Essex frame is the sturdiest built, save one.

Qualities like these make Essex cost less in the long run than the lowest priced cars, because of the difference in repair, maintenance and replacement costs.



Essex is the only American car with roller bearings in the valve mechanism. This construction overcomes wear and frictional loss at one of the most important points. Prevents noisiness and saves a big item of replacement expense. All other cars use plain bushings for this vital function. Just another of the hidden values that account for the everlasting goodness of Essex cars.

The Truth About Henry Ford

End of Chicago Tribune Libel Suit—Mr. Ford's Interesting Personality

By Sarah T. Bushnell

(Copyright by Reilly & Lee Co.)

(Continued from Feb. 17th issue.)

IT was midsummer. The court room was stifling; an occasional breath of air wandered in thru the open windows, but was a questionable relief, for it was laden with the sulphur fumes of the nearby Mt. Clemens baths. A small army of newspaper correspondents was entrenched at long tables surrounding the lawyers, jury and witnesses. Telegraph boys sauntered in and hurried out bearing "copy" for papers far and near. The realization of all this publicity was distressing to Mr. Ford as he sat in the witness box. Mr. Stevenson's voice is throaty and difficult to understand and frequently Mr. Ford could not catch the question put to him. This was another strain on the weary witness.

On the day on which he was to take the stand Mr. Ford wore to court an old and comfortable pair of shoes. Now any witness should be on the alert during cross examination; he should watch the opposing attorney much as one fencer watches another, prepared for any sudden thrust. That day, as the questioning droned on, Mr. Ford let his attention wander. Absent-mindedly he drew from his pocket an old knife, opened it and began idly to trim a bit of leather from the edge of the sole of his shoe. For the moment he was off his guard.

It was just the moment a clever lawyer would make the most of. While I cannot quote from the transcript of the trial, the question which Mr. Stevenson suddenly shot at Mr. Ford was, as I remember it:

"Tell the jury who Benedict Arnold was."

Mr. Ford paused in the whittling of his shoe sole and looked at the lawyer, a pained expression on his face. "Arnold?—Why, Arnold was a writer," he replied.

At once trained pencils sped over the paper of the newspaper men and the tense silence in the court room was broken by the clatter of telegraph boys as they sped away with more "copy." In no time at all newspapers all over the country were proclaiming that "Henry Ford says Benedict Arnold was a writer."

"If only you had not said Benedict Arnold was a writer," groaned a close friend who joined Mr. Ford as soon as court adjourned. Henry Ford sighed. "I thought Stevenson wanted to know about Arnold who used to write for us," he replied. "Don't you remember him? He left the office one day saying he was ill, and that night died of heart disease. Stevenson surely realized that I did not catch his question. He had been asking me about Delavigne and the other men who wrote for me. He had asked me several times about Brownell, and I thought he was nagging me about our publicity and advertising departments."

Such was the simple explanation of the Benedict Arnold reply.

"Never mind," his friend consoled him. "What does it matter? It was just a trick to bring out that you seldom think of history. You are too busy with present day affairs. An attorney is hard up when he has to drag a Revolutionary War traitor into a twentieth century case."

The Ford lawyers had kept the testimony of Clinton C. DeWitt, head of the Americanization school at the Ford plant, till the last to give their case an effective climax. Mr. DeWitt presented the lessons which he had been teaching the foreign-born workers for several years, lessons which taught them to become good Americans, taught allegiance to the flag, interpreted the constitution and pictured the anarchist in his true colors as a peril to government and people alike. Mr. DeWitt testified further that he had arranged the lessons after receiving direct instructions from Mr. Ford, who frequently inspected them in outline and who had, during the last five years, kept in close touch with and frequently had attended the classes.

At last the case went to the jury, which promptly returned a veridct against the Tribune. The clerk of the court read the verdict as follows:

"You do say upon your oath that the said defendants, the Tribune company, is guilty in manner and form as the said plaintiff hath in his declaration in this cause complained, and you assess the damages of the said plaintiff on occasion of the premises over and above costs and charges by him about his suit in this behalf expended, at the sum of 6 cents' damages."

The jury acknowledged the verdict as correct and hurried from the court room.

Mr. Ford's main purpose in bringing the suit was to prove false the accusation of the Tribune that he was an anarchist. The newspaper did not appeal the case.

Few similar suits have been more widely read or discussed than this. It made "good reading," but as reported in many papers the proceedings gave an utterly false picture of the complainant. Many of those who aimed much ridicule at Mr. Ford could have done no better on the witness stand. As some one later observed: "After all, the worst that one of the most powerful papers in the country could say against Henry Ford injured him only to the extent of six cents"

CHAPTER IX

Henry Ford's Interesting Personality

The Ford company plant attracts thousands of visitors, foreign government officials and other distinguished travelers as well as plain Americans. Two hundred thousand persons have been conducted through the plant in a year, and in one month there were forty-eight thousand visitors. Naturally they all want to see and talk to Mr. Ford himself; naturally, too, he can receive only a small percentage of them if he is to have any time for his own affairs. One day his callers included a European Queen, the Rockefeller of China, an ex-president of the United States, several senators, two university presidents, a committee of educators and a California woman, who had crossed the country in her Ford roadster.

A staff of secretaries is kept busy opening Mr. Ford's mail. Ten thousand letters were received each day for a considerable time. If he were to comply with half the requests he receives for help he would be compelled to close his business. Appointments are generally made for him by Ernest G. Liebold, who is Mr. Ford's general secretary, to whom he has delegated great power. He often acts for Mr. Ford. Mr. Liebold's assistant is Frank Campsall, who possesses much ability and a pleasing personality.

It has been said that Mr. Ford does not read the newspapers, and that he does not keep in touch with the affairs of the day. Both statements are untrue. Mr. Ford reads the morning papers more regularly than he eats his breakfast; he glances through the noon editions and the evening papers are always put by his favorite chair and reading light. He goes through them carefully. Moreover, he receives many cartoons and clippings that refer to him, both favorable and unfavorable.

The activities of his experts show that Mr. Ford is in touch with modern conditions and needs. His chemical department has perfected a gasoline substitute by liquifying gases that form much as coke is made from coal. The same department has made tests with a milk substitute which is purer than the average cow's milk and which, it is hoped, will prove a blessing to many thousands of ailing babies. Mr. Ford frequently discusses small communities as industrial centers and many similar subjects.

It has happened not infrequently that persons who never knew Mr. Ford have drawn freely from their imagination to substantiate the claim that they are familiar with all the details of his life. A book was written by a writer with no more foundation than a few interviews with Mr. Ford as he stepped from an elevator or walked in the park with his wife. Nearly all the stories of the financial difficulties of the inventor in the early days of his car-making come from vivid imagination and nothing else.

* * * *

At twenty-eight Mr. Ford's only son is at the head of the motor plant. The heir to vast wealth, it would not be unusual if he devoted much of his time to golf and other amusements and spent months at winter and summer resorts, or, like many another son of a rich father, let Dad do the work. Instead Edsel Bryant Ford is at his desk every morning. Those who know him well say that he has his father's genius, enthusiasm and common sense and his mother's poise and that he is a young man of ability and strength of character.

Edsel Ford was a small child in the days when his father was struggling to get a start in the automobile industry, and he naturally has both love and respect for the great business that his father founded and built up. He had no college education, for he was schooled in the factory; starting in at an unimportant position he worked his way through the various departments and learned the entire business first hand. The draft board granted him one of the ten thousand exemptions that were given industrial workers in Detroit. The board felt that he was more needed in the factory than in active military service. Not by a word or gesture did Mr. Ford seek to keep his son out of war.

* * * *

Mr. Ford seldom wears a hat and his hair is snowy white. He is a frail looking man, with shoulders slightly stooped, and he usually wears a gray suit that matches his gray eyes. His features are delicate and his hands and feet are small, and his height about five feet nine inches. In manner he is friendly and genial, and although very retiring he is a delightful conversationalist. He has traveled much, has inherited a touch of his father's keen wit and enjoys a hearty laugh. Around his home he whistles like a school boy. He is devoted to outdoor life, but abhors hunting. He will not allow anything to be killed on his land, not even the crickets, nor will he permit the servants to drive away birds.

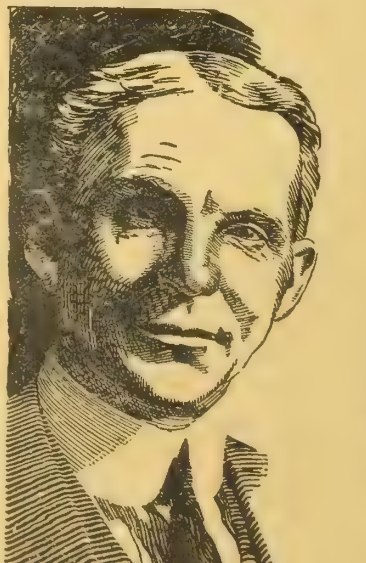
Among his freinds he is known for his quaint and apt expressions. With a quizzical glance at a rainy sky he will remark, "You can't change the weather, so change your attitude toward it." "Pool your knowledge" is a favorite bit of advice he gives and a comment familiar to his intimates is, "It takes pluck not luck, to make people successful." One Sunday while he and Mrs. Ford were attending services in the Episcopal cathedral in Detroit Mr. Ford's car was stolen from in front of the church. Since then he laughingly declares that he has lost interest in church services. And is fond of saying the he "believes in religion, but he doesn't work at it much."

His country estate is seven thousand acres was ten miles from Detroit, but extends almost to what is now the city limits. There Mr. Ford lives the year 'round, entertains his friends and is happy among his birds and trees. A part of his grounds extends behind the Dearborn village school. It is a natural amphitheatre, and Mr. Ford has had it cleared for the use of the school athletic association. He delights in driving through the village where his own boyhood was spent, filling his limousine with boys and girls and carrying them off for a picnic in the woods. For his personal use he generally drives a small gray closed car—a Marmon—but he has, of course, many other cars, including a "flock of Fords."

He is a skillful camp fire cook, and one of his favorite amusements is a steak broiling contest with some titled visitor. On such occasions he personally selects the meat at the butcher's. His frequent visitors include John Burroughs, who died recently, Thomas A. Edison and Harvey S. Firestone. These four regularly spent two weeks together camping or touring, their automobiles followed by a "house on wheels," a large motor truck equipped like the prairie wagons in which the western sheep herders cook, live and sleep. Mr. Ford and Mr. Firestone, being in the same business, have many interests in common. Mr. Ford and Mr. Edison have been the closest friends for twenty years. Both are possessed of many similar characteristics and have the same tireless, inventive genius. Both believe that "success is one-tenth inspiration and nine-tenths perspiration." They have consulted each other in their problems and correspond by letter occasionally by wireless for both have wireless stations at their homes.

Mr. Ford first met John Burroughs some twenty years ago when the great naturalist was visiting in Detroit. Their devotion to the out-of-doors soon made the closest of friends, and that friendship was unbroken until death took the naturalist a few months ago. The last time Henry Ford saw his old friend alive was in December 1920. At that time Mr. and Mrs. Ford visited the Burroughs home place, Riverby-on-Hudson. Mr. Ford stopped at a

(Continued on page 19.)



MR. HENRY FORD

Some of Mr. Ford's Epigrams

Religion, like everything else, is a thing that should be kept working. I see no use in spending a great deal of time learning about heaven and hell. In my opinion, a man makes his own heaven and hell and carries it around with him. Both of them are states of mind.

* * *

Poverty doesn't hold a man down. Money doesn't amount to anything—it has no real value whatever. Any young man who has a good idea and works hard enough will succeed; money will come to him. What do I mean by a good idea? I mean an idea that will work out for the best interests of everyone—an idea for something that will benefit the world. That's the kind of an idea the world wants.

* * *

Do the thing that is the best for everybody and it will be best for you in the end.

* * *

More than enough money to keep him comfortable is no use to a man. You can't squander on yourself without hurting yourself. Money's only a lubricant to keep business going.

Oil-Gas Tractor

The right power for threshing.

An even, steady, strong power like a big steam engine is what the Nichols-Shepard Oil-Gas Tractor produces.

There must be no lack of power to make a thresher do good work.

The little light tractor does not furnish the right power.

The Nichols-Shepard Oil-Gas Tractor does.

It is designed and built to give the thresherman the ideal power and it does it.

Slugging or momentary overloads do not kill it.

It burns either gasoline, kerosene, or distillate at all loads with economy and effectiveness.

It lasts for years. It starts easily in cold weather.

It also fills every place in general tractor work.

Built for service, and is not a plaything.

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

THE IDEAL PEACH

IN the first place, we should like to have an Elberta with more dessert quality and more hardiness. Secondly, we desire a peach at Carman time or earlier, with a better shape for packing than that variety, with a brighter color and freestone. Thirdly, we desire a yellow freestone variety at that season and another to follow that one. Fourthly, a good yellow to follow Elberta is desirable. Combined in these must be productiveness, resistance to diseases, hardiness in bud and lack of irratibility. A big order? Indeed it is, but to get anywhere we must aim high. The fulfillment may be long put off, but must come some day. If we could get a series of varieties having the good qualities of Elberta with added hardiness and quality to extend from Greensboro time till frost, methinks the ideal will have been consummated.

NEW APPLE HAS NO CORE OR SEEDS

APPLES without cores or seeds are promised by a discovery announced at Abbotsford, Canada, the particulars of which have just been received by the Department of Commerce from Consul General Halstead. According to the announcement a seedless and coreless variety of Fameuse apple has been developed which differs but slightly in shape from an ordinary Fameuse by being longer and flatter at the ends with the typical coloring and flavor. Except for a slight marking on the flesh which outlines the situation of the core in an ordinary apple, there are neither core or seeds. The apples were developed in an orchard at Abbotsford and the discovery that they were out of the ordinary was an accident. They had come from a new block of Fameuse, about eight years old, bearing for the first time in market quantities, which had been top grafted on Rabka seedlings. The discovery was made while grading for market, but unfortunately no record was kept of the tree or trees producing the new fruit and it will not be before another harvest that steps can be taken for its commercial development.

NOTES AND COMMENTS

From the comments on that fifty-thousand dollar strawberry it might be inferred that the price was paid for a single plant, but such was not the case. The variety was raised under contract by a Michigan grower who produced many thousands of them, but even at that price was one to break the record.

The Rockhill, as the new strawberry is called, was named from its propagator, Henry Rockhill of Concord, Iowa, who was 14 years in developing it. The variety is large, production of fine quality, and a vigorous plant maker. Besides these features it produces a good crop both summer and fall. It looks now as though the Rockhill might introduce a new era in strawberry growing.

Among the new peaches the Rochester is deserving of attention. It has size and quality, while ripening soon after the Dewey. If the tree prove hardy enough, it ought to add a valuable variety to the list of peaches for the Great Lakes district.

There are several varieties of quinces, some of large size, but none to take the place of the old Orange, Though not remarkable for size, it has quality. Then the bush, laden with its golden fruit in autumn, is not to be passed by as an ornamental. Plant it in a good soil and it will reward your attention handsomely.

The Japan quince has its place among the ornamentals, but the fruit has some culinary value. The juice has a strong flavor, so much so that most persons would not desire it alone, but when added to other fruits the combination makes a fine jelly. It is not very productive and would hardly be desirable for the fruit merely, but as a combination of the useful and ornamental.

Some kinds of wild roses produce large seed containers or hips, which are not only ornamental in winter, but have some flavor when eaten. They are too small to be of value as a food, though a starving person might exist for a little time if given enough of them, but they might be developed for some aspiring fruit. Here is an opportunity for some aspiring Luther Burbank to make himself famous and do the world a favor by producing something new and useful from a promising source.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

LETTING THE FAMILY HEAR "RADIO"

THE word "Radio" is now used by the average person to mean either a radio receiving set or the broadcasted music, lectures etc., that are received on a radio receiving set. It is just as well that we can use such a simple word as that to mean what we have to say without using a long sentence for the same purpose.

"Have you a radio?"—or "How'd your radio work last night?" are familiar greetings between friends when they meet on the street or in the store. One neighbor tells of the wonderful music that he heard while the other tries to get a word in edgewise to tell of the talk by the French healer Coue, and so on 'till each forgets that they were sent to the store to buy a spool of thread or a pound of coffee.

Yes, radio is getting quite the rage now, and each day sees more and more that it has come to stay. It is not a passing fad any more than the automobile is a fad, it has been used for years in a commercial way and for study and experiment by the thousands of American "Amateurs" raiging in age from 14 to 60.

It has saved ships and aided business; it has been a blessing in sickness and emergencies; it has helped armies to win victories; and now it has come to be one of the blessings of the new age when the city visits with the country and singers sing to multitudes that they never see; where colleges can instruct students in their own home; where the sick can go to church; where markets come to you, and many other changes take place that are too numerous to mention. The largest blessing is to the family group.

Let us see what the family can get out of the radio. First let us take mother or wife and see what she will get. There are cooking lessons, dressmaking lessons, hints on interior decorations, flowers and how to grow them, hints on the health, teeth, eyes and hair; children, their care, education, health and amusements, in fact everything that you need to know to give your children proper care.

Now it's father's turn:—market reports, weather and crop reports, farm hints spraying and care of the fruit and other crops, disease prevention in animals and crops, scientific agricultural bulletins, business news, stock and grain market reports and general news of world and local state happenings.

Sister:—How to dress, how to do the hair, latest styles in different cities and countries, dancing hints, etiquette, the latest music, instructive talks and lectures, and many other useful and instructive activities.

Brother:—Sports, scores of ball games, hunting information and stories of adventure, agricultural college extension courses, how to make different things, politics, history, talks by the President and other noted speakers, time signals and the weather forecasts, etc.

Little brother and sister:—Bed time stories, songs and music suitable for young folks. Santa Claus at Christmas time and many unforseen little specials that children will enjoy.

The whole family, young and old:—Church services on Sundays, Politics for both men and women, Club work for womens' and mens' clubs, operas, concerts, lectures, dramas,

Aspirin

Say "Bayer" and Insist!

BAYER

Genuine

Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer product prescribed by physicians over twenty-two years and proved safe by millions for

Colds — Headache
Toothache — Lumbago
Earache — Rheumatism
Neuralgia — Pain, Pain

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proper directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid. (1)

YARD LONG BEANS

This is an excellent variety, as well as being an interesting curiosity. The vines are rampant growers and produce an enormous crop of long, slender pods, many of which grow to three feet or more in length, having the thickness of a lead pencil. Produce late in the summer, very productive, excellent quality for snap beans, tender and of fine flavor. Packet of seed, 10c; 3 for 25c.

Japanese Giant Radish, 10 to 30 lbs. each; **Mammoth Prize Watermelon**, 50 to 150 lbs. each; **Jumbo Pumpkin**, 100 to 300 lbs.; **Vine Peach**, fine for canning, ripe fruit in 80 days after seed is planted; **Garden Huckleberry**, a big crop of fruit the same season seed is planted; **Groun dAlmonds**, delicious cocoanut flavor, grow anywhere, plant in spring or early summer and harvest a big crop of nuts the following September; **Early Giant Rhubarb**, produces large, marketable size stalks next year after planting; **Japanese Climbing Cucumber**, fine variety that can be trained to fence, trellis or poles and save garden space; **Chinese Celery Cabbage**, celery flavored, fine for salads; **String Peas**, cook like string or snap beans; **Burgess' Earliest and Best Tomato**, earliest and best tomato on earth, large, smooth, free from blight and the equal of any late variety; **Giant Ostrich Feather Aster**, handsome, large, fluffy flowers; **Giant Ruffled Spencer Sweet Peas**, finest sweet peas grown; **Red Sunflower**, very attractive.

Take your choice of these varieties at 10c per packet; 3 for 25c; 7 for 50c; or 15 for $1.00, postpaid.

FREE With each order we will give a free trial package of our wonderful Lima Peas (similar in shape and as large as Lima Beans) and a copy of our new book, which tells all about other rare, scarce, curious and valuable fruits, vegetables and flowers and medicinal plant crops that yield from $8,000.00 to $20,000.00 per acre.

Special music and entertainments. Public health talks, noted speakers and singers, educational features.

There is something going on at practically every hour of the day for some member of the family ,and the evening is just "chock full" of good things from the "bed-time story" for the "kiddies" to the "high-brow" stuff for the visiting city "feller". Unless you have spent an evening or two at an assorted entertainment you do not really know how much you are missing. After you once have had an evening of such pleasure "the bug will get you, if you don't watch out," and you will be the happy possessor of a brand new radio set.

Those people who are fortunate enough to be situated near a large broadcasting station can enjoy all these things at a very little expense, but the family that is far away must spend quite a bit more if they are all going to enjoy these good things, as freely as the more fortunately situated.

One hundred dollars carefully spent will enable most of the farmers to have a radio set that will give the family night after night of good things, not "canned" music and speeches, but live up-to-the-minute articles, just as it happens and in many cases long before the papers have the news.

Think it over, you folks that spend your evenings by yourselves, and get a little of the outside world in your home. Keep posted on the latest things and not spend your time worrying about the things that are past.

Get a radio set. It will pay you many times it's cost in the pleasure it will bring you, not to think of the possible profit by watching the markets.

Think it over!

FARM MECHANICS

WATER BACKS UP IN TILE

I would like as much information as I can receive to find a way to stop the water of a stream flowing back in the tile as follows: We have a low place on our farm and a river is near this place. Now we dug a little drain from this low place to the river in which we put eight inch tile and where these tile reach the river they are just a little above normal water, as we had to cut through a high bank on the river. Now we have a flood gate which rises up and down with a handle which is all cemented in but somehow the water gets by it so that when the stream rises it flows back into this low place. Now what I want to know is what can I use at the stream that will stop this back flow?—R. M., St. Charles, Mich.

—It would be very difficult to say in regard to water backing up to this low spot, whether the seepage is through the gate or along the high bank along the river. If the seepage occurs any other place that at or along the flood gate it would be next to impossible to shut off the flow. If it is desired to close the tile only, a flat valve of a sheet of rubber and cast iron disc could be made to close the mouth of the tile, this could be hung at the top so that it would swing out with the flow of water and rest normally over the mouth of the tile when there is no flow. It seems to me that careful investigation of the spot is necessary to determine where the water returns back to the low place, this might be indicated by boring holes with an auger at different points along the bank. If the water passes through the gate or near the gate it would seem possible to find the point at which it passes through.—H. H. Musselman, Prof. of Farm Mechanics, M. A. C.

WALL FOR BASEMENT

I have a barn 20x40x16 feet to the eaves. It has sills under it 9x9 inches. It stands on a side hill and I want to raise it 2 feet and dig out underneath which will give me a basement with an eight foot ceiling. Please tell me how thick the wall ought to be? It is to be made of concrete to make a good solid job of it. How many yards of gravel will it take to make the wall, which will be 8 feet deep, on the two ends and along one side? The other side I intended to put posts under.—F. P.,—Paw Paw, Michigan.

—The walls should be 8 inches thick and would require 10 yards of gravel and about 11 barrels of cement using a 1x6 mix of bank run gravel, in using bank run gravel make sure that you have about the right proportion of sand and gravel and that it does not contain dirt or organic matter. By putting a quantity of gravel in a 2 quart can filling the can nearly full of material shaking thoroughly and the coarse gravel will settle to the bottom, the coarse sand in the next layer, fine sand next with clay and silt next and the organic matter on the top. By studying this carefully you can get a very good idea of the proportion of sand and gravel and the amount of dirt and organic matter. The proportion of sand to gravel should be about 1:2. Material that will pass thru a ¼ mesh screen is considered sand. That that passes over, gravel.—F. E. Fogle, Asst. Professor of Farm Mechanics, M. A. C.

ADVICE TO YOUNG MAN INTERESTED IN ENGINEERING

What would you advise a young man to do who is eighteen years of age, has an eighth grade diploma, (not a state diploma)' no high school education, but who is interested in the electrical and mechanical engineering professions especially mechanical engineering? A college preparatory course and then a university course would take too long for one without funds wouldn't it? Isn't there some way of working up in these professions? Why do some schools graduate their pupils in less time than state universities? Is it a serious drawback in this field to be a poor penman?—R. J. K., Suttons Bay, Michigan.

—The aims and ambitions which this young man has would determine largely what course might be advisable to pursue. It is unquestionably true that short cuts or shorter courses would be better than no attempt at all at self improvement and perhaps some of this work supplemented by practical experience along the line which is desired to develope would prove very effective. For the man who has the ambition and tenacity to stay with it, the correspondence school in construction and practical work has also proven effective in many cases.

It is very likely that the young man who starts out in any one of these so-called short cuts will acquire knowledge of the field to show that the more extended course of training is desirable, if it can be accomplished. The fact of the matter is that if this young man is really interested in mechanical engineering he will take advantage of any and every opportunity which will carry him in this direction. Poor penmanship need not stand in the way, although if he is sincere in his ambition in this direction, effort would be made to overcome this drawback rather than let it reduce his chances for success.—H. H. Musselman, Professor of Farm Mechanics, M. A. C.

SYNOPSIS

JOANNE GRAY is one of the passengers on the train bound for Tete Jaune Cache, the home of "The Horde," where she has no friends and all will be strange to her. The train stops at a town composed of several tents, she goes in search of food and a bath. She is directed to "Bill's Shack" and here she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass out of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which they have passed. In but a moment the girl steps out, face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl money but before he can do so Aldous steps to the girl's side and floors Quade with a terrific blow. Aldous hurries the girl away from the scene to the home of friends. Joanne tells Aldous she is going to Tete Jaune to find her husband, Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner Culver Rann. Aldous believes FitzHugh is dead and locates a friend who declares he has seen the grave. Upon their arrival at Tete Jaune they are met by friends of Aldous, the Blacktons, at whose place they are to stay during their stop. Later they secure horses and supplies and start off into the wilderness accompanied by Donald MacDonald who believes he knows where the grave of FitzHugh is located.

(Continued from Feb. 17th issue.)

JOANNE did not answer, and Aldous stepped outside. He knew where to find the old hunter. He had gone up to the end of the timber, and probably this minute was in the little box canyon searching for the grave. It was a matter of less than a hundred yards to the upper fringe of timber, and when Aldous came out of this he stood on the summit of the grassy divide that separated the tiny lake Keller had described from the canyon. It was less than a rifle shot distant, and on the farther side of it MacDonald was already returning. Aldous hurried down to meet him. He did not speak when they met, but his companion answered the question in his eyes, while the water dripped in streams from his drenched hair and beard.

"It's there," he said, pointing back. "Just behind that big black rock. There's a slag over it, an' you've got the name right. It's Mortimer FitzHugh."

Above them the clouds were splitting asunder. A shaft of sunlight broke through, and as they stood looking over the little lake the shaft broadened, and the sun swept in golden triumph over the mountains. MacDonald beat his limp hat against his knee, and with his other hand drained the water from his beard.

"What you goin' to do?" he asked.

Aldous turned toward the timber. Joanne herself answered the question. She was coming up the slope. In a few moments she stood beside them. First she looked down upon the lake. Then her eyes turned to Aldous. There was no need for speech. He held out his hand, and without hesitation she gave him her own. MacDonald understood. He walked down ahead of them toward the black rock. When he came to the rock he paused. Aldous and Joanne passed him. Then they, too, stopped, and Aldous freed the girl's hand.

With an unexpectedness that was startling they had come upon the grave. Yet not a sound escaped Joanne's lips. Aldous could not see that she was breathing. Less than ten paces from them was the mound, protected by its cairn stones; and over the stones rose a weather-stained slab in the form of a cross. One glance at the gravel and Aldous riveted his eyes upon Joanne. For a full minute she stood as motionless as though the last breath had left her body. Then slowly, she advanced. He could not see her face. He followed, quietly, step by step as she moved. For another minute she leaned over the slab, making out the fine-seared letters of the name. Her body was bent forward; her two hands were clenched tightly at her side. Even more slowly than she had advanced she turned toward Aldous and MacDonald. Her face was dead white. She lifted her hands to her breast, and clenched them there.

"It is his name," he said, and there was something repressed and terrible in her low voice. "It is his name!"

She was looking straight into the eyes of John Aldous, and he saw that she was fighting to say something which she had not spoken. Suddenly she came to him, and her two hands caught his arm.

"It is terrible—what I am going to ask of you," she struggled. "You will think I am a ghoul. But I must have proof! I must—I must!"

She was staring wildly at him, and all at once there leapt fiercely through him a dawning of the truth. The name was there, seared by hot iron in that slab of wood The name! But under the cairn of stones——

Behind them MacDonald had heard. He towered beside them now. His great mountain-twisted hands drew Joanne a step back, and strange gentleness was in his voice as he said:

"You an' Johnny go back an' build a fire, Mis' Joanne. I'll find the proof!"

"Come," said Aldous, and he held out his hand again.

MacDonald hurried on ahead of them. When they reached the camp he was gone, so that Joanne did not see the pick and shovel which he carried back. She went into the tent and Aldous began building a fire where MacDonald's had been drowned out. There was little reason for a fire; but he built it, and for fifteen minutes added pitch-heavy fagots of storm-killed jack-pine and spruce to it, until the flames leapt a dozen feet into the air. Half a dozen times he was impelled to return to the grave and assist MacDonald in his gruesome task. But he knew that MacDonald had meant that he should stay with Joanne. If he returned, she might follow.

He was surprised at the quickness with which MacDonald performed his work. Not more than half an hour had passed when a low whistle drew his eyes to a clump of dwarf spruce back in the timber. The mountaineer was standing there, holding something in his hand. With a backward glance to see that Joanne had not come from the tent, Aldous hastened to him. What he could see of MacDonald's face was the lifeless colour of gray ash. His eyes stared as if he had suffered a strange and unexpected shock. He went to speak, but no words came through his beard. In his hand he held his faded red neck-handkerchief.. He gave it to Aldous.

"It wasn't deep," he said. "It was shallow, turribly shallow, Johnny—just under the stone!"

His voice was husky and unnatural.

There was something heavy in the handkerchief, and a shudder passed thru Aldous as he placed it on the palm of his hand, unveiled its contents. He could not repress an exclamation when he saw what MacDonald had brought. In his hand, with a single thickness of the wet handkerchief between the objects and his flesh, lay a watch and a ring. The watch was of gold. It was tarnished, but he could see there were initials, which he could not make out, engraved on the back of the case. The ring, too, was of gold. It was one of the most gruesome ornaments Aldous had ever seen. It was in the form of a coiled serpent, wide enough to cover half of one's middle finger between the joints. Again the eyes of the two men met, and again Aldous observed that strange, stunned look in the old hunter's face. He turned and walked back toward the tent, MacDonald following him slowly, still staring, his long gaunt arms and hands hanging limply at his side.

Joanne heard them, and came out of the tent. A choking cry fell from her lips when she saw MacDonald. For a moment one of her hands clutched at the wet canvas of the tent she swayed forward, knowing what John Aldous had in his hand. He stood voiceless while she looked. In that tense half-minute when she stared at the objects he held it seemed to him that her heart-strings must snap under the strain. Then she drew back from them, her eyes filled with horror, her hands raised as if to shut out the sight of them, and a panting, sobbing cry broke from between her pallid lips.

"Oh, my God!" she breathed. "Take them away—take them away!"

She staggered back to the tent, and stood there with her hands covering her face. Aldous turned to the old hunter and gave him the things he held.

A moment later he stood where the three had been, staring now as Joanne had stared, his heart beating wildly.

For Joanne, in entering the tent, had uncovered her face; it was not grief that he saw there, but the soul of a woman new-born. And as his own soul responded in a wild rejoicing, MacDonald, going over the summit and down into the hollow, mumbled in his beard:

"God ha' mercy on me! I'm doin' it for her an' Johnny, an' because she's like my Jane!"

CHAPTER XVI

Plunged from one extreme of mental strain to another excitement that was as acute in its opposite effect, John Aldous stood and stared at the tent-flap that had dropped behind Joanne. Only a flash he had of her face; but in that flash he had seen the living, quivering joyousness of freedom blazing where a moment before there had been only horror and fear. As if ashamed of her own betrayal, Joanne had darted into the tent. She had answered his question a thousand times more effectively than if she had remained to tell him with her lips that MacDonald's proofs were sufficient—that the grave in the little box canyon had not disappointed her. She had recognized the ring and watch; from them she had shrank in horror, as if fearing that the golden serpent might suddenly leap into life and strike.

In spite of the mightiest efforts she might have made for self-control Aldous had seen in her tense and tortured face a look that was more than either dread or shock—it was abhorrence, hatred. And his last glimpse of her face had revealed those things gone, and in their place the strange joy she had run into the tent to hide. That she should rejoice over the dead, or that the grim relics from the grave should bring that new dawn into her face and eyes, did not strike him as shocking. In Joanne his sun had already begun to rise and set. He had come to understand that for her the grave must hold its dead; that the fact of death, death under the slab that bore Mortimer FitzHugh's name, meant life for her, just as it meant life and all things for him. He had prayed for it, even while he dreaded that it might not be. In him all things were now submerged in the wild thought that Joanne was free, and the grave had been the key to her freedom.

A calmness began to possess him that was in singular contrast to the perturbed condition of his mind a few minutes before. From this hour Joanne was his to fight for, to win if he could; and, knowing this, his soul rose in triumph above his first physical exultation, and he fought back the almost irresistable impulse to follow her into the tent and tell her what this day had meant for him. Following this came swiftly a realization of what it had meant to her—the suspense, the terrific strain, the final shock and gruesome horror of it. He was sure, without seeing, that she was huddled down on the blankets in the tent. She had passed through an ordeal under which a strong man might have broken, and the picture he had of her struggle in there alone turned him from the tent filled with the determination to make her believe that the events of the morning, both with him and MacDonald, were easily forgotten.

He began to whistle as he threw back the wet canvass from over the camp outfit that had been taken from Pinto's back. In one of the two cow-hide panniers he saw that thoughtful old Donald had packed materials for their dinner, as well as utensils necessary for its preparation. That dinner they would have in the valley, well beyond the red mountain. He began to repack, whistling cheerily.

He was still whistling when MacDonald returned. He broke off sharply when he saw the other's face.

"What's the matter Mac?" he asked. "You sick?"

"It weren't pleasant, Johnny."

Aldous nodded toward the tent.

"It was—beastly," he whispered. "But we can't let her feel that way about it, Mac. Cheer up—and let's get out of this place. We'll have dinner somewhere over in the valley."

They continued packing until only the tent remained to be placed on Pinto's back. Aldous resumed his loud whistling as he tightened up the saddle-girths, and killed time in half a dozen ways. A quarter of an hour passed. Still Joanne did not appear. Aldous scratched his head dubiously, and looked at the tent.

"I don't want to disturb her, Mac," he said in a low voice. "Let's keep up the bluff of being busy. We can put out the fire."

Ten minutes later, sweating and considerably smoke-grimed, Aldous again looked at the tent.

"We might cut down a few trees," suggested MacDonald.

"Or play leap-frog," added Aldous.

"The trees'd sound more natcherel," said MacDonald. "We could tell her——"

A stick snapped behind them. Both turned at the same instant. Joanne stood facing them not ten feet away.

"Great Scott!" gasped Aldous. "Joanne, I thought you were in the tent!"

The beautiful calmness in Joanne's face amazed him. He stared at her as he spoke, forgetting altogether the manner in which he had intended to greet her when she came from the tent.

"I went out the back way—lifted the canvass and crawled under just like a boy," she explained. "And I've walked until my feet are wet."

"And the fire is out!"

"I don't mind wet feet," she hurried to assure him.

Old Donald was already at work pulling the tent-pegs. Joanne came close to Aldous, and he saw again that deep and wonderful light in her eyes. This time he knew that she meant he should see it, and words which he had determined not speak feel softly from his lips.

"You are no longer afraid, Ladygray? That which you dreaded—"

"Is dead," she said. "And you, John Aldous? Without knowing, seeing me only as you have seen me, do you think I am terrible?"

"No, I could not thing that."

Her hand touched his arm.

"Will you go out there with me, in the sunlight, where we can look down on the little lake? she asked. "Until to-day I had made up my mind that no one but myself would ever know the truth. But you have been good to me, and I must tell you—about myself—about him."

He found no answer. He left no word with MacDonald. Until they stood on the grassy knoll, with the lakelet shimmering in the sunlight below them, Joanne herself did not speak again. Then, with a little gesture, she said:

"Perhaps you think what is down there is dreadful to me. It isn't. I shall always remember that little lake, almost as Donald remembers the cavern—not because it watches over something I love, but because it guards a thing that in life would have destroyed me! I know how you must feel, John Aldous—that deep down in your heart you must wonder at a woman who can rejoice in the death of another human creature. Yet death, and death alone, has been the key from bondage of millions of souls that have lived bebore mine! and there are men—men, too—whose lives have been warped and destroyed because death did not come to save them. One was my father. If death had come for him, if it had taken my mother, that down there would never have happened—for me!"

She spoke the terrible words so quietly, so calmly, that it was impossible for him entirely to conceal their effect upon him. There was a bit of pathos in her smile.

"My mother drove my father mad," she went on, with a simple directness that was the most wonderful thing he had ever heard come from human lips. "The world did not know that he was mad. It called him eccentric. But he was mad—in just one way. I was nine years old when it happened and I can remember our home most vividly. It was a beautiful home. And my father! Need I tell you that I worshipped him—that to me he was the king of all men? And as deeply as I loved him, so, in another way, he worshipped my mother. She was beautiful. In a curious sort of way I used to wonder, as a child, how it was possible for a woman to be so beautiful. It was a dark beauty—a recurrence of French strain in her English blood.

"One day I overheard my father tell her, if she died, he would kill himself. He was not of the passionate, over-sentimental kind; he was a philosopher, a scientist, calm and self-contained—and I remembered those words later, when I had outgrown childhood, as one of a hundred proofs of how devoutly he had loved her. It was more than love, I believe. It was adoration. I was nine, I say, when things happened. Another man, a divorce, and on the day of the divorce this woman, my mother, married her lover. Somewhere in my father's brain a single thread snapped and from that day he was mad—mad on but one subject; and so deep and intense was his madness that it became a part of me as the years passed, and today I, too, am possessed of the madness. And it is the one greatest thing in the world that I am proud of, John Aldous!"

Not once had her voice portrayed excitement or emotion. Not once had it risen above its normal tone; and in her eyes, as they turned from the lake to him, there was the tranquillity of a child.

"And that madness," she resumed, "was the madness of a man whose brain and soul were overwrought in one colossal hatred—a hatred of divorce and the laws that made it possible. It was born in him in a day, and it lived until his death. It turned him from the paths of men, and we became wanderers upon the face of the earth. Two years after the ruin of our home my mother and the man she had married died in a ship that was lost at sea. This had no effect upon my father. Possibly you will not understand what grew up between us in the years and years that followed. To the end he was a scientist, a man seeking after the unkonwn, and my education came to be a composite of teachings gathered in all parts of the world. We were never apart. We were more than father and daughter; we were friends, comrades—he was my world, and I was his.

"I recall, as I became older, how his hatred for that thing that had broken our home developed more and more strongly in me. His mind was titanic. A thousand times I pleaded with him to employ it in the great fight I wanted him to make—a fight against the crime of divorce. I know, now, why he did not. He was thinking of me. Only one thing he asked of me. It was more than a request. It was a command. And this command, and my promise, was that so long as I lived—no matter what might happen in my life—I would sacrifice myself body and soul sooner than allow that black monster of divorce to fasten its clutches on me. It is futile for me to tell you these things, John Aldous. It is impossible—you cannot understand!"

"I can," he replied, scarcely above a whisper. "Joanne, I begin—to understand!"

And still without emotion, her voice as calm as the unruffled lake at their feet, she continued:

"It grew in me. It is a part of me

"The Farm Paper of Service"

MICHIGAN FARED BETTER

THE farms of Michigan produced crops to the approximate value of $215,000,000, in 1922, an increase of 17 per cent over 1921 when the valuation dropped to $184,004,000.

Each grain crop, sugar beets, beans and clover seed showed a higher price on December 1 this year than one year ago. All crops except winter wheat, buckwheat, potatoes and wild hay gave a larger monetary return per acre this year than last.

The principal encouraging factors are the diversified nature of Michigan's crops and the high degree of development of the State's dairy industry, which have given its farmers a much stronger economic position than occupied by many of the other corn belt states, especially those which have suffered from the distress caused by inflated land values.

The combined yields of all crops in the State were 7.4 per cent better than the average of recent past years. Only four other important states fared as well this year.

Hay was relatively the best crop of the year, although corn, potatoes, clover seed and most of the fruits yielded above the average. The poorest crops were winter wheat and rye, although, for the State as a whole, these were fair both in yield and quality.

All main crops were larger in volume than last year except corn, rye and sugar beets, and had a greater total value except potatoes, sugar beets and clover seed.—Annual Summary, 1922, U. S. Dept. of Agriculture, Jan. 6, 1923.

HELPING DROWN THE FARMER WITH CREDIT

THE Senate Committee on Banking and Currency has reported out two bills, called Rural Credits Bill. The "Capper Bill" retains the power in the Federal Reserve Board, which, through denial of credit to farmers and discrimination in granting of credit helped ruin farmers, to continue this life and death policy. It specifically provides that the regulations of the Federal Reserve Board shall be designed to insure that notes drafts, etc., drawn or issued, shall be a part of a program of orderly marketing of such agricultural products "and not for speculative holding of such products." Naturally, when the Federal Reserve Board wants to break farmers, it can charge that they are holding crops for speculation and deny them all credit. The Capper Bill, like the Strong Bill in the House, amending the Federal Farm Loan Act, permits a loan of $25,000 by the Farm Loan Bank to any one borrower while the present maximum is $10,000. This is clearly an invitation to uneconomic speculation in farm lands, which has been a serious injury to real producing farmers.

The Lenroot Bill (S-4103) combines a personal or productive credit system with the long term or mortgage credit system in the Federal Farm Loan system, although the United States Commission to investigate rural credits abroad recommended the long term and short term credit system for farmers should be kept segrated, because of the different purposes of the two systms of credit.

IS THE FARMER BEING "KIDDED"?

NO less an authority than "The Chicago Tribune," recently headed an editorial "Farmers Being Kidded by Experts!" which goes on to say:

> "Congress is busily approving measures designed for the purpose of pulling the farmer out of the financial slough in which he has been struggling for two years or more. Without going into details of the methods of extrication thus offered, it is clear that most of the proposals are artificial. Mostly they provide for increase of extension of credits to farmers or potential customers who might buy farm produce at higher prices. Under easy conditions of credit a farmer who needs a new tractor or a new silo can borrow and provide himself with them. Perhaps he could also hold his crop over a few months for an improved market, which might or might not develop. In any event his future would depend upon the demand and consequent prices for his product. He would be certain of nothing except the debt thus incurred. The government or banks would be certain of nothing except responsibility for public or popular funds so loaned."
>
> "It is economically impossible thus to subsidize a basic industry. The farmers admit, especially around election time, that theirs is a basic industry. It is. The country cannot live without it. But if it is to be subsidized, where is the money to come from to subsidize it? For a year or two we may take it by taxation from capital. When capital is thus used up we would have Russia, alike in Wall street, La Salle street, and on the Iowa prairie. That would be the end of subsidy unless we took the money from the basic industry of farming and gave it back to the farmers."
>
> "The farmers are holding up the world. We cannot exist without food. That being true, the world cannot reach down and put a new foundation under the feet of this agrarian Atlas. Our American life and civilization now rests upon the farm, assisted by coal, iron, and copper. All the means of subsistence comes out of the ground. It is obviously impossible to take a part of this production, turn it into money through taxation, and with it restore to the earth a greater measure of wealth than we have extracted."
>
> "The farmer wants a better balance between the prices he gets for his produce and the prices he pays for his necessities. We do not blame him for that. But the assistance offered cannot accomplish that, unless through inflation of currency. If thus the farmer could pay off his debts of dollars with 50 cent pieces he might enjoy it. Even that would be only a "shot in the arm." He'd awake with a parched tongue, a fever, and a craving for more."
>
> "Political spellbinders who have been "kidding" the farmer have been giving him the legislation they persuade him he wants, not the help he needs. They gave him the present tariff, preventing the importation of hogs and corn into Illinois, for instance, because the farmer wanted it. And so the farmer agreed to the tariff which prevents the importation of German or British manufactured goods into this country. Germany and Britain, are being unable to sell here, cannot buy here. The farmer has no competition from Canadian wheat, and he pays for that independence by a sacrifice of foreign markets."
>
> "He has been, and is being, "kidded" by experts. Perhaps the next constitutional amendment should be one making an examination in rudimentary economics a condition for the seating of any member of congress."

Farmers perhaps are being "kidded," but business farmers, are not listening to political spell-binders or if they are they are only smiling at their antics. They are not going into further debt just because credit may be easier, unless they know how in their business they can use that money to bring them in more when the harvest comes. The business farmer only asks the same credit which is extended every other line of manufacturing business. He must be able to hold his produce until he can market it at a profit. He does not ask a subsidy, but because his is the largest business in America, no single source of capital, except the government itself, is prepared to meet his credit needs.

THE GASOLINE TAX

PERHAPS by the time this reaches you the gasoline tax will have been settled at Lansing. At this writing it is hanging in the balance with Governor Groesbeck in favor of a one cent per gallon tax, to be collected from the source at the inter-state line, this tax to be coupled with an increased license tax based on weight which will penalize the heavy, expensive car. A separate measure has been introduced and is favored which will make the heavy trucks and buss lines pay their share of the highway upkeep.

Everyone knows that something must be done to collect more money to keep the states elaborate system of highways in good repair, otherwise the millions that have been spent to date will soon have disappeared in dust and we will be worse off than when we voted for paved roads.

It seems obvious that those who use the roads and do the greatest damage to them should be made to pay as much of their proportion of upkeep as possible. Whether it be raised by gasoline-tax, increased license fee or what method, we who own automobiles know that it has got to be paid and we might as well get ready to pay it.

As a source of consolation to those who fear the gasoline tax we offer our own figures on the amount of gasoline consumed, in average driving of a twenty-mile to the gallon (?) automobile. Our gasoline bill for 1922 averaged $12 per month, so if the price averaged twenty cents per gallon, we burned sixty gallons of gasoline, which at a tax of one cent per gallon, would cost us sixty cents per month or $7.20 per year.

As for the dry-cleaner and others, who use gasoline in their business, they will have to speak for themselves, because it is obvious that no exemptions can be made without employing an army of spies to ascertain whether the gasoline were being used for the purposes purchased or not.

MORE THRILLING THAN FICTION!

THE eyes of the world were riveted on an island that lays midway in Lake Michigan and is a part of our own state, two weeks ago. Ice-bound, by great bergs that had jammed and frozen in an unsurmountable and impassable mass, lay Beaver Island, famed as the onetime empire of that Morman king, Strang.

On the island lay in agony a woodman, whose leg had been crushed between the mighty logs they are felling. With no medical assistance nearer than the mainland and that succor impossible for humans to reach over the intervening miles of broken ice, he was doomed to a painful death.

Then stepped into the arena to combat age-old nature, which for centuries has scoffed at puny man; modern science. First, propelled by tiny batteries, electric waves flashed through space and carried the message to similarly tuned instruments, hundreds of miles away, "S.O.S." it cried, "a human being lies here in distress!" Human ears listened and human hearts quickened to the rescue of their kind.

Wires tingled from Charlevoix on the mainland to the Commander of Selfridge Flying field, there is one way and only one way to reach Beaver Island over the ice and thus to carry medical aid to the afflicted woodsman. The air offered no barriers to man. Within a decade man has conquered almost the last natural force that defied his ingenuity. He has sprouted wings and taken to the element from whence the eagle had for so long looked down in pity on the two-legged animal chained to earth.

Within a few minutes after the messages had been exchanged, a giant bird, with a man on its back, was soaring straight over village and farm at the rate of a hundred miles per hour, towards the afflicted human on the ice-bound island.

Soon a blizzard of snow was whirled back from the propellers into the aviators visors. The first plane had to alight far from its destination, but no sooner than was this message relayed back to the field, than another plane had taken to its wings. A stop at Charlevoix for the doctor, a dash through the air that laughed at the mountain crags of ice below and modern science was at the bedside of the stricken human.

Jules Verne might have written this story from the imaginations of a wierd brain a hundred and fifty years ago. He wrote no stranger tales, nor none that would have caused more smiles from those who pointed to him as "the man who was a bit queer!"

Fiction is fast becoming obsolete, because the news of these days is more thrilling.

Hi Simpkins wants to know what would have happened to the price of potatoes if all the growers had only offered for sale one half of what they grew? He has an idea farmers would have have got more for one half, than they will now for both halves! Maybe Hi ain't as crazy as he looks!

* * *

The older we get the more we believe that the quiet, steady workers are the ones who keep things building in this world.

* * *

Yet, the fellow on the soap-box gets the crowd—while the man who makes the soap works unapplauded!

PUBLISHER'S DESK

The best advice I can give the many readers who ask about correspondence schools which teach everything from barbering to auctioneering and auto painting by mail, is to ask the school for references of satisfied students. Not testimonial letters that you read in their circulars, but actual names and addresses of men and women who have passed the course and are using it. Then satisfy yourself from this student that your money will be well invested in the prospective course. It may take a little time to do this and you might even spend a little money if necessary to visit the student and with him or her face to face, but it is a safe method to follow, if you would be sure.

We do not have very much patience with the person who will dash headlong into a trap when a little effort would secure the vital facts. All to often The Business Farmer is called on to help someone out of trouble, who could have saved themselves, countless worry, if they had written for our advice before they got into it.

They say a child never fears fire until it gets burned, but grown-ups who can read and write, ought to be able to use these two very valuable faculties.

A manufacturer wrote us that he feared our exposition of so many frauds and quack schemes which are worked by mail, would make Business Farmer readers, suspicious of any proposition offered by mail. Our answer was that we gave our readers credit for too much good sense to arrive at any such false conclusions.

As a matter of fact there are more quack and fake schemes offered by peddlers and agents at the doors of the farm home, than by all the mail order schemes put together.

The man who does business thru the United States mails must be honest. Uncle Sam, is your attorney without cost, when you have been defrauded thru the mails.

The Business Farmer has never registered a complaint with a recognized mail order or catalog house, of the kind that we are proud to introduce thru our advertising columns, who did not effect an immediate settlement, satisfactory to our reader.

It must be remembered that we are all prone to take advantage of the one from whom we buy by mail. Often an article which does not exactly please us is kept, because we prefer not to go back to the store clerk and demand our money back or a new article face to face. Yet, it is mighty easy to ship it back to the mail-order house—they advertise "satisfaction—or your money back!" and we are apt to take advantage of it.

We have known many instances where the mail-order house not only returned every penny paid them, but all the freight charges both ways, besides running the risk of the condition of the shipment when it finally was received back in their stock.

There is one simple rule in mail-order dealing:

Don't send money to a firm or person you do not know by previous dealings, unless recommended by a friend, advertised in the columns of a reliable publication or known to you by long-standing reputation.

Several readers have inquired lately regarding the so-called "food and fur companies," one of which advertises from New York and another from Kansas City, I believe. We had a representative of The Business Farmer in New York City make an investigation and I will let his advice to one of our readers answer the many who have been writing me, he says "To be perfectly frank with you, I would suggest that you let this matter alone. Presumably, they sell you a pair of rabbits at a specified price, say $14.00. For every pair you raise and return to them, they pay you $7.00 On the surface it looks good, but I am firmly convinced that a very small percentage of the rabbits sent them meet their requirements, which in itself is entirely in their hands.

While they might specify certain things in the contract, and you, to the best of your knowledge, would live up to that contract, there is no way of your finding out whether or not the condition of the stock was good when it reached their New York station."

In the M. B. F., of Feb. 17th, I saw an article in regard to Warren McRae Land Company, would say I saw his ad in the Allegan Gazette, so I wrote to him about December 1, 1922 and the enclosed was his first answer but there had been a man by the name of Jones from Illinois that had the same kind of ads in the Allegan Gagette and he got some listing fees out of some people and that was the last they heard of him. So I wrote McRae that if Mr. Paulinski or any other mister wanted to come and was afraid of misrepresentation that I would pay his fare here and back to Logansport, but I would not send money to parties I knew nothing about. When my people came from New York to Michigan they just packed their grips and started. McRae thought he had a sucker but I did not bite. I know the price of land here perhaps as well as Mr. McRae. Yours truly,—Chas. W. Goodeve.

* * *

McRae did not sell me or my farm. He is now running an ad in "The Lawrence Times." Go after him. If you need any more evidence than you now have, I will get some more. —D. Mosher, Berrien County.

AT IT AGAIN!

"I want to warn the readers against buying any spectacles from strangers traveling on the roads. Two men came along here and frightened a woman into buying two pair. She needed the one pair, but he told her and her husband she had a cataract coming on her left eye, and manipulated his tools so that they really believed she had and told her she needed one pair to see off and it would straighten the left eye so that cataract would not grow. They finally bought the two pair and paid $10 per pair, more than they are worth. The one pair to read with are O. K., and the other pair lays in a bureau drawer of no use to her or anyone, as she has no cataract. So beware. The men gave a Detroit address, and letters addressed to them there were returned."—Mrs. G.

* * *

When brother Noah clambored over the side of his beached ark, probably the first two living creatures to greet him were a pair of spectacle salesmen. Surely he had none on the ark and they must have floated on the yellow flood until it subsided. Ever since then, apparently their breed has increased and although attacted by better education, common sense and the legalized optometrists during recent years, every once in a while they bob up again in some community with their little black bags and their big black lies.

Generous nature gives most all of us two good optics through which to guide our way through life. However, before a great many years have passed we find our eyes giving out on us. Then it is we turn to glasses exactly as we would buy crutches, were we lame, but the difference comes, in the fact that glasses can be more injurious, than they are beneficial. It takes as well trained a specialist to properly fit a pair of spectacles, as it dots to practice surgery, yet few of us would listen to the peddler who came to our door, looked at our tongues and told us he ought to perform an operation on our appendix then and there! Nor would we be more tempted when he offered us "two operations for the price of one!"

PROFITS THROUGH M. B. F. SERVICE DEPARTMENT

Dear Mr. Editor—Am writing a few lines to thank you for that letter you sent me as it saved me the trouble of feeding and lots of corn. My neighbor fattened one hog about the same size and we sold the same day. It weighed 220 pounds more than mine, after taking out the price of grain and hay he received $8.60 and I got $12.00 and my corn is in the crib yet. Thank you again for sending the answer so soon, and wishing you all a happy new year.—Wm. F. Chaney, R. 1, Standish, Michigan.

This Catalogue will bring you a Saving on Everything you Buy this Spring

Millions of people will this Spring save money on everything they buy from this Catalogue.

Will you miss the saving that may as well be yours?

Millions of people buying this book will secure at lower then market prices, goods of standard quality, goods of the long wearing service-giving kind.

This book offers you, too, a saving—and it offers you certain satisfaction, a guaranteed satisfaction with everything you buy.

Montgomery Ward & Co. is a *low-price house*. But for Fifty Years we have kept faith with the public. We never sell "cheap" goods to make a low price. Ward Quality is never sacrificed.

A saving made on your purchases at Ward's is a real saving—because there is always more than a dollar's worth of service for every dollar of the price.

Everything for the Home, the Farm and the Family

For the Home: This catalogue shows everything for the home and for every member of the family. Everything to wear—the best New York Styles. Everything for use or decoration, from furniture and carpets to kitchen stoves.

For the Man: Everything for the farm, everything for the automobile, everything in wearing apparel; tools, farm equipment, poultry and stock supplies. There are many dollars to be saved through buying everything from this Catalogue.

Your Orders Shipped Within 48 Hours

Our new system of filling orders is now six months old. Six months' successful operation enables us to say—Your order will be shipped immediately; certainly in less than 48 hours.

As a matter of fact, most of the orders are now being shipped the same day they are received.

With the lowest market prices, goods always of Ward Quality, and the most prompt and accurate service, it is true indeed that: "Montgomery Ward & Co., the Oldest Mail Order House is Today the Most Progressive."

One copy is yours free. You only need to return the coupon.

What the Neighbors Say

MARKET MICHIGAN'S POTATOES AND BEANS IN THE SOUTH

BEFORE leaving my home state there was much said about the large potato crop and the marketing of it. On going to buy white potatoes here in south Georgia, I found that they were very scarce and were piled up in the windows as they in the north pile up oranges and they sold for from 3 to 5 cents a pound. They are good potatoes but scarce and this thought came to me. Why could not the Michigan growers ship their potatoes south? I believe there would be a ready market for them in the winter months. There are some grown here but not enough for the winter and there is a growing demand for them for the southern people are beginning to use them more and more each year. They plant them here in January and February but do not harvest them till May. Then it is hard to keep white potatoes long here on account of the warm weather, they rot easily. Our Navy beans are not found in any of the stores here. The southern cook does not know how to prepare them for the table and if they were sacked and the directions on how to cook them put on the sack, they too might become a southern dish as now it is hardly known at all. Only a few buy the canned baked beans.—Mrs. L. L., Cuthbert, Georgia.

THINKS FRIDAY FAVORS THE DISTRIBUTORS

I HAVE been a subscriber of the M. B. F., since the first issue and think the paper deals with problems of the day squarely. I have been reading Dr. Friday's talk on milk and from the farmer's standpoint think him very much in favor of the city people. Here in your issue of February 3rd, in part saying: whereby the farmer will be penalized for over-production in the wrong season. Now just as though we could change our flow of milk in a fortnight like Ford could his autos. It takes 3 to 6 years to raise a heifer calf to a producer, then about one-third are not suitable to keep as profit makers. The $3.00 per cwt. looks good but following the line back, 40c off for hauling from Adrian to Detroit, Adrian price $2.60.

I pay 20c from my farm to Adrian leaving $2.40 and then last but not least the test goes down to 3 per cent or 3.2 taking about 20c more off, netting me $2.20. Possibly my cows are boarders, if so, I have neighbors in like situation. I pity the guy paying 14c per quart. Where I only get 4 2-5c per quart, it costs a difference of 9 3-5c get our product to the consumer.—Porter McLouth, Lenawee County, Michigan.

AMEND THE COVERT ACT

IN your issue of December 9th, our mutual friend and good roads booster, H. S. Earle, asks "Will gasoline tax solve the highway problem?" and then proceeds to answer, "No" to his question. Perhaps he is right. But first what is the highway problem? Is it not, like any other question of taxation, the problem of levying the cost in fair proportion to the benefit derived, taking into consideration, too, the ability to pay? If this statement of the problem is correct, let us ask first if the present law levies the cost of road construction in fair proportion to the benefit derived?

As I understand the operation of the Covert Act, under which most of our improved roads are now and must be hereafter constructed, it assesses first a proportion of the cost of the road on the abutting property and such other property in a district as will receive direct benefit from the road to be built. This proportion, I believe, is twenty-five per cent. Then the township in which the road is situated is assessed for twenty-five per cent, and the county for the balance, the county receiving about half of its assessment back from the state, as an award. So it actully works out about on the basis of twenty-five per cent on the road district, twenty-five per cent on the township, twenty-five per cent on the county, and twenty-five per cent on the state. But let's keep in mind that a farm abutting on a Covert Act road is first in the district, but also in the township, the county and the state, and is therefore taxed in four different places. Is the quadruple tax on the farm a fair proportion on the cost of the improvement on the basis of the benefit derived, as compared with the proportion paid by the hundreds of automobiles and trucks which immediately avail themselves of the good roads? I think not. Nor does it take into consideration the ability to pay. We often hear the argument that a good road in front of or along side of a farm costs the owner nothing because the value of his farm is immediately increased at least to the extent of the cost of the road and often beyond. This is undoubtedly true, but it does force the farm owner to make an investment, and with the present prices of farm products the farming business is not in position to make an investment, and if the present road building program is continued on the present basis of distributing the cost many farms will have to be sold at a sacrifice because they cannot raise the cash to pay for the investment in good roads.

A gasoline tax alone not only would not solve this problem—it would make it worse. Such a tax would go directly to the state and with no more money to pay the state's share the State Highway Department and the County Road Commissioners would re-double their efforts to get more and more roads built, with the consequent piling of more and more district, township and county taxes on the farms.

What then is the solution? Let me offer this—amend the Covert Act so that the road-district pays from ten per cent to twenty-five per cent of the cost of building, the exact percentage to be determined by the State Highway Department on the basis of the average value of property by counties. For instance, a thickly settled, highly productive county like Oakland or Lenawee would be assessed twenty-five per cent on the road district, while a thinly settled unproductive county like Roscommon or Montmorenci would assess the minimum of ten per cent. Then let the State pay all of the balance, relieving the road-districts of their portion of the present township, county, and state taxes, The State to raise all money for highway purposes by specific taxes on those who use the roads. Perhaps a gasoline tax is as good as any to raise the money, but my opinion is that along with it there should be an increase in the license fees on automobiles.

The automobile is not paying its fair share of taxes as compared with other property. A car costing $1,500.00 pays as a license (which is in lieu of all taxes) about $16.00, while the same money invested in a home or a farm and assessed at two-thirds of its actual value pays double that amount in taxes. On higher priced cars the difference is even greater. And the little home or farm does not ask the State to spend millions of dollars a year for improved roads to operate on. Automobile owners, whether in country districts or cities want good roads all over the State, and with but few exceptions would welcome the opportunity to pay their fair share of the cost of the roads.

The Legislature is now in session and a great deal of talk is being heard about a gasoline tax, or about raising the automobile license, but I have seen nothing to indicate any thought of amending the Covert Act, so as to relieve the farms of any portion of the present burden. The property owners, as I see it, are not nearly so much interested in putting more tax on automobiles as in being relieved of a part of the burden they now bear. And the only way to get less taxes on general property (and on the farms in particular) for road purposes is to amend the Covert Act to distribute the burden more equitably.

In closing I might state that I operate two automobiles and am a stock-holder and officer of a corporation owning and operating three trucks and five autos in Michigan—and we'll gladly pay a fair tax on our machines to have good roads and to

Record Garden Yields

Plant Northern Seeds

Thus assure yourself of the biggest yields—the best your garden can grow. Use the Isbell Catalog as your guide. It shows varieties almost unlimited of the finest vegetables, many prize winners of international reputation—all produced from MICHIGAN GROWN

Isbell's Seeds
"As They Grow Their Fame Grows"

SIMPLE METHOD OF SMOKING MEAT

By L. D. Johnson

In a few minutes anyone can smoke a season's supply of meat without bother or loss. The secret is in using Wright's Smoke, which may be applied quickly, easily and cheaply with a brush or cloth. Wright's Smoke is made of smoke from selected hickory and gives a delicious flavor. It saves 20 pounds in every 100 by preventing shrinkage. If you want delicious smoked meat, at less cost and less trouble, use Wright's Smoke. A big bottle costs but little at any drug store. To sugar-cure meat, simply mix 27 pounds of salt with Wright's Ham Pickle. This costs little and will cure a barrel of meat perfectly, without trouble or loss.

Send your name to the E. H. Wright Co., 850 Broadway, Kansas City, Mo., and you will receive, free and postpaid, a new $1 book, "Meat Production on the Farm," which tells how to cure every kind of meat. This $1 book is free to farmers only. Write for it today.—(Adv.)

THE OTHER MAN'S SIDE

TOO many country folks seem anxious to condemn the city receiver for things beyond control. In our 12 years of experience here in Detroit, it has been our observation that the average receiver—whether on commission or outright purchase—endeavors to give the shipper a square deal, realizing that Satisfaction with a capital "S" is the only means of continued shipments in fact we might go so far as to state that 999 out of 1000 dealers will give the shipper their very best efforts in the handling of his shipment and in some instances give him more than he is entitled to by market conditions for the sake of that same Satisfaction.

We also realize that the country shipper has actually been stung at times and these "stings" have been so advertised by the press that it has come to be common impression that the shipper always gets the raw deal.

"The evil that men do lives after them, the good is oft interred with their bones." How many times does a shipper write in and say: "That was a good price you got for me on that shipment old man?" or write "We are mighty well pleased with the service you rendered us on that shipment." Not often. The writer knows from personal experience.

A few years ago when we were doing a commission business, we handled as much or more poultry than any two of our competitors in point of volume. As a Christmas reminder the house decided to get up a memorandum book to be distributed to shippers. Advertising naturally played some part in the copy and it was intended that one page should carry a few sample letters from satisfied shippers, who had written us their approval of the manner in which their accounts had been handled. The stenographer was instructed to search through the letter files and get out a few copies of such letters—yes, so confident was I that we must have a lot of them, that I said a "few."

Diligent search of the records for the entire year failed to bring forth a letter that would sing the praise of our service and the "few" pitiful recognitions that we did receive came from women! All of this, mind you, in the files of the house that has doing the largest commission business in Detroit at the time. One naturally conceedes that if he has a large clientele he must be giving satisfaction.

We, as humans, are too prone to blame the other fellow for our own faults.—Smith Poultry and Egg Co., Detroit, Michigan.

"O, FOR A LINCOLN!"

ALONG with my renewal permit me to again express my appreciation of the M. B. F., and especially of the article on page 19, (Jan. 20) by C. P., Barry county, Mich.: "Dedicated to All Patrons of Husbandry." That one article is worth a year's subscription, because it tells the truth in regard to the great majority of farmers in this part of Michigan. Many men who in years gone by have prospered, and felt a just contentment with their lot, and their achivements, today, have felt their feet slipping "and the thought has shattered their pride

"The hoe has fallen by their sides" But they hate to acknowledge defeat, after years of achivement, and their pride seals their lips in regard to their true condition. Nevertheless in their hearts they are saying. Oh, for a Lincoln, that could throw off the "Slavery of Taxation." But it is all in vain. The "Neros" of the Road Builders, keep on fiddling.—V. W. C., Saranac.

Uncle Rube Spinach Says:

EVERYBODY'S DOIN' IT

THIS is the age of advertisin'. There's been many ages since Adam's time—stone age, copper—all kinds of ages, so to speak, but we, right now, are livin' in the greatest of all ages, the advertisin' age. Everybody is advertizin' somethin' or other and all are tryin' to make the other feller believe somethin' that—well sometimes at least, ain't true.

The big meat packers fr' instance advertizin' hundreds of thusands of dollars worth to try an' make the people think it's a sort of a benev'ent sort of an institution an' it's sellin' its products almost at a loss, mebbe tis but I kinda doubt it, don't you?

Politicians advertize 'at they're in the game—not for their own benefit—Oh bless you no—they're in it to save the country from goin' to the dogs and' they're jest 'bout the only chance we've got to escape some awful calamity that's bound to come if they fail to be elected to office. Advertizin' may be all right in their case but by their works we shall know them—if they ever do any work.

Merchants advertize, as they should do, an' some of 'em do as they advetize to do—an' some of 'em don't. Many advertize one thing an' do the opposite.

Railroads advertize 'at they're losin' money—almost—an' yet they had more business last year than they could handle an' handled more business than ever before in the history of railroadin'. They are advertizin' in order to keep up rates or cut wages or both—most likely both.

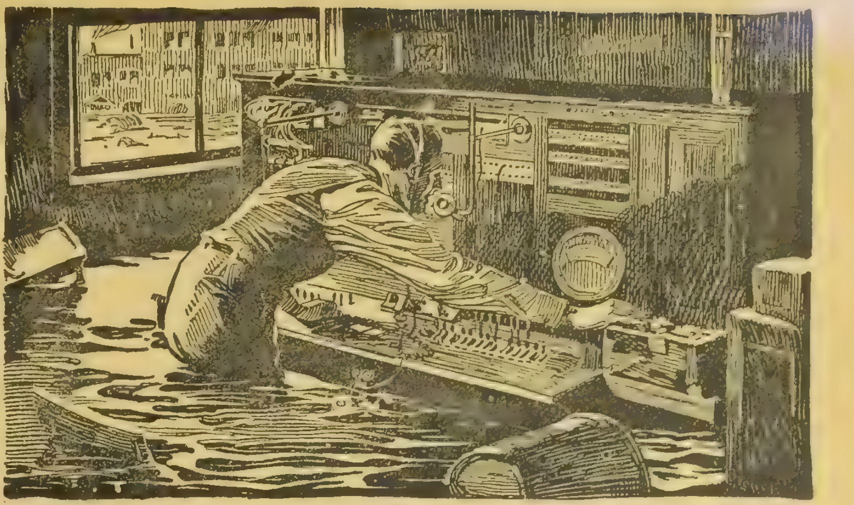
Our legislatur', members of it least ways, 'fore election last fall, advertized a reduction of taxes—less public expenditure of money, they said, an' now they're layin' awake nights to figure out some way to raise taxes so's to have more money to spend. They're wantin' to tax automoblies heavier, tax gasoline—it's a wonder they don't tax the sunshine an' the air we breathe. If they'd put a tax onto hot air an' meter what's bein' shot off at the Capital at Lansin' their whole problem would be solved an' they'd have all the money they needed an' some to spare.

An' it's not the big guys 'ats doin' it. Ol' maids in various an' many ways advertize 'at they are on the vine an' ready to be picked.

Bachelors advertize 'at they're a little shy of women an' some how, manage to keep away from 'em an' so remain their own bosses for a greater or lesser time—but git roped in the end an' there—well then they're gone an' never advertize nothin' no more.

Auto speeders advertize the fact 'at they have no brains an' rooms to rent in the upper story. The little shrimp with the five-cent mustache advertizes 'at he's tryin' to ape simethin' or other 'at don't know any more than himself—the flapper advertizes that she has to help nature to make herself attractive—hence she paints, powders, uses lip sticks, wears "knickers" or skirts so short she shows her ignorance of what's right an' proper for girls to wear.

The ol' grouch aavertizes 'at he's tired of the world, mad at himself an' everybody else an' don't amount to much anyway an' everybody agrees with him, he advertizes well but is not interestin'. The farmer also advertizes—by his actions an' ways—not all you know but some of 'em do—by not hangin' together—not bein' organized. They advertize 'at they're the prey of every grafter an' every shyster 'at comes along to rope 'em in—in fact many of our good farmers, who will not join in the farm bureau or some other good farm organization advertizes that they are lone an' in the sucker class—grafters an' profiteers see their ad's an' profit accordin'ly. Oh its an' advertizein' age all right an' I believe in advertizin', everybody's doin' it, why shouldn't we? But the best advertizin' to my notion is the man or woman who can smile in the face of any an' all things an' who lives up to the smile. It's a pleasure to meet such fellers an' I like to think that their advertizement is good an' that they can be trusted. They are good friends to all an' it's a pleasure to meet 'em anywhere. Cordially yours.—UNCLE RUBE.



Why they stick

On the ground floor of the telephone building a man worked at the test board. It was night; flood had come upon the city; death and disaster threatened the inhabitants. Outside the telephone building people had long since sought refuge; the water mounted higher and higher; fire broke out in nearby buildings. But still the man at the test board stuck to his post; keeping up the lines of communication; forgetful of self; thinking only of the needs of the emergency.

On a higher floor of the same building a corps of telephone operators worked all through the night, knowing that buildings around them were being washed from their foundations, that fire drew near, that there might be no escape.

It was the spirit of service that kept them at their work—a spirit beyond thought of advancement or reward—the spirit that animates men and women everywhere who know that others depend upon them. By the nature of telephone service this is the every-day spirit of the Bell System.

The world hears of it only in times of emergency and disaster; but it is present all the time behind the scenes. It has its most picturesque expression in those who serve at the switchboard, but it animates every man and woman in the service.

Some work in quiet laboratories or at desks; others out on the "highways of speech." Some grapple with problems of management or science; some with maintenance of lines and equipment; others with office details. But all know, better than any one else, how the safe and orderly life of the people depends on the System—and all know that the System depends on them.

The Children's Hour

DEAR Nieces and Nephews:—March, the month in which spring begins, is with us again and I for one, am glad. I enjoy all of the seasons, but spring the most. Summer with its growing crops, ripening grains and fruits is very pleasant, while fall, the harvest season and the time of year that we store away supplies for the coming winter, like the squirrel, is enjoyed by all. The woods are decorated in gay colors as the leaves of the trees change color and drop to the ground, covering the earth with a thick brown carpet; we all appreciate the beauty of the world during this season. And then comes winter, and snow which carpets the world with a white blanket. The trees, bushes, corn shocks, fences and buildings are covered with snow and the country looks like a great fairyland. But we get tired of seeing the snow and having to bundle up every time we go out-of-doors, and we long for spring. With the coming of spring the world is born anew. The snow melts away, the ground soon changes color from brown to green, the leaves come out on the trees, crops are planted, the flowers bloom and birds on all sides send forth their sweet notes proclaiming that spring is here again. Yes, and the fishworms are plentiful so on Saturday afternoon a fellow can take a hook and line and some bait, go down to the creek or river, cut a pole and spend the most enjoyable afternoon fishing. And the girls can gather flowers in the woods. Yes, I am getting the spring fever and I'll bet most of you are feeling about the same way.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned:—How are you? I am feeling fine. I live on a 20-acre farm. We have one cow, and three heifers. I am a boy ten years old on the 12th of February this year. I go to the Deming Lake school. I have some skates. I like to go skating on the ice. We raise onions, but I don't like to weed them, but Daddy said I have got to weed. I have two sisters. I am the only boy in the family. I have five doves and one black rabbit, his name is Dick. My sister and I raised some potatoes last fall and we bought our Christmas presents with the money. —Lee Ream, R. 1, Clayton, Mich.

Dear Uncle Ned:—Hello everybody! May I join your merry circle? I have been a silent reader of the Children's Hour for sometime. Well seeing as I have never written before and you do not know what I look like maybe you would like to know. I will describe myself. I am 4 feet 9 inches tall and weigh 80 pounds. I am a brunette and have long hair. My age is between 12 and 16 years. Who guesses my right age shall receive a long letter from me. I am in the eighth grade at school, and I like to go to school real well. I live on the banks of the Muskegon river, about four miles from Bridgeton. We catch lots of fish in the spring and summer time. The river is frozen over now. I have three sisters and two brothers all younger than myself. My brother and myself are the only ones of us that go to school. We have a mile and a quarter to walk to school. We have just come from sliding down hill.

My father has taken the M. B. F. for some time and we like it fine. Well I suppose you are getting tired of reading this so I will close with a riddle. What will go up the chimney down that won't go down the chimney up? Answer, an umbrella.

I would like to hear from some of the boys and girls of this corner. Will answer all letters that I receive. From your niece.—Doris Storms, R. F. D. 1, Box 73, Grant, Michigan.

Dear Uncle Ned:—Please let a little girl in from Boyne City. I am ten years old and in the fifth grade. I go to the Knap school, but it ought to be called the Behling school for there are six Behling girls and one Knap girl. We have a mile to walk to school. I have four sisters and two brothers. I am the oldest.

My father takes the Michigan Business Farmer and we like it very much. I tried the recipe for dark chocolate cake given last week in the Farm Home Department and it was very good. I love to make cakes. I got lots of Christmas presents this year and I hope you all the same. I wish some of the girls would write to me and tell me what they are doing. What garden stuff you are going to raise next summer. I always have a little garden. I like to take care of one.—Mary Behling, R. 1, Box 91, Boyne City, Michigan.

Dear Uncle Ned:—Here is another boy who wants to join your merry circle, may I? I have brown eyes and black hair. I am 11 years old and in the sixth grade at school. My favorite study is language. I like all winter sports but as I was brought up in the city I didn't get a chance to get the nice fresh air there is in the country, and I had colds so much of the time. But this winter I am living with my aunt and uncle on a farm and my health is better. We have 3 cats and I have lots of fun with them. I carry in the wood, and feed the pigs. I have a little sister, her name is Evelyn and she is 6 years old. I guess I will close with a riddle and the one that guesses it right I will write a long letter to. Three cornered square, black as a bear, guess this riddle or I'll pull your hair. Your nephew,—L. D. Biddle, R. 2, Lakeview, Mich.

Dear Uncle Ned:—May I write to your merry circle? I wrote about a year ago. My brother makes radios. He has made ten of them already. Some large and some small. We have two aerials and two pairs of receivers. I like to listen to it when I get time. There are nine people at our place that listen to it so that's why I don't often get a chance. I hope all the boys and girls who have no radio would get one, because it is very amusing. Anyway they are very amusing to me because ours is so loud. My brother that makes the radio's cannot do anything else. He has tuberculosis of the spine. He wears a cast. He, his wife and my nephew stay at our place now. My nephew is eight months old, he is very pretty. His name is Horace Leander. I'll bet none of my cousins or even Uncle Ned, had as fast a cutter ride as I did. A week ago last Sunday, my brother hitched the cutter to his auto (Saxon.) We went on Lake St. Claire. We took two pictures of the cutter and the auto. There were four girls in the cutter and three people in the auto. Of course I was one of the girls that was in the cutter. We went at the rate of thirty-five miles an hour. We sure had a lot of fun that Sunday. My sister Iris goes to the Mt. Clemens High School. I am in the eighth grade at school. Am fourteen years old. My birthday is the 25th day of September, have I a twin? If I have a twin I wish they would write to me. Will some of my cousins write? Will answer all letters, Your niece.—Rose M. Arnold, R. F. D. 4, Mt. Clemens, Mich.

Dear Uncle Ned:—I wrote once before and had my letter printed so thought I would try again. I am 16 years old and five feet, 6 in. tall. I have 4 brothers and 6 sisters. I like to receive letters , ε boys and girls please write. I will surely answer all letters. Your neice.—Lois Garver, Harbor Springs, Mich.

Dear Uncle Ned and Cousins:—Hello! Everbody. How is the world treating you? It is treating me fine. I am ten years old and my height is four feet, eight inches and I am in the sixth grade. I like to go to school very well. I go to the Ithaca Union School. For pets I have a kitty and a dog. I read the stories and enjoy them very much. I am taking piano lessons. Well Uncle Ned I suppose your eyes are getting tired of my scribbling and so I will close. From your neice and cousin. —Mildred Eicher, Ithaca, Mich.

P. S.—I would like to hear from some of the cousins and would write back so quick it would shock them.

Dear Uncle Ned—I would like to join your merry circle. I am four feet two inches tall, have brown hair, blue eyes, light complexion. I am thirteen years old and am in the eigthth grade. We live on a twenty-acre farm. We grow fruit. My father takes the M. B. F. and likes it very much. I read the Childrens Hour. For pets I have four cats, a dog and a hen. I have two sisters and one brother. I remain as ever your loving niece—Barbara Ebner, Croswell, Michigan.

Dear Uncle Ned and Cousins:—I have never written to the cousins but I have enjoyed reading their letters. I would love to join your merry circle. I am 15 years old and in the eighth grade . I have one brother. His name is Floyd. He is 12 years old and in the 7th grade. I have one sister, married. I live ¾ of a mile from the station, 1 mile from the post-office and school. I have a good teacher. We live on a raise of ground overlooking the trunk line No. 18 and the Michigan Central railroad and the beautiful Mullet Lake.

We have 2 cows, 1 heifer, 3 calves, 8 ducks, and 40 chickens. I love to see the ducks paddle around in the creek near the house. I have a pet cat named Bobbie. He does tricks. We named him Bobby because he has a bob tail. In the Summer the Boy Scouts stay all summer near here, not far off. I can swim and dive and there is no other thing that is so much fun. In winter we have coasting parties, skiing parties, and skating parties. I love to skate. Do you have skating? If not you miss a lot of fun.

My birthday! I'll let you guess that. It's between the 2nd and 7th of July. We have a lot of fruit. Snow apples! Oh, boys! Cherries, plums and pears, I cannot begin to tell you of them all.

In answer to Charles F. Hibberd about city life, I'll say I have lived in the city of Pontiac. In the city you have only to travel the streets, and that is surely a poor plan. You have no woods to ramble through and you do not get the fresh pure air as in the country.

I wish some of the boys would write to me. My father takes the M. B. F. Your friend,—Harold Rose, Mullet Lake, Michigan.

Dear Uncle Ned:—My father takes the M. B. F. and I enjoy reading the Children's Hour. I am in the seventh grade at school and am twelve years old. I weigh one hundred and two pounds. I have 3 brothers and 1 sister. One of my brothers fought in the World War. He was wounded three times. We live on an 80-acre farm. We have about two feet of snow. One of my schoolmates and Wilma McTaggart are the same age and their birthdays are on the same day. I wish some of the boys and girls would write to me. Your niece.—Norma Griffen, R. 1, Charleviox, Michigan.

Dear Uncle Ned:—I wish to join your merry circle if you will let me. My father takes the M. B. F. and he likes it pretty well. I am 11 years old. My birthday is the 3rd of July. I am in the 6th grade. My sister teaches our school. I enjoy reading the Children's Hour. My father is sick. He has been sick for eleven months with heart trouble. He has always been an ambitious man. We live on a 200-acre farm and have a tenant house with 160 acres. I have been sick with the chicken-pox for two weeks. I will close with love to Uncle Ned and cousins.—Donald Dean, R. 2, Milford, Michigan.
